M. J. WOODS, heretofore purser, s.s. Prince Rupert, Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C., has been appointed Travelling Passenger Agent, Canadian National-Grand Trunk Rys., New York, N.Y., reporting to General Agent C. E. Jenney, vice J. F. Mongan, appointed City Passenger Agent.

Canadian Pacific Ry.—G. E. CARTER is reported to have been appointed Travelling Passenger Agent, with headquarters at St. John, N.B.

A. V. CLARK, heretofore Special Continental Representative, has been appointed Managing Director, Canadian Pacific Railway Co. (France), which has been organized in France to carry on all the C.P.R. business in that country, and A. Catoni, heretofore Agent, C.P.R., at Paris, has resigned. Office 1 Rue Scribe, Paris.

J. MITCHELL, heretofore Superintendent of Telegraph Traffic, Eastern Lines, Montreal, has been appointed Superintendent of Telegraphs, Eastern Division, with office at Montreal, vice W. M. Thompson transferred.

W. D. NEIL, heretofore Superintendent of Telegraphs, Ontario Division, Toronto, has been appointed Assistant Manager of Telegraphs, Eastern Lines, at Montreal, vice W. J. Camp transferred to the retired list.

G. A. OWENS, heretofore section foreman, Maniwaki and Waltham Subdivisions, and Ottawa Terminals, Ottawa Division, Quebec District, has been appointed Roadmaster, Shore Line Subdivision and St. John Terminals, Brownville Division, New Brunswick District, vice K. O. Shepard, transferred to Newport Subdivision, Farnham Division, Quebec District. Office, St. John, N.B.

K. O. SHEPARD, heretofore Roadmaster, Shore Line Subdivision and St. John Terminals, St. John, N.B., has been appointed Roadmaster, Newport Subdivision, Farnham Division, Quebec District. Office, Farnham, Que.

W. M. THOMPSON, heretofore Superintendent of Telegraphs, Eastern Division, Montreal, has been appointed Superintendent of Telegraphs, Ontario Division, at Toronto, vice W. D. Neil promoted.

Reid Newfoundland Co.—R. C. MORGAN, Superintendent, Winnipeg Terminal Division, C.P.R., who was given six months leave of absence, to act as Chairman, Management Committee, Reid Newfoundland Co., severed his connection with the Reid management in February and has since been acting as advisor to the Newfoundland Government on railway matters.

Toronto, Hamilton & Buffalo Ry.—H. H. SHEPHERD, heretofore acting Purchasing Agent, has been appointed Purchasing Agent, vice G. W. Holmes, resigned on account of ill health. Office, Hamilton, Ont.

United States Coal for Canadian National Rys.—The Minister of Railways stated in the House of Commons, April 19, in answer to E. M. MacDonald, Picton, N.S., that 977,896 net tons of coal were imported during 1921, from the U.S. for the Canadian National Rys. exclusive of the G.T.R., that the cost was \$5.10 per net ton at the border, and that \$4,992,694.97 was paid for the coal.

Interstate Commerce Commission Hearings on Automatic Train Control.

As stated in Canadian Railway and Marine World for February, pg. 69, the Interstate Commerce Commission issued an order on Jan. 10, calling upon 49 railways to show cause by March 15 why it should not issue an order requiring them to equip certain portions of their lines with automatic train stops. On March 20 the Commission held a hearing in Washington, when a committee of the American Railway Association, representing 40 out of the 49 railways affected, urged that the Commission withhold the proposed order. The case for the railways was presented by R. H. Aish-ton, President, Association of Railway Executives; A. M. Burt, Assistant to Vice President, Northern Pacific; C. E. Denney, Vice President, New York, Chicago & St. Louis, and A. P. Thom, Association Counsel. Generally speaking, all roads represented were unfavorable to the Commission's proposal. The first objection raised was that the science of automatically stopping trains when danger threatens is not sufficiently far advanced to warrant such extensive installations as those contemplated. Attention was called to the three most prominent installations, viz., the Regan system on the Chicago, Rock Island & Pacific, the Miller system on the Chicago & Eastern Illinois, and the American system on the Chesapeake & Ohio, and the members of the committee claimed that experiments with these systems indicated that they all needed a lot of improvement before they could be considered thoroughly reliable. It was further objected that the systems most developed to date use ramps along the track, for the securing of mechanical contacts, while many railways officials believe that an induction system would be more suitable. If the ramp systems had to be installed, the representatives of these roads claimed, no opportunity would be given of experimenting with the induction systems now originated, but in need of development. The committee assured the Commission that it would do everything in its power to co-operate in testing all good devices, but the opinion was expressed that if the Commission insisted on a division of each road being equipped at once, the progress of automatic train control development would be retarded more than advanced. It was also stated by committee members that the proposed order would require many more installations than are advisable at the present stage of the development of the devices, resulting in great waste. Mr. Aish-ton argued that, under present financial conditions, expenditures should be confined to safety devices which had been proved practical by long experience. Many roads were represented individually at the hearing, and all advanced objections to the proposed order. Many stated that they wanted to finish equipping the busy portions of their lines with automatic block signals before starting on the automatic stop; others said the proposed order would disrupt their present betterment programmes; others pleaded financial inability, and still others stated that the climatic conditions under which they operate call for greater care in the development than had taken place in more advanced before they would feel justified in spending the large sums necessary. R. S. Parsons, General Manager, Erie Rd., said that his road had

not had a passenger train accident, which train control would have prevented, in the last 12 years.

On March 23 and 24, M. E. Miller, representing the Simplex Train Control Co., maintained that its device had been tested on the Buffalo, Rochester & Pittsburgh, and had made good, but the company's Signal Engineer stated that the road's officers did not think much of it because it left portions of the track unprotected by the block system. Mr. Miller said that could be remedied. R. L. Miller, of the Otis Automatic Train Control Co., said that tests of its apparatus had been made on the Spokane International Ry. at Spokane, in June 1920 and Feb. 1921, and that since then he has introduced a number of improvements in it.

The hearing was continued on April 12, when a statement was read into the record showing the number of accidents which have taken place in the U.S. From July 1, 1911 to March 31, 1922, there were 255 head-on collisions, resulting in the death of 863 persons and injuries to 5,462, and in the same time there were 205 rear end pitch-ins, resulting in the death of 773 persons and injuries to 3,948. C. W. Hendrick, of the American Train Control Corporation, told of the costs of equipping with his system, and expressed the opinion that the automatic train stop will ultimately result in doing away with block signals.

It is noteworthy that in the majority of the train control systems now developed a locomotive man can, if he is alert, and if he knows that it is all right to proceed, stop an automatic stop from taking effect, and according to the code of requirements drawn jointly by the American Railway Association committee and the Interstate Commerce Commission Bureau of Safety, a train control system with this feature is quite satisfactory. But the Interstate Commerce Commission in its order of Jan. 10 left out this modification, which would make it appear that systems having this feature will not be satisfactory. In view of the fact that the systems which have so far seemed to give the best results contain this feature, it is generally felt that the feature should be retained if the manufacturer of any system so desires.

Hearings on the advisability of issuing the proposed order are being continued before the Commission.

Government Advances to Railways.

The Minister of Railways stated in the House of Commons, on March 29, in answer to J. W. Kennedy, Glengarry and Stormont, Ont., that up to March 25 the following sums had been advanced, or loans guaranteed, to the railways mentioned, since they were authorized during the Dominion Parliament's last session:—

Canadian Northern: sums advanced, \$34,035,553.72; bonds guaranteed, \$25,000,000.00.

Grand Trunk: sums advanced, \$36,200,857.03; bonds guaranteed, \$25,000,000.00.

Grand Trunk Pacific: sums advanced to receiver, \$4,651,341.88; loans guaranteed, nil; guaranteed interest paid by Dominion, \$2,138,335.46.

Grain in Store at Elevators.

Returns to the Dominion Bureau of Statistics, Internal Trade Branch, for the week ended Apr. 14, showed that the quantity of grain in store at elevators throughout Canada decreased by 3,432,394 bush, made up as follows:—wheat 2,180,070, oats 925,586, barley 295,098, flax 37,390, and there was an increase in rye of 6,290 bush.

In western country elevators there were decreases in wheat of 1,328,135 bush, oats 780,652, barley 80,341, flax 56,482, and rye 26,470, and of the total amount, viz., 32,884,516 bush, the following amounts were held by the different provinces:—Manitoba 4,393,069, Saskatchewan 11,395,871, Alberta 16,932,242. The receipts at country elevators were 1,418,581 bush, and the shipments were 2,475,155.

The interior terminal elevators showed decreases in wheat of 45,443 bush, oats 82,113, barley 128, while flax and rye showed increases of 2,726 and 1 bush, respectively. The receipts of wheat at Vancouver were 196,836 bush, and the shipments were, by ship 255,159, and by rail 1,100.

In public and private terminal elevators increases were shown in wheat of 769,296, oats 345,737, barley 92,201, flax 15,825, rye 36,952. The receipts of all grains were 1,546,924 bush, and the shipments, by ship were 44,500 and by rail 242,513. The quantity of wheat in winter storage afloat was 294,656 bush. The rail shipments from Fort William were distributed as follows:—to Atlantic seaboard 1,941 bush, Canadian domestic 118,445.

The private terminal elevators at Winnipeg showed increases in wheat, barley and flax of 65,050 bush, 1,411 and 1 bush, respectively, and a decrease in oats of 4,629.

In eastern public elevators decreases were shown in wheat 643,418 bush, oats 182,404, barley 97,856, rye 5,193. The receipts of wheat were 13,712 bush and the shipments were, by ship 169,877, and by rail 487,252.

The quantity of U.S. grain in store at the eastern public elevators was 3,156,033 bush, compared with 458,945 at the same period in 1921. The U.S. lake ports showed decreases in wheat of 520,220 bush and barley 47,423.

Grain Shipments Through Port McNicoll, Ont.

Following are particulars of grain shipped through Port McNicoll, Ont., by the C.P.R., from Sept. 1, 1921, to March 31, 1922, and from Sept. 1, 1920, to March 31, 1921, respectively:

	1921-22	1920-21
Total bush, shipped	31,789,120	12,230,631
Bush, shipped per day	149,949	57,689
Total cars shipped	16,941	7,953
Cars shipped per day	46	38

Railway Accidents Throughout Canada. The total number of railway accidents throughout Canada during March, reported to the Board of Railway Commissioners, was 182, resulting in 11 persons being killed and 219 being injured. Of those killed, 5 were employees and 6 were others, and of those injured, 37 were passengers, 155 were employees and 27 were others. Under "others" are included 1 person killed, and 10 injured, in 8 unprotected highway crossing accidents, in 5 of which automobiles were concerned, in 1 a motor truck, and in 2, other vehicles.

Railway Wages and Working Conditions in Canada and the United States.

American Federation of Labor, Railway Employes' Department, Division 4, which includes in its membership the large majority of shopmen employed by Canadian railways, met at Winnipeg on March 27, 28 and 29. The delegates were informed of a communication from the Railway Association of Canada, stating the railway managements' desire to revise shopmen's working conditions by making changes in 25 of the general rules and 20 of the craft rules, the changes desired being designed to modify the present rules, contained in agreement 4, so as to bring them into line with the rules promulgated for shopmen in the U.S. by U.S. Railroad Labor Board decision 222, agenda 6, as mentioned in Canadian Railway and Marine World recently. The matter of wages is not a direct consideration at this time, except in so far as they are affected by the proposed changes in the working conditions. Elimination of time and a half for Sunday and holiday work, and the payment of punitive overtime rates for work after the 9th hour of continuous service, instead of after the 8th hour, are two of the principal points involved. The delegates at the meeting decided to ask the railways to adopt a 40 hour week consisting of five 8-hour days, as a counter proposal to the Railway Association's request for changes in the existing agreement. The delegates without exception opposed the changes proposed in the working conditions, and promised full support to the division's executive in combatting the proposals.

On April 17 railway representatives met in Montreal for a meeting with shopmen's representatives, and the two parties met in conference beginning April 19. The Railway Association was represented by Geo. Hodge, Assistant to Vice President, Eastern Lines, C. P.R.; C. F. Needham, Assistant to General Superintendent, Motive Power and Car Department, G.T.R., and C. E. Brooks, Mechanical Assistant, Locomotive Department, Canadian National Rys. The shopmen were represented by R. J. Tallon, President, American Federation of Labor, Railway Employes Department, Division 4, Chas. Dickie, Secretary of the Division, and delegates representing the individual trades. At the time of writing (April 24) the conference was still in progress.

The Railway Association of Canada some time ago issued notice to the maintenance of way employes, who have what may be described as a "national agreement" with Canadian railways, that a revision of schedule rules was desired, to bring such rules into line with those put in force recently by the U.S. Railroad Labor Board. A committee of maintenance of way employes near the Railway Association's was committed for a discussion of the matter, but no agreement was reached, and the employes' representatives asked for time to refer the Railway Association's proposals back to the local chairmen and the men, which was granted.

The railway managements have also notified the telegraphers' organization to bring up for consideration the schedule of rules and working conditions under which they are working. While the railways have not as yet acquainted the leaders of the telegraphers' organization with the changes proposed, the drafting of the new schedule desired is

about completed, and it is expected that a conference to determine on new rules will be held in the near future. The railways have also notified the Canadian Brotherhood of Railway Employes, and the United Association of Railway Employes (this latter organization, with its membership confined largely to the G.T.R., and of comparatively recent formation, was described in Canadian Railway and Marine World for March) that schedule revisions are desired, and as soon as the railways have determined upon the change to be proposed, the customary 30 days notice will be issued to these organizations. It is considered likely that the railways will propose rules calling for a restriction of punitive overtime payments and the limiting of the overtime rate to time worked after nine hours continuous service. A meeting of the United Association of Railway Employes was held at the Labor Temple in Toronto on April 16 to discuss the matter. A. R. Mosher, President, Canadian Brotherhood of Railway Employes, in addressing the London, Ont., membership of the organization, on April 10, promised that any efforts made by the railways to make working conditions less favorable to the employes would be opposed to the limit.

Details have been given in previous issues of Canadian Railway and Marine World of the arbitration proceedings held before the Board presided over by Rev. Byron Stauffer, the recommendations in which for an adjustment of C.B.R.E. members' wages were not adopted by the Canadian National Rys. management. C. B.R.E. members interviewed the Minister of Labor and the Minister of Railways at Ottawa on April 5, urging that this award be put into effect on the C.N.R. Consideration was promised by the ministers, but no action has as yet been taken.

On April 4, legislative representatives of the Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen, Brotherhood of Railroad Trainmen and Order of Railway Conductors met the Dominion Prime Minister, and the Minister of Labor, and submitted a memorandum requesting, among other things, that the customs tariff on foodstuffs coming into Canada be removed; that an investigation into unemployment insurance be undertaken; that income tax exemptions be increased; that Asiatic immigration be further restricted; that certain amendments to the Election Act and the Industrial Disputes Investigation Act be made, and that the elimination of level crossings, as provided for in the Railway Act, be aggressively undertaken, and that labor representative be appointed on the Canadian National Rys. directors.

At the time of writing, no action had been taken by Canadian railways toward seeking a revision of rules and working conditions affecting the employment of conductors, brakemen, and locomotive enginemen and firemen.

United States Situation.—The hearing before the U.S. Railroad Labor Board, in connection with the railways' request for income tax exemptions, was continued in the latter part of March and in the first part of April. As stated in our last issue, B. M. Jewell, President, American Federation of Labor, Railway Employes' Department, questioned the legality of the carriers' position before the Board, but J. W. Higgins, represent-

ing the western railways, argued that the railways had held conferences with the employes as the Transportation Act required. The Labor Board refused Mr. Jewell's request to refer the disputes back to the individual railways and their shop employes for further conference. On the hearings being continued, Mr. Jewell attacked the whole industrial system of the country and the existing social order of things in general. He argued that shopmen's wages should not be reduced, but on the contrary should be increased. He stated that industry as a whole should be able to pay a living wage, and cited figures to show that shopmen are not receiving it from the railways. F. J. Wayne, an economist in the labor organizations' employ, presented figures designed to show that employes are not paid sufficient wages, and that the railways are not operating under the financial disabilities which are claimed. In rebuttal argument, J. G. Walber, representing the eastern carriers, and Mr. Higgins, contended that Mr. Jewell's statements were entirely irrelevant, and that he was asking the Labor Board to solve a legal problem which had remained unsolved throughout the ages. Mr. Warren's figures were severely criticized by Mr. Walber, who characterized them as constituting an unfair attack upon the railway industry in its entirety. Both Mr. Higgins and Mr. Walber presented reasons to the Board as to why the railways should be allowed to have graded rates for mechanics, instead of the one rate for men of varying skill and experience, and employed on widely varying work. They also contended that the railways should have latitude to meet local conditions, and pointed out how injurious to the railways and to the employes, and to industry generally, standard rates are.

On April 10 Mr. Higgins presented arguments as to why wages of maintenance of way department employes should be reduced. (The rates proposed by the railways for various grades of labor were given in Canadian Railway and Marine World for April, pg. 198.) On April 11, the maintenance of way employes' representatives, F. P. Walsh and W. J. Lauck, argued against the proposed reductions in wages. To make their arguments convincing, they had a number of sectionmen and their wives appear before the Board and testify as to present earnings, which they claimed to be inadequate. The Board has stated that the hearings on the maintenance of way employes' and shopmen's wages will conclude before May 1, and that on that date hearings will be commenced on disputes involving the rules and working conditions affecting locomotive employes.

An interesting development in the railway wage situation in the U.S. in April was a demand by the Eastern Federation of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes for the abolition of the Labor Board, a resolution being addressed to President Harding.

The U.S. Railroad Labor Board's offices have been removed to the Transportation Building, 608 South Dearborn St., Chicago, Ill.

U.S. Railroad Labor Board.—L. M. Parker, formerly secretary to Ren Hooper, public member of the Board, has been appointed Secretary of the Board.

Railway Electrification Discussed in Parliament.

H. Deslauniers, St. Mary, Montreal, moved in the House of Commons on April 3: "that in the opinion of this House it is advisable that the Government substitute electric power for the use of coal in its railways, in such centers where this natural supply abounds." He pointed out the great power developments on the Paris-Lyons-Mediterranean and Orleans-Midi railways in France; on the Butte-Anaconda, New York Central, New York, New Haven & Hartford, and Chicago, Milwaukee & St. Paul in the U.S., and in England, Germany, Australia, Africa, Switzerland and Spain. He said that in the central part of Canada there are no known coal deposits and according to geological data presented there never would be any discovered, but that there is a superabundance of water power capable of being transformed into electrical energy. He emphasized the undesirable conditions brought about by the use of steam locomotives in large cities, particularly Montreal, and claimed that if large U.S. cities had the same abundance of potentialities they would have been utilized long ago. He stated that while Canada has large undeveloped electrical power, mounting into the millions of horsepower, it is nearly all going to waste, while the Chicago, Milwaukee & St. Paul scheme was based on a maximum supply of 200,000 h.p., some of it is furnished by electrical plants which an output as low as 4,000 h.p. Unlike the majority of people who want to see every mile of railway in Canada electrified at once, without regard to capital cost, or ultimate economy in relation to traffic and operating conditions, Mr. Deslauniers stated frankly that it might seem unduly venturesome for Canada, with its large public debt, to make the large capital expenditures which would be necessary for electrification. He believed in the final economy of the proposition, however, and proposed to overcome conditions of low railway traffic density by having domestic and industrial requirements for power supplied by the railway power lines, and presented figures to show that the cost of lighting and heating homes, and furnishing power for industries, would be decreased greatly by this method. He gave figures to show the cost of coal, and stated that "it takes approximately two pounds of coal to produce one horsepower hour." If his remark was intended to be applicable to power produced by steam locomotives only, we cannot refrain from stating that he has, presumably unintentionally, flattered the great majority of them. Basing his remarks on his experience with power companies in Quebec, he stated that it would be advisable for the power to be developed by the Government, and that private power companies should not be considered. As a further argument for the introduction of large scale electrification, he stated that he knew that the C.P.R. had, two years ago, almost concluded a contract with the Shawinigan Power Co. for the supply of power for the electrification of the Quebec-Montreal line.

In the discussion which followed, W. E. Maclean, M. L. for South York, Ont., advanced arguments for railway electrification, advocating Government control of power development and the electrical operation of the national lines. He pointed out that freight rates depend primarily on operating costs, and was

confident that electrification would reduce operating costs materially. He expressed the hope that when the Minister of Railways commences his consolidation of the national properties, he will be in a position to take all the power the Ontario hydro electric system can spare, and proceed at once to get all the Ontario portions of the national lines equipped for electric operation.

Paul Mercier, for Westmount-St. Henri, Montreal, stated that his constituency suffer severely from the dense smoke from locomotives, and that great benefit would doubtless ensue in connection with public health and child welfare if Mr. Deslauniers' resolution were adopted.

Hon. W. C. Kennedy, Minister of Railways, stated that he had discussed railway electrification with the Canadian National Rys. management, and that the management is keenly alive on the subject. It is, however, felt that the expenditure necessary to introduce large scale electrification at present would be unduly large, but he assured the members that the management is interested and sympathetic, and when the time is opportune, proper action will be taken.

Mr. Deslauniers then withdrew his motion.

Freight and Passenger Traffic Notes.

The White Pass and Yukon Route has transferred its Vancouver offices from 603 Hastings St. West, to 211 Winch Building.

The C.P.R. s.s. Empress of Russia carried 500 tons of British Columbia potatoes to Hong Kong recently, for reshipment to Manila.

The Canadian National Rys. and the G.T.R. announce that tickets issued between Quebec and Montreal reading via C.N.R. or G.T.R., will be honored on either railway.

The C.P.R. Trans-Canada Limited train from Montreal and Toronto to Vancouver, will resume running on May 21. The running time will be 92 hours from Montreal, and 88 from Toronto.

The C.P.R. will, a press report states, in conjunction with the Minneapolis, St. Paul and Sault Ste. Marie Ry., resume operating trains 13 and 14, between Vancouver, Minneapolis, St. Paul and Chicago, on June 24.

Annapolis Valley, N.S., apple growers report recently that 6,204 carloads representing 1,295,900 barrels of apples of the 1921 crop have been shipped to Halifax for export, and that about 15,000 barrels were still to be shipped.

The Canadian National Railways will, it is said, make very little change in the times in which the train service in the Quebec areas is concerned this summer, but the summer train service will be put in operation May 10, instead of June 25, as heretofore.

F. Mooney, Assistant General Freight Agent, Canadian National Rys. Quebec, is reported to have said April 6, that way freight was heavy on the C.N.R. Lines, and that shipments of timber products had increased 25% since January, on lines under his jurisdiction.

The Atlantic, Quebec and Western Ry., and the Quebec Oriental Ry., which give connection between the Canadian National Rys. at Matapedia, and Gaspe,

are reported to have carried on an uninterrupted service during the winter, and that on only one occasion did the Gaspe train fail to make connection with the C.N.R. Ocean Limited at Matapedia.

The Delaware and Hudson Co., which operates a through train from Windsor St. Station, Montreal, to the Grand Central Station, New York, has put in operation a new and accelerated time table for the New York Limited. The train leaves Montreal at 9 p.m., instead of 8.20 p.m., and arrives in New York at 7.30 a.m., as heretofore.

The Edmonton, Dunvegan and British Columbia Ry., operated by the C.P.R., put into effect recently, through traffic, on live stock from all points on the line to Calgary, Alta., and Winnipeg, which reduced rates 2c. per 100 lbs. Heretofore the custom was to bill shipments of live stock from points on the line to Edmonton, where they were rebilled to destination.

The Northern Navigation Co.'s passenger traffic on the upper lakes will be opened May 1, when the s.s. Hamonic will leave Sarnia, Ont., for Port Arthur and other ports, to be followed by the Huronic on May 6. The Noronic will be put into service later in the season. Special trains will be operated between Toronto and Sarnia, in connection with the steamships.

The Chicago, Milwaukee & St. Paul, the Chicago & Northwestern, the Chicago, Rock Island & Pacific, and the Chicago, Burlington & Quincy have placed in effect home-seekers' rates of a one way fare, plus \$2. for the round trip, effective on the first and third Tuesdays in each month until November. Tickets will be good for 21 days, and liberal stopover privileges will be granted.

The Alberta and Great Waterways Ry. shipped out during the winter the catch of May, when the company's operating of Buffalo Lake, 80 miles east of Cheecham, Alta. Forty-two teams were employed in transporting the fish to the railway. The total shipments are not reported, but one of the companies is said to have shipped 1,260,000 lbs. of whitefish, requiring 63 cars for its transportation.

Railway Rolling Stock Orders and Deliveries.

The C.P.R. has bought one 80,000 lb. sealed tank for its Western Lines.

Canada Crossings Co. has ordered 120 standard tie cars from Canadian Car & Foundry Co.

The New York Central Lines are reported to have ordered 75 switching locomotives and 16,000 freight cars.

The C.P.R. has received 2 steel sleeping cars from its Angus shops, Montreal, the frames having been built by National Steel Car Corporation.

The G.T.R. has given an order to the National Steel Car Corporation for rebuilding 250 refrigerator cars, including new underframes.

The Midland Ry. Co.'s Chairman announced at the annual meeting in London, Eng., recently, that negotiations for amalgamation were proceeding with the London & Northwestern Ry. and five other companies, and that the total combined capital would be \$527,000,000.

Edgar R. Mills, Night Locomotive Foreman, Canadian National Rys., Brandon, Man., writes:—"I greatly enjoy reading Canadian Railway and Marine World each month."

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway, Marine, Shipping, and Railway, Harbor and Canal Contractors' Interests.

Official Organ of various Canadian Transportation Associations.

Published on the first of each month at 70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager

Assistant Editors, John Keir, Donald F. Keir and Edwin Windfeld

United States Business Representative,
A. Fenton Walker, 143 Liberty St., New York.

Member of
Associated Business Papers, Audit Bureau of Circulations, Canadian National Newspapers and Periodicals Association, Canadian Press Association.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage, Canada, United Kingdom, most other British Possession (except Australia), and to Mexico, \$2 a year. Extra postage to United States, 50c. a year; to other foreign countries, except Mexico, \$1.50 a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or post office money order. If remittance is made by cheque, 15 cents should be added to cover cost of collection, unless cheque is payable at par in Toronto or Montreal.

ADVERTISING RATES furnished on application. **ADVERTISING COPY** must reach the publishers by the 10th of the month preceding the date of the issue in which it is to appear.

TORONTO, CANADA, MAY, 1922.

Editorial Notes.

Exaggerated Advertising.

Exaggeration in advertising should be avoided by railways as well as by any other advertisers. For years Muskoka has been advertised as the "Highlands of Ontario," while as a matter of fact Lake Muskoka is only 733.7 ft. above sea level and Lakes Rosseau and Joseph 742.2 ft. The Muskoka district is not even as high as some points between Toronto and Lake Simcoe; the Toronto and York Radial Ry.'s crossing of the Holland River being 764 ft. above sea level, and that railway rises to 989 ft. at Jefferson, while the G.T.R. Toronto-North Bay line rises to 1,002 ft. at 26.3 miles north of Toronto. These figures are dwarfed by many other places in Ontario, of which only a few need be noted, viz.—the highest point in the province, Tiptop Hill, near Michipicoten, 2,120 ft.; Dundalk, on the C.P.R., Toronto-Owen Sound line, 1,706 ft.; Orangeville Jct., 1,613 ft.; Orton, Wellington County, 1,528 ft.; Orangeville, 1,395 ft.; Hillsburg, 1,405 ft.; Caledon station C.P.R., 1,356 ft.; Fergus, 1,355 ft.; Cataract Jct., 1,252 ft.; Stratford, 1,211 ft.; and Guelph, 1,143 ft. Algonquin Park has been, and is being, persistently advertised as 2,000 ft. above sea level, but Algonquin Park station is only 1,418.9 ft. above, and the Highland Inn, close to the station, is only a few feet higher, while the summit on the G.T.R. line through the park, 17.8 miles farther west, is only 1,080 ft. The natural beauty and the healthfulness of Muskoka and Algonquin Park are sufficiently great in themselves to prove irresistibly attractive, and there is no necessity for exaggeration, and nothing to be gained by it in the long run.

Gross Discrimination Proposed.

At least one member of the House of Commons, W. M. McQuarrie, New Westminster, B.C., has a badly perverted idea of how publicly owned utilities should be carried on, and how competing privately owned ones should be treated, as evidenced by a question he asked in the House of Commons recently, as to whether the Government intends to make arrangements to have all mails carried by the Canadian National Rys. where possible. The Postmaster General replied that on Dec. 13, 1920, the then Minister of Railways issued instructions that the Post Office Department should see that the Canadian National Rys. and the C.P.R. were fairly treated in connection with the mail service, and that neither be given an unfair advantage, and added that in every case the Department is governed by the requirements of the postal service in the territory served by the railway, and that any further intention on the part of the Government will be announced in due course. We cannot imagine for a moment that the established policy will be disregarded. To act on Mr. McQuarrie's suggestion would be a gross outrage.

Excessive Railway Building.

The Toronto Globe, in discussing the railway situation, says:—"One cause of delay is that railway building was carried on in advance of the needs of the country." But the Globe was one of the principal advocates of the building of the National Transcontinental and the Grand Trunk Pacific lines, for neither of which was there any necessity, as long

before they were conceived the Canadian Northern Ry. had commenced its transcontinental line, which, with the C. P.R., would have given all the accommodation required for some years to come.

Government Steamship Losses.

When considering what the Canadian Government Merchant Marine lost in operation in 1921, it should be borne in mind that the United States Shipping Board's Chairman stated recently that the U.S. Government is losing \$50,000,000 a year on a fleet of 1,442 steel ships, of which only 421 are in operation.

Freight Rates and the Crowsnest Pass Agreement.

Hon. J. A. Stewart, Lanark, Ont., asked in the House of Commons April 19:—"Is it the intention of the Government to introduce legislation at this session to continue the provisions of the Railway Act, 1919, sec. 325, sub-sec. (5), or in any way further suspend the freight rate provisions of the Statutes of Canada 60-61, chap. 5, passed June 29, 1897, which would become operative on and after July 6 next, or to repeal or vary or in any way amend said chap. 5?"

Premier King replied:—"The subject of freight rates is being referred for consideration to a committee of the House, and is receiving the consideration of the Government. Should it be found necessary or desirable to introduce legislation at this session, intimation to this effect would be given in due course."

The Minister of Railways gave notice April 24 that he would move in the House of Commons that notwithstanding that the regulation of railway rates is a matter within the jurisdiction of the Board of Railway Commissioners, it is advisable that a select special committee be appointed to make enquiry into the question of railway transportation costs, it having been disclosed by recent conferences held between the Government and the chief executives of the various railways with respect to the reduction of freight rates that the representatives of the railways deem it inadvisable immediately to reduce rates on basic commodities because of the expiration, on July 6 of the suspension of the Crowsnest Pass agreement; that, in the circumstances, it is advisable to afford opportunity to all interested parties to submit their views upon the subject matters of the enquiry to the said committee, with particular regard to the effect of rates established by the Crowsnest Pass agreement upon Canadian National Rys. and other lines, as well as upon agricultural development and Canadian industry generally; and that the said committee shall have power to send for persons, papers and records, including the minutes and evidence taken before the committees of this House in previous sessions, to examine witnesses under oath, and to report from time to time.

Railway Lands Patented—Letters patent were issued during March for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Canadian Northern Ry.	Acres 185,67
Canadian Pacific Ry. grants	8,19
Canadian Pacific Ry. roadbed and station grounds	6,25
Total	501.11

The G.T.R.'s Ottawa Station Assessment.

The Supreme Court of Ontario, Appellate Division, heard arguments 29 and 30, on the City of Ottawa's appeal against the Ontario Railway and Municipal Board's decision with respect to the assessment of the G.T.R.'s central station in Ottawa by the city. The Canada Atlantic Ry. Co., control of which was acquired by the G.T.R. Co. in 1904, had leased from the Crown the lands upon which the present central station stands, and undertook to make sufficient provision to allow other railways to use the station for passenger purposes. Under this provision the C.P.R. Co. and the Ottawa and New York Ry. Co. obtained access to the station about 1898. In 1907 the Canada Atlantic Ry. Co. made an agreement with the Dominion Government in regard to the erection of a new station, and in the same year made an agreement with the city, under which the city was to give the railway a fixed assessment for 20 years of \$150,000 on the central union passenger station and the lands used in connection therewith. The agreement provided that any part of the station "not used for railway purposes," should be assessed in the ordinary way and that any of the lands "used for other purposes than passenger train terminals or passenger business, or purposes incidental thereto," should cease to enjoy the benefit of the fixed assessment and be assessed at their actual value. Matters went along for a number of years, and upon the notice of assessment for 1922 being served in 1921, the G.T.R. Co. appealed, objecting to the assessment of four portions of the station, viz., those occupied by the Canadian National Express Co. and the Dominion Express Co. adjoining the train shed, and the portions occupied by the restaurant and the Canadian Express Co.'s main building. These assessments amounted altogether to \$98,000, in addition to the fixed assessment of \$150,000. The city's court of revision affirmed the assessment, and this was confirmed on appeal to the county judge. The company appealed to the Ontario Railway and Municipal Board, which ordered the items named to be struck out of the assessment. The city's main contention was that the agreement which had been made went beyond the powers given in the Ontario statutes allowing the city to fix an assessment, and also that the building adjoining the train shed, occupied by the Dominion Express Co., had not been shown in the original plans of the station approved of by the city, and, therefore could not be included in the fixed assessment, even if used for purposes within the meaning of the agreement. The G.T.R. Co. contended that accommodation for express and restaurant purposes is an ordinary and proper accessory of a passenger station and comes within the description of a central union passenger station, and the words "passenger purposes," used in the statute. Judgment was reserved.

Canadian Northern Ry. Subsidies.—The Minister of Militia and Defence stated in the House of Commons, April 3, in answer to W. Irvine, Calgary East, A. I., that the first cash subsidy was paid to the C.N.R. by the Dominion Government, Sept. 7, 1900, and that the total amount of cash subsidies paid to the C.N.R. by the Government was \$31,870,016.56.

Canadian National Railways' Insurance.

The Minister of Railways gave the following information in the House of Commons on March 29, in answer to E. M. Macdonald, Pictou, N.S. The following insurance is carried on the railway properties named:—Canadian Northern Ry., \$12,590,338. Grand Trunk Pacific Ry., \$22,822,720.00, effective under general schedule at Feb. 9, 1922. Canadian Government Rys. No insurance is carried on former Canadian Government railway lines such as the Intercolonial and, latterly, the Transcontinental.

The insurance was placed on the following dates:—Canadian Northern Ry.: Dec. 1, 1919, and additions made since to schedule of insurance. Grand Trunk Pacific Ry.: Feb. 9, 1921, for one year, continued on basis of pro rata additional premiums until Dec. 1, 1922, when Canadian Northern Ry. general schedule will also expire.

The insurance was placed with the following companies and for the following amounts:—Canadian Northern Ry.: Grand Trunk Pacific Ry.: Union Assurance Society of London, Eng., 20%; Western Assurance Co. of Canada, Mackenzie, Ltd., Montreal.

The insurance was placed through the following brokers:—Canadian Northern Ry.: Toronto Insurance and Vessel Agency. Grand Trunk Pacific Ry.: Hare & Cornhill Insurance Co., 37%; Lloyd's of London, 43%.

The Minister of Militia and Defence stated in the House of Commons, on April 3, in answer to E. M. Macdonald, Pictou, N.S., that the amount of annual premium payable on the \$12,590,338 insurance carried on the Canadian Northern Ry. property is \$506,656.52. The amount of annual premium on insurance carried on Grand Trunk Pacific Ry. property is \$362,098.65.

Inspection of Railway Steam Boilers.

The Board of Railway Commissioners issued a circular April 11, respecting general order 330, re inspection of railway steam boilers, and enclosed a draft order requiring all railway companies to show cause why the recommendations of the Board's Mechanical Expert, as set forth in the draft, should not be put into full force and effect. The draft is as follows:

In pursuance of the powers conferred upon it, and for the further carrying out of general order 330 re the inspection of railway steam boilers, other than locomotive boilers: it is hereby ordered that all railway companies under the Board's jurisdiction file with the Board's Chief Operating Officer, within 30 days from this date, a list showing the numbers of all stationary boilers owned by them; and also file from time to time with the Board's Chief Operating Officer a list giving the numbers of any additional stationary boilers that may be purchased, built or leased by the said railway companies."

Quebec wants Railway Divisional Headquarters.—The Quebec Board of Trade's council has passed a resolution urging upon the Minister of Railways that the headquarters of one of the projected "divisions" of the Canadian National Rys. administration be established in Quebec City.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry., System, Grand Trunk Pacific Ry., and Canadian Government Railways, including the Intercolonial Ry., Prince Edward Island Ry. and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government.

	Revenue	Expenses	Net deficits
Jan.	\$5,210,001	\$10,433,044	\$2,223,145
Feb.	\$7,650,748	\$10,026,572	2,375,829
			2,986,998

\$15,861,441 \$20,460,136 \$4,598,992 \$5,850,056
Decr. \$6,138,188 \$6,390,252 \$1,251,064
Approximate gross earnings for March, \$9,956,702, and for two weeks ended Apr. 14, \$18,157,176, against \$10,539,861 and \$4,399,544 for same periods 1921 respectively.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1922, compared with those for 1921. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures from the C.P.R. including the Esquimaux & Nanaimo Rys., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net	Decreases
Jan.	\$13,875,915	\$14,028,948	\$2,157,948	
Feb.	\$11,303,693	\$10,649,205	\$654,488	\$58,904

\$22,641,668 \$21,508,703 \$1,137,965 \$31,852
Decr. \$4,592,749 \$4,275,897 \$316,852
Approximate gross earnings for March, \$13,095,000, and for two weeks ended Apr. 14, \$25,689,000, against \$14,466,000 and \$6,262,000 for same periods 1921.

Grand Trunk Railway.

Approximate gross earnings for January, \$7,339,113; February, \$7,171,691; March, \$8,420,021, and for two weeks ended Apr. 14, \$3,252,311, against \$6,102,408 for January, \$7,732,242 for February, \$7,016,196 for March, and \$4,743,266 for two weeks ended Apr. 14, 1921.

Electric Haulage in Mines.—Under the Nova Scotia Coal Mines Regulation Act, 1918, the Minister of Public Works was authorized to make regulations respecting the use of electricity in mines. The general regulations affecting coal mines were made by the Minister of Public Works under the act of 1908 as amended by the act of 1915. Under these acts there was a general regulation as to the use of electricity, which has now been revoked, and a new section has been inserted dealing fully with the use of electricity in mines for haulage and all other purposes.

C.P.R. Lectures.—W. L. Payn, of the C.P.R. Publicity Department, is giving a series of lectures in the West of England on Canada. These are illustrated by moving pictures of Canadian scenes, etc. At a recent lecture at Panzance, Cornwall, the chairman was Captain F. D. Luge, justice of the peace and county councillor, and at one time C.P.R. Marine Superintendent in London.

C.P.R. observation cars will, it is stated, be used on the Italian State Rys. for sight-seeing, by the delegates taking part in the International Economic Conference at Genoa. These cars were operated on the railways in the Austrian Tyrol prior to the war and later sold to the Italian Government.

Bureau of Railroad Time Service.—A press report states that W. F. Hayes has been appointed General Time Inspector, Bureau of Railroad Time Service, vice W. G. Ball, deceased, with O. H. Pyper in charge at Winnipeg.

The Pennsylvania Rd. has authorized the buying of 190 passenger cars, 35 combination baggage and passenger cars, and 25 combined baggage and mail cars, of all steel construction.

The Minister of Railways' Statement on Government Owned Railways.

The Minister of Railways and Canals, Hon. W. C. Kennedy, made the following statement in the House of Commons, April 11:—When the Department's estimates were presented to the House on a recent occasion, at the request of the former minister (J. A. Stewart) and the leader of the Opposition I withdrew them for the moment in order that I might later present the annual statement. I am now in a position to present to the House the annual statement of the Minister of Railways with respect to the operation of the nationally owned railways of Canada. The period under review is the 12 months which ended Dec. 31, 1921, the calendar year now being the fiscal year of all Canadian railways, including the government lines, whose year formerly ended on March 31. Although a year of depression in trade, with decreased tonnage and less travel, and with reduced rates when contrasted with the previous year, the nationally-owned roads were able, largely owing to drastic curtailment of expenditures, to make an improved showing over 1920.

As the government-owned railways are still being operated in two groups, by two separate boards, though with such co-ordination of operation as has been possible under separate management, it is again necessary to make separate statements concerning the operations of the Canadian National lines, and of the Grand Trunk lines. But before dealing with the separate reports, I would like to say that seemingly the outstanding feature of 1921 operation was the improvement in the position of the Canadian National-Grand Trunk combination. Those roads comprise approximately 52% of the railway mileage of Canada, and in 1920 they did 52.21% of the railway business of the country as reflected in the gross earnings of the transcontinental lines. During 1921, a year of depressed trade and falling railway revenues, the Canadian National-Grand Trunk lines increased their percentage of gross earnings from 52.21 to 54.22%. Applying these percentages to gross earnings of the transcontinental lines, it means that the nationally-owned lines increased their proportion of the available railway business and improved their position as carriers during the year to the extent of about \$8,500,000.

Canadian National Railways.—The operated mileage of the Canadian National lines at Dec. 31, 1921, was 17,338. During 1921, 173 miles of new line were turned over to the operating department for permanent operation and, in addition, 65 miles were turned over for operation on behalf of the construction department, a total of 238 miles. The mileage comprises the following units:—

Intercolonial Ry.	1,670
Prince Edward Island Ry.	276
Branch lines, including the leased St. John & Quebec Ry.	315
	2,461
Transcontinental Ry., including Lake Superior Branch	2,007
Hudson Bay Ry.	211
	2,221
	4,682
Canadian Northern Ry. System	9,900
Grand Trunk Pacific Ry.	2,756
	17,338

The average mileage operated in 1921 was 17,064. The gross earnings were \$126,691,455.72, an increase of \$1,049,703.41 over 1920, notwithstanding decreased traffic to the extent of 4,000,000

tons of freight and 1,715,625 passengers. The National system is said to be the only transcontinental system in America whose earnings in 1921 from the increased freight and passenger rates established in Sept. 1920, were not entirely offset by the loss in tonnage and passengers. Operating expenses were \$142,784,357, a decrease of \$19,700,365, leaving a loss on operation of the system of \$16,092,901 for the year, compared with \$36,842,970 for 1920, or an improvement in the operating result of \$20,750,068. It is claimed on behalf of the management that this reduction was not made at the expense of the property, and that deferred maintenance and betterments made during 1919 and 1920 were reflected in 1921 by providing more economical operating conditions, while increased efficiency of the working forces enabled more work to be done by fewer employees.

The year saw a big slump in railway traffic following the decline in trade which set in during the closing months of 1920. There was a decline in the movement of all commodities, with the exception of wheat. The grain movement of that season continued into January and February and kept the national lines as a whole from very seriously feeling the loss in total traffic until March, when instead of the increase which this month usually shows over January and February, there was a serious decline in car loadings. The drop continued through April, reaching the lowest levels in the first two weeks of May. June and July, however, very little improvement, and it was not until half way through August that any pronounced upward tendency was shown. That month a surplus of \$47,231 on operation was recorded. In September it grew to \$504,174, in October to \$1,036,130, and in November it was \$734,149. In December the loss was \$1,114,794. What seems to have happened is that, as there was no car shortage, the grain crop of last season was handled as it was harvested, and traffic was restricted to the autumn months which ordinarily was spread over much of the winter. This would seem to account for the light traffic of the first couple of months of the current year.

As members will no doubt be interested in seeing the loss on individual lines, I will hand in with other detailed figures at the conclusion of my remarks, a statement showing the individual deficits for 1921, as contrasted with 1920. From this it will be seen that the Canadian Northern was able to cut its loss by about \$10,000,000, the Intercolonial by \$5,000,000, the Grand Trunk Pacific by \$8,000,000, while the transcontinental, the loss on which had been almost \$3,000,000, has a deficit of less than \$500,000. The increase in deficit of certain of the branch lines, especially those more recently acquired, was due to the necessity to bring these roads up to Canadian National branch line standard.

The greatly improved showing of the Grand Trunk Pacific is attributed to the fact that for a full year it has been operated as an integral part of the Canadian National System, and is one of the results of co-ordinated operation of these western lines under one management. By that co-ordination, the loss of \$10,000,000 on a gross of \$14,000,000 in 1920 was turned into a loss of \$4,000,000 on a gross of \$16,000,000 in 1921.

Conforming to standard railway accounting, this year's statement shows tax accruals, which swell the net operating deficit by \$1,500,000, after which non-operating income (car rentals, rental of joint facilities, express, mails, elevators, etc.) is taken into account. This in turn is affected by deductions from gross income (hire of equipment, joint facilities, etc.) which brings us to the net deficit, \$15,896,018, before taking fixed charges into account.

In the case of the Canadian Northern it will be seen that the fixed charges are split to show those due the public, who invested in securities before or since the taking over of the roads, and those due the Government on loans and advances. The difference between these two classes of fixed charges is that the interest due the public is paid—by the Government—and the interests due the Government is not paid, but becomes an added liability of the railway to the Government. It is, however, not compounded.

The Grand Trunk Pacific fixed charges are shown as those due the public, interest due the Government, and in addition, interest which has accrued on receiver's certificates and interest due the G.T.R. Those due on receiver account are for advances of all kinds rendered necessary to meet deficits and other obligations since the Minister of Railways was appointed receiver in March, 1919. Those due the G.T.R. are on account of loans which that company made to the Grand Trunk Pacific and subsidiaries, and also on account of interest on loans by the Government to the Grand Trunk Pacific and guaranteed by the G.T.R., all of which are interest charges against the Grand Trunk Pacific.

It has been submitted by the management that, inasmuch as large sections of the national lines serve the newer portions of the country, and thus assist in their development, and as a considerable portion of the advances made by the Government has been for maintaining the property and carrying it through what might be called the pioneer stage, interest on such advances should be suspended for a certain definite period, and that the fixed charges be limited for the present to interest payable to the public. On the other hand, it has been alleged that our railway accounts are misleadingly caused in the case of the Intercolonial and the Transcontinental, interest on capital account has not been charged up and compounded annually. Matters of this kind will be referred to the incoming administration for consideration and report to the Government.

The total increase in fixed charges, both Canadian Northern and Grand Trunk Pacific, from \$33,194,239.96 in 1920 to \$40,777,915 in 1921, reflects the increased interest charges during the year, to which I shall refer in a moment. After these fixed charges are taken into account, the total deficit for 1921 amounts to \$56,673,934 as against \$67,505,059 for 1920, and which was erroneously stated at the time to be \$70,351,734, owing to the fact that available figures were incomplete when the Minister made his announcement. I have endeavored to have the figures I am using today as exact as possible.

Mr. MEIGHEN: There was a correction made to \$69,593,441. I understand that now it is given as only \$67,000,000 odd.

MR. KENNEDY: I am now giving the correct figures. The Minister in his statement last year gave the figures as \$70,331,734, which was later corrected to \$69,000,000. That is due to the fact that the figures were incomplete at that time, and that was also one of the reasons why I asked him to wait for my statement. The auditors, G. A. Touche & Co., have completed their work on the Canadian Northern Ry. accounts and the management has their certified balance sheet, so that the figures with respect to the Canadian Northern are final and complete. Marwick, Mitchell & Co. are still working on the Grand Trunk Pacific books, and G. A. Touche & Co. on the Canadian Government Ry. accounts at Moncton. However, they expect to complete their audit in a few days, and the management feels that the accounts as submitted may be regarded as final.

During 1921, advances were made by the Government to the railways in the national system as follows:

Canadian Government Ry.	\$5,792,896.48
Canadian Northern Ry.	\$64,449,245.24
Less repaid from proceeds of securities	27,927,119.40
Grand Trunk Pacific Ry.	\$6,722,123.84
	\$2,750,500.33

A total of \$51,785,522.65

The advances for the year were applied on construction and betterments, equipment, repayment of loans (including equipment trust obligations) operating deficits and fixed charges. The total advances to Canadian Northern Ry. Co. and Grand Trunk Pacific Ry. Co. to Dec. 31, 1921, are as follows:

	Canadian Northern	Grand Trunk Pacific
Total advances to Dec. 31, 1920	\$214,966,123.64	\$72,099,303.33
Advances during 1921	\$6,722,123.84	\$2,750,500.33
Total advances to Dec. 31, 1921	251,688,247.48	82,450,303.56

The above figures represent cash advances only and do not include accrued interest due to the Government, which, in the case of the Canadian Northern, amounts to \$35,191,210.81, and, in the case of the Grand Trunk Pacific, to \$14,729,238.80, of which \$6,741,381.26 was prior to the appointment of the Minister of Railways as receiver, in March, 1919, and \$7,987,857.54 since.

During 1921, an issue of \$25,000,000 Canadian Northern Ry. 5½% 25-year sinking fund bonds guaranteed by the Dominion was disposed of, the proceeds going to the Government in repayment of advances. These bonds, which, plus exchange, brought \$26,228,163.03, together with a balance of \$1,466,044.16 from the bond issue of December 1920, and a payment of \$232,912.21 on account of series B equipment trust issue, make up the \$27,927,119.40 referred to a moment ago as having been repaid to the Government. There were also retired during the year \$2,000,000 5% Duluth, Rainy Lake and Winnipeg Ry. bonds guaranteed by the Canadian Northern Ry. Co. and \$3,650,000 Canadian Northern Ry. 5% guaranteed notes. These were provided for out of an issue of \$25,000,000 Canadian Northern Ry. 7% 20-year bonds, sold in the New York market in Dec. 1920.

Wages, Fuel and Other Operating Costs.—I would now like to refer briefly to certain features of the year's operations. Wages and fuel still remain the principal charge upon railway revenues. The total pay-roll in 1921 was \$88,755,060, of which \$82,381,597 was chargeable to operation; the balance, being for betterments, was chargeable to capital. The national railways used 3,544,200

tons of coal, about 300,000 tons less than in 1920, and the coal bill was \$21,391,215. When operating revenues amount to \$126,691,455, and wages and fuel combined require \$103,642,575, the balance, roughly, \$23,000,000, is of course insufficient to meet other operating charges totalling \$39,000,000. For that reason, the operation ratio in 1921 was 112.90. In other words, it took 112.9c. to earn \$1. In 1920, the ratio was 129.32. That year wages took 78.61c. of every revenue dollar, locomotive fuel 18.79c., and other expenses 31.92c. In 1921, the distribution was, wages 65.03c., locomotive fuel 16.88c., and other expenses 30.79c.

Out of every dollar spent in 1921, 23.63c. went into maintenance of way and structures and 22.09c. into maintenance of equipment. Transportation by rail, (supplies, maintenance, train movement, station employees, yards, terminal telegraphs, etc.) absorbed 50.19c., and transportation by water, 0.08c., (car ferries and Grand Trunk Pacific steamships). The Traffic Department (soliciting, etc.) 1.45c., general (general officers, law, insurance, etc.) 2.16c., while transportation for investment (the cost of moving the railway's own materials for betterments, new construction, etc.) amounted to 1.39c.

Operating costs were high in Jan. and Feb., 1921, due to the higher wage scale which was adopted in Sept. 1920, retroactive to May 1, the result of the Chicago award. When traffic commenced to fall away forces were reduced and by the end of April the staff showed a reduction from 60,500 in 1920 to 51,000 in 1921. This staff reduction was maintained until the end of the year. It ran nearly 10,000 below 1920 through May, June and July, averaged about 6,000 less in August, September and October, and about 5,000 less in the last two months of the year. The reduction of operating expenses by \$20,000,000 is a welcome change, as in recent years it has been all the other way. Operating expenses of 1920 increased by more than \$37,000,000 over 1919; those of 1919 increased by \$27,000,000 over 1918.

The total pay-roll, including betterments, was \$88,755,060 in 1921, against \$105,109,808 in 1920, a decrease of \$16,354,748. The reduction in the number of employees and of the rates of pay from July 16, 1921, is estimated to account for \$12,775,000 of this, and the balance would be betterments. It has been customary to quote for comparative purposes the increase in the average railway wage, which grew from \$713 in 1915 to \$1,633 in 1920. In 1921 the average wage was \$1,471.35, but the comparison is of little use in contrast with full employment years, as in 1921 decreased train service caused lessened mileage per man in the running trades, and part-time work in shops with permanent force, rather than full time with reduced force, materially decreased the average wage of the mechanical staff, while rigid curtailment of overtime was another factor. While this explanation shows the 1921 average wage to be of little use in comparison with other years, the fact remains that on reduced time, the average wage last year was still double what it was in 1915.

In accepting the reductions which the Canadian railways, acting in unison, made effective from July 16, 1921, the railway brotherhoods recognized the present labor situation and also accepted the principle of following in the defla-

tion stage the U.S. precedents which built up the war time wage scale. At present negotiations are under way looking to a modification of some of the working conditions that the railways feel to be difficult of application, resulting in excessive wages in some classes and the placing of expenses on the railways which are claimed to be unduly burdensome. It is recognized that railway wages must provide for a proper standard of living, but they should have reasonable relation to the importance and value of the work performed, and to wages generally. The management informs me that the labor situation has greatly improved; that the spirit of railway labor is better than it was; that labor has become more efficient and is doing more work and better work. I am glad to give expression to the management's views in that regard.

Self-propelled Cars.—A problem which in recent years has confronted railway managements is the question of providing suitable service on branch lines, at a cost not out of proportion to the earnings and capable of meeting in many cases motor car competition. For this the self-propelled gasoline car seems to be the most suitable. The Canadian National Ry. have been active in obtaining experience with this plan of operation. Much will depend upon the attitude of railway labor towards the self-propelled car, which could take care of branch line services, if expenses of operation are not made too costly in the matter of wages. In this effort to cut excessive costs, and yet provide reasonable service, the co-operation of railway labor is invited. As a matter of fact, these branch lines should not only carry heavy loads of operation, but from the competition of the motor car and motor truck, a competition which is increasingly felt each year by all railways.

Deflation of Prices.—While the trend in prices of materials and supplies is generally downward, the movement is slow, and prices continue greatly in excess of pre-war figures. Of course a drop in prices is not immediately reflected in operating expenses, due to the necessity to keep on hand large stocks of fuel and other supplies, which have to be charged out at purchase price until new stock begins to be used. The management estimates the reduction in the expenditure in 1921 to have been \$1,550,000; reduction on account of materials and supplies generally, \$1,300,000, and on fuel \$2,216,175. The average price of coal, which was \$36.05 in 1916, and \$7.46 in 1920, was \$6.91 in 1921. Coal purchases during 1921 amounted to 3,483,085 tons. Of this 2,505,389 were Canadian coal, costing on the average \$5.71, or \$14,320,504.53; and 977,696 U.S. coal, at an average price of \$6.47, and totalling \$6,324,450.94.

Coal Purchases.—The management states that in 1921 it did not purchase for the Intercolonial Ry. or ship to the Intercolonial Ry. east of Montreal any U.S. coal; that on the other hand, it took delivery of coal produced in the Maritime Provinces in 1921 to the extent of 1,184,015 tons. In addition to the coal taken by rail in the Maritime Provinces, it moved 281,959 tons of Nova Scotia coal up to Levis by water. It also took in through the port of Quebec, by water, 90,865 tons of Nova Scotia coal, and railed some of it as far west as Cochrane, Ont. The coal taken in by water at Levis and Quebec was included in the total of 1,184,015 mentioned. The

total quantity of U.S. coal purchased for use at Toronto and east during 1921 was 160,000 tons. Coal consumption on the Intercolonial in 1921 was about 20% less than in 1920. The management has now accumulated nearly four months' stock of coal, and eastern officials have been instructed that sufficient reserve has been secured and the railway is, therefore, no longer in the market for daily requirements.

Rolling Stock.—After the very heavy purchases of rolling stock and motive power in 1918, 1919 and 1920, it was not necessary to go into the market for equipment of any kind during 1921.

Construction and Betterments.—No work was done on eastern lines in the construction of new branches during 1921. All such work was confined to western lines. A number of branch lines and extensions were under way prior to the war, on which work was suspended, and the Government has since provided the National Railways management with money to go ahead with certain of these lines along which settlers were in bad way for railway facilities. A detailed statement of this construction work will be included with those which will appear as an appendix to these remarks.

The construction and betterment programme for 1922 is necessarily curtailed. There is in the west alone construction projected which would entail an expenditure of \$25,000,000 to bring to completion. In view of the financial condition of the country and the impending general re-organization of National Railways direction and management, it is felt to be better to confine construction and betterments for the present to the minimum and leave to the new board to advise as to what is essential or necessary in the matter of extensions. Briefly, this year it is proposed to finish active lines, up to the point to which track has been laid, at an estimated expenditure of \$1,286,164, with ballast, fence, telegraph line and buildings, and to make no extensions to any of them beyond the point where track is already laid. Details of this work will be given in connection with the estimates.

Grand Trunk Railway System.—I will now deal with the G.T.R. System which extends from Portland, Me., to Chicago, with an operated mileage of 4,776, of which 3,612 comprises what are known as the G.T. Canadian Lines, the New England lines, as the eastern U.S. lines are known, extend from Portland, Me., to Norton Mills, Vt., on the International Boundary, with an operating mileage of 172, while 992 miles embrace the operated mileage west of the Detroit and St. Clair rivers, in Michigan, Illinois and Indiana, between Port Huron, Detroit and Chicago.

In addition, there is operated under separate management, but controlled by the G.T.R. Co. of Canada, the Central Vermont Ry., with an operating mileage of 613, extending from New London, Conn., to Montreal, of which 463 is operated in the United States.

After taking into consideration railway tax accruals, uncollectible railway revenue, hire of equipment, joint facility rents and non-operating income items, the gross income, before deducting fixed charges, was in 1921 \$3,573,443.34,

against \$7,498,393.30 in 1920. The fixed charges for 1921 were \$19,245,583.68, against \$14,025,637.07 in 1920, making a net loss for 1921 of \$15,672,299.34, against a net loss for 1920 of \$6,527,243.77. The net deficits for 1921 and 1920 are apportioned as follows:—

Canadian lines	\$7,386,179.97	\$15,592,906
Western lines	4,797,177.55	1,985,156.94
New England lines	1,881,093.84	999,869.93
Central Vermont	1,607,836.98	445,326.74

\$15,672,299.34 \$6,527,243.77

The increase in the net income deficit of 1921 over 1920 of \$9,145,155.57 is due principally to variation in amount received under the guarantee of the U.S. Government following the return of the U.S. units of the system to corporate control on March 1, 1920, and to an increase of \$5,219,946.61 in interest on funded debt. The increase in fixed charges was caused by the inclusion of a full year's interest on guaranteed stock, which was from May 21 only in 1920, and increased interest on government loans and new issues.

In addition to the results as shown for the system comprising the Canadian lines, the Western lines, the New England lines and the Central Vermont, there are certain stock controlled subsidiary companies, the net results of whose operations do not wholly enter in the system net income. These companies are: Chicago, New York & Boston Refrigerator Co.; International Bridge Co.; Montreal Warehousing Co.; Terminal Warehouse Registered; Oshawa Ry.; Rail & River Coal Co.; Thousand Island Ry.; Montreal & Southern Counties Ry.; St. Clair Tunnel Co.; Grand Trunk Milwaukee Car Ferry Co. The net income of all these companies for 1921 was \$453,118.25, compared with \$163,639.65 in 1920. The amount taken into the G.T. R. accounts as dividends from these subsidiary companies was \$127,000 in both 1921 and 1920. The accumulated undistributed surplus of these subsidiaries was \$918,986.21 in 1921, compared with \$934,423.49 in 1920.

At Dec. 31, 1921, there was on hand locomotive and car stock, owned by the G.T.R. System, including the Central Vermont, as follows: Locomotives of all kinds, 1,503; passenger service cars of all kinds, 1,210; freight service cars of all kinds, 47,312; company's service cars of all kinds, 2,545.

The outstanding obligations as at Dec. 31, 1921 and 1920 respectively, of the G.T.R. System, including the Central Vermont Railway, bearing interest were as follows:—

	1921	1920
Government loans.....	\$73,702,164.42	\$21,840,808.62
Other obligations.....	\$34,683,462.32	\$38,434,369.72
Total	\$108,385,616.74	\$59,775,178.34

Because of the fact that the operations of the units of the railway system in the U.S. were subject to a guarantee by the U.S. Government in operating results for eight months in 1920, no proper comparison can be made for the system with the results of the operations for the 12 months of 1921. Comparisons, however, can fairly be made of the operations of the Canadian lines for the two years. These will be found in detail in the statements which form an accompanying appendix.

Revenue passengers carried on the Canadian lines in 1921 were 11,699,702, compared with 12,206,977 in 1920, a decrease of 4.39%. Revenue tons of freight handled in 1921 were 21,687,749, compared with 26,322,423 in 1920, a decrease of 17.61%.

With 26,322,423 in loss in tonnage was distributed over all commodities, excepting products of agriculture, but was most noticeable in coal, both anthracite and bituminous, which together constitute between 25 and 28% of the total tonnage. The average number of employees on Canadian lines in 1921 was 29,127, compared with 32,260 in 1920, and 24,457 in 1917. The average wage in 1921 was \$1,574.66, compared with \$1,661.54 in 1920, and \$914.80 in 1917. Of the total operating expenses of \$71,179,292.80 in 1921, \$42,149,952.50, or 59.22%, was the amount of the payroll. The corresponding figures in 1920 were: operating expenses, \$76,213,815.16; pay-roll, \$49,567,436.72; per cent. of operating expenses, 65.04. Total hours worked, including betterments, ordinary and joint facility operations, in 1921, was 68,545,640, compared with 82,178,337 in 1920. At rates in effect prior to the McAdoo award, the employees would have received, in 1921, \$23,374,063.24, compared with \$45,865,171.10 actually paid, an increase of 96.2%.

The decision of the U.S. Labor Board, known as the 13th decrease, which came into effect July 16, 1921, produced to Dec. 31, 1921, on G.T.R. Canadian lines a saving of \$3,035,112.06. Had the decision been effective throughout the full year, the difference in wage charges would have been \$6,306,198.88.

The G.T.R. System, exclusive of the Central Vermont, contracted for 2,795,000 net tons of coal during the coal year ended March 31, 1922, at an aggregate cost, including freight and duty, being \$15,288,900, or \$5.50 a ton. Of this amount, 2,675,000 tons had been delivered to March 31. The amount bought for Canadian lines was 2,030,000 tons at an aggregate cost, including freight and duty, of \$11,672,700, or \$5.75 a ton.

During the year ended Dec. 31, 1921, there was added to the investment account of the G.T.R. System \$26,772,057.15, apportioned as follows:—Canadian lines, \$24,709,000; U.S. Western lines, \$1,550,559.95; New England lines, \$44,277.94 (Cr); Central Vermont, \$474,920.13. Of the above total \$20,550,000 was for new equipment; \$2,100,000 for improvements to equipment; \$1,150,000 for increased weight of rail; \$800,000 for sidings, yards and spur tracks; \$350,000, investment of G.T.R. and Central Vermont in affiliated companies, and the balance, \$1,500,000, in new equipment, roadways, buildings, structures, etc.

The G.T.R. System accounts for the year ended Dec. 31, 1921, have not been audited by an outside firm of chartered accountants, as is the case with the rest of the roads embraced in the National system. The auditing has been done by the company's own auditors.

The Estimates.—It is not necessary to do more at this stage than outline the requirements of the railways so far as the estimates are concerned, and to leave detailed explanation for the consideration of the various items in columns B and C. Briefly, the amount to be voted on account of the railways for the fiscal year ending March 31, 1923, as provided for in the estimates, is \$97,220,000, compared with \$179,065,760 last session. This includes both Grand Trunk and Canadian National lines. For operating deficits \$21,123,897 is provided for 1922, against \$23,129,369 for 1921. The annual operating deficit on the Canadian National lines in 1921, as already stated, was \$16,092,901. Interest charges due the public require \$33,571,438. Last year

this item was \$35,871,195. For betterments \$30,261,286 is provided, against \$60,077,828 last year. Pending the organization of the new board and adoption of its policy as to necessary extensions, and also having in mind the general financial position of the country, the construction and betterments programme has been restricted to minimum requirements. Refunding securities in the hands of the public, for which \$39,241,700 was necessary last year, calls for \$11,129,910 this year. This refunding does not add to corporate capital indebtedness, but changes the form, the usual practice being to retire a maturing issue with a fresh issue bearing the Government's guarantee. Where securities are retired by government loans, the liability of the railway is transferred from the public to the Government. It is not necessary this year to provide for refunding securities in the hands of the Government, for which \$11,148,533 was included last year. The actual cash for operating deficits, interest charges to the public, and betterments, which is required to be provided for the current year is \$84,956,552, against \$119,078,000 last year.

Freight Rates.—In the speech from the Throne it was stated that conferences had been arranged between the railway authorities with respect to the reduction of rates upon basic commodities. A number of these conferences have been held, but, because of the uncertainty of the entire rate situation, the executives of the various railways feel that it is inadvisable, at this time, to reduce rates on basic commodities in view of the fact that the suspension of the Crownst Pass agreement ceases on July 6 next, and the Crownst Pass scale of rates will again become effective on the commodity named in the Crownst Pass special legislation of 1897; further, general order 308, of the Board of Railway Commissioners, dated Sept. 9, 1920, does not extend beyond July 1. The Government feels that the matter is of such great moment and of so much importance to the people of the country, who are not only interested in lower freight rates, but concerned as owners of more than 12,000 miles of Canadian railways, that the entire question should be placed before the members in such a way as to enable them to obtain the fullest possible information. With this in view, I propose, at an early date, to ask the House to appoint a special and representative committee to examine into the question of rates, with power to summon the executives of the various railways and otherwise place before the committee all available information for the consideration of its members. It would then be for the committee and for the House to take such action as, having regard to all the circumstances, shall commend itself to the wisdom and judgment of Parliament.

Reorganization.—The first step in the reorganization of the railways will be the establishment of a single representative board of directors for the unified control and co-ordinated operation of the government-owned lines, now directed and controlled by two separate boards and two different managements. This board will be thoroughly representative and will include in its number the most competent railway men, men of wide practical experience and training, and possessed of expert knowledge in the various departments of railway activity. I am aware that there has been criticism of the Government because the new board has not already been appointed.

We realize that, for the time being, we might conceivably save some money by the immediate termination of dual control and dual management; on the other hand, we also realize that by unwise or hasty selection of this most important body we might easily, in the long run, lose a great deal more.

It is well to bear in mind that it is intended to turn over to this board properties in which the public and the Government have invested \$1,582,500,000, (and this does not take into consideration cash subsidies amounting to \$4,000,000 nor land grants). Last year our railway executives spent \$343,458,420, made up as follows: Grand Trunk (operating), \$104,725,040; Canadian National (operating), \$142,784,857; cash voted in estimates, not including deficits, \$95,949,023. Total \$343,458,420. The total expenditure of the Dominion on consolidated fund account of 1919-1920 fiscal year was \$503,843,930, and in 1920-1921, \$502,600,000. It will be seen that the new Canadian National Rys. board will have the spending of more money than was expended by the Dominion on consolidated revenue fund account in 1920, and almost as much as was spent in the fiscal year ending March 31, 1921. Before turning these properties over, or entrusting any board with an expenditure which equal or may exceed the ordinary expenditures of the Dominion, we are anxious to know that the men to whom this vast responsibility is entrusted, and in whom this great confidence is to be reposed, are eminently qualified to successfully discharge such important duties. I am free to confess that in the short time thus far at our disposal, and with the necessarily limited investigation it has been possible to give the matter, we are not yet in a position to announce who will compose this board. In an undertaking of this magnitude, it is above all essential that we be prudent and careful. When we turn over these valuable railway properties with a view to giving government ownership and operation a fair trial, it is of the utmost importance that we place them in capable and honest hands, and in the hands of men who, as regards component parts of the system, will administer them without fear or favor, without thought of politics, and in the general public interest. For that reason, we prefer to be careful and prudent, adopting good business methods, and, in the final analysis, the country will benefit by it.

We are impressed with the necessity for bringing about the unification of the system as quickly as may be possible with due regard to the public interest. We keenly realize the magnitude of our responsibility. We know we are expected of us, and when we appoint our board we wish it to fulfil on behalf of the Government and the people of Canada those same high expectations. We propose to appoint this board under provisions of existing legislation to which, up to the present time, no effect has been given. This legislation provides for a single board of directors and for the inclusion of any lines of railway which may from time to time be vested in, or owned, controlled or occupied by His Majesty. When this legislation is brought into effect it automatically abolishes the present Canadian Northern board, and the Canadian Grand Trunk board, which succeeded the English directors in May last. The new board will be given the direction and control of the Grand Trunk Ry. properties, the Canadian Northern Ry., the Grand

Trunk Pacific Ry., the Transcontinental Ry., and the Intercolonial and Prince Edward Island Ry. and branch lines. I have mentioned these lines specifically so that there may be no question or misunderstanding as to where any or all of them stand so far as general direction and control is concerned. The board will be asked to examine fully for itself the existing situation, and after it has done so to make such recommendations as in its opinion will tend to the highest efficiency in the operation of these railways, without respect to political or any considerations other than the best and most approved railway practice. On their advice and recommendation will depend the division of the immense mileage into suitable operating districts or divisions, with regional headquarters which it is hoped will enable local or district matters to receive the consideration of officials most capable of understanding local requirements. Briefly, what will be aimed at will be centralization of general direction and control and decentralization in matters of local detail. As to this, I have had opportunity to consult the gentlemen who at present are operating and managing the roads, and while there are natural differences of opinion as to how the various lines might best be grouped for economic management and operation they are unanimously of the opinion that a regrouping and rearrangement is necessary if improved results are to be obtained. They agree that the large mileage should be divided into units, each with its own headquarters and under the direct control of a general manager who, while subject to the nearest of direction laid down for his guidance and action by the board at general headquarters, should have much wider powers on all matters pertaining to his own particular division or district than has recently been the case so far as the present two divisions of the Canadian National system are concerned. It will be for the new board, however, to advise just what form of administrative reorganization is the intention of the Government that the board in the exercise of its several duties and functions shall be free from interference, political or otherwise.

Upon the new board will devolve also the task of selecting and developing an executive composed of the best men in the existing systems, and such others as may be necessary, in order to combine the most suitable talent available for the management of the railways, and in order that economies may be effected which are desirable and necessary in the interests of the country and the public interest. It is hoped to build up a distinctly Canadian National personnel and in this the board will receive such co-operation and support from the Government as should secure for it, from the employees, the same loyal and faithful service which generally characterizes the relations of the average railway man with his own particular road. The Government and the board will want the good-will and co-operation of the employees, and we will wish every employee to feel that he will have, under government ownership, the same opportunities of advancement to even greater responsibilities and greater rewards than would have been possible under former restricted conditions. Such of the older officials and employees as have given long service, and who of necessity may have to be retired, will receive the benefit of superannuation.

Just one other point. There has been

such criticism of the statements presented by the Canadian National Rys. management, and also concerning the Grand Trunk, as to impair parliamentary and public confidence in the figures and statements which have been put out from time to time. Naturally, any confirmation or verification of accounts, or investigation or justification of managerial methods and practice is a matter to be dealt with by the incoming board, to whom these properties are being turned over, rather than by the outgoing. The Government is most anxious that as far as the financial affairs of these railways are concerned, not only Parliament, but the general public, may have confidence in any statements which may be issued by the new board. To that end, it is proposed to supplement the work of co-ordination by an investigation of the financial affairs and business methods generally of the railways passing under the control of the new board. This is a usual business precaution in the nature of stocktaking on the occasion of a change of administration.

Canadian Government Merchant Marine.—I expect, after the Easter recess, to be in a position to make a statement to the House concerning the operation of the Canadian Government Merchant Marine during 1921. Heretofore, that has been done by the Minister of Marine, but the late Government decided that the responsibility of the Minister of Marine and the Marine Department, should cease with the completion of the construction programme. As the ships are being operated in conjunction with the National Railways, and directed by the same board, and to a certain extent by executives common to both the railways and the merchant marine, on the Minister of Railways devolves the task of presenting the report of the operations for last year. I understand that the figures are now complete, and I hope, therefore, to present the report when we take up the Canadian Merchant Marine estimates.

Before taking my seat, I would like, following the usual practice, to hand in, for publication in Hansard, copies of the various statements which I have endeavored to analyze in the course of my remarks. I would request the consent of the committee to have them printed as an appendix to the statement I have just concluded.

Statements.—The House having given its unanimous consent, the Minister handed in the following statements:—

Grand Trunk Ry.—Comparison of results of operations of G.T.R. system, including Central Vermont Ry. for the years 1920 and 1921. Comparison of the principal and interest and the funded debt of the G.T.R. System, including the Central Vermont, for the years 1920 and 1921, showing the increase in principal and interest charges in 1921 over 1920. Comparison of the results of the operations of certain stock controlled subsidiary companies, the net results of whose operations do not wholly enter the net income of the G.T.R. system. Comparative operating and statistical information in respect of G.T.R. Canadian lines for the years 1920 and 1921. Statement showing for the G.T.R. System, including the Central Vermont, the locomotive and car stock on hand Dec. 31, 1921. Statement for the G.T.R. System, including the Central Vermont, showing the additions to investment during 1921.

Canadian National Rys.—Mileage statement; comparison of operating re-

sults, 1921 and 1920; operating results by months for 1921; comparison of operating deficits for 1921 and 1920; income and fixed charges for years 1921 and 1920; comparison of payroll showing amount of operating revenue paid in labor and average number of employees, 1921 and 1920; comparison of traffic 1921 and 1920, exclusive of electric lines; comparison of train mileage, 1921 and 1920; details of equipment on hand, Dec. 31, 1920, deliveries, retirements and position at Dec. 31, 1921; betterments carried out in 1921, and some of the larger works it is proposed to carry out during 1922; summary of construction carried out in 1921.

MR. MEIGHEN, leader of the Opposition, in the discussion which followed, asked what was meant by the statement that no further construction would be done this year, except "in cases where construction had already proceeded to the point where track was laid," and was informed by the Minister that it meant that no rails are to be laid this year on new lines. Mr. Meighen also asked what was meant by the statement that an investigation was to be conducted, and the Minister stated that the investigation into railway affairs would be conducted by the new board of directors in charge of the consolidated railway property, and that if it should be considered advisable to also have an investigation by a committee of the House, "very well."

J. A. STEWART, Lanark, Ont., who was Minister of Railways for a short time in the Meighen Government, traced the history of the present railway situation, and complained of delay exhibited by the new Government in placing its consolidation programme in operation. He excused the Meighen Government's failure to carry out its co-ordination policy by stating that when it was finally in a position to do so, it found itself in the midst of a general election, and it was felt that it would have been unwise to complicate the situation by the appointment of a new board. He referred to H. J. Logan, Cumberland, N.S., as having made a very strong argument in support of the return of the Intercolonial to political control, but he was pleased to see that the King Government had seen fit to leave that road in the consolidated National system. He attacked the Liberal party on its past railway policy, blaming it for all the railway ills, supposed and real, from which the country is suffering; he said it had been charged that the Conservative Government had encouraged the construction of the Canadian Northern into territory occupied by the Grand Trunk Pacific for the express purpose of destroying the latter road, and then gave a lot of figures and historical data to show that Sir Wilfrid Laurier and the Liberal leaders had supported the Canadian Northern venture fully as much as the Conservative leaders.

D. D. MCKENZIE, Cape Breton, N.S., stated that while a Conservative Government had been in control of the railway situation for 10 years and had accomplished nothing, it expected a Liberal Government to solve the railway problem in its entirety in 10 weeks. He flatly stated that he had no faith in Government ownership and operation of railways, and that he considered the acquisition of the G.T.R. a colossal blunder. He blamed the Conservative party for all of Canada's railway troubles, and between him and Mr. Stewart the railway problem became a secondary considera-

tion in the discussion, serving merely as an instrument for the resurrecting of political differences of long standing.

MR. MEIGHEN emphasized the fact that the improvement in Canadian National operation had been effected before the change in Government took place. He said that the Liberal policy in connection with the railways was exactly the policy which was followed by his Government. He defended the delay in getting all the Government railways together under the one management by stating that the G.T.R. arbitration proceedings held up action in that connection. He mentioned the disappointing results secured on the G.T.R. in 1921, and said: "We knew that some time would be required on the part of the former officers of the G.T.R., and on the part of some of the officers of the Canadian National Rys. to prepare the way for amalgamation, to prepare the line immediately to be pursued when the amalgamation would take effect. Consequently, we were anxious that as little delay as possible should intervene between the control of the G.T.R. board proper, and the G.T.R. board as appointed by the Government. The G.T.R. appointed its board about the end of May or the first of June 1921. The G.T.R. retained, and necessarily retained, on the board, temporarily at least, certain of its high officials. The reason for that was manifest, and the justice of it no one would dispute. The Government board, therefore, only operated with part of the G.T.R. board, the Government appointed, from before the middle of May 1921 until the end of that year; consequently the less favorable showing of the G.T.R. last year is in no way attributable to the fact that there was a Government board in control as opposed to the old board." Mr. Meighen gave credit for the improved showing in Canadian National operation last year to the management of the lines and said that the Government would do well to reflect as to whether or not it is probable that there are some good men on the board. In connection with the portion of the Minister's speech dealing with freight rates, he ridiculed the idea of a parliamentary committee, and said that the Minister's statement was merely an admission of "mental and moral bankruptcy" on the whole question. He concluded by reaffirming that the Government's policy was but the policy of his own Government, and he taunted the members for the Maritime Provinces in connection with their pre-election promises to their constituents to have the Intercolonial divorced from the National system and returned to direct operation and control by the Railways Department. He said that according to the election promises of Liberal members, one railway policy came from British Columbia, another from the prairies, and another from the Maritime Provinces, but that all had been scrapped and replaced by the policy he had laid down.

Grand Trunk Pacific Ry. Taxation in Prince Rupert.—The ratepayers of Prince Rupert, B.C., voted recently in favor of accepting the G.T.P. Ry. management's proposals respecting the assessment of the company's properties there. The city, it is estimated, will collect \$80,000 a year in taxes.

Ontario Provincial Police Officers seized 360 bottles of high grade spirits on the C.P.R. Montreal-Chicago express train at Smith's Falls, Ont., March 16. No arrests were made.

Canadian Pacific and Canadian National Railways' February Earnings and Expenses.

The C.P.R.'s gross operating revenue for February was \$11,303,693, compared with \$12,768,986 in Feb. 1921, and operating expenses were \$10,649,205, compared with \$11,955,594 in Feb. 1921, leaving net earnings of \$654,487, compared with \$813,391 in Feb. 1921. While operating expenses showed a gratifying decrease from Feb. 1921, the operating revenues decreased in greater proportion, leaving net earnings decreased by \$158,904.

The Canadian National Rys., including the Canadian Government Railways, Canadian Northern and Grand Trunk Pacific, gross operating revenue in February was \$7,650,742, compared with \$10,148,421 in Feb. 1921, and operating expenses were \$10,026,571, compared with \$13,135,420 in Feb. 1921, making the operating deficit \$2,375,829, compared with \$2,896,998 in Feb. 1921. While a very material decrease in gross operating earnings took place, the decrease in operating expenses was greater, with the result that the deficit was reduced by \$611,169.

C.P.R. gross earnings for February were not large; the month is short and never one of heavy traffic, and the rate reductions which have gone into effect have materially affected gross earnings. The point worthy of note in any analysis is that the C.P.R. February earnings is that operating expenses remained high in comparison with those of preceding months, with the result that the net was the smallest for any February for many years. The next smallest net was in Feb. 1920, when it was \$713,873; in Feb. 1916 it was \$2,294,342. The January net was the smallest for that month for many years. The February results, then in connection with the January ones, indicate that the progress made in getting operating revenue and expenses back into a proper relationship has been severely arrested, and consideration of this fact makes evident the folly of talking about large rate reductions before reductions in operating expenses are made. In our April issue, pg. 195, we pointed out how moderate has been the return secured by the C.P.R. on the value of its property used in the public service, and we also pointed out the inadvisability of attempting to further contrast that return by restrictive regulation and legislation. We say "and legislation" advisedly; under the regulative scheme which has obtained in Canada for years past, the return earned by the company has been what may be called fair to both the company and the public, but with a proposal which practically amounts to taking the matter of rate regulation out of the hands of the Board of Railway Commissioners and giving it to a parliamentary committee, it is difficult to predict what will happen.

With a decline in C.P.R. net earnings of \$316,852 for January and February, compared with the corresponding months of 1921, it cannot fail to be evident that rate reductions before expenses are reduced would be not only ill-advised, but practically impossible. In view of the fact that all material prices have ceased their precipitate decline, with some prices, indeed, now increasing, it would seem that the only means of reducing railway operating expenses is by a reduction in wages. It is probable that

any effort to reduce expenses in this direction would meet with strenuous opposition, and, judging from past action, that no reduction in expenses will result in this direction unless and until action has been taken on the U.S. roads. To expect a large rate reduction before counterbalancing wage reductions have taken place is to expect the impossible from the railways. Regulation has, in the past, given railways a chance to provide facilities with which to carry on transportation economically and efficiently, and it would be sorry day for Canada if regulation, or legislation, or both, were to assume a narrow and restrictive character, resulting in the enforcement of false economy in railway operation, which would, in turn, ultimately increase transportation costs.

While the February results show that at the present rates and with present levels of operating expenses, the C.P.R. is not in a position to make large rate reductions in any portion of the country, they also show that under present conditions the Canadian National Rys. management is not getting a fair show. In the autumn of 1921 the monthly results on the National lines, based on a good flow of traffic, and on rates which gave the C.P.R. a fair return, were such as to afford some encouragement to believers in the Canadian National Rys. venture, but with the rate reduction of Dec. 1, 1921, in effect with no change in wage scale, and with traffic seasonally reduced, the results are discouraging. There is some room for congratulation in the reduction of the deficit mentioned above, and under the conditions the results have been as good as could reasonably be expected. It is the conditions which are at fault; the relationship as between rates and expenses in the Canadian railway industry should be such that the Canadian roads could carry their operating expenses at this time and in their present operating position.

It may be asked what this relationship as between railway rates and operating expenses should be, and with no hesitation we express the opinion that it should be such that the C.P.R. would be able to show an annual operating ratio of but little over 70. Under those conditions, the National lines would be past the day of operating deficits, and the taxpayers of the country would be relieved of a large portion of their liability on capital account. It must not be lost sight of that, in a growing country like Canada, new facilities needed for the provision of adequate transportation are necessary, and it will be well if the credit of the corporate roads remains high so that the necessary new capital for such facilities can be raised on the most favorable terms. It is but a few short years ago that the C.P.R.'s operating ratio was where it ought now to be, and the railway industry in Canada will not be on a proper basis till that operating ratio approaches its former level. We repeat that any attempt to reduce railway operating revenues before their expenses are reduced to compensate, would be a serious mistake; it would mean, undoubtedly, lower transportation charges for a time, but in the final analysis it would result in greatly increased transportation costs. If investigation discloses that railway operating expenses, and particularly railway wages, can be reduced without

working an injustice in any quarter, it will be then, and not till then, time to discuss rate reductions seriously.

Reduction in Lake and Rail Rates on Grain.

A reduction in lake and rail freight rates on grain and grain products of 5½c. per 100 lb. on grain for domestic consumption at destination and 1c. per 100 lb. on grain for export, applicable between the head of the Great Lakes and points in eastern Canada and the eastern U.S., was announced by the C.P.R. and the Canadian National Rys. on April 1. The reductions in export rates from Fort William, Port Arthur and Westport, Ont., lake and rail, are as follows: on flour, to Baltimore, Md., and Boston, Mass., from 27c. to 26c. per 100 lb.; to Halifax, N.S., from 28c. to 27c.; to Montreal, from 26c. to 25c.; to New York, Philadelphia, Quebec, St. John, N.B., and West St. John, N.B., from 27c. to 26c.; on grain and grain products, to Baltimore and Boston, from 28c. to 27c.; to Halifax, from 28c. to 27c.; to Montreal, from 26c. to 25c.; to New York, Philadelphia, Quebec, St. John and West St. John, from 28c. to 27c. The export rates were effective April 20.

The reductions in domestic rates, lake and rail, from Fort William, Port Arthur and Westport, Ont., are: on grain and grain products, to Baltimore, Md., from 38½c. to 33c.; to Boston, Mass., Brunswick Me., Elsworth, Me., and Hartford, Conn., from 40c. to 33c.; to New York and Philadelphia, from 38½c. to 33c., and to Providence, R.I., from 40½c. to 35c. The reductions in the domestic rate were effective April 29.

The all rail rate on grain moving east was adjusted on Jan. 1, and these reductions in the lake and rail rates represent an adjustment to bring them into the proper relationship with the all rail rates.

Rights of G.T.R. Strikers of 1910.

A motion, of which notice had been given by W. A. Boys, South Simcoe, Ont., was moved in the House of Commons April 10, as follows:—That immediate steps should be taken by the Government to restore the pension rights and status of all employees and ex-employees of the G.T.R. who were deprived thereof owing to participation in a strike on the system in 1910, to the end that all such may secure their just rights pursuant to the terms and true intent of the settlement made between the parties.

Premier King said:—"The member in whose name the resolution stands is not in the House. I regret his absence, because I desire to make a statement on the subject of the resolution. However, he will be able to read my remarks in Hansard and that will perhaps serve the same purpose. There is no need for this resolution, inasmuch as the Government has already taken steps in the direction proposed. The Government has been negotiating with a view to seeing that a long standing injustice should be remedied without further delay: If it is not possible to effect by negotiation what we hoped would be attained by that negotiation, then the Government will bring in the necessary legislation to see that the injustice that was done to G.T.R. employees involved in the strike of 1910, in virtue of the terms and conditions of its settlement not having been complied with, is duly remedied."

Among the Express Companies.

The Canadian National Ex. Co. opened an office at McDermid, Ont., April 1.

The Canadian National Ex. Co. has made Beaverbrook, N.B., an open office.

The Canadian National Ex. Co. has opened offices at Dona, Ont., and St. Martin, Man.

The Canadian National Ex. Co. has closed its office at Tashota, Ont., the place becoming a star point.

J. E. Stevens has been appointed Foreign Freight Agent, American Ex. Co., Montreal, vice G. H. Magrane, transferred to Boston, Mass., in similar capacity.

The Ottawa South Municipal Association has decided to ask the Board of Railway Commissioners that additional territory in Ottawa South, Ont., be included within the express delivery radius.

The Dominion Express Co. dispatched two live deer recently, from Newcastle, N.B., to Uniontown, Pa. The animals were caught in the wilds of Mt. Bruns, and were shipped in a park near Uniontown, in charge of an experienced guide. They arrived in first class condition.

G. H. Magrane, Foreign Freight Agent, American Ex. Co., Montreal, was entertained at dinner by the local staff, April 12, and presented with a travelling bag, on leaving for Boston, Mass., where he has been transferred as Foreign Freight Agent.

The Board of Railway Commissioners passed order 32,235, March 16, refusing the National Railway Council of Canada's application for a reduction in express rates on butter from Silverdale and Renon, Ont., to Hamilton, Ont., the case having been heard in Ottawa, Sept. 20, 1921, when the applicants and the express companies were represented.

The Interstate Commerce Commission recently approved a revised schedule of charges for express shipments between United States and Canadian points, submitted by the American Railway Express Co., effective April 20. It is stated that the new schedule was necessitated by the fact that express rates in Canada generally, had become higher than those in the U.S., and through rates on international shipments consequently had to be modified. The changes are said to be comparatively small in most cases, and the general system of class rates apply exclusively to miscellaneous commodities and merchandise in comparatively small parcels, as against bulky and regular shipments which are ordinarily transported under special commodity rates.

Express Class Rates between Canadian and United States Points.

The Interstate Commerce Commission has, no the application of the American Railway Express Co., on its own behalf and on behalf of other express companies, removed its suspension of the tariffs on traffic between points in the U.S. and Canada, which were found to be justified in so far as they affect the charges or divisions accruing for that part of the transportation between U.S. points and the international boundary. For some years the express companies have maintained tariffs of through express rates between Canadian and U.S. points, which were based, generally speaking, upon a combination of the local

rates to and from the border points. When the express rates were revised in Canada in Sept. 1919, by the Board of Railway Commissioners, these through international rates were thrown out of line, because it was no possible at that time to revise the international tariffs on the basis of the new Canadian rates. General increases were also made on two or three occasions in the U.S. rates, and these changes were reflected in the international tariffs by means of percentage increases. On Feb. 9, 1921, the rates in Canada were again advanced by the Board of Railway Commissioners, and as a result of this last increase, together with certain advances permitted by the Interstate Commerce Commission in the American Railway Ex. Co.'s rates, it was found necessary to reissue the international block tariffs in order to bring them into line and put them on a proper basis. Work on the revised tariffs was started last summer and on Nov. 15, 1921, the revised tariffs were filed with the Interstate Commerce Commission and the Board of Railway Commissioners covering some 1,600 different block tariffs first class express rates per 100 lb., applying between all points in Canada and the U.S., to become effective Jan. 1, 1922, the southbound and northbound rates being contained in different tariffs. The exceptions to the official express classification governing international traffic covering the table of graduated charges for shipments weighing less than 100 lb., and scales of rates applicable to second class matter, currency, etc., were also filed to come into force at the same time. On Dec. 31, 1921, the Interstate Commerce Commission suspended the tariffs until May 1, 1922, and the matter was again heard at New York, Jan. 23, when W. C. Muir, Vice President and General Manager, Canadian National Ex. Co., and G. F. Snyder, Dominion Ex. Co., appeared on behalf of their respective companies. As a result of the hearing the Interstate Commerce Commission ordered the removal of its suspension, and approved the tariffs as filed, making them effective April 20, 1922.

The reasons for revising the tariffs were, in order that the express companies could get, within Canada, and the U.S. the full benefit of the increases authorized by the Board of Railway Commissioners and the Interstate Commerce Commission; and to readjust the rates so as to eliminate the inconsistencies caused by the various percentage increases.

Telegraph, Telephone and Cable Matters.

The Commercial Cable Co. is offering for sale at New York, N.Y., one of its cable repairing steamships, 270 ft. long, 40 ft. beam, 24 ft. moulded depth, 1,012.92 tons net.

Canadian National Telegraphs during 1921 erected 230 miles of new pole line, and over 7,300 miles of new wire. The company is gradually extending and increasing its facilities.

C. E. Davies, General Traffic Superintendent, and E. Kenward, Superintendent of Railway Service, Canadian National Telegraphs, attended the American Railway Association, Telegraph and Telephone Division, annual convention at Richmond, Va., March 21 to 23.

The Western Union Telegraph Co. will, it is reported, reopen its cable office at

Canso, N.S., shortly. The office had been in operation for about 30 years, until it was closed during the war, and the staff and a considerable portion of the equipment were transferred to North Sydney, N.S.

The Canadian National Telegraphs' sixth general conference of traffic officials, was held at Toronto, April 14 and 15, when traffic managers and sub-chiefs from the various offices from Moncton to Edmonton, met the head office and division officials for a general discussion of traffic problems.

Canadian National Telegraphs have opened offices at Arundel, Breakville, Britannia Mills, Flamand and Ville Lambert, Que.; Kabina, Mattice and Tannin, Ont.; Muir, Man., and Lake Lenore and Mantario, Sask., and have closed offices at Les Ebouliments, Que., Beardmore, Pass Lake and Thor Lake, Ont., Libau, Man., Horburg, Alta., and Albreda, B.C. The name of the office at Chaleurs, Que., has been changed to New Richmond.

The cable ship Restorer, which, prior to the war, was always stationed at Esquimalt, will, it is stated, be returned there in the near future. Owing to the docking accommodation at Esquimalt being required for war purposes, the ship was transferred temporarily to Seattle, and arrangements made for her temporary registration under the U.S. flag. British officers are always employed on this ship, and it is believed that this will necessitate her ultimate transfer to a British port.

The Minister of Marine, in reply to a question in the House of Commons recently, regarding experiments, stated to be proceeding by the British Admiralty, with what is known as wireless beacons, with the object of replacing lighthouses, stated that the experiments now being carried on with a view to utilizing wireless stations as aids to navigation, are being carefully watched by his department, and any developments that appear to be of value will be promptly taken into consideration.

R. W. Ball, heretofore Commercial Supervisor, has been appointed District Commercial Superintendent, District 2, Canadian National Telegraphs, Montreal, vice L. S. Humes, deceased. He was born at Toronto, Sept. 24, 1886, and has spent his entire business career with the Great North Western Telegraph Co., and its successor, Canadian National Telegraphs. He was educated at Kingston, Ont., and entered G.N.W.T. Co.'s service there as telegraph learner, and later served at Montreal and Toronto. In Aug. 1919, he was appointed local manager, G.N.W.T. Co., Regina, Sask., and in 1915 was transferred to a similar position at Calgary, Alta., remaining there until he was attached to the head office staff in Feb. 1921.

British Railway Passenger Traffic Decreases.—Traffic statistics of British railways for Dec. 1921, show a decrease of 10.8% in passengers carried, exclusive of season ticket holders, a decrease of 8.7% in ordinary passenger receipts; of 8.1% in season tickets issued; and of 14.8% in tons of freight carried, compared with 1920.

Burglarizing a Car.—William Davis, a negro tramp, was sentenced to a year imprisonment recently at Kamloops, B. C., for breaking into a sealed car containing sugar and syrup, breaking off some of the packing boards, and lighting a fire inside the car.

Electric Railway Department

Winnipeg Electric Railway's Franchise Negotiations.

In connection with the negotiations which have been in progress for some time between the Winnipeg Electric Ry. Co. and the city council upon railway matters in general, among them being an extension of franchise, A. W. McLimont, Vice President, wrote the city clerk April 4, as follows:—As the city council is aware negotiations have been proceeding since May, 1921, between the company and a sub-committee of the council with a view of disposing of the main outstanding questions between the city and the company. These negotiations have proceeded very harmoniously and a point was arrived at where the company indicated its willingness to meet the city upon all the questions involved and also to make certain desirable extensions to its street railway system, but advised the committee that as the carrying out of these various matters involved the expenditure of large sums of money it was impossible for the company to undertake them without co-operation on the part of the city. We informed the committee that the co-operation desired was for the council to agree to postpone its option to purchase the street railway for a sufficient period of time to permit the company to float a satisfactory security; that we are advised by the bankers that to provide such a security would mean that the city should agree that the earliest period it would exercise its privilege of purchasing the street railway would be 1937. As the matter is now about to come before the council, we think it advisable to formally state our position. We therefore beg to advise the council that in order to obtain the necessary funds to carry out the settlement of outstanding matters and the programme of extensions, improvements and betterments above referred to and more particularly set out hereafter, it is necessary that the council should agree to postpone the first period at which the city may acquire the street railway utility from 1927 to 1937.

If the city will postpone the date as above outlined the company would be in a position to arrange for payment of all outstanding taxes; payment to the city of the proper amount due for paving charges; payment to the city of such sums as may be found to be due to the city in respect of damages caused by electrolysis; completion of the work now in hand to carry out recommendations of Prof. Featherstonhaugh; completion of the work of removing span wire poles; undertaking to place wires underground, according to such plan as may be agreed upon between the city and the company; completion of grounding of secondaries; actively proceeding with and completion of the adoption of joint use of poles in accordance with joint pole agreement.

The company also will agree to make the following extensions:—Talbot Ave. from present terminus to Panet Road; to extend street car line down Notre Dame and connect up with Provencher Bridge; to extend the Academy Road line to Assiniboine Park; to extend Notre Dame Ave. West line to Keewatin St.; to extend McGregor St. line; to extend Sargent Ave. line 3,000 ft.; to make changes on Osborne St. necessitated by widening thereof; enlarge St. James sub-

way so as to permit of double track operation; to install such necessary bus service as may be agreed upon between the company and the city in localities where the same is necessary.

I want to draw council's attention to the necessity of dealing with this matter without delay, on account of the benefit to be obtained by the people of Winnipeg, the city authorities and the company if our plan for extensions and other work can be started upon at the opening of this season's construction period when employment for Winnipeg workmen will be beneficial. If the council will make a favorable decision, our plan, which involves—making financial arrangements; ordering and obtaining materials on a satisfactory delivery schedule; obtaining labor to do the work, could be put into effect, and employment could be given in time to benefit the present unemployment conditions; our obligations to the city could be arranged; the extensions of track and car service outlined could be started upon this year and the majority of the localities concerned would not have to go through another winter period without them.

While not desiring to unduly hurry the council, I feel it is my duty to point out that any delay in deciding this matter will necessitate postponing for at least 12 months carrying out the plans herein mentioned. In view of the benefits that will accrue to the citizens at large from the expenditure of the large sum of money involved, and the employment that will be provided; in view of the benefit to the city from the moneys it will receive from the company, and in view of the fact that the company would be put in a position to plan intelligently for the future, I request the council's early consideration and favorable action.

The matter came before a city council special committee April 7, when Mayor Parnell made a lengthy statement, in which he favored the granting of a 10-years extension of the franchise; and Alderman Fowler argued that the city could take over, operate and pay for the company's entire system within the city, and own it free from debt within 30 years, and that without an increase of fares. The committee decided to send Mr. McLimont's letter to the city council.

Mr. McLimont subsequently issued a statement in reply to Alderman Fowler's observations, as follows:—"In expressing his opinion that the city should buy the street railway in 1927, Ald. Fowler in voicing his opposition to the company's application, gave as his main reasons that the citizens could not continue to pay the heavy cost of financing the street railway, that the method of financing adopted by the company was excessively expensive, that in connection with the recent sale of preference stock the company gave away a large amount of common stock as a bonus and sold the preference stock at a discount, that the cost of financing fell on the car riders, and that the car riders were expected to provide a return upon the capital stock of the company. When he made these statements, Ald. Fowler should have known, because he is the chairman of the city's

committee on finance, and is familiar with the existing arrangements between the city and the company, that the words 'fair return,' as used in computing what a proper street railway fare should be, have nothing whatever to do with the amount of capital stock or bonds or any other securities, but mean a fair return (or fair rate of interest) on physical value of the street railway property used in serving the car riders, and nothing more. The agreement entered into between the city and the company, July 27, 1921, with which Ald. Fowler is familiar, and by which all litigation with reference to fares was settled, absolutely protects the car riders against possible excessive costs of financing, and fixes the fares to be charged during the remaining period of the franchise, and further provides that they may be varied from time to time as conditions permit. If the parties cannot agree, then they may refer to arbitration, and the arbitrators will fix just and reasonable fares on the basis of the value of the company's property devoted to transportation purposes and not on any capitalization, bond issue, or other basis. Ald. Fowler's reference to the heavy cost of financing in relation to the question of fares is entirely misleading. The cost of the road is not asked for a fare that will do more than pay operating costs and a reasonable return upon the value of the property. It is immaterial to the car riders whether the capital stock is \$1,000,000 or \$50,000,000—the return is based upon the physical value of the property. This is clear, and moreover, the city is safeguarded on this point by the fares agreement entered into with the company last year. To illustrate, assuming the property employed in the traction utility is valued at \$10,000,000, then it is this amount, and this amount only, that is to be taken as the basis for fixing reasonable fares. It is immaterial to the car riders or the city what the bonded indebtedness or the issued capital stock or other securities may amount to. As to Ald. Fowler's suggestion that the city should take over the road, his prediction that it could be operated without any increased charge to the car riders, I would like to ask if the company is only permitted to earn, as it is, a reasonable return on the physical value of the property used for transportation purposes, and if the company is unable to pay any dividends to its common shareholders, and there is now a large amount of shareholders' money invested in the street railway upon which no return is being made, how could the City of Winnipeg under municipal operation expect to make the favorable showing which Ald. Fowler claims it could make?"

The matter again came before the City Council April 10, and after some discussion was referred back to the committee for a detailed examination and report. The special sub committee held its first sitting for this purpose April 13, at which Mr. McLimont, and E. Anderson, K.C., were present for the company.

A report by Price, Waterhouse & Co., upon the company's financial status was laid before the City Council, April 17, and referred to the special committee

which is dealing with the franchise negotiations. The report was not made public, but a press report says it shows that for 1920 the net profits were \$846,633 and for 1921 \$807,080. To comply with the Public Utility Commissioner's judgment \$75,000 a year is deducted, leaving balances of \$771,633 and \$732,080. A return of 8% which the Commissioner decided the company to be entitled to amounts to \$751,818 and \$768,075 for the two years, leaving a surplus of \$19,814 for 1920, and a deficit of \$35,995 for 1921.

Electric Railway Finance, Meetings, Etc.

Brantford Municipal Ry.—Operations for 1921 are reported to show a surplus of \$174.00, after payment of all operating expenses; to payment in full of interest on bonds and debentures; the provision of a sinking fund; the retirement of a debenture of \$6,250, and the writing off of \$1,497.47 for depreciation.

British Columbia Electric Ry. and allied companies.—

	8 mos. to Feb. 28, 1921	8 mos. to Feb. 28, 1922
Gross	\$721,922	\$838,682
Expenses	\$73,119	\$78,870
Net	\$648,803	\$759,812

Calgary Municipal Ry.—The electric car line operated by the Calgary, Alta., Municipal Ry., to the C.P.R. Ogden shops, is about six miles long, and its operation is reported to have resulted in a loss to the city during 1921 of \$21,426.25, the greatest portion of the loss being in the operation of special cars for the accommodation of the men at the C.P.R. shops. The following figures give the revenue, expenses and loss in the regular hourly service, and also the special car shops cars:—

	Regular line.	Special cars.
Cost of operation	\$24,568.50	\$24,568.50
Revenue received	26,304.14	26,304.14
Net loss	\$1,833.64	\$1,833.64
Cost of operation	\$40,233.60	\$40,233.60
Revenue	42,371.71	42,371.71
Net loss	\$2,142.89	\$2,142.89
Total cost of operation	\$64,802.10	\$64,802.10
Total revenue received	68,676.85	68,676.85
Total net loss	\$21,426.25	\$21,426.25

Deficits	1,945	7,299

*Deficits.

Edmonton Radial Ry.—A press report states that the net profits of the various public utilities in Edmonton, Alta., for January and February were \$102,149, against \$58,486 for the corresponding months of 1921. The Edmonton Radial Ry. showed a profit of \$7,343 for Jan. and Feb. 1922, against a loss of \$17,123 in 1921.

Montreal Tramways Co. on April 11 declared a regular dividend of \$1.50 a share for the quarter ended March 31, payable on May 1.

Regina Municipal Ry.—The Regina, Sask., City Council on April 8 considered the estimates for 1922, which contained an estimated surplus of \$3,732.53 for Regina Municipal Ry. in comparison with a deficit of \$18,080.94 for 1921. The estimated receipts for the year are put at \$372,000 and the operating expenses at

\$265,000. The estimated net operating receipts would meet the fixed charges and leave the surplus mentioned.

Sherbrooke Ry. & Power Co.—A special meeting of shareholders was called to be held at Montreal, April 22, to consider a bylaw empowering the directors to issue \$1,000,000 of 18-year 6% second mortgage bonds, to be a mortgage upon the property and other assets, subject only to charges already created by the company's outstanding bonds. The trust deed is to be created in favor of George Parent, K.C., and C. E. Taschereau, notary, both of Quebec, as trustees for the bondholders. A sinking fund will be provided.

Quebec Railway, Light, Heat & Power Co.'s Annual Meeting.

The Quebec Ry., Light, Heat & Power Co.'s report for the calendar year 1921 is given fully on page 35 of this issue. Its outstanding features are increases of \$203,423.81 in gross earnings, of \$113,428 in operating and maintenance expenses, and \$89,995.81 in net earnings, an improvement of 120,684.54 over 1920.

The proceedings at the annual meeting, the subsequent directors' meeting, showed the control of the company had passed to interests headed by E. A. Robert, President, Montreal Tramways Co., who was not previously a director, but has succeeded Senator L. C. Webster as President, the latter becoming Vice President, the former Vice President, Senator D. O. L'Esperance, remaining as a director, the only other members of the former board who were re-elected being J. N. Greenhields, K.C., and C. G. Greenhields, K.C. The following former directors were not re-elected, C. A. Lavigne, T. J. Stewart, M.P., P. Galibert, L. J. Tarte, A. Picard, Hon. J. Tessier, and Brig.-Gen. A. E. Labelle. The board as now constituted consists of E. A. Robert, President; Senator L. C. Webster, Vice President; A. C. Barker, New York, N.Y.; K. B. Thornton, Col. J. E. Hutchison, N. G. Valliquette, J. N. Greenhields, K.C., C. G. Greenhields, K.C., Montreal; Senator D. O. L'Esperance, Hon. A. Turgeon, and Hon. G. E. Amyot, Quebec. The company's principal officials are W. J. Lynch, General Manager; Arthur Lemoine, Secretary, and R. A. Wilson, Treasurer.

The retiring President, Senator Webster, welcomed Mr. Robert to the board and assured him of hearty co-operation. Mr. Robert said that his position was, rather difficult one at the moment, but that he might make a statement in a short time, after he had gone into the various phases of the situation with the management. He added that the company was in the best financial shape it had been in for years, and expressed the hope that he would be able to report further development and improvement.

Immediately after the annual meeting, a special meeting of shareholders authorized the directors to apply to the Dominion Government for supplementary letters patent to empower the company to convert its 100,000 shares of common capital stock, with a par value of 100 each, into 100,000 common shares with-

out nominal or par value.

On April 14, Lt. Col. J. E. Hutchison, General Manager, Montreal Tramways Co., accompanied by another of the new directors, K. B. Thornton, and by D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., visited Quebec, and inspected the company's lines, rolling stock, etc.

Change of Rule of the Road in Nova Scotia.

The Nova Scotia Legislature has passed an act amending the Revised Statutes of 1900, chap. 81, by striking out the word "right" and inserting instead the word "left" in sec. 3, subsection 5. The effect of this is that the rule of the road is brought into conformity with that obtaining in most of the other provinces. The new rule will be brought into operation at an early date.

The electric railways operating in Halifax, Sydney, Glace Bay, New Glasgow and Yarmouth will be affected by the new rule. The Cape Breton Electric Co. advises us that the changes to be made on its lines in Sydney, Louisbourg and Glace Bay will not be expensive. The company has a safety or one-man cars which it will be necessary to remodel so that the entrance and exit at either end will be on the right instead of the left. The Nova Scotia Tramways & Power Co. advises that the cost of changing its rolling stock, etc., will amount to \$41,840, as follows:—24 safety cars, \$12,000; 6 sweepers and plows, \$10,000; 12 two-man cars, \$2,400; 8 crossovers, \$16,000; 24 switch boxes, \$2,000; overhead wiring on special work, \$1,200. The Yarmouth St. Ry. advises that its expenses in connection with the change will be very slight.

Montreal Tramways Co.'s Track Expenditures.—The Montreal Tramways Co. has applied to the Quebec Public Service Commission for relief in respect to \$381,000 over-spent upon maintenance and renewal of tracks. Under the contract with the city the Montreal Tramways Commission allowed the company \$214,700 for maintenance and renewal during 1921, and the company overspent this by \$381,000, largely on account of the council's decision to change the level of St. Catharine St., after the Commission's appropriation had been made. The company contends that this over expenditure of last year's gross receipts, and before any surplus is paid to the city in rentals. The city contends that this amount should be carried forward and financed in the following year in the same manner as a municipal corporation did. Arguments were heard by the Quebec Public Service Commissioners April 18.

Detroit United Railways Purchase.—Detroit, Mich., ratepayers voted, April 17, on the agreement recently entered into between the city council and the Detroit United Ry. Co., for the purchase by the city, of all the lines in the city, not already taken over, for \$19,850,000. The purchase price also covers certain real estate. About a third of the qualified ratepayers voted, the bylaws being carried by 55,658 to 12,198 votes. One bylaw confirms the agreement to purchase, and the other provides for raising \$2,770,000, the cash consideration of the bargain. The balance is to be paid in half yearly instalments of \$500,000, with 6% interest, to July 1, 1931, the final payment to be made Dec. 31, 1931.

Ontario Hydro Electric Railway Legislation.

A bill respecting the construction and operation of municipal electric railways, introduced in the Ontario Legislature, March 16, by the Premier, is to be cited as the Municipal Electric Railway Act, 1922, 4 George 5, chap. 31, sec. 1, amended. The latter is the Hydro Electric Railway Act of 1914, and the bill now under consideration proposes to repeal the whole of that act, section 2 of the Hydro Electric Railway Act 1915; sections 2, 3, 4 and 8 of the Hydro Electric Railway Act, 1916; sec. 32 of the Statutes Law Amendment Act, 1917; sections 8 and 9 of the Hydro Electric Railway Act, 1919, and sections 2, 3, 4, 5 and 6 of the Hydro Electric Railway Act, 1920. The effect of the bill, if passed as introduced, would be that with the exception of bylaws confirmed by the several amending acts, the whole of the hydro electric railway legislation heretofore in operation would be repealed.

The bill, outside the short title section, and the repealing section, contains 27 sections, of which a number are taken in whole or in part from the Hydro Electric Rys. Act, 1914, and amendments. It provides that two or more municipalities in any area supplied with electric power by the Hydro Electric Power Commission of Ontario, may apply to the Commission, which will, at the cost of such municipalities, report upon the cost of constructing and equipping and providing for the operation of an electric railway in such municipalities; the practicability of the undertaking and its economic value to the locality to be served by it. Such municipalities may enter into an agreement with each other over the construction and operation of such railway, to be operated by electrical power or energy supplied by the Commission. The agreement is to set forth the proportion of the cost to be borne by each contracting party, provision for the issue of debentures; the terms for power; provision for construction by the Commission, or by the municipalities, and the entrustment of the operation of the line to an association known as the Municipal Electric Railway Association. The agreement may also provide for the construction of a railway upon any right of way acquired by the Commission for power purposes; for the purchase or lease of any steam, electric or street railway already in existence, capable of forming part of the projected railway, or for securing running rights over the same; and for the extension of the railway into any adjoining municipality with the consent of the corporations parties to the agreement. Before submission of the bylaws to the ratepayers, the municipalities are to enter into agreements with the Commission for power, and construction. The provisions are to apply to lines purchased or leased. The bylaws are to be submitted to a vote of the ratepayers of the several municipalities interested. In the event of any municipality failing to pass a bylaw, the other municipalities may assume the cost, provided it does not exceed 10% of the estimate cost of construction and equipment. Debentures are to be deposited with a trust company. As soon as practicable after the passing of the bylaws, the representatives of the several municipalities interested are to be called together by the head of the corporation making the largest contribution for the purpose of forming a Municipal

Electric Railway Association, either for the purpose of building and operating the railway, or for the purpose of operating only. The association is to consist of five persons, to hold office for five years. A corporation contributing over 25% of the cost of the line shall nominate one member, and a corporation contributing over 50% of the cost shall nominate two members; the other members being elected by vote based on the estimated cost of construction. The association is to be incorporated, and to have power to appoint officers and to pay them salaries as follows:—chairman, \$4,000; vice chairman, \$3,000; other members \$2,000 a year. The association is to operate the railway and report annually to the municipalities. A number of other sections deal with the association's power to issue bonds and debentures; to provide a sinking fund; to assume a bond issue in case of purchasing a railway; to fix tolls and charges at such rates as will provide for the cost of maintenance and operation, the cost of renewals, the payment of interest and principal, and the formation of a sinking fund. Surplus funds may be retained by the association to meet the cost of branch lines, or in increased equipment, etc., and the municipalities are to be called upon to meet deficits. The association may make an agreement with the Commission for the operation of the lines for five years, renewable for further five year periods.

The bill was read a first time March 16, and had not been dealt with further up to the time of writing, April 19.

Customs Duty on Intersections for Railways.

As stated in Canadian Railway and Marine World for April, pg. 205, when the Customs Board sat in Ottawa, March 18, to consider the application from Canadian Steel Foundries Ltd., Montreal, in regard to tariff item 390, which specified the duty on switches, frogs, crossings, and intersections for railways, the applicants' counsel contended that the whole layout constitutes an intersection, and should be assessed under the item.

G. Gordon Gale, Vice President, and General Manager, Hull Electric Co., and President Canadian Electric Railway Association, agreed with the Toronto Transportation Commission's contrary contention, and obtained the Board's permission to file evidence from electric railway companies which are members of the Association, and which were not represented at the hearing, and might wish to present their views, and he issued a circular to member companies asking their views, and as a result of the replies, submitted the following memorandum to the Board on March 28:—(1) The electric railway companies, members of the Canadian Electric Railway Association have used the term "intersection" in connection with the track work referring to the individual pieces where one line of rail actually intersects or crosses another line of rail. (2) The expression "intersection" has also been used in a general way in relation to the streets, that is, a point where one street intersects or crosses another street. (3) An electric railway track layout at street intersections is composed of straight and curved rails, provided for by tariff item 388, fish plates and the plates provided for by tariff item

389, and switches, frogs, crossings and intersections provided for by tariff item 390. (4) The application for a new interpretation of the term "intersection" is an attempt to establish a meaning for this expression which is not used by street railway companies, and in the opinion of these companies the Board's interpretation should continue as set forth in paragraph 3 above.

Canadian Railway and Marine World is officially advised that the Board of Customs, at a meeting in Ottawa, on April 11, declared as follows:—"Track layouts for use on street railways at street intersections are not entitled to entry under tariff item 390, as intersections for railways, departmental ruling being sustained." This decision sustains the Toronto Transportation Commission's contention.

Regulation of Public Vehicles on Ontario Highways.

The Ontario Minister of Public Works introduced a bill in the Legislature to regulate the operation of public vehicles, which was read a first time March 20. It provides for the repeal of the act passed in 1920 with a similar title, and for placing under the Public Highways Department the regulation of all traffic for hire on the highways. It provides that no person shall conduct the business of a public carrier of freight or passengers on the highways except under a license from the Department. This license may confer exclusive or limited rights; the annual license fee, to be fixed by the Government, is to be in addition to any fee fixed by the Motor Vehicles Act or any other act; and the business is to be carried on under such regulations made from time to time by the Government. The number of persons to be carried, and the tonnage to be carried by each vehicle is to be fixed by the license; the tolls to be charge for passengers and freight are to be fixed by the Department, and revised from time to time. The Department is authorized to operate a public vehicle service on any public highway, and may retain exclusive privileges therefore; the cost of vehicles and equipment be met out of any money voted by the Legislature or that purpose. The licenses granted to individuals or companies shall not be transferred except with the Department's approval. A number of sections deal with the necessary equipment of the licensed vehicles, and the manner of their operation, and provide for inspection by the Department's officers. Trailers are forbidden. Every vehicle is to be insured as a safeguard against claims of passengers, etc., and bills of lading are to be used. Where exclusive rights are granted a penalty of not less than \$25 or more than \$100 a day is provided for violation of such rights, and a general penalty of \$10 for the first offence, \$20 for the second, \$30 for the third and \$50 for every subsequent one is provided in respect of the bill's general provisions. Any profits of a provincially owned service, together with the amount of the penalties received under the general provisions of the act, are to accrue to the highway improvement fund account.

Burlington Bascule Bridge.—The newly erected bascule bridge carrying the highway and the Hamilton Radial Ry. across the canal at Burlington Beach, Ont., was opened for traffic April 10.

Electric Railway Wages, Working Conditions, Etc.

Capre Breton Electric Co., C. C. Curtis, Manager, issued the following bulletin to trainmen March 21:—"It is with the deepest regret that I am obliged to announce a reduction in wages, which will become effective April 1. I had hoped that in spite of tremendous snow expenses during the winter and the very serious business depression through which we are passing, it might still be possible for us to maintain the scale of wages in effect since May 1, 1921. This now, however, seems impossible. All divisions of the railway department in January took in as gross earnings \$19,522, compared with \$32,416 in Jan. 1921, and estimated revenue for Jan. 1922 of \$29,713. Operating expenses, without any allowance for taxes, depreciation, interest charges, dividends, reserves, etc., were \$39,276, compared with \$32,774 in Jan. 1921, and estimated in Jan. 1922 of \$26,963. This means that in Jan. 1922 the railway department failed by \$19,753 to earn its ordinary day to day operating expenses. In February, due to similar conditions, gross revenue was about \$7,000 less than anticipated, and expenses over \$6,000 more than expected, with the result that day to day operating expenses were \$14,772 more than the revenue taken in. For the two months of January and February, therefore, day to day operating expenses were \$34,525 greater than the revenue received. For the whole company, including all departments, in the two months of Jan. and Feb. 1922 we failed by \$29,825 to pay interest charges on our bonded indebtedness. As you are all fully aware, riding on the cars has fallen off tremendously and there seems no immediate prospect of any great improvement. In Jan. 1922 we carried 39.8% less passengers than in Jan. 1921; in Feb. 1922 32.8% less than in Feb. 1921, and up to March 21, 25.2% less than for the corresponding period of 1921. Of course some of this decrease was due to snow conditions, but there seems every reason to feel that the riding will continue at a low ebb for some time at least. On and after April 1, 1922, wages of trainmen, all divisions, will be as follows per hour: 1st six months, 35c.; 2nd six months, 36c.; 2nd year, 38c.; third and fourth year, 40c.; fifth and six year, 42c.; seventh and thereafter, 44c. This represents a reduction of only 2c. an hour, and, though I fully appreciate that no one likes to get a reduction in wages, this seems very mild as compared with some others which have been made in other industries, representing as it does a cut of only 4 or 5%. Similar reductions will be made in the case of most other employees, although, as a general rule, monthly men will not be reduced at this time. As you all know, daily men, with overtime, have often received higher total wages in a month than their boss, who was working the same number of hours, but who had no overtime payments. In this, as in all other things, we are doing our best to treat every single employee with absolute fairness and justice. Once more, I wish to impress upon all of you that nothing but absolute necessity forces us to reduce wages. I know you will all accept this in the spirit in which it is announced, and in the knowledge that I will at all times, both now and in the future, do everything in my power to make your work pleasant, profitable and generally

more satisfactory than it could be with any other company."

Canadian Railway and Marine World is advised that the trainmen appear to be quite pleased that the reduction made was so small. This makes two wage cuts which have been made by the company, the first one having been put into effect May 1, 1921, at which time all employees, daily men, monthly men and officials were cut approximately 8 to 10%. The cut at that time was also accepted by everyone with a fine spirit, they being convinced that it would not have been made unless absolutely necessary. Prior to May 1, 1921, wages of trainmen per hour were as follows: 1st six months, 40c.; 2nd six months, 42c.; second year, 44c.; third and fourth year, 46c.; fifth and sixth year, 48c.; seventh year and after 50c.

Dominion Power & Transmission Co.—A majority report of a board of conciliation, dated March 31, and signed by J. M. Godfrey, chairman, and F. Bancroft, representing the men; and a dissenting report dated April 3, signed by F. H. McGuigan, the representative appointed for the company by the Labor Department, have been filed, with reference to the differences between the D. P. & T. Co., the Hamilton St. Ry. Co. and other subsidiary companies, and various classes of employees represented by Local 700 International Union of Steam and Operating Engineers, and Divisions 107 and 108, Amalgamated Association of Street and Electric Railway Employees of America. The majority report states that the difference had to do almost entirely with wages, as E. P. Colman, the company's General Manager, expressed his willingness to adjust the minor matters in dispute. The men asked for an increase of 10% and the company made reductions varying from 12% to 13½%. During the hearings a conference was held at which the men abandoned their claim for an increase, and the company offered to reduce the decreases put in force, but it was not possible to bring the parties to an agreement. After hearing both sides of the case, a schedule was drawn up which was recommended for adoption for 12 months from April 5, 1922, and the majority report recommended that the scale of wages paid up to the time the reductions were put in force by the company, be paid up to April 5. The suggested wage schedule for motormen and conductors on all the electric lines is as follows per hour, compared with the former rates:—

	Suggested	Former
First 6 months	38c.	38c.
Second 6 months	40c.	40c.
First year	38½c.	38½c.
Second year	43c.	43c.
Third year	50c.	52c.

The rates of wages of other employees will be scaled down on the same basis, the reduction being 10%. F. H. McGuigan reviewed a number of points in the case as presented, upholding the company's position and expressed his inability to agree in his colleagues' recommendations.

We were advised April 12 that the company had informed the Labor Department that it cannot accept the recommendations of the majority report.

The second board of conciliation, which deals with the differences as to wages between the D. P. & T. Co., and its subsidiaries, and its employees being mem-

bers of the Canadian Electrical Trades Union, Hamilton branch, presented a unanimous report dated April 3, and signed by J. M. Godfrey, Chairman; F. H. McGuigan, appointed by the Department of Labor to represent the company; and J. G. O'Donoghue, representing the men. It stated that the employees applied for an increase of 4c. an hour, while the company had put into effect a reduction of 12½% on Feb. 15. A conference was arranged at which an agreement was effected under which the scale of wages in force prior to Feb. 15 is to continue for six months from March 1, and thereafter subject to 30 days notice on either side, to be retroactive to Feb. 15. We were advised April 10 that the agreements necessary under this report were being drawn up for signature, the terms having been settled.

The day employees on April 17, adopted a resolution favoring a strike unless the company would accept the majority report of the board of conciliation; and at a general meeting held the same night, this resolution was confirmed by the remainder of the employees. This decision was conveyed to the company, and E. P. Colman, General Manager, is reported to have stated that the letter was so important that it would not be replied to. A delegation of employees waited on Mr. Colman, April 19, and offered to accept a lower rate of wages than that recommended by the majority report, and were advised that a reply would be given by the directors on April 20, when an offer, which was stated to average 4% reduction for power house employees, and 8% for motormen and conductors, was made. This was submitted to a vote of the employees, Apr. 22, which decided in favor of acceptance.

London St. Ry.—We are officially advised that the Ontario Railway and Municipal Board, after considering the London St. Ry. Co.'s employees application, came to the conclusion that it was really made a matter for a formal Disputes Investigation Act, 1907, passed by the Dominion Parliament, and that the Board has no authority in the premises, consequently no order was issued.

Some negotiations have taken place since March 30, the company having been approached by the employees, but nothing resulted, the company adhering to its decision to reduce conductors and motormen's wages by 3c. an hour as from March 1 to 10, and by 4c. thereafter. 1st year, 40c.; 2nd year, 43c.; 3rd year, 45c. The Dominion Labor Department was approached as to the appointment of a board of conciliation, but it is stated that there was some irregularity in the procedure. The men held a meeting April 9, and decided to strike if aboard of conciliation, which was to be formally applied for, did not satisfy them. The local union made a formal Disputes Investigation Act, 1907, on April 13 to the Labor Department for the appointment of a board.

Nipissing Central Ry.—A notice was posted in the car house at North Cobalt, Ont., recently, informing the railway's employees that they will be required to pay the ordinary fare when travelling on the line, except when actually engaged on duty. The men claim that the working agreement provides for free transportation at all times, and arranged to send a delegation to North Bay, to interview W. A. Griffin, the Superintendent.

ent, on the matter. The line is operated by the Timiskaming & Northern Ontario Railway Commission for the Ontario Government.

Ottawa Electric Ry. Co.—Negotiations between the company and the employees with respect to the new wage schedule which the company proposed to put into effect May 1, have not resulted in a settlement. A meeting was held in the company's offices March 27, when Major F. D. Burpee, Manager, called the men's attention to the bulletin issued on Feb. 27 and published in Canadian Railway and Marine World for April, and stated that the company was financially unable to continue the existing wage scale after May 1. The extraordinary increases in wages during the past six years were accepted by the company on the recommendation of various boards of conciliation, because of the exceptionally high cost of living due to conditions caused by the war, and that it had never been the company's intention that such wages should be continued. As the cost of living has dropped, the company expects that wages will be reduced in proportion. He acknowledged the receipt of a draft of an agreement which accompanied a letter received from the men's representatives on March 23, but said that as the company's revenue was not sufficient to continue the existing wage rates the company could not seriously consider the draft agreement which called for a heavy increase in operating expenses. He advised the committee to consult with their organization and if they were prepared to discuss the decrease of wages announced by the company he would be ready to meet them at any time. A general discussion took place and the committee stated they would report the result of the interview to their organization, and that unless instructed to return and discuss the decrease of wages, they would apply to the Labor Department for a board of conciliation under the Industrial Disputes Act. The men subsequently applied for a board of conciliation on the ground of "increase of wages and reduction of hours," instead of "reduction of wages," an error which was afterwards corrected. It is said that G. D. Kelly will be the company's representative, and that C. J. Tuley will act for the men.

The Winnipeg Electric Ry. Co. gave notice to its employees on April 1, that it desired to terminate the present agreement in force as at April 30 with a view to a modification of its terms, and intimated that its officials were prepared to meet representatives of the employees to discuss the terms of a new agreement. Some negotiations are reported to have taken place between the management and representatives of the union, upon the company's proposal to reduce wages by 3½c. an hour. The employees met on April 12, and unanimously decided not to accept the reduction. The management also proposes to make some changes in the working conditions, but these changes are said to be of little importance.

Soft Pedal.

Curate (referring to a slightly intoxicated fare)—"Conductor, do you allow drunken men on these cars?"

Conductor (in a whisper)—"It will be all right, sir, if you don't get too noisy."

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—A press report states that a contract has been let to W. Greenlees, Vancouver, for the substructure, and to J. Coughlan & Sons, Vancouver, for the superstructure of a bridge across the Vedder River on the company's Chilliwack line, in replacement of the bridge destroyed by floods in Oct. and Nov. 1921. (March, pg. 150.)

Calgary Municipal Ry.—The City Council recently authorized the purchase of a quantity of steel rails for relaying and subsequently received tenders for them at \$78.60 a gross ton delivered at Calgary. A press report of April 15, stated that R. A. Brown, Superintendent, has closed a deal with the Moose Jaw, Sask., City Council for the purchase of 160 tons of rails at \$33.77 a gross ton. These rails were bought by Moose Jaw City Council some years ago for an extension of an industrial railway, and have not been used. W. Coms, Assistant Superintendent, was in Moose Jaw, April 15, closing up the matter and arranging for the shipment of the rails. They will enable the Calgary City Council to build the entire East Calgary extension, provide passing tracks for the North Center St. line, and leave 38 tons over for repairs, in addition to having been able to purchase them at a price very much below that asked in the lowest tender. (March, pg. 150.)

Grand River Ry.-Lake Erie & Northern Ry.—We are officially advised that an appropriation has been made for the construction of a joint passenger station at Galt, for both these railways. The work is to be gone on with at an early date, but the plans and specifications are not yet completed. The station will be built on the south side of Main St., near the Iroquois Hotel. The building will be 100 x 34 ft., brick and stone being the principal materials. The foundation and walls will be designed to carry a two-story building, but it is proposed to erect only one storey at present. (Aug. 1921, pg. 434, and Oct. 1921, pg. 548.)

Grand River Ry.-Lake Erie & Northern Ry.—A press report states that a joint station will be built on Main St., Galt, Ont., during the summer for use by both lines. (Aug. 1921, pg. 434, and Oct. 1921, pg. 548.)

Hamilton St. Ry.—A press report states that track repairs will be done on Locks, Wentworth, Margaret and King St. west, during this year. These are among the streets upon which new track is to be laid as agreed on between the City of Hamilton and the city council when the recent increase in fares was granted (Jan., pg. 42.)

Kingston, Portsmouth & Cataract Electric Ry. is, we are officially advised, replacing the 60 lb. rails on some 3,800 ft. of its track in Kingston, Ont., with 90 lb. A.S.C.E. rails, which are on hand. (Mar., pg. 150.)

Kitchener & Waterloo St. Ry.—We are officially advised that the Kitchener, Ont., Light Commissioners' Street Railway Department has bought 230 gross tons of 80 lb. rails, A.S.C.E. section, 60 lb. lengths, from the United States; and 1,530 twin steel ties, from the Sarnia Bridge Co. This material is required for the construction of a mile of double track on King St. E., for which the voters on Jan. 2 authorized the issue of \$65,000 of debentures. A press report states that a contract has been let to the Standard Paving Co., for

building the extension on King St. East. (March, pg. 150.)

London & Port Stanley Ry.—A press report states that the London Railway Commission has secured another contract for the provision of terminal accommodation for a line of coal barges at Port Stanley. The Commission is reported to have authorized the expenditure of \$20,000 for a coal landing device, to be erected as soon as the necessary agreements are entered into.

The erection of a new terminal at London, which has been under discussion, is not to be settled for some time, according to a press report. The Board of Railway Commissioners has under consideration the terms upon which the G.T.R. will transfer some property on Richmond St. to the London Railway Commission for terminal purposes. (April, pg. 206.)

Montreal Tramways Co.—The Montreal City Council's executive committee had a conference April 6 with the Montreal Tramways Commission to arrange for street paving and track relaying for the season, so that the work may be done jointly, or at least in such a way that neither would have to undo the work of the other. The city council proposes to expend \$1,500,000 on street paving this year.

The question of the construction of a canal to the Mountain Park has been given considerable discussion of late by the city council. The suggestion is to build a line up Shakespeare Road, and round by the park rangers' house on Mount Royal at an estimated cost of between \$90,000 and \$100,000. The matter was discussed by the city council's executive committee April 6, when, it is stated, there was an understanding that the line was not to be built this year. (April, pg. 206.)

Ontario Hydro Electric Railways, Essex Division.—We are officially advised that the Hydro Electric Power Commission of Ontario is endeavoring to complete the rebonding of a considerable portion of the old Sandwich, Windsor & Amherstburg Ry., and is erecting approximately six miles of overhead wire to be used by the electric trolley buses that have been ordered to serve settled sections of Walkerville and Windsor. The Commission is contemplating renewing the track construction on Ouellette St., Windsor, as well as making extensive betterments on short sections of track on various portions of the lines. Plans are under way for building a new substation in the vicinity of Canard River. (Feb., pg. 97.)

Oshawa Ry.—We are officially advised that it is proposed to improve the passenger tracks from Avenue St. to Alexander St., Oshawa, Ont., 8,025 ft., by replacing the present 56 and 70 lb. rails with 80 lb. rails; and that it is also contemplated to put in a passing track on Simcoe St., between Metcalfe and John Sts.; to extend the tracks into Lakeview Park, and to add a shelter and platform there. The company contemplates buying 6,000 ft. of feeder cable wire for use from the power house along the back freight line. (Jan. 1921, pg. 36.)

Ottawa Electric Ry.—We are officially advised, with respect to press reports as to possible track extensions, that the city's street railway committee has not yet consulted with the company as to what extensions or new lines would be required under a new franchise. A line

on Bronson Ave., as an alternative to the extension of the Gladstone line has been spoken of and the people in Gloucester Tp. have asked for an extension there, but it is not at all likely that anything definite will be settled for some time. (April, pg. 206.)

Windsor, Essex & Lake Shore Rapid Ry.—We are officially advised that it is proposed to do some paving work on the line in Kingsville, Ont., and to build a siding into the company's terminals at Leamington, during this year. The company is buying 3,000 oak ties for use in the work. (Feb., pg. 97.)

Winnipeg Electric Ry.—In connection with the franchise negotiations at present in progress between the company and the city, the question of track extension is a prominent one. A number of suggestions for extensions have been made, particulars of which are given under "Winnipeg Electric Ry. Franchise Proposals" on another page of this issue. (March, pg. 150.)

Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry. Co.—In a discussion upon electric railway matters, recently, W. G. Murrin, Assistant General Manager, intimated to the Vancouver City Council, that a reduction to the former 5c. fare is out of the question. He stated that all the lines in the city show a decreasing revenue; the net profit for 1920-21 being only 3.03%, showing that even the 6c. fare is insufficient for profitable operation.

Levis County Ry.—The general committee which has studied the electric railway situation in municipalities served by this railway, reported to the Levis, Que., City Council, March 25, suggesting that the company be permitted for the next 15 years to have a 10c. fare, 25 tickets to be sold for \$2.25 for adults, and \$1.25 for children under 16 years of age.

London & Port Stanley Ry.—The London, Ont., City Council, April 18, passed on to the London Railway Commission a request to restore the old summer rate of 30c. from London to Port Stanley, on the London & Port Stanley Ry., and to lengthen the period during which commutation tickets can be used between these points. The rate was increased, with the consent of the city council, to 50c. in 1919.

P. Pockock, Vice Chairman, London Railway Commission, is reported to have stated that the summer fare will not be reduced as requested by the council, but that the Commission is applying to the Board of Railway Commissioners for authority to put in force a 75c. return fare between London & Port Stanley, at the close of the summer season.

London St. Ry.—The Ontario Legislature gave a first reading on March 28, to a bill, introduced by R. L. Braklin, to enable the company to charge an increased fare. The bill provides that notwithstanding anything contained in any agreement or bylaw, or in any general or special act of the Legislature, the company may, for the unexpired term of its franchise, charge 5c. for adults, 3c. for children between 5 and 12 years of age; children under five years in charge of adults to be carried free. It also provides that the following shall be carried free, viz.: police constables in uniform, firemen in uniform, or wearing badges,

going to or returning from a fire; health and water inspectors and city detectives, wearing badges.

St. Thomas Municipal Ry.—We are officially advised that the city council has authorized an increase of fares on the St. Thomas, Ont., Municipal Ry. The cash fare is 5c. as heretofore, but the sale of 6 tickets for 25c., available at all hours, has been abandoned. Strips of 5 unlimited tickets are sold for 25c., and 10 children's tickets are sold for 25c. as heretofore.

Winnipeg Electric Ry.—A press report states that the city council will ask for a reduction of fares if the reduction of wages proposed by the company goes in to effect on May 1.

Mainly About Electric Railway People.

R. A. Brown, Superintendent, Calgary Municipal Ry., has had his salary for this year fixed by the city commissioners at \$2,900, a reduction of \$189.72.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., and President, Canadian Electric Railway Association, addressed the Hull, Que., Rotary Club, of which he is President, on April 6, on electrical energy, its origin and application, the address being illustrated by motion pictures.

H. F. Macdonald, who was, from July 1911 to June 1915, Accountant, Timiskaming & Northern Ontario Ry., Toronto, has been appointed Auditor, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., and assumed his duties April 10. J. L. Baird, Accountant and Assistant Secretary-Treasurer, who has been acting as Auditor, remains in the former capacity.

Alfred Piddington, formerly of the Quebec Bank, who died in Montreal April 1, and was buried at Quebec, was an uncle of G. Gordon Gale, Vice President and General Manager, Hull Electric Co., and President, Canadian Electric Railway Association.

H. D. Scully, General Manager, and one of the directors of Canadian Brill Co., Preston, Ont., has resigned these positions.

Electric Railway Notes.

Montreal Tramways Employees' Union passed a resolution April 6, protesting against the adoption of daylight saving there.

The St. Thomas, Ont., Municipal Ry. put in force a new time table recently, which is reported to have resulted in increased passenger travel.

The British Columbia Electric Ry. Co. was reported recently as expecting to have one-man cars in operation on all of its Vancouver Island lines by April 15.

The Levis County Ry., which has not been operated for some months, report states, resumed operation on April 12. It has only six cars available for service, the others having been burned.

The Quebec Ry., Light & Power Co. announced early in April that it would begin the operation of trailer cars on its lines in Quebec City at the end of April, the first route to be used being the Champlain Market and St. Sauveur line.

The Hull Electric Co. recently proceeded against Patrick Riopelle and Joseph Mullen, alleging that they had

stolen a fare box. The case was heard at the Hull, Que., Assizes, March 22-24, and resulted in a verdict of acquittal, the evidence of identity not being considered sufficient.

Calgary, Alta., Municipal Ry. had to suspend service April 10, owing to a very heavy fall of snow, which accompanied a very high wind. The service was resumed on April 12 after hard fighting to get the lines cleared. This was the first time for many years that service had to be suspended on account of weather.

The heavy sleet and wind storm of March 24 did extensive damage to the London & Port Stanley Ry.'s pole line between London and Port Stanley, Ont. In order to carry on traffic the London Railway Commission borrowed a steam locomotive from the G.T.R., and provided a partial service until the power lines were restored.

The Quebec Public Service Commission on April 25 heard applications respecting the difficulties between the Levis County Ry. and the municipalities within which it operates. The Levis Town Council objects to the Commission's jurisdiction in the matter, a point which will have to be decided before the general applications are heard.

Niagara, St. Catharines & Toronto Railway Purchase Negotiations.

A deputation from municipalities interested in the proposed purchase under the hydro radial railway project, of the Niagara, St. Catharines & Toronto Ry., from the Dominion Government, waited on the Minister of Railways at Ottawa, March 30, and stated that the roadbed is in need of extensive repairs, and that its condition is holding up municipal street improvement plans. The deputation asked that the Government should cause the necessary improvements to be made. The Minister is reported to have promised the usual consideration.

The St. Catharines, Ont., City Council, on April 3, considered a report of its railway committee recommending that the question of the renewal of the company's franchise be again taken up, and that negotiations respecting it be opened with the Minister of Railways. This was agreed to and the committee was authorized to keep in touch with the hydro radial railway situation, with special attention to the option the Hydro Electric Power Commission of Ontario has on the line.

It was reported April 12, that a meeting of the representatives of the various municipalities served by the railway would be held in St. Catharines on an early day, to endeavor to adopt a standard form for a franchise for all. The suggestion is that a renewal of the franchise be given the company, in consideration of the making of improvements and extensions.

Grain Elevator Overages.—The Minister of Trade and Commerce stated in the House of Commons, April 3, in answer to W. T. Lucas, Victoria, Alta., that the total amount of overages received by the Government from terminal elevators, during the crop year 1920-1921, was 98,455 bush., and 671,075 lb. of mixed grain. The total value was \$156,524.06. Accounts were rendered for this amount, but no payments had been made.

The Canadian Electric Railway Association's Meeting at Quebec, June 1, 2 & 3.

Since a preliminary draft of the programme for the Canadian Electric Railway Association's annual meeting, to be held at Quebec on June 1, 2 and 3, was

Thomas Ahearn,
President, Ottawa Electric Railway, and Honorary
President, Canadian Electric Railway Association.

G. Gordon Gale,
Vice President and General Manager, Hull Electric
Co., and President, Canadian Electric Railway
Association.

given in Canadian Railway and Marine World for April, the Association's officials, particularly G. Gordon Gale, President; Major F. D. Burpee, Vice President, also chairman of the papers com-

mittee; W. J. Lynch, chairman, entertainment committee; and R. Mayne-Read, chairman, exhibits committee, all of whom have been devoting a large amount of time to the work, have perfected the arrangements and we are now able to give the revised programme for the meetings, which will be held on the second floor of the Drill Hall on Grand Allee, while exhibits will be displayed on the ground floor.

May 31, Wednesday.—Starting at 3 p. m. Meeting of executive committee; preliminary meeting of associate members; registration at Chateau Frontenac.

June 1, Thursday.—9 a. m. Registration at Drill Hall. 9:30 a. m. Addresses of welcome by the Lieutenant Governor of Quebec Province, Sir Charles Fitzpatrick, and Mayor Samson of Quebec City, to be followed by an inspection of the exhibits.

Business session. Minutes of last annual meeting; President's address; re-

Canadian Electric Railway Association.

Honorary President, Thomas Ahearn, President, Ottawa Electric Railway.

Honorary Vice President, George Kidd, General Manager, British Columbia Electric Railway.

President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.

Vice President, Major F. D. Burpee, Manager, Ottawa Electric Railway.

Treasurer, A. Gaboury, Superintendent, Montreal Tramways Company.

Executive Committee, E. P. Coleman, General Manager, Dominion Power & Transmission Co.; H. H. Coutens, General Manager, Toronto Transportation Commission; C. C. Curtis, Manager, Cape Breton Electric Co.; W. S. Hart, Managing Director, Three Rivers Traction Co.; A. W. McLintock, Vice President, Winnipeg Electric Ry.; E. Mayne-Read, Superintendent, Quebec Ry.; Light & Power Co.; Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry.; and C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Auditor, H. E. Weyman, Manager, Levis County Railway.

Secretary, L. E. Moreland, Chief Clerk, Hull Electric Co., Hull, Que.

Official Organ, Canadian Railway and Marine World, Toronto.

ports by Secretary, Treasurer, and special committees; appointment of nominating committee; general business; and inspection of exhibits.

1 p. m. Get-together luncheon for members, associate members and ladies, at Chateau Frontenac, with short address by prominent guest. Tickets, \$1.50.

2:30 p. m. Paper on Valuation of Street Railway Assets, their Maintenance and Depreciation, by L. A. Herdt, D.Sc., E.E., consulting engineer, Montreal. Discussion to be led by H. E. Weyman, Manager, Levis County Ry.

2:45 p. m. For ladies, sight-seeing trip round Quebec by electric railway car.

4 p. m. Paper on the Modern Street Railway Motor, by J. K. Stotz, Canadian Westinghouse Co. Discussion to be led by W. G. Gordon, Transportation Engineer, Canadian General Electric Co.

5 p. m. Inspection of exhibits.

7:50 p. m. Association dinner at Chateau Frontenac, for members, associate members and ladies, to be presided over by the Association's Honorary President, Thos. Ahearn, President, Ottawa Electric Ry. Tickets \$5.

10 p. m. Dancing. Band on Dufferin Terrace.

June 2, Friday.—9 a. m. Inspection of exhibits.

10 a. m. Paper on Motor Buses and Trackless Trolleys, by D. E. Blair, Sup-

George Kidd,
General Manager, British Columbia Electric Railway, and Honorary Vice President, Canadian Electric Railway Association.

Major F. D. Burpee,
Manager and director, Ottawa Electric Railway, and Vice President, Canadian Electric Railway Association.

intendent of Rolling Stock, Montreal Tramways Co. Discussion to be led by M. W. Manz, Ohio Brass Co.

11:50 a. m. Moving pictures, "The Ro-

mance of the Rail and Power," by Canadian Westinghouse Co.

12.30 p.m. Inspection of exhibits.
2.30 p.m. Paper on Welded Track Joints, by E. B. Entwistle, Loraine Steel Co. Discussion led by W. F. Graves, Chief Engineer, Montreal Tramways Co.
3.30 p.m. Moving picture exhibit, by National Safety League and Dominion Wheel & Foundries Ltd.

4.30 p.m. Trip to Quebec Bridge, by steamboat, for members, associate members and ladies. Light refreshments will be served.

6 p.m. Inspection of exhibits.
9 p.m. Reception and ball at Chateau Frontenac. Tickets \$2.
June 3, Saturday.—9 a.m. Inspection of exhibits.

10 a.m. Unfinished business, and election of officers.

To be followed by a trip to Montmorency Falls and Ste. Anne de Beaupre, and for those who desire it, a trip to the Saguenay.

Exhibits by Manufacturers.

As stated in previous issues, exhibits of electric railway supplies, etc., will be shown, for the first time, in connection with the meeting, and the whole ground floor of the Drill Hall on Grand Allee will be devoted to them. R. Mayne-Read, chairman of the exhibits committee, has displayed great energy, and spent a large amount of time, in arranging for the location of spaces, dividing of them off, decoration of the hall, the supply of d.c. current, and the innumerable details involved. Through his courtesy, Canadian Railway and Marine World is able to give a diagram of the ground floor of the Drill Hall, showing the exhibit spaces, and also considerable information about most of the exhibits. The following are the numbers of the spaces allotted up to April 19, the names of the exhibitors, the principal things they will exhibit, and their representa-

tion, circuit breakers and parts for operating same, accessories and repair parts of street railway motors, showing coils and photographs of installations and equipment. G. F. Foot, Assistant to Manager of Sales; T. F. Dryden, Manager, Toronto office; H. T. Gibbs, Sales Engineer, and H. A. Cooch. The Canadian Westinghouse Co. will also provide a film entitled "The Romance of the Rail and Power," which will be shown as a moving picture on June 2, at 3.30 p.m.
4. Ohio Brass Co., Mansfield, Ohio. P. A. Hinds, Canadian Representative.
5. Taylor Electric Truck Co., Troy,

Corporation, Toronto. Armature coils, car seats, electric car heaters, gear cases, pneumatic door and step mechanism, tail light signs, trolley catchers and retrievers. F. J. Neale and D. M. Galloway, Vice Presidents; W. E. Foreman, Sales Manager; A. F. McLaughlin, Montreal representative. National Pneumatic Co., Philadelphia, Pa. Messrs. Casey and Paul, Nichols-Lintern Co., Ohio.

North center of hall.

D.C. current will be installed in the

Drill Hall, for the use of those who wish to have moving exhibits, and who have been located on the north side of the hall.

Snow and Ice Plough for Toronto Bus Routes.

The Toronto Transportation Commission's operation of buses, as described in Canadian Railway and Marine World's recent issues, has been facilitated greatly during this winter by the use of an ice and snow removing machine, an illustration of which is given herewith. While the 1921-22 winter has been a comparatively open one in Toronto, there have been a few severe storms, when large quantities of snow accumulated on the roads, and one particularly had one, which resulted in the disruption of the street car service and left the streets in a very icy and almost impassable condition. The double bladed plough shown was, however, used with good effect during and after these storms, with the result that the bus service suffered no interruption.

The plough's most distinguishing feature are its two blades for the removal of snow and ice. The front blade, supported by the A frame at the front of the truck, may be raised and lowered vertically from the driver's seat, by manipulation of the wheel adjacent to the steering wheel, a corner of this raising and lowering wheel being shown in the illustration. The raising and lowering is done by means of gearing in the quadrant, (to one extremity of which the chain is attached), meshing with worm gearing at the end of the rod extending from the wheel. The front blade may be set at any angle desired.

The blade under the center of the truck may be raised and lowered by the manipulation of the wheel at the center, over the blade. The shaft on which this raising and lowering wheel is mounted has a worm cut on it, which engages the gearing seen, causing the blade to rise or lower as the wheel is turned.

tionally low, 80 to 1.

In operation in heavy drifts, the leading blade is set a little higher than the following one, so that the first one will remove the greater part of the surface

34. Vickers Limited, London, England, and Montreal. R. S. Griffith, Agent and Importer.

35. Electric Railway Journal, New York, N.Y. L. W. Seeligsberg, Vice Pre-

The tractor on which the blades are mounted is of a heavy and rugged design, driven by a 50 h.p. engine, and with the drive transmitted to all four wheels. Five speed transmission is employed. An automatic differential lock is employed, ensuring even application of power to all four wheels. The gear ratio is excep-

sionally low, 80 to 1. In operation in heavy drifts, the leading blade is set a little higher than the following one, so that the first one will remove the greater part of the surface snow, leaving to the second one the task of removing the tightly packed snow, and ice. While ploughs similar to this are employed on bus routes in New York City, we are informed that this is the first of this kind to be used in Canada. It was supplied by the Packard Ontario Motor Co., Toronto.

The Toronto Transportation Commission's Activities.

As stated in Canadian Railway and Marine World for April, pg. 205, the Toronto Transportation Commission, applied to the City Board of Control on March 15, for sanction no. 3, to authorize the issue of debentures for \$13,542,000 to provide for its construction and rehabilitation programme for 1922. After a conference with the commissioners, and the Commission's General Manager, H. G. Couzens, the Board decided to authorize the issue of debentures for \$10,000,000, the question of issuing further debentures for the balance asked for being deferred for consideration later.

The Commission plans to go ahead aggressively with the rehabilitation started in 1921, and work will be started immediately on the completion of the track layouts at the St. Clair, Danforth and Russell car houses. Work was started on April 15 on rehabilitation of the track on King St. from Sherbourne St. to Spadina Ave., and on April 19 started on rehabilitation of the track on Bloor St. from Lansdowne Ave. to Spadina Ave.; on Gerrard St. from Pope Ave. to Greenwood Ave., and on Parliament St. from Gerrard St. to Winchester St. Work will begin shortly on rehabilitation of tracks on York St. from Queen St. to Front St., and on Church St. from Queen St. to Bloor St. Later in the season, the work will be done on Queen St. between Yonge and Shaw Sts., and on Dovercourt Road, from College St. to Hallam Ave. All of the foregoing work is classified as rehabilitation, which means that the tracks will be completely renewed, from subgrade to rail. Details of the types of track structure adopted by the Commission, and varying according to traffic density and other considerations, were given fully in preceding issues of Canadian Railway and Marine World. In addition to the foregoing, the installing of special work and intersections where necessary throughout the city is being carried on, and work has been begun on the construction of a loop at Queen St. and Kingston Road, in the east end of the city.

To facilitate the hiring of men necessary for rehabilitation work, the Commission opened an employment office, which has been placed under the direction of Dr. S. G. Mills, formerly senior medical officer of the 13th Reserve Brigade at Shorncliffe, Eng. Preference in employment is being given returned soldiers and married men.

An important extension will be undertaken in the near future, when a double track line will be built from Sunnyside to Jane St., near the Humber River, at the west end of the city. It will be located south of the Lake Shore Road, or Toronto-Hamilton highway, and it is expected that details of the transaction involving the acquisition of the right of way will be settled by May. This extension will be brought within the single fare zone as soon as completed.

The Commission has bought about 10 acres of land, bounded on the north by Eglinton Ave., on the east by Yonge St., on the west by Duplex Ave., and on the south by Berwick Ave., as a site for large car houses, which will be used for cars operating on Yonge St., and it is probable that when they are ready for occupancy the present Yorkville car house will be closed.

Plans are nearing completion for machine shops, to cost in the neighborhood

of \$1,000,000 and to be located at Davenport Road and Bathurst St. It has not been decided when tenders will be called for and construction begun.

In connection with new equipment, it is said that the intention is to order about 250 new double truck cars similar to those obtained in 1921, but at the time of writing (April 20), details had not been settled. The rehabilitation of rolling stock operated formerly by the Toronto Ry. Co. is described fully in another article in this issue, and as there-in stated, this work is about completed. An important addition to equipment was made recently by the purchase in the United States of 8 differential dump cars, with single end tower and control, and 18 cu. yd. capacity. Their tilting bodies are divided into 3 compartments, each with its own side doors, so that different kinds of material may be hauled in the same car at the same time. Their traversing and tilting mechanism is electrically operated by a small motor, which is automatically controlled by a reversing switch.

The Commission removed to its new offices in the old Board of Trade Building, at the corner of Yonge and Front Sts., from the old offices at 229 Yonge St., April 8. The building has been named the Public Utilities Building. The Commission has also acquired adjoining properties on both Yonge and Front Sts., viz., 37, 39 and 41 Yonge St. and 10 and 12 Front St., and has a frontage on Yonge St. of 185 ft. and on Front St. of 100 ft. The old Board of Trade Building has been thoroughly overhauled, provided with a new layout and made as fireproof as possible, and the Commission is occupying the whole of it, except the ground floor. It is contemplated to build a wing 64 x 114 ft. and 10 stories high on Front St., and when the plans are fully carried out the Toronto Transportation Commission and the Toronto Hydro Electric System will both be housed in the combined buildings.

Brandon Municipal Railway May Cease Operating.

There is reported to be some talk in Brandon, Man., of discontinuing the street car service. At a recent meeting of the city council T. Boden, Superintendent, presented a report dealing with the position of the railway, which is stated to have shown that for the years 1913 to 1920 the railway just paid operating expenses, and that for 1921 there was a loss of nearly \$15,000 in operating due largely to the higher cost of power.

Brandon Municipal Ry. has 9.90 miles of single track, and has 10 closed, 10 open cars, and 1 sweeper. The capital outstanding consists of a bond indebtedness of \$450,000. The following figures show the operations for the calendar year 1920:—

Passenger revenue	\$14,016.10
Miscellaneous transportation	100.00
Other than transportation	692.7
	\$15,218.13
Operating expenses	30,379.89
Loss on operation	\$15,160.84
Interest on floating debt	21,000.00
Interest on floating debt	667.48
Reserves and special charges	10,709.41
	\$37,477.71
Total loss	\$22,259.58
Car mileage	\$61,312
Fare passengers carried	809,021
Transfer passengers carried	76,000

Manitoba Public Utilities Commission Abolished.

As stated in Canadian Railway and Marine World for April, pg. 205, the Manitoba Legislature passed a resolution March 14, censuring the Government for not having put into effect a resolution of the Legislature, passed April 28, 1921, directing the winding up of the Public Utilities Commission's affairs and the transfer of the Commissioner's duties to the Provincial Secretary's Department. Following this vote the Premier tendered the Government's resignation, but an arrangement was made under which the Ministers would continue in office until estimates could be passed, and certain routine business completed. The estimates contained \$12,765 for the Public Utilities Commission, and on March 22, P. A. Talbot proposed that this amount be reduced to \$6,000 and that the office closed immediately, but further consideration was adjourned. The matter came up again, March 27, when a sum not exceeding \$42,265 was voted for salaries, supplies and expenses (Public Utilities Commission) in connection with the Attorney General's Department for nine months ending Aug. 1922. It was under discussion again on April 29, when the estimate for the continuation of the office was eliminated, and discussion followed as to whether or not legislation would be introduced to repeal the act under which the Commissioner was appointed. It was finally determined that the office of Public Utilities Commissioner be abolished. The Attorney General's Department is now expected to have no more Commissioner, P. A. Macdonald, to cease operations under the act on May 31. The act providing for the appointment of a commissioner has not been repealed.

Jurisdiction Over British Columbia Electric Railway.

The bill for the amendment of the Vancouver, Fraser Valley and Southern Ry. Co.'s act of incorporation, which is the British Columbia Electric Ry. Co.'s application to bring its entire undertaking under the jurisdiction of the Dominion Government, was read a first time in the House of Commons, April 5, and a second time on April 7, after which it is referred to the railway committee.

The bill is being opposed by the Union of Canadian Municipalities, the Union of British Columbia Municipalities, and the British Columbia Government, as well as by municipalities within which the B.C. Electric Ry. operates, with the exception of the City of Victoria. It is stated that while the Victoria City Council is not opposing the bill its attitude is not one of sympathy with the provisions. The position taken by the Union of Canadian Municipalities is that the bill, if adopted by Parliament, would void provincial and municipal control of highways and traffic and place the company and its subsidiaries for the future under the Board of Railway Commissioners of Canada's jurisdiction. Agreements and contracts between the companies concerned and the municipalities served, covering tramway, service, fare rates, for electric light, power and gas would be immediately abrogated and the municipalities would thereafter be compelled to go to Ottawa for a decision on matters which are of purely local concern.

Marine Department

General Shipbuilding Matters Throughout Canada.

Canadian Vickers Ltd., Montreal.—The dredge which is under construction at this yard for the Marine Department's service in the St. Lawrence River, and which was ordered before the war, is approaching completion. It was intended originally to utilize the dredge in the deepening of the channel between Quebec and Montreal, but it is now reported that it may not be used for this work, at any rate for the present, but may be assigned to work elsewhere. The original contract price was \$850,000.

Six ships which are being overhauled for the George Hall Coal Co., were expected to be completed and handed over for operation about the end of April, or early in May.

Davie Shipbuilding & Repairing Co., Lauzon, Que.—A Montreal press dispatch of April 19 states that the suit between this company and the French Government had been settled out of court.

Dominion Government Shipyard, Sorel, Que.—The Minister of Marine gave the following information in the House of Commons, April 13, in answer to questions by R. B. Hanson, York-Sunbury, N.B. There have been no actual dismissals of employes at Sorel shipyard since Dec. 29, 1921. The services of a number of employes were discontinued temporarily since that date; the names of the persons whose services have been discontinued have been filed with the Clerk of the House. A number of persons have been taken on as employes at the shipyard since Dec. 29, 1921, their names being given on a list which has also been filed with the Clerk of the House.

Dougherty & Dowkes, Owen Sound, Ont., have built a small steamboat on the site of the old drydock during the winter, for fishing service about Pyette's Point. She is 45 ft. long, and 10 ft. beam. A 4-cylinder gasoline engine is to be installed.

W. R. Menches & Co., Vancouver, B.C., launched a power boat for Powell River Co., April 11. Her dimensions are, length 132 ft., breadth 19 ft., draft 8½ ft. She is equipped with engines of 200 h.p., driving twin screws, and developing a speed of about 15 knots. She is to be used between Vancouver and Powell River, and another boat of a similar type, but somewhat smaller, is now under way, by the same builders and for the same owners.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—The keel of the freight steamship which this company is building for the Mathews Steamship Co., Toronto, was, according to a Port Arthur press report of April 3, expected to be laid during April, and it was also stated that the ship will be ready for launching in August, and will be named Mathews-ton.

Prince Rupert Drydock & Shipbuilding Co., Prince Rupert, B.C.—The Minister of Marine gave the following in the House of Commons April 3, in answer to R. J. Manion, Fort William and Rainy River, Ont.:—No claims are outstanding against the Canadian Government Merchant Marine ships built at Prince Rupert. There are, however, claims by out-

side creditors outstanding against the Prince Rupert Dry Dock & Shipbuilding Co., the contractors for building the ships. The Marine Department is not definitely advised as to the exact amount of these claims. They are represented as amounting to between \$400,000.00 and \$450,000.00. The Attorney General of British Columbia has requested settlement on behalf of the community and in the hope that satisfactory arrangements for continuing the enterprise at Prince Rupert might be made possible. The Attorney General of B.C. is not acting for the B.C. Government.

Reid Newfoundland Co., St. John's, Nfld.—The s.s. Portia, which has been undergoing repairs in the company's dry-

Dominion Marine Association.

Honorary President, A. A. Wright, President, Tidewater Shipbuilders, and Vice President and Managing Director, Davie Shipbuilding & Repairing Co., Montreal.

President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal.

First Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Second Vice President, G. J. Madden, George Hall Coal Co. of Canada, Ogdensburg, N.Y.

Executive Committee, The President, First and Second Vice Presidents, and W. E. Burke, Canada Steamship Lines, Montreal; Yvon Dupre, Sincennes-McNaughton Line, Montreal; M. J. Honey, Canada Steamship Lines, Toronto; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Alooma Central Steamship Co., Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Keystone Transports, Montreal; Honorary members, L. L. Henderson and A. A. Wright, Montreal.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

dock, was completed April 10. Extensive repairs to bottom plating and frames were undertaken, and several new plates were placed, as well as a new section of the keel, and a new smoke stack.

Smith & Rhuland, Lunenburg, N.S., launched the schooner Mahaska, March 28, for W. C. Smith & Co. Her dimensions are, length overall 133 ft., length on water line 108 ft., beam 25.5 ft. She will have a spread of canvas of 2,295 yards, and it is possible that she will be one of the entrants for the annual fishing schooner race.

Victoria (B.C.) Shipowners Ltd.—The Minister of Marine stated in the House of Commons March 24, in answer to questions by W. Duff, Lunenburg, N.S., respecting wooden sailing ships built in Victoria, in which the Government is interested, that one named S. F. Tolmie has been completed, net tonnage 1,497.08. Construction has been suspended on two hulls, and part of the material is on the building site for another hull. The Finance Department advanced and expended \$629,131.49 on the four ships to the end

of Feb. 1922. This amount was not apportioned to each ship, but applied to the four. The advances are secured by mortgages, and the Government is still interested in the ships. There is no market at present for their sale.

Capt. M. D. Harbord, President, has resigned and is reported to have stated that he was leaving the company on account of pressure of private business and of lack of tangible success in his efforts to right the company's affairs. The company was formed to build 4 wooden barquentines under special aid from the Dominion Government, but got into financial difficulties before the completion of the first ship. Efforts have been made to persuade the Government to continue the shipbuilding and grant increased aid, but up to the present no decision on the matter has been announced.

Yarrows Ltd., Victoria, B.C., did the following repair and overhaul work during March:—Cameron-Genoa Mills Co., tug Des Brisay, repairs to bottom caused by being submerged; Canadian Government Merchant Marine, Canadian Freighter, cleaning, painting and sundry repairs; Canadian Observer, cleaning, painting and sundry repairs; Canadian Prospector, drydocking, cleaning, painting and sundry repairs; Canadian Transporter, cleaning, painting and sundry repairs; Dominion Government, Madras, docking, cleaning, painting and sundry repairs; Restless, cleaning, painting, caulking and general repairs; Imperial Oil Ltd., Calgarolite, survey, Government inspection, general repairs and boiler work; Talaralite, general overhaul, drydocked, cleaned and painted; A. O. Lindvig, Romulus, docking, cleaning, painting and sundry repairs; Pacific Co., repairs; Restless, cleaning, painting, construction Co., tug Burrard, repairs to hull and boiler, due to collision; Union Steamship Co., of British Columbia, Cowichan, alterations to interior, new baggage trunk installed and steam hoists fitted.

Gyroscopic Stabilizer for Passenger Ships.—It is reported that the U.S. Shipping Board is to have a gyroscopic stabilizer installed on one of its passenger steamships in the trans-Atlantic service. It is claimed that the instrument will allow of the removal of the bilge keels, and save approximately 2,000 h.p. The instrument is 12 ft. in diameter, weighs about 100 tons, and will make about 850 revolutions a minute. The estimated cost of the installation is \$150,000.

Launceston Steamship Co. has been incorporated under the Ontario Companies Act, with \$40,000 authorized capital, and office at Toronto, to build, own and operate ships and to carry on a general navigation and transportation business. The provisional directors are:—J. A. Kent, G. M. Jarvis, and A. K. Russell, Toronto.

The Canadian Navigators Federation, Eastern Division, held its annual meeting at Halifax, N.S., March 22. Officers were elected as follows:—President, L. A. Doyle; Vice President, W. Matthews; Treasurers, M. T. Murphy; Secretary, W. A. McInnes; Solicitor, L. A. Forsythe.

Esquimalt Drydock Construction.

Hon. S. F. Tolmie, Victoria City, B.C., said in the House of Commons, April 3:—"Before the orders of the day are called, I would like to direct the attention of the leader of the Government to an article appearing in the press this morning to the effect that work on the Esquimalt drydock has been ordered stopped. In that connection I will read a wire from the Associated Boards of Trade of British Columbia, dated Victoria, March 31, as follows:— 'Whereas it has been brought to our notice that the Federal Government has ordered the suspension of work on the building of the Government drydock at Esquimalt; also we understand that the work on the floating drydock at the Wallace shipyards, North Vancouver, has been discontinued by order of the Government; and exceedingly

ported to be a telegram from myself to the secretary of some organization in Victoria with regard to this matter. I should like to make it plain that I have not sent any communications at all; possibly the message referred to was sent by one of my colleagues and the press has got the Kings mixed. But the substance of this telegram attributed to me indicated that the matter was receiving the attention of the Government. We have thought it advisable to have a report on the situation as it affects the dry docks of Victoria and Vancouver before proceeding further with the work. The matter is under consideration."

Canadian Railway and Marine World is officially advised that the general contractors, P. Lyall & Sons Construction Co., who commenced work on the dry-

two inner stops to allow it to be divided into two berths, 400 and 750 ft. long respectively, if desired, and a landing wharf, 800 ft. long, adjoining.

The stoppage of the work has caused great dissatisfaction in Victoria and Esquimalt, which culminated in the sending on April 13, of a delegation consisting of Hon. John Hart, British Columbia, Minister of Finance; H. C. Hall, K.C., W. M. Ivel and T. Booth to Ottawa to protest against it and to urge resumption.

P. Lyall Construction Co.'s directors, on March 31, passed the quarterly dividend of 1% due April 10, one of the reasons given being that the Dominion Government had not provided in its estimates for the continuance of work on the Esquimalt drydock. Officials of the company stated that an item had been included in the estimates up to the last moment, and that there is a possibility of it being inserted in the supplementary estimates, but this was not regarded as being tangible enough to warrant a declaration of a dividend under present conditions. It was also stated that if the Government fails to provide for the carrying on of the work, it will constitute a basis for a substantial claim by the company.

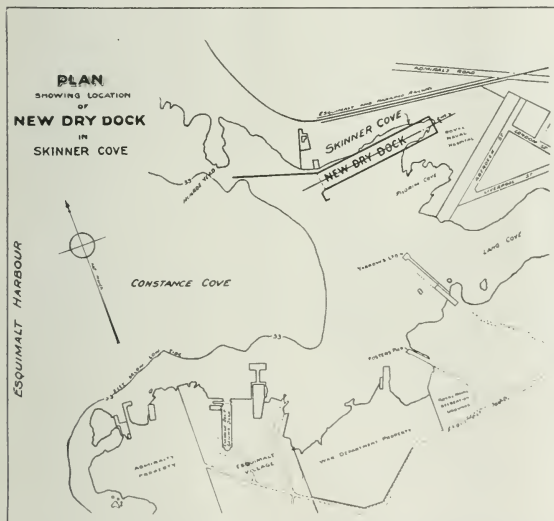

The sites of the existing drydock at Esquimalt, and of the other one on which construction has been started, are shown in the accompanying plan.

Welland Ship Canal Construction.

The Minister of Railways and Canals gave the following information in the House of Commons April 10 in answer to questions by T. L. Church, North Toronto:—"Approximately 70% of the total work on the new Welland Ship Canal remains to be done. This comprises the completion of sections 1, 2, 3, 4 and 5; the construction of secs. 6, 7, 8 and 9; the lock gates, superstructures of bridges and minor details. Approximately 30% of the total work has been completed. This comprises 63% of the work on secs. 1 and 2; 51% of the work on secs. 3 and 4; 72% of the work on sec. 5. The gross amount expended to March 31, 1922, was \$30,588,026.07, less credit for cash received on account of plant and materials, etc., from contractors for secs. 1, 2 and 5, \$1,149,761.25; less further amount to be paid by contractors for secs. 1, 2 and 5 in accordance with their contracts on account of plant, etc., \$952,883.11, and less estimated value of plant, etc., to be taken over by contractors for secs. 3 and 4, \$2,151,655.88, making the net expenditure upon work done to March 31, 1922, \$26,333,725.83, which sum includes other redeemable assets.

If ample funds are available for the prosecution of the work, it will be ready for traffic during 1927. It is the Government's intention to finish the canal as soon as circumstances will permit. The work to be done this year will be the construction of locks on secs. 1, 2 and 3 and excavation upon secs. 1, 2, 3, 4 and 5.

St. Lawrence Transportation Ltd. has been incorporated under the Quebec Companies Act, with \$20,000 authorized capital, and office at 10 St. Jean, Montreal, to carry on general transportation business, and to own and operate ships. The incorporators are: L. J. A. Michaud, J. A. Harnois, J. E. Redard, Quebec, Que.

regretting that the Government has seen fit to stop both of these important works, especially seeing that at Esquimalt they have already expended approximately \$1,500,000; therefore be it resolved that this meeting request the Government to immediately reconsider their decision in order that these important and necessary works for the development of the ports of Victoria and Vancouver be proceeded with as rapidly as possible.' This telegram clearly indicates that the matter is one of great importance not only to the ports mentioned, but also to the great shipping interests of the Pacific Coast. I should be very glad indeed, therefore, to receive from the leader of the Government some statement as to what the Government intends to do in this connection."

Premier King replied:—"I saw in this morning's paper the dispatch to which my hon. friend has referred. I also noticed a communication which was re-

ported about a year ago, discontinued it on March 31, under the Public Works Department's instructions, up to which date they had about 350 men employed. All the dredging on the site of the wharf and entrance channel had been completed and the inner half of the dock site had been enclosed by a cofferdam, in which excavation work has been proceeding for some months. An outer cofferdam, to enclose the balance of the work, was also under construction. The excavated material has been used to build the rubble mound for the landing wharf cribs to be placed on and to reclaim seven acres of land adjacent to the landing wharf for machine shops, industrial sites, etc. The rubble mound for the landing wharf was about completed and the five timber cribs sheeted with reinforced concrete, of which the wharf will be composed, were almost ready to be placed on the mound. The plans provide for a dock 1,150 ft. long, and 135 ft. wide, with

Canadian Government Merchant Marine Operation, Etc.

Cost of Ships, Operation, etc.—The Minister of Railways gave the following information in the House of Commons on March 29, in answer to questions by W. Duff, Lunenburg, N.S., and J. F. Johnston, Last Mountain, Sask. The total capital cost of all C.G.M.M. ships up to Dec. 31, 1921, was \$73,571,842.27. Sixty-five ships are in commission and 48 are being operated. The net loss on operation during 1921 was \$2,210,724.55, exclusive of depreciation and interest due Government. The following amounts are owing the Government for interest up to and including Dec. 31, 1921, viz.—1920, \$1,741,394.27; 1921, \$3,357,833.39; these figures are computed at 5½% on total capital cost. The following amounts were allowed for depreciation on value of ships, viz.—in statements prior to 1921, \$815,841.32; for 1921, at 4%, \$2,342,932.19, a total of \$3,158,775.51. The average cost per day to the Government of ships when not operated is as follows: 2,800-ton type, \$163.12; 3,400–3,950-ton type, \$226.38; 4,400-ton type, \$274.23; 5,100-ton type, \$296.08; 8,100-ton type, \$422.72; 10,500-ton type, \$572.87. All these figures include watchmen's wages, insurance, interest and depreciation. Two passenger ships on West India trade, Canadian Fisher and Canadian Forester, cost \$399.56.

We are officially advised that the 17 ships not in operation are located as follows: Canadian Voyageur, Canadian Signaller, Canadian Gunner, Canadian Miner, Canadian Sealer, Canadian Settler, Canadian Warrior and Sheba, Northwest Arm, Halifax, N.S.; Canadian Recruit, River St. Lawrence, near Stone Mills; Canadian Adventurer, Port McNicoll, Ont.; Canadian Engineer, Canadian Sailor, and James A. McKee, Goderich, Ont.; Canadian Pathfinder, Canadian Sower, Canadian Trader, and Thomas J. Drummond, Midland, Ont.

Insurance.—The Minister of Militia and Defence gave the following information in the House of Commons, April 3, in answer to questions by H. Marler, St. Lawrence-St. George, Montreal: The insurance carried on Canadian Government Merchant Marine ships owned by the Dominion Government is \$41,310,720, which was placed Jan. 1, 1922, with 30 English companies of good repute and 4 United States companies, as follows:—Globe & Rutgers Fire Insurance Co., Franklin Fire Insurance Co., Philadelphia, Springfield Fire & Marine Insurance Co., and Acta Insurance Co. The insurance was placed through Willis Faber & Co. of Canada, Montreal, as brokers. The premiums were in sterling £203,096 16s. 10d., and in dollars \$144,111.63 additional.

Officers of Steamships.—The following engineers have been appointed in addition to those mentioned in previous issues:—Canadian Harvester, R. C. Prydie; Canadian Logger, S. Gruzelier; Canadian Pioneer, T. Duguid; Canadian Raider, E. G. Rankin.

Canadian Trasher Ltd., incorporated to own the ship which was originally named Canadian Thrasher, but which was renamed Canadian Britisher about the time of its completion, has had its corporate name changed to Canadian Britisher Ltd.

Montreal Sailings.

To Liverpool—Canadian Conqueror, May 5; Canadian Explorer, May 13; Can-

adian Leader, June 2; Canadian Cruiser, June 16; Canadian Commander, June 30.

To London—Canadian Volunteer, May 4; Canadian Challenger, May 18; Canadian Ranger, June 1; Canadian Conqueror, June 15; Canadian Challenger, June 29.

To Glasgow—Canadian Navigator, May 6; Canadian Otter, May 20; Canadian Seigneur, June 3; Canadian Carrier, June 17; Canadian Volunteer, June 24.

To Cardiff and Swansea—Canadian Squatter, May 23; Canadian Runner, June 6; Canadian Navigator, June 27.

To Australia and New Zealand—Canadian Planter, May 23; Canadian Explorer, June 28; Canadian Spinner, July 26.

To Barbados, Trinidad and Demerara—Canadian Beaver, May 10; Canadian Logger, May 24; Canadian Harvester, June 7; Canadian Coaster, June 21.

To Nassau, Kingston and Belize—Canadian Fisher, May 10; Canadian Forester, May 31; Canadian Fisher, June 21; Canadian Forester, July 12.

To Newfoundland—Canadian Sapper, May 6 and 27.

Vancouver Sailings.

Australia and New Zealand Service—Canadian Britisher, May 11, Auckland, Sydney, Melbourne, Adelaide. Canadian Skirmisher, June 15, Auckland, Sydney, Melbourne.

Oriental Service—Canadian Highlander, May 5, Yokohama, Shanghai.

India Service—Canadian Importer, May 30, Calcutta, Bombay.

Nova Scotia-Boston Service.—Nova Scotia members of Parliament waited on the Dominion Government, April 7, to discuss the question of better steamship accommodation for eastern ports. It was requested that the Canadian Government Merchant Marine s.s. Canadian Mariner, now laid up at Halifax, be placed in service between Nova Scotia ports and Boston, Mass., to carry live lobsters and other sea food, at a fair freight rate. It was stated that the deputation left with the expectation that a ship will be put on the route if it can be shown that there is sufficient trade to warrant it.

Mainly About Marine People.

Capt. D. Baird, President, Victoria and Vancouver Stevedoring Co., Vancouver, B.C., was elected President of the Northwest Waterfront Employers' Union at the recent annual meeting at Portland, Ore. A. M. Dollar, is Vice President for British Columbia.

Capt. Jos. Blois, master of the G.G.S. Stanley, has retired from active service, after about 51 years of seafaring life, 20 of which have been in Dominion Government service. He was presented March 30, with a travelling bag by the crew.

C. S. Boone, President, Boone Dredging & Construction Co., Toronto, died there, April 16, aged 67. He carried out a number of extensive dredging operations, mainly on the Great Lakes, for the Dominion Government, and was associated with the Toronto Shipbuilding Co., which built the wooden s.s. War Toronto, for the British Government, under order from the Imperial Munitions Board.

Capt. T. Bourassa, harbor master, Montreal, has retired after having been in the service for 30 years, as deputy

harbor master and harbor master. He was born at La Prairie, Que., in 1851, and was appointed deputy harbor master, Montreal, in 1892, and harbor master in 1914.

W. Carson, who died at Midland, Ont., April 16, aged 72, was a well known diver on the Great Lakes, and during the war acted as Dominion Government inspector of wooden ships which were built for war purposes.

Dr. W. Bell Dawson, Superintendent, Tidal and Current Survey, Naval Service Department, Ottawa, sailed from St. John, N.B., on the C.P.R. s.s. Melita, on his way to Rome, Italy, where he will represent Canada at the International Science Conference.

Mrs. G. H. Flood, wife of the Purchasing and Contract Agent, Marine and Fisheries Department, Ottawa, died there March 29, and was buried at St. John, N.B., her native place. She was a sister of George McAvity.

Capt. W. E. George, a veteran master mariner of the Pacific Coast, died at Victoria, B.C., recently, aged 88. He came from England in 1878 and settled in Victoria.

E. Hawken, Assistant Deputy Minister of Marine, and Frank McDonnell, Chairman, Board of Steamboat Inspection, are expected to return to Ottawa about May 1, from an official trip to Great Britain.

A. S. Hawker, Superintendent of the C.P.R. Bay of Fundy Steamship Service, died in the Infirmary, St. John, N.B., March 11, after a short illness. He had been in C.P.R. service over 40 years.

J. G. Macphail, B.A., B.Sc., Commissioner of Lights, Marine and Fisheries Department, returned to Ottawa, early in April, from Great Britain.

F. J. McClure, Passenger Traffic Manager, Robert Reford Co., Ltd., returned to Montreal at the end of March, after a ten weeks trip to the British Isles and European continent.

Thos. McConkey is acting as Chairman, Board of Steamship Inspection, Marine and Fisheries Department, Ottawa, during the absence in England of Frank McDonnell.

Jas. Playfair, President, Great Lakes Transportation Co., has been re-elected President of the Golf and Country Club at Midland, Ont.

Capt. D. Sutherland, master of the Imperial Oil s.s. Victrolite, died of pneumonia, aboard his ship, April 3, when bound from Port Lobos, Mexico, to New York, and was buried at Keywest, Florida. He was well known in Halifax, N.S., from whence his ship frequently sailed, and he had been in the company's service for a number of years, in command of its various steamships, being transferred from the s.s. Impoco to the Victrolite about four months ago.

A. R. Tibbitts, Inspector of Harbor Commission, Marine and Fisheries Department, Ottawa, is acting as Assistant Deputy Minister of Marine and Fisheries during the absence in England of E. Hawken.

J. W. Troup, Manager, British Columbia Coast Steamship Service, C.P.R., accompanied by Mrs. Troup, returned to Victoria, April 9, after a trip to China, Japan, Straits Settlements, and the Dutch East Indies.

Mrs. Jos. Whalen, mother of James Whalen, President, Port Arthur Shipbuilding Co., Port Arthur, Ont., died at Vancouver, B.C., April 5, aged 71.

United States Merchant Marine Affairs.

The position in which the U.S. Shipping Board found itself following the somewhat hysterical shipbuilding programme carried out in the later months of the war, and since, has been clarified to a considerable extent by the Merchant Marine Act 1922, some details of which were given in our last issue. The main principle of the act is to provide for the sale of the ships built, to private owners, and to provide what may be termed subsidies in regard to their operation, in the way of more or less indirect aids. The act of 1922 must be considered in conjunction with the act of 1920, commonly called the Jones Act, of which it is practically an amendment. The 1920 act, sec. 34, provided for preferential tariffs for merchandise carried in U.S. bottoms, but to have carried out the intention of this section, it would have been necessary to abrogate a number of international commercial treaties, which forbid preferential tariffs, but this, both the present and past Presidents did not consider to be in the national interest. The 1922 act therefore confines itself to the provision of indirect aids for the establishment of the merchant marine.

The 1922 act provides for the sale of the ships at such prices, to U.S. citizens, except as otherwise provided, as the Board may prescribe, the payment of the purchase price, with interest at not less than 2%, not to be deferred for more than 15 years. The intention is that the ships shall be sold at world prices, so that in capital account they shall not stand, to the purchaser, at more than foreign owned ships of similar type. With the exception of 23 combination passenger and cargo steamships, and some former German owned ships, the Board has only cargo ships, so that the disposal of them does not affect the passenger carrying trade to any extent. The main indirect aid provided, in lieu of that dealt with under sec. 34 of the Jones Act, is the deduction of 5% of all freight receipts for inbound and outbound traffic on U.S. ships, from income and corporation taxes. This, it is claimed, will benefit everybody concerned, including the farmer, the manufacturer, the importer and exporter, and the shipowner, giving a preference to U.S. ships, and ensuring full cargoes.

With regard to immigration traffic, it is provided that when 50% of the number of aliens of any nationality, admissible in any one year under the immigration laws, shall have been transported from foreign ports, in any other than U.S. ships, no more shall be admitted unless they shall have been transported in U.S. ships. Where, however, there are inadequate U.S. shipping facilities with any foreign countries for immigration traffic, the percentage above mentioned, may be increased up to 100%, and when a foreign nation possesses no ships engaged in emigration traffic to the U.S., the percentage above mentioned may be reduced to whatever percentage the Board may determine. This means that 50% of the admissible immigrant traffic to the U.S. from nations engaged in that traffic, will be allowed to travel in foreign ships, and that immigrants to the U.S. from foreign nations, not owning ships, which include a number of the Central European countries, from which there is a large number of immigrants, must travel in U.S. ships.

Other provisions of the act cover the

creation of a merchant marine navy reserve, the transport of army and naval officials, and of U.S. officials generally, in U.S. ships, and other matters, and also authorize the payment out of the merchant marine fund, of "compensation" in order to aid in the development and maintenance of the merchant marine, as follows:—To the owner of every sail, or power driven ship of 1,500 gross tons or more, registered in the U.S., and owned by a U.S. citizen, and operated in the foreign trade, half a cent for each gross ton of such ship, for each 100 nautical miles travelled; whenever such power driven ship is capable of a speed of 13 knots or over, on light draft, the compensation payable shall be calculated as follows:—for 13 knots and less than 14 knots, 2/10 of 1c.; for 14 knots and less than 15 knots, 3/10 of 1c.; for 15 knots and less than 16 knots, 4/10 of 1c.; for 16 knots and less than 17 knots, 5/10 of 1c.; for 17 knots and less than 18 knots, 1/10 of 1c.; for 18 knots and less than 19 knots, 9/10 of 1c.; for 19 knots and less than 20 knots, 1 1/10c.; for 20 knots and less than 21 knots, 1 3/10c.; for 21 knots and less than 22 knots, 1 5/10c.; for 22 knots and less than 23 knots, 1 8/10c.; and when the speed is over 23 knots, 2 1/10c., in addition to the basic rate before mentioned, for each 100 nautical miles travelled. Any power driven ship of 5,000 tons gross or less, but exceeding 1,500 tons gross, shall receive compensation as if it was 5,000 tons gross. The method of computing the distance travelled will be solely by the distances of the direct customary routes between the ports cleared and ports entered, and the tables of such distances as published by the U.S. Shipping Board, regardless of the ships' logs. Compensation will only be paid to ships actually operated in the foreign trade, and they must be maintained at the American Bureau of Shipping's highest classification. They shall carry foreign mail as required by the Postmaster General, but shall not be obliged to make a voyage which would not otherwise be made, unless expressly stated in the contract, and first, second and third class mail matter shall be carried free. The amount of compensation outlined may be increased by the Shipping Board, if it deems it desirable or necessary to secure the establishment and maintenance of such lines and services, but to not more than twice the amounts provided. These amounts shall be paid out of the Merchant Marine Fund, and which will be credited all amounts paid to the Shipping Board by shipowners, being 50% of excess profits over a net operating income of 10% in any fiscal year; the amounts which would ordinarily be payable by the Postmaster General for the transportation of foreign mails, carried by such ships; 10% of such duties as are imposed by the act of Oct. 3, 1919; and all tonnage dues, taxes or fees imposed on ships entering U.S. ports.

The Director of Sales announced April 3, that the entire holdings of the U.S. Shipping Board Emergency Fleet Corporation at the Merchant Shipbuilding Corporation plant, Bristol, Pa., would be offered for sale by auction, April 24 to 27. The material offered included power plant equipment, gantry cranes, buildings, storehouse material, contractors' supplies, maintenance tools, automobiles, motor trucks, etc.

The U.S. Shipping Board Emergency Fleet Corporation, which is in charge of traffic, has announced the establishment of a monthly line of steamships from New York to south and east African ports, commencing with May, under the management of the Mallory Transport Lines. Six steamships, all cargo carriers, will be placed in the service, and the first call will be at Cape Town, thence to Port Elizabeth, East London, Durban, Beira, and possibly to Zanzibar and Mombassa. This will be the only U.S. line operated on this route.

The Emergency Fleet Corporation has made arrangements with Runcimans London Ltd. to act as operating agents for the U.S. Lines in the United Kingdom, with supervision over sub agencies at Queenstown, Ireland, Plymouth and Southampton, Eng. These agents will act on a commission basis and a small guarantee, and will solicit outward cargoes and handle inward cargoes. The Corporation has leased offices in Cocksper St., London, for the U.S. Lines, where all passenger business will be handled. A series of offices will be opened shortly throughout the U.S. middle west, under the management of Louis F. Klein, with head office at Washington, D.C.

F. I. Thompson, Commissioner, U.S. Shipping Board, in announcing various hearings to be held under sec. 28 of the Merchant Marine Act 1920, recently stated that it is contemplated that this section become operative when, in the Board's opinion, facilities under the U.S. flag are adequate for U.S. foreign commerce, and that the hearings are to ascertain shippers' views as to the adequacy of the facilities afforded, and so that the operation of the section will not disturb the normal flow of commerce, nor adversely affect the various ports. Evidence as to the adverse or beneficial effect of the section will not be precluded, but the actual object of the hearings is directly on the question of the adequacy of the facilities. Hearings were held at Boston, Mass., Apr. 21, and at New York, Apr. 24, these two covering the North Atlantic, and hearings governing the South Atlantic and Gulf will be held at Norfolk, Va., Savannah, Ga., and New Orleans, La., during May, and for the Great Lakes and Pacific coast during June.

A. D. Lasker, Chairman, U.S. Shipping Board, at a joint hearing before the Senate committee on commerce and the House committee on merchant marine, in Washington, recently, stated, among other things, that one of the most formidable objections to continued Government operation of the merchant marine, an objection which he considered insurmountable, is that ships owned by the Government would in due course wear out, even with proper repairs. He had not heard it suggested from any source, that the Government should build ships to replace those that are worn out, or that the Government should build new type ships. He said that if there is one unanimous opinion in the country regarding the merchant marine, it is that Government construction of merchant ships should cease. Thus the continued operation by the Government of its present fleet would be making no progress toward a permanent policy on the seas, or a renewed and enduring merchant marine. This one phrase alone calls for legislation along lines proposed to en-

sure the Government's retirement from ownership and operation.

The Emergency Fleet Corporation, which is in charge of traffic, announces that in regard to the status of the various conference arrangements to which the U.S. Shipping Board is a party, there have been no developments of importance in the trade between the U.S., the United Kingdom, Germany, Belgium, Holland and France, rates continuing firm with few changes. From the Mexican Gulf, cotton rates are firm, and while the movement is not large it remains steady. On the Pacific Coast, outward rates to the Orient are weak, and the general situation is chaotic, due chiefly to the falling off in demand for lumber in Japan, thus throwing on the market a large number of Japanese steamships previously engaged in the trade. Australian and South American trade is practically without change, equities being light and rates nominal. General cargo for the far east from New York is light, but the demand for steel continues brisk. Demands for space for the Black Sea and Levant services are active, and rates are advancing. Coffee rates continue light, being in fact, totally unremunerative, owing to competition chiefly by Scandinavian ships.

The U.S. Shipping Board's General Counsel has announced, with respect to the wooden ships and the claims of their builders, that a definite policy regarding the settlement of the amortization and profit claims, has been decided on in settlement for cancellation of wooden ships which were being built under cost plus contracts, and which superseded and cancelled lump sum contracts. For cancellation of hulls originally awarded, under lump sum contract, the builders will be allowed the full fees mentioned in the superseding contracts, and for the cancellation of additional hulls, under superseded contracts, they will be allowed the portion of the fees which by the terms of the contracts, is apportioned to plant depreciation, and a percentage of that portion of the fees which is allocated to profit, such percentage to be based on a proportion of work performed on the cancelled hulls. This settlement, it is stated, will, if satisfactory to the contractors, be on a basis of \$7,000 for amortization, and \$8,000 for profit, per ship, on all new contracts executed by the Board, involving approximately 100 ships. In cases where a ship was partially completed, the builder will be allowed \$7,000 for amortization, and a proportionate amount of the \$8,000 allowed for profit, according to the amount of work done. The amortization claims approximate \$6,000,000, involving 70 builders, and it is stated that if the builders accept this decision, the Board will not be called upon to pay more than approximately \$1,000,000. The builders claim that they originally received verbal assurances that they would be given a sufficient number of contracts to enable them to come out whole in amortizing their plants, but the Board denies this.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

9. March 21.—18, Nova Scotia, south coast, approach to Country Harbor, uncharted shoals. 19. Nova Scotia, south coast, approach to Whitehaven, uncharted shoals. 20. Nova Scotia, south coast, Dover Bay, uncharted shoals.

10. March 22. — 21, Nova Scotia,

southwest coast, Yarmouth Harbor, dolphins replaced by spar buoys. 22. New Brunswick, Northumberland Strait, Baie Verte, rearrangement of buoys leading to mouth of Tidnish River, two additional buoys to be placed.

Dominion Government Steamship Subsidies.

The Minister of Trade and Commerce said in the House of Commons, April 3, in answer to J. Evans, Saskatoon, that the following companies performing ocean services were subsidized during 1921-22, and the votes are repeated in the estimates for 1922-23.

Atlantic Ocean:—Reid-Newfoundland Co., St. John's, Nfld., Canada and Newfoundland Service; annual subsidy \$35,000.

Royal Mail Steam Packet Co., London, Canada, British West Indies and Demerara service; annual subsidy \$340,666.66. Elder, Dempster & Co., London, England, Canada and South Africa service; annual subsidy \$146,000.

Pacific Ocean:—Union Steamship Co., of New Zealand, Dunedin, New Zealand, Canada-New Zealand (Pacific) service; annual subsidy, \$130,509.

Pacific Steamship Co., Victoria and San Francisco; annual subsidy \$3,000.

The purpose of these subsidies is to assist the development of trade between Canada and the countries named, and also in some cases to provide for the transportation of mails to and from Canada.

The Minister of Trade and Commerce also answered questions by S. W. Jacobs, George Etienne Cartier, Montreal, as follows:—The estimated expenditure for the fiscal year 1922-23 under the head of mail subsidies and steamship subventions is \$1,100,775.66. Of this amount \$655,175.66 is for ocean services, and the balance, \$445,600, is for coasting services in Canadian waters. Ships running on the ocean services referred to above sail to Newfoundland, the British West Indies, Demerara, South Africa, New Zealand, and the United States. The question "How much has so far been paid on account of such subsidies?" is too indefinite to enable a reply to be made. Ships under Canadian Government Merchant Marine control sail to countries and ports to which ships subsidized by the Government also sail. In answer to the question "Does the Government intend to take action to discontinue the subsidies to companies competing with steamships belonging to the Dominion Government?" the Minister replied:—"Canadian Government Merchant Marine ships, when properly equipped to meet requirements of service, should be entitled to preference."

Dominion Hydrographic Surveys.

We are officially advised that the Naval Service Department's Hydrographic Survey Branch will undertake the following work this year. On the Atlantic coast the s.s. Avonia will sail from Halifax, N.S., about the middle of May, in charge of Capt. F. Anderson, and for the first part of the season will continue the work off Cape Canso, and later, will undertake a resurvey of the waters off the west end of Nova Scotia. The s.s. Cartier will sail from Quebec, about the same date, in charge of C. M. Savary, and continue the examination of the shore off the north side of Gaspé Peninsula. It is expected

that this latter work will reach Gaspé Basin before the end of the season. It is also proposed to make a survey of the harbor at Seven Islands by the same party, in charge of one of the assistants. It is not proposed to place the s.s. Bayfield in service this season, but she will undergo an extensive overhaul, which has been delayed for some time. The party will, however, be placed in camp, and will survey Miramichi Bay and River, in conjunction with the Public Works Department.

As the survey work on the Great Lakes has been completed, no hydrographic ship will be in service there this season.

The Pacific coast branch, in charge of H. D. Parizeau, will operate the steamships Lillooet and Restless during the season. Both ships were commissioned Apr. 18, the Lillooet proceeding to Vancouver, where she commenced a series of sweeping operations in conjunction with the Public Works Department, in the First Narrows, to test the channel recently dredged, and to pick up any loose boulders that may be lying about. It is hoped that after this examination, the channel north of Parthia Shoal will be opened to navigation. After completing this examination, the Lillooet will proceed north, and the work along the east shore of Hecate Strait, between the north end of Banks Island and the south point of Aristazable will be proceeded with. The s.s. Restless, in charge of Commander Knight, will make a survey of Johnson Channel, to develop, if possible, a new and shorter route between Fisher and Seaforth Channels, and it is expected that this work will take all the season.

Naval Service Department Ships For Sale.

Tenders were invited to May 1, by the Naval Service Department, for the purchase of the following ships:—

Armstrong, steel, built at Montreal, in 1918, screw driven, engine 61 h.p., length 130 ft., breadth 25 ft., depth 13 ft., tonnage 357 gross, 136 net, equipped with wireless, lying at Esquimaux, B.C. C. D. 23, wood, 50 tons, lying at Halifax, N.S.

Canada, steel hull, built at Barrow-In-Furness, Eng., in 1904, screw driven, engine 200 h.p., length 206 ft., breadth 25.1 ft., depth 3.3 ft., tonnage 411 gross, 185 net, equipped with wireless, lying at Halifax, N.S.

Grille, steel pleasure yacht, built at Glasgow, Scotland, in 1912, screw driven, turbines, 6,000 h.p., length 202.3 ft., breadth 18.3 ft., depth 9.2 ft., tonnage 287 gross, 157 net, equipped with wireless, lying at Halifax, N.S.

Niobe, steel armored cruiser, 11,000 tons, lying at Halifax, N.S.

Petrel, steel, built at Owen Sound, Ont., in 1892, screw driven, engine 50 h.p., length 116 ft., breadth 22 ft., depth 10.3 ft., tonnage 192 gross, 98 net.

Stadacona, formerly named Columba, steel, built at Philadelphia in 1893, screw driven, engine 99 h.p., length 168 ft., breadth 30.5 ft., depth 15.7 ft., tonnage 780 gross, 520 net, equipped with wireless, lying at Esquimaux, B.C.

In addition to these a number of small boats are offered for sale.

Canadian Pacific Railway's Ocean Steamship Services.

Capt. A. H. Hosken, of the s.s. Empress of Russia, is reported to have invented a method of reading a sextant at night, by means of a small dry battery, push button and shaded light.

The company has announced that its fare from the Far East points to Europe by way of Canada, is \$620, whose route, it is stated, equals the Suez Canal route, both in fare and in time.

The s.s. Empress of Britain sailed from New York to Liverpool, Eng., towards the end of March, after having completed her second pleasure cruise of the season to the West Indies. She is due to arrive at Quebec from Liverpool, May 19, and to sail from Quebec, May 26.

The s.s. Montrose docked at Liverpool, Eng., March 26, after a successful trial run from Glasgow, Scotland. She is a sister ship of the Montcalm and the Montclair, and was built by the Fairfield Shipbuilding and Engineering Co., Govan, Scotland, for the C.P.R. Montreal service. She is expected to arrive at Montreal, May 14, on her maiden trip, after which she will be operated on that route throughout the St. Lawrence season. She has been built to Lloyd's highest class, 100 A1, and is equipped with geared turbine engines driving twin screws. Her dimensions are,—length 356 ft., breadth 70 ft., depth 51 ft., 16,400 gross tons. She has accommodation for about 500 cabin, and 1,250 third class, passengers. The boilers are equipped for burning oil fuel. The accommodation for cabin passengers is arranged on B and C decks amidships, in 2 and 4 berth staterooms. The cabin dining room is on D deck, extends the full width of the ship, and is arranged with a large well overhead and an arched clerestory around, and a number of the tables are arranged for small parties. The smoking room, drawing room and card room are on the promenade deck. The third class accommodation is on D and E decks, in 2, 4 and 6 berth rooms, with dining room on D deck and smoking rooms and lounges on B and C decks.

It is announced that the steamships Scotian and Victorian, which have been in service between England and India, for the British Government for some time, are returning to the St. Lawrence service. They have been utilized for the transportation of soldiers and their families from Great Britain to India, and have been running continuously in that service since the autumn of 1921. Before taking up this last service, they were completely refitted for the Suez Canal route, and supplied with awnings, electric fans, etc., necessary for the tropical run. They are being reconditioned for the Atlantic service, and the Scotian is expected to arrive at Montreal, May 6, the Victorian following on May 21. The s.s. Scotian will replace the s.s. Prentorian on the Glasgow route, in conjunction with the steamships Metagama and Tunisian. The s.s. Victorian will be placed on the Liverpool route.

The s.s. Empress of Canada is expected to arrive at Vancouver from Liverpool, via the Orient during June, and is announced to sail from Vancouver to the Orient June 29, and regularly thereafter. She is the latest addition to the company's trans-Pacific fleet. She was originally expected to be in service in March 1921, but has been considerably delayed at the builders, owing to strikes and other unforeseen occurrences. She is of

33,000 tons displacement, 22,500 tons gross, 627 ft. long, and uses oil as fuel. The s.s. Empress of Australia, 31,000 tons displacement, 21,400 tons gross, 530 ft. long, and using oil as fuel, will also be placed in service to the Orient this summer, her first sailing from Vancouver being announced for July 27. These two steamships will be operated in addition to the two already in the Oriental service, viz., Empress of Asia and Empress of Russia, each 25,000 tons displacement, 16,500 tons gross, 570 ft. long. The two latter hold the records for the quickest time across the Pacific. The company has arranged with the Japanese and Chinese government railways for the sale of overland tickets between Yokohama and Shanghai, at reduced fares in connection with its ocean tickets.

Dominion Marine Association's Activities.

The Association is maintaining its protest against the tonnage duty and inspection taxes which were abrogated by statute in 1903 and reimposed in 1920.

The Association is compiling its recommendations as to aids to navigation and it is giving consideration to recommendations by the Lake Carriers Association for aids in certain Canadian waters.

The Association has renewed its request for the abrogation of the compulsory payment of pilotage dues on the St. Lawrence, below Montreal, and it understands it has the support of the Shipping Federation of Canada, as representative of ocean tonnage.

In connection with the Association's request for an amendment of the Canada Shipping Act, to exempt from hospital taxes in Quebec, ships from the Great Lakes, instead of merely ships from Ontario, the Dominion Minister of Health is having a report prepared and an amendment of the act is hoped for as a result.

The Association has concurred with the Lake Carriers Association, after consultation with Dominion Public Works Department's engineers, and the United States War Office District Engineer, in a proposal for the removal of the Middle Ground shoal which now divides the up-bound and down-bound channels, between port Huron, Mich., and Sarnia, Ont., and it is expected that the work will be proceeded with forthwith.

The Association, in conjunction with the Lake Carriers Association, is seeking modification of the stringent immigration regulations which were put in force during the war, and which imposed serious burdens of clerical and other work on ship's masters. The U.S. authorities are disposed to go as far as the Dominion Government will, and the matter is now being considered by the Dominion Interior Department.

A review of the Chicago Drainage Canal situation has been presented by the Association to the Dominion Premier, with reference to bill H. R. 9046, now before the U.S. Congress and resolution 105 before the U.S. House of Representatives, and has renewed its request for action by the Dominion Government at any possible opportunity, to prevent withdrawal of water in excess of the 4,167 cu. ft., authorized by the U.S. Secretary of War in 1912, and it has also protested against proposals now before the U.S. Congress for permission to

withdraw a larger amount, with compensating works, in the St. Clair, St. Lawrence and Niagara Rivers.

The Association has approached the Minister of Trade and Commerce and the Dominion Grain Commissioners, on the subject of a reduction in the charges upon a ship in connection with the transshipment of grain, and it is conferring with the various elevator owners and operators, including the railways, the Montreal Harbor Commissioners, and the Railways and Canals Department, on the subject. Shovelling and elevating are variously charged at different ports, and statistics appear to prove that the elevator operators make a very substantial profit over the cost of operating, in connection with charges for these items.

The Association has requested the Minister of Marine and the Minister of Railways and Canals to appoint a committee to continue the work which was carried on last year in Montreal harbor, by representatives of the Association, in removing difficulties and improving the dispatch of traffic. This has led to the appointment of a committee consisting of M. P. Fennell Jr., Secretary, Montreal Harbor Commissioners, Chairman; T. R. Enderby, Operating Manager, Canada Steamship Lines Ltd.; E. N. Todd, General Foreign Freight Agent, C.P.R., and C. J. Smith, General Manager, Montreal Warehousing Co.

Ships Registered in Canada during January.—Apart from three small motor boats, only one steamship was registered during January, viz., 150,555, Princess Louise, registered at Vancouver, B.C., built at North Vancouver in 1921, length 317.2 ft., breadth 48.1 ft., depth 17.4 ft.; tonnage, 4,032 gross, 2,449 net, 252 h.p., screw driven, owned by C.P.R. Co., Montreal. Two sailing ships were also registered, viz.: 141,800, C.N.P. No. 3, New Westminster, B.C., barge, built at Port Mann, B.C., in 1921, length 153.6 ft., breadth 46 ft., depth 12 ft.; tonnage, 723 net, owned by Canadian Northern Steamships Ltd., Toronto; 141,654, Kirk and Sweeney, Yarmouth, N.S., built there in 1921, schooner, length 124.4 ft., breadth 27.4 ft., depth 12 ft.; tonnage, 192 net, owned by W. D. Sweeney, Yarmouth, N.S.; 150,398, Saguenay Trader, Quebec, schooner, built at Chicoutimi, Que., in 1921, length 102 ft., breadth 27 ft., depth 9.1 ft.; tonnage, 148 gross, 147 net, owned by J. Tremblay and E. Gagnon, Chicoutimi, Que.

Ships Added to, and Deducted from Canadian Register during January.—One steamship, 4,032 tons gross, 2,449 tons net; 3 motor boats, 35 tons gross, 23 tons net; and 3 sailing ships, 1,063 tons gross, 1,062 tons net, all built in Canada, were added to the Canadian register during January. One steamship, 16 tons gross, 11 tons net, and 2 sailing ships, 290 tons gross, 227 tons net, were removed from the register, having been wrecked or otherwise lost; 3 sailing ships, 1,528 tons gross, 1,355 tons net, were sold to foreigners, and 1 sailing ship, 106 tons gross, 96 tons net, was transferred to a British port.

The First King's Pilot of the St. Lawrence River.—A monument is to be erected on the Plains of Abraham, Quebec City, by the C.P.R., with the following inscription in English and French: "This monument recalls to the passer by, Abraham Martin, called he Scot, first King's pilot on the St. Lawrence, who tilled the land on the illustrious plains which bear his name."

Quebec Harbor Improvements.

The Minister of Marine and Fisheries, Hon. E. Lapointe, M.P. for Quebec East, placed on the House of Commons order paper early in March a notice that he would, in committee of the whole, move a resolution to the effect that it is expedient to provide that the Dominion Government may, from time to time, advance to the Quebec Harbor Commissioners, such sums, not to exceed \$1,500,000, to enable them to carry on the construction of such terminal facilities as may be necessary to equip the port properly. The resolution provides that the debentures shall be issued by the commissioners to cover the advances, and that the interest thereon, shall be considered a part of the construction costs, and may be paid out of amounts advanced by the Government. Applications for advances to be submitted monthly for the Minister's approval, showing total expenditures on the different items in detail. The debentures to be issued to repayable within 25 years, and to bear interest at 5% per annum.

Brig-Gen Tremblay, one of the commissioners, in speaking of the resolution, is reported to have stated that the contemplated works include dredging the entrance to the St. Charles River, to allow ships of larger draft to enter; dredging the entire basin beside the grain elevators to 35 ft.; completion of the large wharves along the St. Charles River at the extreme west, to give easy berthing to larger ships; extension of the elevator system to expedite the transfer of grain to large ships; renovation of sheds 19 and 26; completion of the commissioners' wharf; construction of pontoons for better wharfing of ships; renovation of grain elevators and accessories; extending the surface of the wharves between sheds 18 and 26 at the breakwater; increase of accommodation for the commissioners' transportation facilities; building oil tanks and connections at Louise docks; coal chutes for trans-Atlantic steamships; and small quays for the better entry of small ships to the St. Charles River; also the renovation of the immigration docks.

Seasickness Prevention Device.—London, Eng., cablegram, April 12.—The new s.s. Montcalm has been placed by the Canadian Pacific Steamships Ltd. at the disposal of marine architects who are experimenting with a device to prevent seasickness. Already, by means of bilge keels, tanks and other measures, the rolling motion of ships has been reduced to a minimum. Now the experts are seeking a preventive of the fore-and-aft pitching movements, which are not only the main producers of seasickness, but which cause the engine to race uneconomically when the screw is lifted clear of the water. The experiments will be carried on while the Montcalm is doing her regular service on the Atlantic.—Copyright, Montreal Gazette.

Salvors Ltd. has been incorporated under the Dominion Companies Act, with \$5,000,000 authorized capital and office at Ottawa, to save ships and other property, afloat or ashore, to rescue crews and passengers, to tow and otherwise aid ships and floating property and to operate ships. The incorporators are:—W. H. G. Garrioch, John Gray, John Huckell, James Scobie, C. F. Winter, R. K. Paterson, A. G. Midford, Ottawa, and F. A. Heney, Westboro, Ont.

Miramichi Bay Tides' Mystery Solved.

The hitherto unaccountable action of the Miramichi Bay tides has been solved. The diurnal tides are unequal, and for years an explanation of the reasons for this inequality has been sought by the Naval Service, Department's Tidal and Current Service Branch officers. A definite analysis of the tide action in Miramichi Bay has been arrived at recently, and in the Tide Tables for 1922 it is indicated for the first time which of the two tides of the day is the higher. It has long been known that the diurnal inequality of the tide is reversed in regard to the two tides of the day across the width of the Gulf of St. Lawrence, between St. Paul Island and Miramichi Bay. This gives rise to much complexity, but a definite relation between these two points has been discovered.

The new information will be of great advantage to shipping interests; as in future, captains will only need to refer to the Tide Tables to see which tide in the day will be higher. This is of special importance in Miramichi Bay, because of the bar at its mouth which has to be crossed. The difference in the rise of the tide is often as much as 2 ft., and ships leaving Chatham, N.B., can now gain this advantage by choosing the higher tide of the day, thereby enabling them to take on a considerable additional amount of cargo.

The Icebreaking Steamship J. D. Hazen.—The Ottawa press dispatch of Apr. 19, states that the icebreaking steamship J. D. Hazen, which was built for the St. Lawrence service, and sold to the Imperial Russian Government during the war for operation in the White Sea, has been purchased by the Dominion Government, for \$400,000, and that the arrangement was concluded by E. Hawken, Assistant Deputy Minister of Marine, with F. McDonald, chairman, Board of Steamboat Inspection, as mentioned elsewhere in this issue, were expected to return to Ottawa about May 1, after an official trip to Europe. We were officially advised Apr. 25, that the Marine Department had not been advised that the purchase of the ship had been concluded.

Glen Steamships Ltd. s.s. Glendochart, which wintered at Londonderry, Ireland, left from there, April 7, for Montreal. The company's steamships Glenelg and Glenarnock, which wintered at St. John's, Nfld., will sail for Montreal as soon as conditions warrant. These, with the Glenarn, Glendowan and Glenfarn, which were overhauled and repaired at Midland during the winter, will be operated by the Great Lakes Transportation Co., Midland, until the full organization of Glen Steamships Ltd., when they will be handed over. The Glen Transportation Co.'s ships will, as last year, be operated by A. E. Mathews, as Manager, who is also Managing Director, Mathews Steamship Co., Toronto.

The Naval Service's Future.—A bill introduced in the House of Commons by the Minister of Militia and Defence, Hon. G. F. Graham, provides for the establishment of a Department of National Defence, the Minister of which shall be charged with matters relating to defence, including militia, military, naval and air forces. It provides for a Deputy Minister of National Defence, and an officer who shall, in relation to the Naval

Service, perform all the powers, duties and functions vested in the Deputy Minister of the Naval Service by the Naval Service Act, and who shall have the rank and salary of a deputy head of a department and shall be a member of the Defence Council.

Steel Plates for Shipbuilding.—The Minister of Marine stated in the House of Commons on April 5, in answer to T. W. Caldwell, Victoria, and Carleton, N. B., that the Government entered into a contract with the Dominion Iron & Steel Corporation for a supply of steel plates, that the contract was not carried out in its entirety, having been cancelled on Feb. 18, 1921, the matter of damages being referred to the Exchequer Court. The total claim was \$10,969,422.15, of which \$3,000,000 was paid on Dec. 14, 1921.

Drydocks.—Hon. H. H. Stevens, Vancouver Center, B.C., moved in the House of Commons, on April 5, for a return showing what drydocks are located and operated at Vancouver, Victoria, and Prince Rupert, B.C., Halifax, N.S., St. John, N.B., Quebec and Montreal, Que., when they were built and put in service, what are their dimensions, and what were the total gross tonnages entering and leaving those ports during 1921.

G.T.R. Port Facilities at Portland, Me.—Preliminary work is reported to have been commenced on the construction of a pier at Portland, Me., at an approximate cost of \$1,000,000, jointly, by the State of Maine and the G.T.R. A contract for the removal of the old wharf, construction of retaining walls, and a considerable amount of dredging is reported to have been let to the Atherton Construction Co., Boston, Mass. The pier will be mainly of timber construction.

Eaton-Nelligan Shipping Ltd., the incorporation of which was announced in our last issue, with \$100,000 capital, has its office at 59 St. Peter St., Montreal, with the following directors:—Perley R. Eaton, President; E. P. Cleary, Vice President; J. J. Nelligan, Managing Director; and A. P. McKinnon. It will operate ships carrying bulk cargoes in the St. Lawrence River and Gulf, and on the Atlantic coast, generally.

The s.s. Posen, a former German steamship, seized under proceedings at New York, and offered for sale by order of the New York Federal Court, Apr. 7, at the reserve price of \$200,000, or approximately \$19 a ton, was withdrawn and the sale postponed, without a single bid being obtained. At the sale it was observed that the U.S. Shipping Board is holding its ships at approximately \$30 a ton.

Revillon Freres Trading Co. has bought a wooden 2-masted schooner of 400 d.w. tons capacity, which is being built at Liverpool, N.S., and which will be fitted with a Densil semi-Diesel engine of 100 b.h.p., which is expected to give her a speed of 7 or 8 knots. She will be used to take supplies to the company's trading posts in the Arctic and will be away for about 4 months on this service.

It is reported that local interests are considering the erection of a grain elevator at Burrup Point, Vancouver, with an initial capacity of 50,000 bush, but so arranged that the capacity can be increased to 1,000,000 bush, later. The proposed buildings will include a sacking and drying plant, and, if proceeded with, will be ready for operation in about six months.

Atlantic and Pacific Oceans.

The Anchor-Donaldson Line inaugurated its service between Montreal and Londonderry, Ireland, March 25, in conjunction with its Glasgow service by the s.s. *Saturnia*.

The Hamburg American Line has declared a dividend of 10% for the calendar year 1921 compared with 8% for 1920. The profit and loss account showed a gross surplus of 96,171,675 marks, compared with 44,474,835 for 1920.

The White Star-Dominion Line has completed arrangements for booking passengers through to points in Soviet Russia. This is the first resumption of normal passenger traffic since 1920 to the port of Russia now under Soviet Government.

The Cunard Line's s.s. *Albania*, which has been running for some time between Liverpool, Halifax and New York, is to be transferred to the St. Lawrence route, and will open the company's service from Liverpool to Montreal, calling at Quebec, during May.

The Canadian Robert Dollar Steamship Co. is reported to have sold the s.s. *Melville Dollar* to the *Kishimoto Kaisha*, Kobe, Japan. She was built at Glasgow, Scotland, in 1905, for Robert Dollar, and has been operated between Vancouver and Oriental ports for several years.

The Thomson Line, Robert Reford Co., Montreal, agents, is reported to have bought the s.s. *Baarn*, which is said to have been renamed *Calmavon*. She was built in 1920, and has been fitted up for carrying perishable freight. She has been placed in the Montreal service and was announced to sail from Newcastle, April 30, and from Montreal May 25.

General reductions in freight rates between the Pacific coast and the Orient are reported from Vancouver. The rate on lumber is stated to have been reduced from \$15 to \$12 per 1,000 ft. b.m., the rate on wheat flour from \$6 to \$5 a ton, and on general merchandise by an average of \$2 a ton. Apparently, according to reports, a rate war is in progress between the Blue Funnel Line and the Japanese Lines, and it is stated that the C.P.R. has declared its intention of meeting competition.

The White Star-Dominion Line's s.s. *Canopic* sailed from Liverpool, April 13, for Halifax, N.S., calling at Queenstown, Ireland. She has been completely overhauled and refitted for the St. Lawrence traffic, having been originally operated in the White Star Line's Mediterranean-New York service. On her second sailing from Liverpool, May 13, she will come direct to Montreal and be operated throughout the season on that route, in conjunction with the steamships *Canada*, *Megantic* and *Regina*.

The White Star-Dominion Line's s.s. *Regina* arrived at Halifax, N.S., March 24, on her first trip after having been fully reconditioned, following a year's service. She completed the trip in 7 days, 11 hr. 43 min., maintaining an average speed of 15.07 knots. She was building at the outbreak of the war, and was immediately taken over for war service, and placed in patrol duty in the North Sea. After the armistice, she made two trips to Canada, before being reconditioned, and was then placed in the builders' hands for overhauling.

The motor ship *Dinteldijk*, built at Belfast, Ireland, for the Holland American Line, for the joint service with the

Royal Mail Steam Packet Co., between U.K. ports and British Columbia, was delivered recently, and is expected to arrive at Vancouver on her maiden trip, in May. Each of the companies engaged in this service is building three motor ships. The R.M.S.P. Co.'s *Loch Katrine* arrived at Vancouver in March, and the *Loch Goll* is approaching completion, and is expected to arrive during the summer. The Holland America Line's ships *Kindijk*, *Eemdijk* and *Moerdijk* are already in service.

Maritime Provinces and Newfoundland.

St. John, N.B., harbor revenue for March was about \$31,000, about \$4,000 more than for March 1921.

The names of the Newfoundland ships *Rattler* and *E. J. Reddy*, have been changed to *Iron Bound* and *Lucy Kent*, respectively.

The schooner *Cumberland Queen*, owned by J. N. Pugsley, Parrsboro, N.S., is reported a total loss, off Cape Hatteras, while bound from Turks Island to New York with a cargo of salt.

The Bras d'Or Steamship Co. is reported to have bought the new steel steamship *Princess*, at present in New York, for service on the Bras d'Or lakes, in place of the old sidewheel s.s. *Marian*.

The Newfoundland Government has adopted a regulation for Grand Banks harbor, providing that the owner of every ship entering the harbor shall pay 5c. a ton on the gross tonnage not often than once in each calendar year.

The s.s. *Diana*, of the Newfoundland sealing fleet, was caught in heavy ice floes towards the end of March, and was abandoned. She was built in Great Britain, especially for whaling and sealing service, and was originally named *Hector*.

The Newfoundland sealing fleet's catch is given as 79,000, divided amongst the ships participating, as follows:—*Terra Nova*, 15,000; *Eagle*, 12,000; *Ranger*, 4,000; *Viking*, 15,000; *Thetis*, 14,000; *Nep-tune*, 11,000; *Saguna*, 7,000; *Seal*, 1,000. The s.s. *Diana* was caught in the ice and abandoned. Last year, the catch was 101,452, valued at \$171,242.76.

The Bridgetown Steamship Co. s.s. *Valinda*, which struck one of the piers at Annapolis, N.S., in Dec. 1921, and sank there, was subsequently raised and temporary repairs made, to enable her to proceed to Bear River under her own steam. During the winter she has been completely renovated, and fitted with a new starboard broadside, keel and shoe, several new beams, new deck, and general repairs. These repairs were completed during March, when she proceeded to St. John, N.B., where her machinery was overhauled, after which she was placed in service between Bridgetown, Annapolis and St. John.

The North Atlantic Steam Fishing Co., Ltd., is being organized in Sydney and North Sydney, N.S., to undertake fishery business in North Atlantic waters with steam trawlers, etc., and use North Sydney as a shipping port. James Dunn, North Sydney, and W. N. McDonald, Sydney, are interested in the project. The capital will be \$100,000, most of which has been subscribed locally. It is proposed to operate five steam trawlers at present owned by W. N. McDonald. They were used in naval patrol work

during the war, but were built originally for fishing at a cost of approximately \$75,000 each. It is stated that the company is buying the ships for \$15,000 each, and they are to be equipped with all the latest fishing gear.

The Cape Breton Electric Company has sold the hull of its s.s. *Pawnee* to J. Salter and Sons, North Sydney, N.S. She is being dismantled, the machinery and boiler having been removed, the purchasers intending to use the hull as a floating warehouse. The C.B.E. Co. is offering the machinery, boilers and fittings for sale separately. The s.s. *Pawnee* was built at Athens, N.Y., in 1890, and was screw driven by engine of 150 h.p. Her dimensions were length 115.8 ft., breadth 22.9 ft., depth 5.7 ft., tonnage 107 gross, 65 net. She was operated originally by the Sydney Ferry Co., and was taken over with other of the ferry company's property by the C.B.E. Co. She was condemned in 1913 and has not since been operated, her place having been taken by the s.s. *Electronic*.

Province of Quebec.

The port of Montreal was officially opened for navigation April 13, when the C.G.S. *Lady Grey* arrived from Three Rivers, and reported that there was practically no ice between those points.

A proposal has been made to the Quebec Harbor Commissioners, to make all the sheds on the breakwater wharves 18, 25 and 26, 2 stories high, to provide extra accommodation along a frontage of about 2,300 ft., for the handling of immigration traffic, etc., leaving the lower space exclusively for freight.

The Webster Steamship Co., Ltd. has been granted supplementary letters patent under the Quebec Companies Act, reducing its share capital by \$200,000, by cancelling 1,400 paid up shares of \$100 each, not represented by available assets, and by paying off 560 shares of \$100 each which are in excess of the company's requirements.

The Montreal Harbor Commissioners are reported to have adopted a new tariff of wharfage rates, giving a general average reduction of approximately 15%, the reduction being considerable on coal. It is estimated that these reductions will mean a decrease of nearly \$100,000 in receipts, which is expected to be covered by increased business.

Montreal longshoremen are stated to have declined to accept the reduction in wages announced by the various steamship companies trading out of Montreal, and about the middle of April a strike appeared imminent. It was proposed by the steamship interests to make the new rates as follows:—50c. instead of 60c. an hour for day work and 60c. instead of 80c. an hour between 1 and 11 p.m., and 60c. instead of 90c. an hour for night work from 11 p.m. to 5 a.m.

Ontario and the Great Lakes.

The Welland Canal was officially opened for traffic April 17.

The name of the s.s. *America*, owned by Georgian Bay Tourist Co., Midland, has been changed to *Midland City*.

Harbor improvement work at Cobourg, will, it is reported, be commenced almost immediately, with the rebuilding of the Langevin pier.

An order in council has been passed fixing tolls to be charged for ferry ser-

vice across the Rainy River, between Rainy River, Ont., and Beaudette, Minn.

R. MacDonald, first mate, and C. E. White, third engineer, of the Imperial Oil Co.'s s.s. *Royalite* were smothered by gasoline fumes in the hold of the ship April 14, at Sarnia.

It is reported that a syndicate of Montreal and Toronto business men has acquired some steamships from the U.S. Shipping Board, to operate between the Great Lakes and Newfoundland.

The Minister of Public Works stated in the House of Commons recently that the total expenditure from Jan. 1, 1912 to Dec. 31, 1921, on the Toronto harbor by his department was \$6,376,149.72.

L. Solman, Manager, Toronto Ferry Co., stated recently, in reference to a Montreal press dispatch, that his company was not, as reported, buying any steamboats, but was more inclined to sell them.

The Niagara, St. Catharines and Toronto Navigation Co.'s s.s. *Dalhousie* City, which opened navigation on Lake Ontario, at the end of March, lost one of her propeller blades while running between Toronto and Port Dalhousie, March 27. Repairs were made at Toronto, the following day.

The Niagara, St. Catharines and Toronto Navigation Co.'s s.s. *Dalhousie* City opened Canadian navigation on Lake Ontario, when she arrived at Toronto, March 27. Capt. J. Maddicks received the customary harbor master's hat. The first ship of any description to arrive in Toronto harbor this season was J. E. Russell's steam tug John E. Russell.

The U.S. Lake Survey reports the levels of the Great Lakes for March, in feet above mean sea level, as follows:—Superior, 601.35; Michigan and Huron, 579.40; St. Clair, 573.96; Erie, 571.39; Ontario, 245.08. Compared with the average March levels for the past 10 years, Superior was .042 ft. below; Michigan and Huron, .066 ft. below; Erie, .032 ft. below, and Ontario, .060 ft. below.

The arrangement of a package freight service between Montreal and Detroit, calling at Toronto, Hamilton, Cleveland, and other ports en route, was reported to have been announced by W. E. Burke, Director of Transportation, Canada Steamship Lines, recently. The company operated a similar service prior to the war, and this, it is stated, is a resumption of that service, which will be commenced on the full reopening of lake navigation.

The Great Lakes Steamship Co. sued the Maple Leaf Milling Co. recently for \$40,516, for damage caused to the s.s. *John Dunn Jr.*, when alongside the Maple Leaf elevator at Port Colborne, about Dec. 9, 1921. It was claimed that there was an agreement that the ship should have been lightened to 15 ft. draft, immediately upon arrival, and that as this was not done, she struck a rock which pierced the hull. On the other hand it was alleged that the rock or whatever pierced the ship, lay about 96 ft. north of the elevator leg, and 40 ft. from the shore. Judgment was given in favor of the plaintiff company, the amount of damages to be settled by the Master of the court.

With reference to the report mentioned in our last issue, the Chicago Steamship Lines, Inc., Chicago, Ill., proposes to inaugurate a steamship service between Chicago and New York, calling at

Montreal, we are officially advised that the company has decided to bring around five steamships from the Atlantic seaboard with cargoes for Chicago, stopping at Montreal and Buffalo, and that if these cargoes prove successful a regular service will be operated between Chicago, Detroit, Montreal, Boston and New York. The first trips of these ships, however, will be in the nature of a trial only.

Canada Steamship Lines Ltd. has bought the s.s. *Aube* from the General Transatlantic Co., through the Anderson Co. of Canada, the purchase having been made by J. W. Norcross, President, Canada Steamship Lines, during his recent visit to England. The s.s. *Aube*, which is now at St. Nazaire, France, was formerly the Montreal Transportation Co.'s s.s. *Rosemont*, and was sent overseas and sold to the French company during the war. She was built at Newcastle-upon-Tyne, Eng., in 1896, and is screw driven by engine of 200 h.p. Her dimensions are,—length 245 ft., breadth 41 ft., depth 13.4 ft.; tonnage 1,580 gross, 989 net, 2,800 d.w. tons capacity.

Mathews Steamship Co., Toronto, is reported to have bought the s.s. B. F. Berry, from Franklin Steamship Co., Cleveland, Ohio, for \$400,000. She was built at Lorain, Ohio, in 1908, of steel on the channel system, with steel tank top where no wood ceilings are fitted, 3 watertight and 2 non watertight bulkheads, steel boiler house, steam pump and electric light system, side hatch spaces 12 ft. centers, etc. Her dimensions are,—length 480 ft., breadth 52 ft., depth 30 ft., tonnage 6,188 gross, 4,775 net. She is equipped with triple expansion engines having cylinders 22½, 36 and 60 in. dia. by 42 in. stroke, supplied with steam under induced draft by 2 Scotch boilers, each 14½ ft. dia. by 1½ ft. long, at 180 lbs.

The s.s. Robert L. Fryer is to be offered for sale May 1, at Port William, Ont. She is fitted up as a floating elevator, and besides general equipment, has an electric light plant, stationary engines for running elevator machinery, 16 hopper grain compartments, conveying belts under all bins, and a screw conveyor. She has an estimated loading capacity of from 12,000 to 15,000 bush. an hour, and is especially designed for harbor work and the transferring of grain from elevator to elevator, ship to ship, and ship to elevator. She was built at West Bay City, Mich., in 1888, and has an oak hull with diagonal strapping on frames, steel arches, steel boiler house, steam pump wells, etc. Her dimensions are,—length 281 ft., breadth 41½ ft., depth 21½ ft.; tonnage, 1,810 gross, 1,451 net. The propelling machinery consists of triple expansion engines with cylinders 19, 32 and 50 in. dia., by 40 in. stroke, 850 i.h.p., at 88 r.p.m., supplied with steam by two Scotch boilers, each 10 ft. dia. by 11 ft. long, at 150 lb. She was owned formerly by Henderson Towing & Lightering Co., Port William, and is being offered for sale by the liquidator.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The Northern Trading Co. is building a warehouse for freight at Nangles Snye, at the mouth of Slave River, near Fort Resolution. Freight for Mackenzie River points is usually held back until the ice clears from the Great Slave Lake, but with the building of the warehouse,

freight can be accumulated at the Slave River mouth, and when the lake is cleared of ice, forwarded more speedily than hitherto.

British Columbia and Pacific Coast.

The C.P.R. s.s. *Princess Mary*, which sailed from Vancouver, April 19, for Skagway, Alaska, carried about 100 White Pass and Yukon Ry. employees, the majority being crews of that company's river boats.

With reference to press reports that the C.P.R. is to remove its British Columbia Coast Steamship Service headquarters from Victoria to Vancouver, we are officially advised that they are unfounded, the matter not having been given any consideration whatever.

It is reported that dredging operations will be undertaken in the Victoria outer harbor, this year, to provide a depth of 40 ft. at low tide. It is stated that ships on the Pacific services have difficulty in entering the harbor, where there is a minimum depth of 29 ft. in some places.

The Latin America Line, for which B. L. Johnson, Walton and Co. are Vancouver agents, is operating a steamship service between Victoria, Seattle, San Francisco and South American ports. Between Oct. 1921 and March 1922, five sailing were made, and it is announced that monthly sailings will be made, if sufficient business offers.

The s.s. *Ruth Alexander*, bought recently by the Admiral Line from the U. S. Shipping Board, has been placed on the company's Puget Sound-California route, and is making regular calls at Victoria. She was built at Stettin, Germany, for the South American trade, and at the commencement of the war was seized and held by the Chilean Government, and at the close of the war was allocated to the U.S. She is 455 ft. long, 55 ft. beam, and is well equipped for Pacific Ocean service.

The C.G.S. *Gunhild*, used formerly as a quarantine tender on the B.C. coast, is reported to have been sold to W. H. Drewitt, Victoria, who, it is stated, intends using her in freight service to the Gulf Islands. The price paid is stated as \$2,000. She was built in the U.S. in 1906, and was originally named *Margaret*. She is screw driven by engine of 10 h.p., and her dimensions are:—length 61 ft., breadth 12.7 ft., depth 5½ ft.; tonnage, 27 gross, 18 net. When the Dominion Government bought her, the price paid was stated to have been \$12,000, and it is also stated, that for the greater part of the time since she has been lying up at the William Head quarantine station.

The Grand Trunk Pacific Coast Steamship Co., announces, effective May 7, a double weekly service between Seattle, Victoria, Vancouver, Prince Rupert, Ansox and Stewart, with the steamships *Prince George* and *Prince Rupert*, the former leaving Seattle northbound, and the latter leaving Prince Rupert southbound, on that date. The Queen Charlotte Islands service will be performed fortnightly, by the s.s. *Prince John*, effective May 6. The s.s. *Prince Albert* will be operated principally in freight service, but commencing about the middle of July, and until the end of August, she will leave Vancouver on approximately alternating dates with the s.s. *Prince John*, calling at Skidegate Inlet and other south Queen Charlotte Islands points, if may be found necessary, en route from Vancouver to Prince Rupert.

British and United States Shipbuilding and Operating Cost Comparisons.

Reference is made elsewhere in this issue to the provision made for payment of subsidies to U.S. steamships operating in foreign trade. The U.S. Shipping Board Emergency Fleet Corporation has issued a circular in justification of these subsidies, and showing the necessity for them so as to place the costs of maintenance and operation more nearly on a par with those of British shipping. The circular states that British labor costs are from 35 to 45% lower in practically all industries than are similar U.S. costs. This creates a differential against products of U.S. labor in the proportion that labor enters into these products. The labor affecting U.S. shipping costs comprises the labor involved in building and repairing ships, in operating them at sea, and in controlling the ships' operations from on shore. The effect of the higher cost of U.S. labor is to add an annual differential to the operating cost of a U.S. ship which will run from 4 to 5% per annum on her cost. In other words, a modest dividend rate is absorbed in paying for building the ship in U.S. yards, her operation by U.S. officers, and a crew shipped in a U.S. port, and her control by a shore staff paid at U.S. wages. In the past the crew's wages have been especially stressed in commenting on the difference in operation cost between a U.S. and a British ship. For the tramp cargo steamer about half the differential existing is due to wage costs, especially to that of the licensed officers, which by U.S. laws must be U.S. citizens. For the larger and faster ships, the express freighters, or the passenger ships, which the U.S. merchant marine is so grievously lacking, this difference becomes less in importance compared to the tremendous difference existing in the cost of construction.

George Washington type would cost in the U.S. about \$9,500,000. She could be built in England for about \$7,500,000 to \$8,000,000. The U.S. owner of a U.S. built George Washington would therefore have to carry, during the life of the ship, an excess capital cost of \$1,500,000 to \$2,000,000, on which he would be paying probably \$250,000 to \$300,000 a year more than a British ship of a similar size. The payroll of this ship would be no less than \$450,000 a year, and would involve a wage differential of nearly \$100,000. The higher cost of repairs and of the U.S. administrative staff would add to this another \$25,000, making a total annual differential against this ship of approximately \$400,000. This difference amounts to 5% on the first cost of the British ship of \$8,000,000. In other words, when the British ship is paying 5%, the U.S. ship would only be breaking even. For cargo ships, the wage differential alone would amount to \$9,000 or \$10,000 a year under present conditions, and owing to the acute unemployment among seafaring labor on this side of the Atlantic due to the large number of ships laid up, the U.S. wages are closer today to those of British ships than will normally be found to be the case. This, however, is a temporary condition and cannot last, for the Board does not believe that U.S. ships can ever successfully compete, except upon the principle of paying sea labor a living wage, commensurate with that which equally skilled labor can obtain ashore. To meet these situations the Board has

recommended a schedule of direct aid based upon the partial equalization of the wage and first cost differentials existing between U.S. and British ships. The schedule of payments provides for a flat rate of all low speed ships based upon their size and mileage. For the fast, hence, much more costly ships, of which the U.S. merchant marine is in great need, the scale of payments increases according to the speed, so that the larger and faster ships get sums in proportion to their cost. The direct aid schedule will work out for nearly all types of steamships approximately 2 1/2% a year of the first cost.

Some question has been raised as to the size of the subsidy which would be received by some of the former German ships, such as the *Leviathan* and *Mount Vernon*. Obviously, on these ships, the scheduled amount of subsidy, which is based on cost of replacement, will not be followed, since the Board will sell the ships at prices much less than the building cost. It will, instead, under the direction of the Board, be used to offset the amount of the subsidy assigned to such ships to an amount commensurate with the price at which the Board sells them. The largest amount of subsidy which would be received by privately owned ships at present existing would be that paid, if the schedule were carried out, to the new *Resolute* and *Reliance* of the United American Lines. They would be entitled to approximately \$200,000 a year by the schedule, but in receiving this aid, they would be obliged to forego their mail payments, which would approximate \$150,000 a year. The total subsidy which could be paid to the existing privately owned fleet would approximate \$12,500,000, from which should be deducted approximately \$2,500,000 now being paid in the form of mail subsidies. This has been estimated by the Board, that an adequate U.S. fleet, composed of all the types of ships needed, would receive, according to the schedule, from \$30,000,000 to \$32,000,000 a year.

Montreal Longshoremen's Wages

Ocean steamship lines operating out of Montreal, have put into effect a new schedule of wages and working conditions for longshoremen as follows: Working hours from 7 a.m. to 12 noon, and from 1 p.m. to 6 p.m. at 50c. an hour; from 7 p.m. to 11 p.m. and from 12 midnight to 5 a.m. at 50c. an hour; double time for Sunday work. When longshoremen are required to work in meal hours, they will receive double time at the prevailing rate of wages, and for each succeeding hour until discharged or set to work. Nitrate and bulk sulphur will be paid at the rate of 65c. an hour for day work and 75c. an hour for night work; grain trimming and bagging will be paid at 65c. an hour for day work and 75c. an hour for night work, the running of grain in the pipes to be stopped while the men go down in the hold to work, two men to stand on deck during that time if necessary. Orders for work will be given at 7 and 9 a.m., 1, 4 and 7 p.m., for night work; men for night work will be ordered out for 7 p.m. and paid full time at the prevailing rate from that hour until discharged or set to work. Night meals to be taken between 11 p.m. and mid-

night, and the ship to supply good meals or pay the cost thereof. Coal handling on general cargo ships will be paid at 55c. an hour for day work and 65c. for night work; 15 men will constitute a gang for discharging and 16 men for loading, according to the nature of the work and the capacity of the ship. These conditions and wages will apply to all steamships coming into the port of Montreal and belonging to the companies signing the schedule.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers, job, or dealers in the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige our readers to purchase any other work, our reading columns are not for sale, either to advertisers or others.

Metal and Thermit Corporation, New York, announces that an investigation by its research department, to reduce the cost of Thermit welding, has shown that economic saving of 10% or more, can be made in regard to the amount of Thermit required to make a weld. It has been found that by reducing the size of the collars or re-inforcements of Thermit steel, also by narrowing the gap and changing considerably the proportions of gates and risers, it is possible to weld the smaller sections, such as 2 x 3 in. up to 4 x 6 in. with very much less Thermit than was heretofore believed possible before. For instance, a weld on a 2 x 3 in. section, for which 40 lb. of railway Thermit used to be recommended, now can be made with only 10 lb. of Thermit. On a 3 x 4 in. section, where 55 lb. was recommended formerly, 25 lb. only is needed, providing the size of collar, width of gap and size of the various gates are proportioned in accordance with the dimensions now found best.

Another motive from this section, which is believed to be about 4 x 6 in., the new method will give a perfect weld, with a saving of over 10% in the Thermit required, i.e., while 75 lb. was recommended previously for this size of frame, the new method will weld with only 65 lb., or a saving of 13 1/3%. Investigation has proved that in no case will the saving for the average frame be less than 10% when this method is followed, while, as stated before, on the smaller sections the saving runs up into high figures and enables a Thermit weld to be made at a cost which will not only compare favorably with the cost of other welding methods, but which will actually be cheaper when advantage is taken of the use of pneumatic rammers, smaller mold boxes and other labor-saving devices which have been introduced in the past year.

Orton & Steinbrenner Co., of Chicago, Ill., manufacturers of locomotive cranes, clamshell and orange peel buckets, and coal crushers, have arranged with J. Ross Bates, formerly connected with Wonham, Bates and Goode Trading Corporation, of New York and Boston, to represent them in New York, N.Y., and the New England States, with offices at 136 Liberty St., New York, N.Y., and 128 School St., Watertown, Mass.

Templeton, Kenly & Co., Ltd., Chicago, Ill., has issued bulletin 122, illustrating and describing simplex jacks for all lifting purposes.

Canadian Railway and Marine World

June, 1922

The Board of Railway Commissioners and the Nature of Its Work.

By S. J. McLean, LL.B., Ph.D., Assistant Chief Commissioner.

What I have to say in the present paper is concerned with the work and practice of railway regulation in Canada. I am designedly abstaining from expressing any qualitative opinion on the merits of the Board's work; not because I am without opinions on the subject, but because such expression of opinion does not fall within the scope of the paper. I am also taking for granted that you have a general knowledge of the body of law under which the Board of Railway Commissioners operate.

Decisions of courts which are now accepted as a commonplace establish that railway activity is concerned with private property affected by public use, and, therefore, the public phase having been recognized and propriety of regulation is now beyond peradventure. The question of regulation of railways began to attract attention in Canada in the early seventies. In 1873, a bill was introduced into Parliament to provide "for the better regulation of the traffic on railways." It provided for equal mileage rates. No machinery for a regulative commission was provided under it. The matter of an improved method of regulation was referred in 1875 to the Commons committee on railways, telegraphs and canals; but nothing was done. The question of railway regulation was taken up very actively by the late D'Alton McCarthy in the period from 1880 to about 1885, and he argued very strongly for the organization of a railway commission such as had been organized in England under the legislation of 1873. As an outcome of his activity there was appointed in 1866 a royal commission on railways which investigated the situation and which reported that some of the conditions existing in England were of such a nature that legislation which was applicable there would probably not work out so well in Canada. It also stated that the experiment of the United States in organizing the Interstate Commerce Commission was so recent that Canada could hardly predicate a policy on a basis of the policy so recently adopted there. And so it was suggested, and there was embodied in the act of 1888 the idea that the existing railway committee of the Privy Council should be given additional functions, in regard especially to the regulation of rates. It was recognized in that report that one defect in the organization of the railway committee, as it had existed, was its lack of a migratory character. That is to say, any person who had any matter coming within the jurisdiction of that committee had to hear it heard in Ottawa, and it was suggested by the royal commission that officials should be appointed who would go out and take evidence and report to the committee, and the committee would take action upon the report, thereby lessening the expense of the parties applicant. The situation worked along in that way, and about 1898 the matter of a further development of the policy

of railway regulation was taken up. Various investigations were conducted and the result was that in 1903 the Railway Act was amended, and provision was made for the organization of a railway commission which is more technically described in the Act as: The Board of Railway Commissioners for Canada.

The Commission was organized in 1904 and very wide powers were given to it. As the Commission was organized in the first instance, provision was made for three commissioners. Subsequently, in 1908, provision was made for six, and an arrangement was made whereby the Commission could be divided into sections, i.e., one section could be taking evidence—hearing cases—in one province, and another section in another; or, as has happened, both sections have sat in Ottawa on the same day hearing different cases. The decision of the section is, under the act, the decision of the Board.

The Commission, coming after the railway committee of the Privy Council, had its functions in some ways conditioned by those of the railway committee. The functions formerly possessed by the railway committee were transferred to the Board and various functions were added thereto; and the question at once arose as to the relation of the new Board of Railway Commissioners to the cabinet and courts. Formerly, the matter of regulation of rates, for example had been in the hands of Parliament. You will find in some of the older legislation the provision that Parliament might regulate rates, but not so as to produce less than a 15% return. And evidence of that having existed comes up, in connection with the provision as to the 10% clause in the C.P.R. Co.'s charter. Parliament saw fit to transfer the control of rates and various other functions to the railway committee of the Privy Council: that is to say, to a committee of the cabinet. And there was a political responsibility of the cabinet to Parliament. When Parliament transferred from the railway committee to the Board the functions the committee had formerly possessed, it was considered that the principle of responsibility should still be retained, and so provision was made for an appeal from a decision of the Board to the Governor-in-council; and the Governor-in-council, of his own motion, has also power to review or rescind or vary the Board's action.

The Railway Commission has been in existence some 18 years. I am purposely limiting myself to setting out in this paper the phases of the Commission's activities which can be statistically measured; that is to say, I am simply concerning myself with the quantitative measure of the Board's work. The qualitative measure of the Board's work is of course, of importance. It is open to all to form an opinion on this; and all I can ask, as a member of the Board, is that the citizens of Canada in arriving at a qualitative opinion should first acquaint

themselves with the nature and results of its work. The records are available in its annual reports.

Applications, Orders, etc.—Some information in regard to the number and nature of the applications that come before the Board, the matters involved, and the way in which they are dealt with, whether formal or informal, should be not only of interest but also of some service in arriving at an opinion on the Board's work and the place it occupies in connection with regulation. The committee whose report led up to the act of 1888 recognized that one defect in the existing procedure was the lack of migratory organizations. In sum, it was necessary to bring the organization closer to the people. In the 13 odd years which have elapsed since I was a member of the Board I have travelled some 169,000 miles. During 1921, the mileage covered by the Board and its officers amount in round numbers to 453,000. Further, the time taken up in formal hearings and the necessary travelling in connection therewith during the past year equaled 50 out of every 100 working days. Simply as a matter of statistical note, it may be mentioned that the Board had 27,534 out-going letters during 1921. During the year, 1,484 orders were issued. Some 26 general orders, applicable to all companies subject to the Board's jurisdiction, issued on such topics as sleeping and parlor car fares, exchange surcharge—freight and passenger, coal supply, packing and frogs, inspection of steam boilers, valuation of live stock shipped with settlers' effects, telephone tariffs and rates, maintenance of way rules, brake tests, demurrage, track centers, switching rates, operating rules, explosives regulations, summer rates on coal.

The applications made to the Board in 1921 were 3,454. Down to the end of 1915, the Board had received some 47,000 applications. Since that date some 20,000 have been received, making a total of about 67,000 all told. Of the 67,000 applications the Board has had before it, not more than from 15 to 20% have come to a formal hearing. During 1921, 88% of the applications were dealt with informally. Referring to the Board's general business, it may be noted that some 7,800 cases had been set down for formal hearings since the inception of the Board's work down to the end of Jan., 1922.

As already pointed out, provisions are made for appeals to the Supreme Court and to the Governor-in-council. Up to date, the totals in this respect are as follows:

To the Supreme Court dismissed 28, allowed 8, abandoned 5, withdrawn 3, total 45. To the Governor-in-council dismissed 17, referred back 5, abandoned 5, withdrawn 1, allowed 1, pending 1, total 30. The total number of appeals in which the Board has been reversed amounts to less than 1% of the total

cases heard.

The informal work, that is to say, work not of necessity involving hearings, begins soon after the railway obtains its charter, from Parliament. There has been discussion from time to time as to the propriety of having a general railway act laying down the general conditions, much the same as is provided for in the Companies Act, with the further provision that on a given body of men satisfying a regulative tribunal that they have complied with the provisions of the statute a charter might be issued. This method of incorporation exists to a considerable degree in the United States. So far as Canadian discussion is concerned, it may be mentioned that the late Sir William Van Horne expressed his favor for it. After the charter comes a route map approving the general location. Since 1919, this falls within the scope of the Board's work. Next is the location plan, which is a detailed route map, and has to be approved by the Board. A plan has to be filed showing what is proposed to be done in connection with highway crossings. A copy of this has to be served upon the municipality concerned, giving it time to file its objections, if any, to the crossings. The crossings have to be built to specified standards.

A plan showing where it is proposed to locate its stations has to be filed by the railway. It files with the Board standards showing types of stations and exactly what accommodation is to be given. A plan is served upon the municipality concerned and it is given an opportunity in the time limited, to forward its objections, if any, to the location of the station. Bridges over 18 ft. long must have formal approval. When the road is constructed, the railway company makes application to open for traffic and an inspection is made to see whether the road is reasonably safe for travel.

Accidents—The question of public safety arises as soon as the railway is in shape for operation. This arises in connection with train travel, accidents at crossings and accidents from trespassing. All railways subject to the Board's jurisdiction are required to report the accidents occurring on their lines. The Board's function is not to ascertain the facts with a view to assessing damages, as would be the case in a court action, but with a view to preventing as far as possible a recurrence of accidents. During 1921, there were 4 passengers killed and 240 injured, a decrease of 13 and 139 respectively from 1920. Travel on railways, serious as an accident may be and important as it is to eliminate the possibility of accidents, is relatively safe. In 1921, there were over 51,000,000 people carried on Canadian railways, which is equivalent to a little less than 7 railway trips per capita; and there were 4 passengers killed and 240 injured. During 1921, there were some 91 employees killed and 1,344 injured. The figures given may be compared with the total of 145,000 employees on the railways. Another phase of the matter is concerned with accidents at crossings.

The total number of accidents reported during 1921 show 243 persons killed and 1,928 injured, which is an improvement over 1920, when the figures were 254 and 2,330 respectively. Further analyzing these figures, it will be found that 189 accidents took place at highway crossings covering 70 persons killed and 214 persons injured. This compares with the figures of 68 and 215 for 1920.

Of these accidents, 45 occurred at crossings protected by gates, bells, watchmen, etc., and covered 20 persons killed and 48 injured.

Motor Accidents.—One significant factor is the large number of motor accidents. Out of 189 highway crossing accidents in 1921, 114 were motor ones. From April to Oct., 1921, 50% of the highway crossing accidents were motor accidents, while four-fifths of those killed and two-thirds of those injured were to be found in the column of motor accidents. The improvements of highways and the greater speed possible thereby for motor travel is a very great contributing factor to motor accidents. It cannot be too much emphasized that the only absolute protection against railway danger is to be obtained from the construction of subways or the installation of overhead crossings. In a great many cases, this type of protection is impossible to put in; and so, the forms of protection that the rider must of necessity be on the driver of the motor car to use reasonable precautions. This applies to any crossings, whether protected or otherwise. Without arguing from the extreme case and without alleging that all drivers of motor cars are similarly negligent, I may say that within the past year we have had 4 cases where men driving motors ran into trains. For example, at one point, a motor ran into a train standing at the water-tank, the caboose and some three cars being over the crossing. At a point in Ontario, where a train was standing on the crossing, a motor ran into the ninth car from the caboose. The crossing was protected by a bell which was in good order. In another case, in the west, a motor driver ran into a train standing on the crossing; and in a case in the east, a man ran into a moving train, a part of which had passed the crossing. While the motor traffic is concerned with the legitimate use of the highway, at the same time, on account of the high speeds that are available in this type of traffic, there is much greater chance of danger than with ordinary highway traffic; and no matter what can be done in connection with protection, there is an especial burden of care on the part of motor drivers.

During 1921, 64 of those killed on the railways were trespassers while 91 were injured. The figures show a decline in recent years, which is very fortunate. Some years ago, the railways did not receive the co-operation they should have from the municipalities in connection with the prosecution of those trespassing on the railway. It is obvious that such prosecutions were really in the interest of the trespassers, with a view to keeping them out of the dangerous situations. Part of the improvement in the situation is due to the loyal co-operation of the different provinces, with a view to emphasizing upon the local magistrates the importance of preventing in the interests of the individual those trespassing on the railways. The Board has circularized the attorney general of each province from time to time and there has been a decided improvement. The most extreme case of trespassing is one which took place in eastern Canada last December, where a man had driven on to the railway track, apparently asleep, and was killed. Another accident occurred in a case where the distance between the two crossings was shorter on the railway than on the highway,

and two unfortunate trespassers took a chance by driving down the track during the winter season and were killed.

Protection of Crossings.—Under the legislation of 1909, railways constructed subsequent to April 1 of that year had to stand the full cost of any protection ordered. In the same year, a grade crossing fund of \$200,000 a year, for a period of years, was provided for. Out of this, the Board may make a contribution of 25% of the cost of installation of the protective device and not exceeding \$15,000. The expenditures on protective devices under this legislation was enacted by the following: By the railways \$2,382,814.75; by the municipalities \$1,783,983.41; out of the grade crossing fund \$338,528.62; total \$4,505,326.78. The contribution as it was prior to 1919 was 20% and not exceeding \$5,000. It is readily apparent that the limitation placed prevented any considerable aid to a large protective work. The amended procedure now has to have improved the situation. In dealing with crossings in connection between April 1909, and Dec. 1921, the following is the record of protective works and devices: by electric bells 262; gates 115; subways 64; overhead bridges 25; diversion of highways 35; closing of streets 10; removal of view obstruction 8; shelter 1; towers 3; wigwags 8; bell and wigwags 26; diversion of highway subway 1; diversion of highway and removal of view obstruction 1; bell and removal of view obstruction 1. Inspections were made by the Board's Operating and Engineering Departments. Where an accident takes place, there is, pending investigation, a speed limitation of 10 miles an hour. If the Board is satisfied, after investigation, that the crossing is reasonably safe, the speed limit may be raised. If it is not satisfied, protection may be provided by subway, separation by overhead installation of gates, bells, bell and wigwags, watchmen, improved view by the cutting down of banks or the clearing out of brush. Recently, in connection with a couple of highway crossings near Ottawa, which was part of the Civic Improvement Commission's work, protective islands have been installed as an additional protective device. Usually where subways are concerned, the matter necessitates a hearing. In other cases, such as have been enumerated, very often the procedure is for a copy of the report of the inspecting official to go to the parties asking them to show cause, in writing, why protection should not be installed as recommended. Informal procedure has been developed to a very considerable extent in connection with the matter of protection. Whereas in the State of Wisconsin the practice is, in connection with the installation of a bell or a bell and wigwag, to have a formal hearing, here in Canada the expedited process afforded by informal action has been taken. I have gone to some length in the question of accidents, but do not feel that any apology is necessary, because I am sure that every one is agreed that the elimination of accidents is greatly to be desired. I have not exhausted the subject, but I wished to say something which would emphasize what is being done, and also to emphasize the necessity of people exercising due care in connection with the approach to crossings.

The service and convenience to the public is very important. As bearing on the nature of the work done in addition to what has already been mentioned,

some of the lines of investigation of the Board's Engineering and Operating Departments may be mentioned, viz.: inspection of spur tracks, condition of road-bed, switches and frog packing, grade revision, inspection of track in connection with slides, culverts, drainage, interlocking plants, safety appliances, inspection of motor power, passenger equipment, station buildings and premises, station locations, train service, and car supply. For example, in connection with the inspection of cars and engines in Jan. 1922, alone, there were some 7,201 cars inspected from the standpoint of safety appliances and some 799 locomotives inspected. During 1921, 73 applications in western Canada dealing with station facilities and train service were gone into.

The prevention of fire loss is another phase of the work where through co-operation of the railways and the Board's Fire Inspection Department a great improvement has been made. During 1921, some 10,270 miles of fire-guards were constructed or maintained by railways in the Prairie Provinces, in accordance with requirements issued by the Fire Inspector. A total of some 1,500 fires were reported as originating within 300 ft. of the railway lines. The total damage done by the fires was estimated to be \$162,000. In this connection, fire appliances on some 2,900 locomotives were inspected. Under the Railway Act, provision is made for fire-guarding in the west, the Board having powers in regard to exempting where there is no real danger, from the necessity of building fire-guards. Any one who has travelled in the grain country will know how quickly, at certain seasons, a fire may start and do great damage; and it was obvious in the general interest, that such source of danger should be minimized in every way possible. The matter involved in connection with the question of fire-guards very seldom come to a public hearing. There has been a very close co-operation between the railways and the Board's officials, enabling the informal procedure, as distinct from that of the formal hearing, to be used to a very great extent here.

Railway Rates—While, from what has been said, it will be seen that there is a wide scope of work as distinct from the rate jurisdiction of the Board, the importance of the rate side is not to be minimized. The rate cases involve the very often wide sweep of facts. Within the last couple of weeks, argument has been terminated on a rate case involving matters affecting rate structures from Sidney, Vancouver Island, to Sydney, Cape Breton; but while many rate matters must of necessity, come to a formal hearing, it must also be recognized that the informal procedure is of importance here as well. During 1921, some 93,000 tariffs were filed with the Board. These cover tariffs of from one sheet up to the size of a modest book. All standard tariffs have to be approved by the Board and thereafter published in the Canada Gazette. The standard fixes the maximum within which the railway may operate. Special tariffs thereafter filed come into operation on notice, without the formal hearing of the Board. Under the Railway Act, an application may be made for suspension of a new tariff; thereafter the Board, if satisfied that a prima facie case for suspension has been made out, may suspend pending hearing.

The Board requires the railways to file statements of the reasons for changes in tariffs. An analysis of the reasons filed

would in itself afford grounds for a rather instructive paper. I have been struck in looking over these notices recently with the number of voluntary reductions. In a batch of some 50 odd tariff notices which I looked over a few weeks ago, over 50% of them were concerned with reductions; that is not to say that all the others were increases, because in many cases there were new rates on account of the extension of territory hitherto not covered except under the standard tariffs. The reasons given are interesting and some may be mentioned in passing. On the Dominion Atlantic, a quite common reason given is to meet water competition. In western Ontario, various reduced coal rates were put in because the coal would not move on the standard mileage rates. In other sections, it will be found that reductions are made to put various shipping points more on a parity. Matters of short line-mileage enter in. These rate notices show a much more fluid condition in regard to rate adjustment than is ordinarily taken for granted.

Classification. Fundamental to the movement of commodities is the question of classification. The process in connection with the formulating and amending of classification is to use the informal procedure as much as possible. Where a new classification is being worked out, as at present, the process is to have the matter discussed by a representative committee of the shippers and railways, the idea being that only the irreducible minimum of difference shall be brought to the Board for its consideration. In the same way, in connection with an amendment of the classification by supplement, the changes proposed by the railways are sent out to an extensive list of trade bodies; these are considered by these trade bodies; their objections or exceptions are sent in; then a meeting is arranged between a representative of the Board and the representative of the shippers and railways; and, thereafter, if there are any points of difference that cannot be agreed upon, the matter comes before the Board for hearing, if necessary. I may remark in passing that the recent classification supplement was finally ironed out without the necessity of any formal hearing. I lay stress and feel justified in laying some stress on this aspect of the matter, because there is no adequate appreciation outside of the limited classes of shippers and railway traffic men of the amount of informal work which is done in connection with working out the fundamental matter of classification. I may say, further, that I am of opinion that it is much more important work in this connection than formal hearings because when the items of a general classification come to a formal hearing, each side feels itself in the position of an advocate, and, therefore, the matter is not looked at from a standpoint of reasonable give and take which is available in a round-table conference.

Informal Action.—Many applications in regard to rates come in and are dealt with informally. The Board has no jurisdiction in regard to loss and damage and refund claims. The Board is of the opinion that if it appears that any question is raised as to the propriety of the rate charged, the matter is brought to the attention of the railways. As to overcharges, I have had on my desk within the last few weeks a matter involving an overcharge of 20c on a passenger journey, and on taking it up with the railway the matter

was adjusted. A number of years ago, a man complained of an alleged overcharge on a jug of mineral water. This was investigated and it was found there was an overcharge of 15c; and the matter was adjusted. Matters are constantly coming in as to provision under the bill of lading, the rate charged, the provisions of classifications, etc., and a large amount of time is spent on matters of this kind which, while individually small, are important in their total sum to a very considerable number of residents of Canada.

As indicated, I have attempted only to deal with this matter from a quantitative standpoint—perhaps it might be called a study in the anatomy of regulation. I have already referred to the number of complaints filed during 1921. In various cases, these complaints include 3 or 4 under one heading. A special check shows that some 4,500 individual complaints were received. Of these, some 2,800 fell under the heading of engineering and operating, and show some 64 sub-heads; 900 under rates and traffic, which show some 58 sub-heads; while there are some 564 applications under miscellaneous.

In various cases, the Board is asked to deal with matters over which it has no jurisdiction. The obvious answer from the standpoint of principle in such cases is simply to explain the lack of jurisdiction; at the same time, I think it may be said for the Board that it is not a mechanical organization, that it may claim some of the attributes of the heart, and that where on the special conditions as disclosed, notwithstanding the lack of jurisdiction, the special case of hardship appear, the Board is not unwilling to advise the applicant that while it has no jurisdiction in the matter it is agreeable to bringing the matter to the attention of the railway in the hope that through the exercise of its good offices an adjustment can be affected, and to act accordingly.

Regulation.—It has been my fortune to be connected with the matter of regulation in Canada for a good many years, and it is a matter of interest to me, entirely aside from my official connection with the work of regulation, to watch the expansion of the jurisdiction of the Railway Act. The tendency has been gradually to increase the jurisdiction. The first connection I had in an official capacity with the work of regulation in Canada goes back to Dec., 1898, when in an interview with the late Hon. A. G. Blair, then Minister of Railways and Canals, we talked over the question of railway legislation and the regulative portions of it. At that time, basing my opinion on studies I had made on the conditions in the United States and England, I expressed the opinion that the preventive work would be even more important than the corrective work. Quite a number of years have elapsed since then and a good deal has happened but I am still more convinced that to endeavor to deal with complaints and grievances in their inspection stage rather than when they come to a head is perhaps the most valuable portion of the Board's work.

Under the Railway Act of 1888, provision was made for the exercise of regulative functions by the railway committee of the Privy Council. It was recognized by the royal commission, which reported in favor of the amended legislation of 1888, that a non-migratory or-

ganization might put obstacles in the way of dealing with grievances. This criticism in anticipation was justified by the subsequent facts. The condition was that if a man could not afford either to attend the sittings of the Railway Committee in Ottawa in person or engage counsel, he had to let the matter go unexamined and unredressed.

Farm Crossings.—In the applications before the Board during last year, 80 were concerned with farm crossings, fencing and drainage. In the old days, under the act of 1888, the section foreman appeared to be the highest type of authority before the eyes of the applicant. If he had any question in regard to fencing, cattle guards or farm crossings, he apparently appealed to the section foreman, and without disparagement of the worth of the section foreman it is evident that in many cases he did not handle the situation very tactfully, and the grievance had an opportunity to develop. After a man has written in a few letters on a grievance it becomes a principle. Complaints in regard to farm crossings, cattle-guards and other matters do not now stop with the subordinate officials, but, if necessary, are taken to the highest executive. Matters which in themselves may seem small and of minor importance can, under the procedure existing, be taken before the highest official of the railway by way of dealing with matters of necessary redress.

A Migratory Organization.—As pointed out, the Board is a migratory organization. It has an inspecting organization travelling from place to place. It has sub-offices at Toronto, Winnipeg and Calgary. It does not take even a 2c. stamp to start an application, as letters come into the Board's offices free. The Board's organization is migratory not only as to hearings but also as to investigations. I have mentioned in an earlier connection the mileage I have travelled during the last 13 years. This is not of importance in itself, but as indicating that the hearings which it is my lot to take part in have extended from White Horse, in the Yukon, to Mulgrave, N.S. Whenever necessary, investigations are made on the ground, and throughout it has been recognized that while a hearing may be a matter of last resort an adjustment informally, without hearing, in an expeditious and economical method, is also in the interests of the general public.

The foregoing paper was read before the Canadian Railway Club in Montreal recently.

An Ideal Railway Job.

Lazy Mike—I have a new position with the railway.

Weary Rhodes—What ja gona do?

Lazy Mike—You know the fellow that goes alongside the train and taps the axles to see if everything's all right? Well, I help him listen.—Dry Goods Economist.

C.P.R. Constable Shot.—A. J. Tierney, a C.P.R. constable at Moose Jaw, Sask., came upon three men engaged in robbing a freight car in the yards there at midnight recently. Two shots were fired from the car as the constable approached and he was shot through the heart and killed instantly. The men immediately ran away, being fired on by another C.P.R. constable who was on duty in the vicinity.

Birthdays of Transportation Men in June.

Many happy returns of the day to:

Thomas Ahearn, President, Ottawa Electric Ry., Ottawa, Ont., and Honorary President, Canadian Electric Railway Association, born at Ottawa, Ont., June 24, 1855.

F. B. Backus, General Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Rochester, N.Y., June 4, 1860.

W. C. Bowles, Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, born there, June 3, 1875.

J. H. Boyle, Superintendent, Brownville Division, New Brunswick District, C.P.R., Brownville Jct., Me., born at Waterloo, Que., June 26, 1869.

F. P. Brady, Assistant to Executive, Canadian National Ry., Toronto, born at Haverhill, N.H., June 22, 1853.

H. W. Brodie, General Passenger Agent, lines west of Revelstoke, C.P.R., Vancouver, B.C., born at Fredericton, N.B., June 8, 1874.

G. W. Coburn, Resident Engineer, C.P.R., Brandon, Man., born at Upper Melbourne, Que., June 24, 1877.

P. Coleman, General Manager, Dominion Power & Transmission Co., Ltd., Hamilton, Ont., born at Taunton, Mass., June 14, 1867.

W. S. Cookson, General Passenger Agent, G.T.R., Montreal, born at Port Jervis, N.Y., June 12, 1871.

E. L. Cousins, Manager and Chief Engineer, Toronto Harbor Commission, Toronto, born there, June 11, 1883.

A. Craig, City Passenger Agent, C.P.R., Hamilton, Ont., born there, June 5, 1884.

J. M. Davidson, Division Engineer, Canadian National Ry., Winnipeg, born at Glasgow, Scotland, June 4, 1877.

Edward de la Hooke, Secretary-Treasurer, Canadian Ticket Agents' Association, London, Ont., born at Chichester, Sussex, Eng., June 29, 1842.

Capt. C. P. Disney, Engineer of Bridges, Eastern Lines, Canadian National Ry., Toronto, born at Montreal, June 11, 1887.

A. E. Doucet, ex-Director of Public Works, Montreal, born there, June 9, 1860.

Knowlson Elliott, City Freight Agent, C.P.R., Calgary, Alta., born at Gorrie, Ont., June 26, 1884.

J. M. R. Fairbairn, D.Sc., Chief Engineer, C.P.R., Montreal, born at Peterborough, Ont., June 30, 1873.

W. E. Foster, Solicitor for Ontario, G.T.R., Montreal, born at Belleville, Ont., June 27, 1866.

A. A. Goodchild, General Storekeeper, Eastern Lines, C.P.R., Montreal, born at Peckham, London, Eng., June 3, 1866.

W. C. Guthrie, Superintendent, Schreiber Division, Ontario District, C.P.R., Schreiber, Ont., born at Annapolis, Ont., June 15, 1876.

L. R. Hart, General Agent, Passenger Department, C.P.R., Boston, Mass., born at Fairport, N.Y., June 3, 1877.

J. A. Heaman, Assistant Chief Engineer, Canadian National-Grand Trunk Pacific Ry., Winnipeg, born at Memphis, Tenn., June 3, 1874.

Major R. B. Jennings, Division Engineer, Canadian National Ry., Montreal, born at Paris, Ont., June 29, 1888.

M. W. Kirkwood, General Manager, Grand River Ry., and Lake Erie & Northern Ry., Galt, Ont., born at Cheltenham, Ont., June 8, 1877.

L. Lavoie, General Purchasing Agent,

Canadian National Ry., Toronto, born at Rimouski, Que., June 22, 1879.

J. D. McAuley, Soliciting Freight Agent, Canadian National-Grand Trunk Ry., Montreal, born at Plantagenet, Ont., June 11, 1884.

R. S. McCormick, Chief Engineer and General Superintendent, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont., born at Quaker City, Ohio, June 22, 1873.

S. J. McLean, M.A., LL.B., Ph.D., Assistant Chief Commissioner, Board of Railway Commissioners, Ottawa, born at Quebec, June 14, 1871.

C. E. McPherson, Assistant Passenger Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Chatham, Ont., June 7, 1862.

James Manson, Assistant to the Vice President, C.P.R., Montreal, born at Thurso, Scotland, June 8, 1863.

W. E. Massie, Master Mechanic, Niagara, St. Catharines & Toronto Ry., St. Catharines, Ont., born at Elora, Ont., June 5, 1861.

J. D. Morton, General Auditor, Canadian National Ry., Toronto, born at London, Ont., June 15, 1857.

L. Mulken, Division Freight Agent, C.P.R., North Bay, Ont., born at London, Ont., June 18, 1871.

R. P. Ormsby, Secretary, Canadian National Ry., Toronto, born at Arklow, Ireland, June 26, 1869.

J. E. Finault, General Superintendent, Canada & Gulf Terminal Ry., Montreal, Que., born at Rimouski, June 24, 1884.

F. R. Porter, Foreign Freight Agent, Canadian National-Grand Trunk Ry., Toronto, born at Stratford, Ont., June 13, 1875.

F. Price, Superintendent of Car Service, G.T.R., Montreal, born there, June 11, 1864.

L. J. Reycreaff, Solicitor, Manitoba and Saskatchewan Districts, C.P.R., Winnipeg, born in Orford Twp., Kent County, Ont., June 20, 1868.

J. R. Shaw, Passenger Agent, Ocean Traffic, C.P.R., Manila, Philippine Islands, born at Montreal, June 28, 1871.

J. L. Simpson, agent, C.P.R., Port McNicoll, Ont., born at Mount Forest, Ont., June 9, 1866.

H. H. Smith, Car Accountant, Canadian National Ry., Toronto, born at Quebec, Que., June 14, 1872.

N. Van Wyck, General Purchasing Agent, Canada Steamship Lines, Montreal, born at Hamilton, Ont., June 29, 1883.

V. G. R. Vickers, ex-Manager, Foreign Department, and Superintendent Atlantic Division, Dominion Express Co., now Vice President, The Holden Co., Montreal, born at Toronto, June 1, 1866.

W. Walker, Assistant Bridge Engineer, Western Lines, Canadian National-Grand Trunk Pacific Ry., Winnipeg, born at Alderley Edge, Cheshire, Eng., June 1, 1885.

A. E. Warren, General Manager, Western Lines, Canadian National Ry., and Grand Trunk Pacific Ry., Winnipeg, born at Taunton, Eng., June 9, 1874.

Walter White, Trainmaster, G.T.R., Palmerston, Ont., born at Toronto, June 4, 1866.

Walker D. Hines, formerly Director-General of Railroads under the United States Railroad Administration, has been retained as Eastern General Counsel by the Great Northern Ry.

Checking and Accounting, Canadian National Railways Car Repairing Contracts.

Canadian Railway and Marine World for Nov. 1921, contained a copy of order in council 3,800, passed at Ottawa, Oct. 6, 1921, authorizing the ordering of steel rails for the Canadian National Rys. and G.T.R. in anticipation of the requirements for 1922, and for the repair of box cars by car building companies at various points. The reason for this action as stated by the then Dominion Government was to afford relief in the abnormal industrial situation obtaining, by providing employment. The order stated that in placing orders for the repair and rebuilding of freight equipment, the charges against the railway should only be the reasonable cost of the same in the company's shops, and that any extra expense involved should be a proper charge against unemployment generally and be regarded as such.

Another order in council passed Dec. 21, 1921, and published in Canadian Railway and Marine World for March, 1922, reviewed the circumstances attending the passage of the order in council, of Oct. 6, 1921, and authorized a Governor-General's warrant to provide the funds necessary in connection with the work.

As stated in Canadian Railway and Marine World for Dec. 1921, the C.N.R. management at once entered into agreements for the repair of 2,000 box cars by car building companies, the work being distributed as follows: Canadian Car and Foundry Co., Montreal, 500 cars; Canadian Car and Foundry Co., Amherst, N.S., 500; Eastern Car Co., New Glasgow, N.S., 500; National Steel Car Co., Hamilton, Ont., 500. In addition, arrangements were made for the repair of 1,000 G.T.P.R. box cars by Canadian Car and Foundry Co. at Fort William, Ont.

While the repairs were primarily in the nature of a general overhauling, there is a certain amount of standardizing being done as the cars are put through the shops. On all cars not so equipped, the door fixtures are being made to conform to C.N.R. standard, and all cars with defective roofs are being equipped with inside metal roof and outside board roof. All cars not so equipped are being fitted with metal draft arms, and the foundation brake gear is being overhauled to conform to C.N.R. standard on all cars where this work is necessary. Details of this brake rigging were given in Canadian Railway and Marine World for Dec. 1921, pg. 647.

It will readily be appreciated that great care must be taken in connection with the determination of costs in this work. In addition to the activities of inspectors of independent inspection companies who are employed on the work, the car companies and the railways have representatives at car companies' works whose sole work is to keep account of the repair costs. The system in use, involving co-operation and agreement between the representatives of the contracting parties and the inspection company, is very efficient. Robert W. Hunt & Co., Ltd., is handling the work at the Eastern Car Co's plant at New Glasgow, and at the Canadian Car and Foundry Co's works at Amherst and Montreal, and the Canadian Inspection Co. is operating at the Canadian Car and Foundry Co's plant at Fort William and the National Steel Car Co's plant at Hamilton.

At each shop there is a railway inspector for every eight to 10 cars repaired daily, who, before repairs are started,

inspects the car and authorizes in writing the repairs which are to be made. Forms are provided, on which are listed practically every conceivable kind of repair which can be made to a car, with appropriate spacing for the recording of material applied, and columns arranged for making the extensions to arrive at the total costs. The forms are 9 in. wide by 15 in. long, ruled vertically and horizontally, and there are 9 pages of classified items and a summary page to cover the work on each car. The summary page brings together the group totals of the other pages; for instance, on the summary page is entered the total for lag screws, nails, bolts, rivets, nuts, washers, flat bars, round bars, cast steel, malleable iron, grey iron, red pine, spruce, B.C. fir, and so on. When the railway representative has decided on the repairs to be made to a particular car, he hangs a copy of his written instructions on the side of the car, and no work is to be done which is not authorized by these instructions. As the work proceeds, the railway inspector, and an inspector representing the car company, keep check of the material applied and enter it on the forms provided, and when the work is completed, but before the car is painted, the inspection company's representative checks the work and ascertains that all charges as recorded are correct. The inspectors for the railway, the car company, and the inspection company having been provided with copies of the forms mentioned above, three more copies are made for billing purposes, and in addition a large number of copies of the summary sheet are made, some of which go to the railway and the others remaining for the inspection company and the car company's records. On the summary sheet, the signatures of the railway representative, the inspection company representative, a railway stores representative who certifies as to the correctness of material prices and the car company's works auditor, must appear. In this way, it is evident that, after the repair bill for any car is once rendered, it has been done so only after agreement among the representatives of all parties concerned, and therefore admits of no dispute. This method of handling the work has proved very successful and has greatly facilitated the work of accounting. Part of the materials for the repairs are being supplied by the C.N.R. and part by the car companies. In the latter case the prices to be charged are decided by the C.N.R. Purchasing Department.

At the time of writing (May 11) repairs on 500 cars had been completed by the Canadian Car and Foundry Co. at Montreal, 416 at Amherst, and 780 at Fort William. The Eastern Car Co. had completed 381, and the National Steel Car Corporation had completed 245.

The following questions were asked in the House of Commons recently by C. A. Gauvreau, Temiscouata Que., the answers being given by the Minister of Railways.

Q.—Have contracts for the repairs of cars of all kinds of cars, belonging and used by the Intercolonial Ry., been given to private companies instead of having these repairs done by the different Intercolonial Ry. repair shops, and if so, to what companies? A.—Contracts for repairs to a portion of the box cars only,

belonging to the Canadian National Rys. were given to private companies in order to help out the unemployment situation in the different parts of the country. Canadian Car & Foundry Co., Eastern Car Co., National Steel Car Corporation.

Q.—Is it the Railways Department's intention to have repairs and improvements to locomotives, cars and other equipment done by the employees of the different workshops of the Canadian National Rys.? A.—The company has always, and will continue to make repairs and improvements to locomotives at their own shops. As to cars, these will be done in our own shops as far as is practicable.

Q.—What amount, if any, has been paid to private companies for repairs to the rolling stock, for the section of the Canadian National Rys. from Montreal to Halifax? A.—The amount that has been paid to date to private companies for repairs to rolling stock for the entire Canadian National Rys. is \$389,961.93. The rolling stock belonging to the Canadian National Rys. is used for the benefit of the system as a whole and it is not possible to allocate charges for repairs to equipment that is being or will be used on any particular section of the line, such as Montreal to Halifax. The amount of above paid to car companies Montreal and east was \$371,600.83.

The Pacific Great Eastern Railway's Future.

The British Columbia Government, which owns the Pacific Great Eastern Ry., secured power from the Legislature to investigate the railway's position and prospects, with a view to determine what is best to be done to promote its interests, and the Government was authorized to consult with D. B. Hanna, President, Canadian National Rys., and E. W. Beatty, President (C.P.R.), as to the best men to be employed to make the investigation.

After making enquiries, W. P. Hinton, formerly Vice President and General Manager, Grand Trunk Pacific Ry., and subsequently until recently consulting officer to the Minister of Railways, as receiver for that railway, made an inspection of the P.G.E. Ry., and has made a report to the Government on the office organization and operation of the railway. J. G. Sullivan, Consulting Engineer, Winnipeg, formerly Chief Engineer, C.P.R., was engaged to investigate the engineering features of the line, and to advise the Government particularly in regard to its linking up with the Canadian railway systems, and the abandonment of the heavy mountain section between Squamish and Clinton. Col. J. S. Dennis, C.M.G., Chief Commissioner of Colonization and Development, C.P.R., has also been appointed to report upon the resources and settlement possibilities along the railway.

The Witch.—Conductor: Pardon me, madam, but your girl seems more than twelve. Her Mother: Conductor! Would you take me to be the mother of a girl that age? Conductor: Lady, don't let me see you're her grandmother!—Sydney Bulletin.

Application of the Turbine to Locomotive Practice.

The steam locomotive of today, designed scientifically and equipped with all the latest economy and power increasing devices, is a vastly more efficient prime mover than that of even 10 years ago. And yet, with all of the improvements which have been made, it is still a notoriously inefficient machine. One of the most outstanding characteristic features of the progress made in locomotive design is that practically no change has been made in the principle of the locomotive, in that the combination of revolving and reciprocating parts is still the standard for the translation of the expansive power of steam into the movement of the locomotive. Improvements have consisted almost entirely of the construction of larger units, of refinements in design without radical departure from original types and standards, and in the addition of appliances or devices designed to secure greater economy, or more power for the same expenditure in fuel.

In view of the fact that so much study and thought has been applied throughout the years to the effecting of improvements in the standard type of steam locomotive, it is not surprising to find that study is also being given to the possibility of effecting economies in motive power costs by the introduction of locomotives of radically different type to those in use. Experiments have been conducted recently with turbine locomotives in Sweden and Switzerland, the results of which indicate that considerable progress has been made in the development of such equipment. In the latter part of Sept. 1921, tests were conducted on the Swedish State Railways, with a steam turbine locomotive, and although test figures are not available, it is stated that the trials indicated large tractive effort on a minimum fuel consumption, while the design indicates a low scale of maintenance cost. In Switzerland, a Federal Railways 10-wheeler was converted by the Swiss Locomotive Works into a turbine locomotive, by placing a Zoelly turbine at the front, the rotor being geared to a transverse shaft over the leading truck in the ratio of 30 to 1. Solid wheels on each end of the transverse shaft carried crankpins, to which driving rods were connected. A condenser was installed between the frames of the locomotive; the water from the tender, after passing through the condenser, was carried back through piping to a specially designed apparatus over the tender, from which it was sprayed into the tender, the fine streams of water being more rapidly cooled. The steam used in the operation of the turbine, after undergoing condensation, was pumped back into the boiler, so that but little new water was required. The water was not pumped directly from the condenser to the boiler, but was passed through a heater, leaving the latter with a temperature of 250 deg. F. It is worthy of note that by re-using the water in the locomotive boiler, with the addition of but a small percentage of new water, the formation of boiler scale would be practically eliminated. There being no forced draft, as furnished by the exhaust in the standard type of locomotive, the required draft on the fire was obtained by means of a blower. The locomotive was superheated. The turbine was designed for a speed of 8,000 r.p.m., giving a locomotive speed of 48½

m.p.h. Three valves controlled the operation of the locomotive, one being used for starting, and for operation on heavy grades, another for ordinary forward running, and the third for backing up. Tests showed a fuel economy of 25% over compound handling similar trains on the same runs.

Discussing the matter of the application of the steam turbine to locomotive practice, an English contemporary suggests that a great difficulty is that the steam turbine depends for its high efficiency on an almost perfect vacuum, which means the necessity of a highly efficient condensing apparatus. The opinion is expressed that water cooling apparatus will give way to condensers of the air cooled or evaporative types, but it is obvious that, in view of the large cooling surface necessary to deal with the exhaust from a large turbine, combined with the limited space available, the problem will require much study before it can be solved satisfactorily. It is further suggested that a fuel consumption of 1.6 lb. of coal per horse power hour at the turbine should be obtained, representative of about 12% of the energy in the fuel derived in power delivered by the turbine. It is worthy of note, however, that the starting torque of the turbine is not in its favor, and that efficiency is decreased as the speed in r.p.m. decreases, thus adding new problems in the work of successful development.

The progress made in Europe in connection with the development of the turbine locomotive cannot fail to be of interest to Canadian railway men, and the subject is closely watched. The thing is certainly a radical departure. The present steam locomotive is a much better machine than it formerly was; maintenance costs, on the whole, are not unreasonable, while it has the ability to stand up under varying and hard conditions, this great feature of reliability being an important one. But the fact remains that if, by the introduction of a new type, great fuel economies can be introduced, while at the same time considerations of tractive power, hauling radius, reliability and maintenance costs are shown to be in favor of the new type, it is evident that the present locomotive will be gradually supplanted by such a new type. While further tests may bring to light facts which might show that the present type of locomotive is the superior machine in the long run, and while it is evident that the adoption of the turbine locomotive would be an extremely gradual process, even if its superiority can be demonstrated, it should be borne in mind that the steam turbine is a very efficient device, and that the problem of the turbine locomotive does not involve the originating of an efficient method of utilizing steam, but merely the application of such a method in a new field.

A condensing turbine electric transmission locomotive, originated by D. M. Ramsay, of Glasgow, Scotland, has been built recently at Newcastle-on-Tyne, Eng., by Sir W. G. Armstrong, Whitworth & Co. This is the second practical attempt to introduce such a locomotive in Great Britain, the first one being the Reid-Ramsay locomotive built in Glasgow and tried on the Cowlairs incline there in 1910. The locomotive recently has the following chief dimensions:

Length over all.....	69 ft. 7 in.
Wheelbase, fixed.....	25 ft. 4 in.
Wheelbase, rigid.....	16 ft. 4 in.
Average weight on driving wheels.....	18 tons
Driving wheel diam.....	48 in.
Height, center of gravity.....	45 in.
Height, center of boiler.....	10 ft. 1 in.
Width, maximum.....	8 ft. 11 in.
Weight of front engine.....	61 tons, 5 cwt.
Weight of front engine, light.....	43 tons, 15 cwt.
Weight of rear engine.....	63 tons, 10 cwt.
Weight of rear engine, light.....	45 tons, 3 cwt.
Total weight, operating condition.....	130 tons, 15 cwt.
Total heating surface.....	1,453 sq. ft.
Grate area.....	284 sq. ft.
Boiler pressure.....	200 lb. per sq. in.
Superheat.....	300 deg. F.
Adhesive weight.....	108.5 tons
Tractive effort.....	22,000 lb.
Ratio of adhesion to tractive force.....	11.95
Turbo-generator.....	890 k.w. at 3,600 revs. and 27½ in. vacuum, voltage 600

The locomotive is, in effect, two separate units, which, when coupled together, resemble to a large extent a locomotive with its tender as ordinarily known. But as a matter of fact both units form separate engines. The front unit, as regards both the boiler and framing, differs but little from accepted locomotive practice, with the exception, of course, that the cylinders, valve chests, reciprocating parts, etc., are replaced by a turbo-generator supplied by a Swiss firm. The main turbine is of the impulse pressure type, compounded multistage type, connected through a flexible coupling to a 3-phase generator, capable of sustaining a 25% overload for half an hour. This generator is separately excited by an auxiliary turbine-driven direct-current generator. The 3-phase generator supplies power to four 3-phase slip-ring motors, arranged in two groups on the front and rear parts of the locomotive respectively. The two motors of each group are bolted to a common stretcher, carrying a countershaft, to which they are geared. The power is then transmitted from the countershaft to the six driving wheels on each engine unit, by side rods, in the ordinary manner. Each of the motors is capable of developing 275 h.p.

The rear engine incorporates the coal bunker, cooling water tank, as well as the condenser and its appurtenances. The condenser is of the evaporative type, supplied with air by a fan at the rear of the engine. The exhaust steam from the turbine is discharged into the condenser through a large diameter pipe, being expanded down from boiler pressure to a vacuum of 27½ in., the condensate being drawn off from the bottom of the condenser, through a circulating pump, and returned to the well, from which a feed pump delivers the water into the boiler, thus completing the cycle. The steam tubes of the condenser are arranged in the form of a cage, which is caused to revolve in water at slow speeds, and through which the air is impelled by the fan, in a radial direction, over the tubes.

The boiler, hand-fired and fitted for forced draft, is equipped with a superheater, the heating surface, including the superheating surface, being 1,453 sq. ft. The driver manipulates the locomotive by a master controller placed in the cab.

The locomotive, which was built by Sir W. G. Armstrong, Whitworth & Co., at Newcastle-on-Tyne, has been sent to Horwich and will be tested on the London & Northwestern Ry. under actual operating conditions. The following description of the locomotive is abstracted from an article in the Railway Gazette, London, Eng.

This latest development in locomotive

design and construction is certainly worthy of attention. It has been said by men qualified to know that the development of the steam locomotive, as at present known, has about reached the limit, with the various power-increasing and economy-producing factors taken into consideration. The advocates of steam railway electrification maintain that the day of the steam locomotive is about done, and insist that cheap and efficient railway transportation will require, henceforth, electric locomotives, with power distribution from a central station. It is recognized that such a scheme of electrical operation has many advantages on divisions of heavy traffic, but the difficulties of financing are always present, and for the past few years have been particularly great. Does the development recorded above represent an intermediate stage between the steam locomotive and complete railway electrification? Being an electrically-driven locomotive, generating its own power, it would seem that it does, and the success met with in testing this locomotive on the London & Northwestern will be watched with interest. It is expected that large economies in fuel will be obtained, that maintenance expenses will be cut down, and that locomotives of this type will be demonstrated as suitable for regular main line service. Time and test alone will serve to prove the value of the design, which is certainly representative of a radical departure from accepted standards, but the experiment is expressive of the ever-present quest for improvement in the railway motive power field.

Proposal for Another River Bridge at Montreal.

A deputation of nearly 400 persons, representing Montreal City and South Shore municipalities as far east as Sorel, Que., waited upon the Dominion Government at Ottawa recently and urged the provision of additional bridge accommodation across the St. Lawrence River between Montreal and the South Shore. The petition which was presented contained resolutions passed by 125 interested municipalities, and about 75,000 signatures, and asked that the Government provide \$50,000 to enable the Montreal Harbor Commission to prepare plans for the construction of a bridge. J. Archambault, M.P. for Chambly-Verchères, introduced the deputation, and explained that while the proposed bridge and road approaches would be entirely in Quebec Province, the project is of an international character. The highway communications between Montreal and the south shore are the same as in 1859. During 1921, over 42,000 motor cars crossed the Victoria Bridge on a 13-ft. highway, and the population of Montreal and the south shore areas is increasing. Sixteen miles of the Montreal Harbor approaches on the south shore, which is an argument in favor of the construction of the bridge, a span of which could be connected with St. Helen's Island and open up that island for the people. W. Ramsay, chairman of the committee in charge of the project, stated that during 1920-21, the Victoria Bridge was crossed by 1,181,000 people, 50,000 vehicles, in addition to those who crossed on trains and motor cars. During 1921 the traffic over the bridge increased by about 30%. R. Prieur, Secretary of the Quebec Union of Municipalities; A. Lambert, Presi-

dent Montreal Chamber of Commerce, and W. M. Birks, President Montreal Board of Trade, also spoke in favor of the project. The Premier promised careful consideration of the project by the Government; and Sir Lomer Gouin expressed his opinion that the bridge is a necessity for the whole country, and stated that he would fervently support the proposal.

In connection with this matter, it has been pointed out that at the time of the rebuilding of the C.P.R. Lachine bridge about 1907, a proposal was made to have it built as a highway as well as a railway bridge. The C.P.R. was willing to make the necessary arrangements, but the Government did not take any action. After a start had been made on the work, the C.P.R. was approached by the Government to have the design altered so as to include a highway section, and the C.P.R. expressed its willingness to co-operate provided it was reimbursed the expenditure incurred, estimated at about \$200,000. This the Government declined to entertain, and the bridge was completed as a strictly railway one. A suggestion appears to have been made that a highway section could be added to the Lachine Bridge as it now stands, but P. B. Motley, Engineer-in-Chief, C.P.R., is reported to have stated that to make provision now for highway traffic would mean that the company would have to reduce the weight of its trains, as the bridge, being designed for railway traffic only, could not carry increased strain, and that the only course open is to build a new bridge.

C.P.R. Officers as U.S. Railway Officers.

The U.S. Interstate Commerce Commission passed the following order recently: In the matter of authorization, under the Interstate Commerce Act, sec. 20a, paragraph (12), to hold the positions of officer or director of more than one carrier: Application of Canadian Pacific Ry. Co. in behalf of sundry persons—The application, under said paragraph, in behalf of the persons herein-after named being under consideration, and it appearing, upon due showing in form and manner prescribed by the Commission, that neither public nor private interests will be adversely affected thereby, it is ordered that each of the persons named in this paragraph be authorized to hold, until further order of this Commission, positions with carriers as follows, respectively:

Lord Shaughnessy, director, Minneapolis, St. Paul & Sault Ste. Marie Ry. Co.; President and director, Sault Ste. Marie Bridge Co.

I. G. Ogden, director, Minneapolis, St. Paul & Sault Ste. Marie Ry. Co., Duluth, South Shore & Atlantic Ry. Co., Aroostook River Rd. Co.; Vice President and director, International Ry. Co. of Maine, Midland Rd. Co.

W. R. MacInnes, director, Aroostook River Rd. Co., International Ry. Co. of Maine, Midland Rd. Co.

A. D. MacTier, President and director, Aroostook River Rd. Co., International Ry. Co. of Maine, Midland Rd. Co.

G. M. Bosworth, Vice President and director, Aroostook River Rd. Co.; director, International Ry. Co. of Maine.

W. R. Baker, director, Aroostook River Rd. Co., International Ry. Co. of Maine, Midland Rd. Co.

F. R. Perry, director, American Nia-

gara Railroad Corporation, Sault Ste. Marie Bridge Co.

It further appearing that the Pennsylvania-Ontario Transportation Co. is not a carrier within the meaning of that term as used in said section 20a, it is further ordered that so much of said application as requests that W. R. MacInnes and A. D. MacTier be authorized to hold positions with said Pennsylvania-Ontario Transportation Co., be dismissed.

British Columbia Wants Representation on Canadian National Railways Board.

A Vancouver press dispatch reports members of the local board of trade as stating that renewed pressure will be brought to bear on the Dominion Government to secure the selection of a British Columbia man as a director of the consolidated Canadian National Rys. system. W. F. McCintock, a member of a delegation which visited Ottawa recently, is reported to have said: "The sooner the projected organization is completed, the better it will be for Canada and its railways. In the first place, the Government should see that men of ability, foresight and experience are appointed, and that this province is given representation on the Board. The railway question in this province is one of the most serious confronting it, and we must have a representative on the Board if we are to receive the consideration to which we have been looking for so long."

J. B. Thomson, Vice President, Vancouver Board of Trade, is reported as having said: "We will now take up with renewed energy our request for the appointment of a representative from British Columbia on the National Railways Board. The Board of Trade has repeatedly urged that such representation be given this province, and since it was shown so plainly before the Board of Railway Commissioners that the great bulk of freight originates in or is destined for the west, it is only reasonable to suppose we will be granted our request."

Division of Wheat Transportation Between the Railways.

Geo. Stephen, Freight Traffic Manager, Canadian National Rys., has issued the following statement as to the division of the handling of the prairie provinces' grain crops of 1920 and 1921 by the Canadian National, Canadian Pacific and Great Northern Rys. from Sept. 1 to March 31, both inclusive—

	1920 Crop	1921 Crop
C.N.R.	4,875	5,000
C.P.R.	74,216	15.5
G.N.R.	89,695	54
G.N.R.	163	60

181,886 196,136

The C.N.R. and C.P.R. shipments were both to the head of the Great Lakes and to Vancouver, B.C. The G.N.R. shipments were to Duluth, Minn.

Sir William Van Horne's Estate.—The Quebec Superior Court gave judgment recently in an action brought by the collectors of succession duties for the province against the Royal Trust Co. and other executors of the late Sir William Van Horne, claiming duties on an estate valued at \$1,127,927.10 outside the province. The court held that the right of the province to collect duties on the estate was amply provided for in the statute, and gave judgment for \$243,749.

The Canadian Pacific Railway Company's Annual Meeting.

The C.P.R. Co.'s shareholders' 41st annual meeting was held at Montreal, May 3, the President, E. W. Beatty, K.C., in the chair. In moving the adoption of the report for the calendar year 1921, as published in Canadian Railway and Marine World for May, Mr. Beatty said:—The annual report, which is now submitted for your consideration and approval, indicates in a vivid way the effect on your company's operations of the acute depression through which the business of the country passed during 1921, and it is a matter of gratification that, notwithstanding the decrease in gross earnings of \$23,619,000, the economies which were effected resulted in somewhat increased net earnings, and, of course, a slightly larger surplus; after paying fixed charges and usual dividends on the preferred and common stocks. The results reflect great credit upon the ability of the company's officers and men, and are also to be attributed to the physical condition of the property, which permitted reduction of expenses without in any degree affecting the efficiency with which traffic was moved. During October and November especially the heavy grain traffic was transported most expeditiously, with distinct advantage to the company's revenues.

Immigration.—The sales of agricultural lands were small, due to the general depression and the absence of the immigration of agriculturalists during the year. In my opinion, Canada cannot afford to be without a definite and forward immigration policy much longer. While it is urged that the depression both in agriculture and in general industry, with consequent unemployment during the past winter, is a reason why active immigration should be postponed, it must not be forgotten that there are types of immigrants that can be readily obtained and brought to Canada without the possibility of adding to the country's burdens. The immigration of young people of British stock can be accomplished without affecting in any material degree the existing situation respecting unemployment. The immigration of domestic servants in substantial numbers may reasonably be encouraged and the immigration of agriculturalists from Northern Europe, Great Britain and the United States, who can only be secured in limited numbers, should be actively prosecuted. In addition, the Government would, I think, be well warranted in framing a policy designed to permit more general immigration of carefully selected types from countries the people of which have heretofore come to this country and succeeded under Canadian conditions. It must not be forgotten that Canada's opportunities deserve widespread recognition, and even if adequate machinery is now begun to be set up, it will not be until 1923 that the results of the Government's activities will be felt. Unless we feel that the conditions in this country will not be improved for some considerable time to come, it would appear that the preliminary steps to obtain immigrants in substantial numbers should be taken without further delay. The C.P.R. has for many years been the most active colonization agency in Canada, 54,000 settlers having been placed upon its lands alone, and the cost of the company's activities in land selling, irrigation and colonization, since its incor-

poration, has been extremely large, amounting in the aggregate to approximately \$68,000,000, an amount in excess of the Dominion Government's total expenditure for immigration during that period.

Freight Rates.—As forecasted in the address at the last annual meeting, reductions took place during the year in both rates of wages and in freight and passenger rates; the former, which became effective July 16, 1921, was equivalent to a reduction of 9.03% on the company's then existing payrolls. The demand for further freight rate reductions is still persistent throughout Canada and to the existing scale of rates is attributed much of the present slackness in business. It is, in my opinion, an entirely erroneous impression that the existing freight rates are the cause, rather than the result, of the present economic conditions, the most important of which, from a transportation standpoint, is the present scale of wages and working conditions which the railways were compelled by Government authority to accept during the war. It is your directors' view, and it has been their view for some time, that the scaling downward of freight rates should be begun with reductions on basic commodities, especially in those industries which have felt the general depression most severely. Notwithstanding the willingness of the companies to make sacrifices in their revenues, in the hope that a lower scale of rates on basic commodities would give an impetus to business activity, they have been precluded from agreeing on a definite policy because of the approaching expiration on July 7 next of the provisions of the Railway Act which enable the Board of Railway Commissioners to make rates irrespective of agreements, statutory or other. In 1897 an agreement was made between this company and the Government, and confirmed by Parliament, whereby in consideration of the receipt by the company of a subsidy of \$3,300,000 in aid of the construction of a railway to the Crownsnest and Southern British Columbia, reductions in rates on certain named commodities shipped from eastern Canada to points in the west, and on grain to Fort William were exacted, with the obvious intent of assisting the colonization of the prairie provinces. The so-called Crownsnest rates on the commodities specified are from 19% to 49% lower than the rates at present being charged. The intention of Parliament at that time undoubtedly was to create special rates, which the company would be entitled to collect, and which would be legal, though not bearing a fair relation to other rates. At that time the C.P.R. operated about 7,300 miles of railways, but in a desire to give equality of rates to territories contiguous to those mentioned in the statute, though not supplied with railway facilities at the time the statute was passed, the company extended the application of rates to the lines subsequently constructed, or acquired, so that in 1918 the application of the rates had been extended to 13,772 miles of railway. During the period subsequent to 1897 many thousands of additional miles of railway were constructed by other companies now included in the National Railway System. The rates effective on this company's lines were naturally put into effect on the lines of these railways, so

that it is safe to say that the so-called Crownsnest rates were in practice applied to five times the mileage in operation at the time the agreement was made. The Crownsnest scale of rates, if applied literally, would bring about an inequality of treatment between different parts of western Canada which must, of necessity, favor some districts against others which now enjoy relatively equal rates. The Government desires to have the factors considered by a special committee of Parliament, with particular reference to the operating costs of the railways and to the result of the application of the Crownsnest scale upon the revenues of the National Railways and of other railways. The situation has been twice reviewed by the late Government, once in 1918, when the rates were suspended by order-in-council under the War Measures Act because of the inability of the companies, in view of the heavy costs of operation, otherwise to carry on successfully, and to perform the transportation service so peculiarly essential at that time; and again in 1919, when power to deal with the rates, irrespective of the provisions of special agreements, was conferred upon the Board of Railway Commissioners. In both instances the Government's view apparently was that Parliament, in establishing the Crownsnest rates, had not in contemplation the extraordinary and abnormal conditions under which the operations of the railways have been carried on in recent years, or the inequalities and discriminations which might be created under the scale of rates then imposed. While considerable progress has been made in reducing expenses, there still exists a serious increase in overhead costs, and the wage scales of 1921 are higher, by percentages ranging from 82% to 368%, than those existing in 1898 and 1899, and the cost of principal commodities, including fuel and rails, is also substantially higher; the increase in the case of rails being 92.32%, and fuel 177½%. The company's operating ratio in 1897 was 57.16%, while for 1921 it was 82.28%. The situation is one which should have frank recognition. The matter is in the hands of Parliament, which alone can deal with it, because of statutory restrictions.

I regard the stability of railway rates in Canada (even if readjustments downward are bound to continue until normal operating conditions are reached) as being of the greatest possible importance to all Canadian railways. For the past four years the extraordinary conditions which prevailed have compelled drastic economies, and the conserving of the resources of the companies wherever possible. It has prevented the increasing of facilities and improvements in maintenance, and the construction of new lines, because no company would be justified in spending freely for these purposes, in the absence of adequate revenues. The large railway systems of Canada are, of course, the chief purchasers of material and supplies and to the extent to which their purchases for any purpose, including new construction, are prevented by the uncertainty of financial return upon the money invested, a return to prosperity is retarded.

Maintenance and Construction.—I had been hopeful that the present year would see a resumption of at least normal activity in maintenance and construction

works, the necessity for which always prevails on a system the size of the C.P.R. Apparently, however, we have not reached the period at which we can say that large expenditures are warranted, especially in view of the freight rate situation.

Wages.—The steps preliminary to the readjustment of wage scales and working conditions are proceeding both in the United States and in Canada. The procedure being followed is that required by the agreements with the labor unions and by the laws of the United States and Canada. An early decision is hoped for in respect of some of the matters in dispute, but the proceedings are, of necessity, protracted, and decisions are not, therefore, reached speedily.

Gross earnings on all Canadian roads still show substantial decreases under those of the corresponding period of 1921. Crop conditions, however, so far as they can be judged at this date, are very favorable, and there is a returning spirit of optimism and activity which should grow in volume if the agricultural prospects are realized.

The company's taxation is not unduly increasing from year to year, approximately \$10,000,000 having accrued in Federal taxes during the last five and a half years.

Finances.—As indicated in the annual report, the company's finances are in splendid condition, and its credit has been well maintained and is extremely high, and it is, I think, of national importance that it should be so maintained.

Business Situation.—While there are some serious and difficult problems yet to be solved, the general sentiment of the country shows a distinct improvement from that prevailing at the end of 1920 and the beginning of 1921. I am very hopeful that the importance of Canada's transportation agencies being permitted to undertake their full share in the country's advancement, will receive due recognition, and if it does, I am convinced that the return to normal conditions will be greatly accelerated. Your company will, as always, endeavor to perform its part with the purpose of advancing the expansion of the country agriculturally and industrially. Few institutions are so linked up with the prosperity of Canada as is the C.P.R., and its ability to maintain a high credit has in a large measure contributed to the support received by other Canadian enterprises. Its progression should be step by step with that of the country itself.

Sir John Eaton's Death.—Since the publication of the annual report, the board has lost one of its members through the death of Sir John Eaton, who joined the directorate on Dec. 8, 1919. He was in the prime of life, a man of tremendous personal influence, and of extraordinarily generous qualities. His loss will be very much felt throughout Canada and particularly in Toronto. His counsel and assistance were greatly appreciated by the board and his death is deeply deplored. The vacancy created by his death has not yet been filled.

Officers and Employees.—I cannot speak too highly of the morale and efficiency of the company's officers and men. A more loyal group of men does not, I think, exist in any corporation in the world.

The report was adopted unanimously. **Interprovincial & James Bay Ry.**—A

lease to the C.P.R. Co. of this railway, from near Lumsden's Mill to near Des Quinzes River, Que., about 77 miles, and all the branches of and additions thereto which may be built, at an annual rental equal to the interest, not exceeding 5%, payable on securities issued or which may hereafter be issued by the I. & J.B.R. Co. with the C.P.R.'s consent, the total of such securities not to exceed at any time \$50,000 a mile, was approved.

Consolidated Debenture Stock.—The following bylaw was approved: "Certificates of ownership of consolidated debenture stock, may if the directors so determine with respect to any stock issued, be made in bearer form transferable by delivery, with coupons for interest payable to bearer, and any holder of stock with respect to which the directors shall have so determined shall on surrender of a certificate in bearer form with all unmatured coupons thereon, receive in exchange therefor a certificate for the same amount of stock registered in his name bearing interest payable at the same rate, time and place but with coupons and any such registered certificate may in like manner be exchanged for a bearer certificate for the same amount of stock bearing interest coupons payable to bearer. After all interest coupons attached to a certificate in bearer form shall have matured, the holder of such certificate, upon presentation and surrender thereof shall be entitled to a new certificate bearing coupons for future interest."

Directors, Officers, etc.—The retiring directors, J. K. L. Ross, Lord Shaughnessy and Sir Thomas Skinner, were re-elected. At a directors' meeting, held immediately after the annual meeting, the following officers were elected: Chairman of the company, Lord Shaughnessy; President, E. W. Beatty, K.C.; Vice President, Grant Hall. The following were appointed as the executive committee: R. B. Angus, E. W. Beatty, Grant Hall, Sir Herbert Holt, Sir Vincent Meredith, Sir Edmund Osler, Lord Shaughnessy.

Pensions for G.T.R. Strikers of 1910.

W. A. Boys, South Simcoe, Ont., moved in the House of Commons on May 3. That in the opinion of this House, immediate steps should be taken by the Government to restore the pension rights and status of all employees and ex-employees of the G.T.R. who were deprived thereof owing to participation in a strike on the system in 1910, to the end that all such may secure their just rights pursuant to the terms and true intent of the settlement made between the parties."

Mr. Boys said: "In my absence on April 10, the Prime Minister, referring to this resolution, said: 'There is no need for this resolution, inasmuch as the Government has already taken steps in the direction proposed. The Government has been negotiating with a view of securing that a long standing injustice should be remedied without further delay. If it is not possible to effect by negotiation what we hope and believe will be attained by negotiation, then the Government will bring in the necessary legislation to see that the injustice that was done to G.T.R. employees involved in the strike of 1910, in virtue of the terms and conditions of its settlement not having been complied with, is duly remedied.' Mr. Boys continued:—"I read the Prime

Minister's remarks with great interest and satisfaction, and in view of what he said on that occasion I certainly have no desire at present to press this motion. I should be glad, however, if he could see his way clear to give me an opportunity later on in the session, if perchance negotiations fail, or if no legislation is brought forward, to deal with the subject matter of this motion. I am very much in earnest about it, and I realize that the Government is as well. Apparently we are in accord in our views, and if the Prime Minister would be kind enough to promise me this consideration I should appreciate it very much and, on the strength of such an assurance, I would move the adjournment of the debate on the motion."

Prime Minister King:—"Not only am I very much pleased to meet my hon. friend's wishes, but should negotiations fail and should it become necessary for the Government to consider introducing legislation, I will assist the hon. member in carrying his resolution."

Mr. Boys:—"I am entirely satisfied with the Prime Minister's statement and I move the adjournment of the debate." The motion was agreed to and the debate adjourned.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry. System, Grand Trunk Pacific Ry., and Canadian Government Rys., the last including the Intercolonial Ry., Prince Edward Island Ry., and various local lines in Maritime Provinces and Quebec, which have been acquired by the Dominion Government:—

	Revenue	Expenses	Net
	1922	1921	
Jan.	\$8,210,401	\$10,433,564	\$2,223,163
Feb.	7,650,743	9,026,418	1,375,675
March	9,415,100	10,387,547	\$979,447
	25,276,244	\$30,851,683	\$5,575,439
Decr.	\$6,174,338	\$8,978,914	\$2,804,576
	\$8,635,358		
	Approximate gross revenue for April, 14,489,814,		
	against \$9,427,600 for April, 1921, and \$39,856 for		
	two weeks ended May 14, 1921.		

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1922, compared with those for 1921. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Eastern & Northern Ry. and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in the supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net
	1922	1921	Decreases
Jan.	\$11,315,937	\$10,554,498	\$761,439
Feb.	11,305,935	10,649,295	656,648
March	13,847,627	11,427,120	2,420,507
	\$36,469,500	\$32,330,828	\$4,138,672
Decr.	\$5,450,819	\$5,103,395	\$347,424
	Approximate gross earnings for April, \$11,970,000,		
	and for two weeks ended May 14, \$5,778,000,		
	against \$13,411,000 for April, and \$5,878,000 for		
	two weeks ended May 14, 1921.		

Grand Trunk Railway.

	Gross	Expenses	Net
	1922	1921	Decreases
Jan.	\$,341,317	\$,984,908	\$,643,591
Decr.	\$64,048	\$1,354,318	\$1,670,586
	Approximate gross earnings for February, \$7,171,600,		
	and for two weeks ended May 14, \$6,803,191,		
	against \$7,407,821 for February, and \$16,196 for		
	March, 1921.		

Australian Railway Gauges. — The

Commission on the unification of railway gauges in Australia, which was appointed by the Commonwealth Government Feb. 8, 1921, has recommended the adoption of the 4 ft. 8½ in. gauge as the standard. The cost of the conversion of all lines is estimated at \$57,200,000.

Railway Wages and Working Conditions in Canada and the United States.

As stated in Canadian Railway and Marine World for May, p. 243, the Railway Association of Canada had begun negotiations with the United Brotherhood of Maintenance of Way Employers' officials, for a revision of rules and working conditions affecting the employment of maintenance of way men, but the employees' representatives had asked for time to reter the proposals to the men. After this had been done, the employees' representatives and the Railway Association's wage committee met again, and a mutually satisfactory agreement was reached. Generally speaking, the agreement provides that for certain kinds of work in connection with which overtime, Sunday service and holiday service, is unavoidable, pro rata rates of pay shall in future apply for such service within certain limits, instead of punitive overtime at the rate of time and a half as heretofore. The agreement has been made without prejudice to future negotiations on 30 days' notice, any change as a result of such negotiations to be effective from a date subsequent thereto.

An agreement has also been reached between the Railway Association of Canada and the shop employees included in the American Federation of Labor, Railway Employers' Department, Division 4. After some weeks of negotiation at Montreal, an agreement was arrived at, effective May 22, by which a wage agreement 4 was amended. The C.P.R. was represented by Geo. Hodge, Assistant to Vice President, Eastern Lines; the G.T.R. by C. F. Needham, Assistant to General Superintendent, Motive Power and Car Departments; the Canadian National Rys. by C. E. Brooks, Mechanical Assistant, Locomotive Department; the A. F. of L. by R. T. Preston, President, Division 4; by R. T. Preston, President, Dickie, Secretary, and delegates representing the various trades. The railways affected by the agreement are: Canadian National; Canadian Pacific; Dominion Atlantic; Esquimalt and Nanaimo; Grand Trunk; Grand Trunk Pacific; Kettle Valley; Quebec Central; Timiskaming and Northern Ontario; Winnipeg Joint Terminals; Toronto, Hamilton and Buffalo; Edmonton, Dunvegan and British Columbia.

The agreement is the usual voluminous document, a summary of which is impossible in the space at our disposal. Except as provided in specific instances, 8 hours constitutes a day's work, and with the exception of employees regularly assigned to road work and paid on a monthly basis, all employees will be paid on an hourly basis. The chief overtime provisions are as follows: Rule 6. "All overtime continuous with regular bulletined hours will be paid for at the rate of time and one half until relieved, except as may be provided in rules hereinafter set out. Work performed on Sundays, New Year's Day, Good Friday, Victoria Day, Dominion Day, Labor Day, Thanksgiving Day, and Christmas Day (provided when any of the above holidays fall on a Sunday the day substituted by the Federal Government will be observed), will be paid for at the rate of time and one half, except as follows: (a) Employees necessary to the operation of power houses, millwright gangs, heat treating plants, pipe line maintenance gangs, train yards, running repair and inspection forces, will be paid time and one half if required to work on New

Year's Day, Labor Day and Christmas Day, and straight time for other specified holidays unless such holidays fall on regularly assigned seventh day off duty. (b) Employees necessary to the operation of train yards, running repair and inspection forces will be assigned one regular day off duty in seven, Sunday if possible, and if required to work on such regular assigned seventh day off duty, will be paid at the rate of time and one half, and where such assigned duty is not Sunday, work on Sunday will be paid for at the straight time rate. (c) Sunday and holiday work will be required only when absolutely essential to the continuous operation of the railways."

Rule 7. "For continuous service after regular working hours, employees will be paid time and one half on the actual minute basis, with a minimum of one hour at straight time rates for any such service performed. Employees shall not be required to work more than two hours without being permitted to go to meals. Time taken for meals will not terminate the continuous service period, and will be paid for up to 30 minutes at straight time rates. Employees called or required to report for work and reporting but not used will be paid a minimum of 4 hours at straight time rates. Employees called or required to report for work and reporting will be allowed a minimum of 2 hours and 40 minutes, less and will be required to perform such work as called for or other emergency work which may develop after they were called and cannot be performed by the regular force in time to avoid delays to train movement. Employees required to attend passenger trains for inspecting, icing, watering, cleaning and putting on supplies, outside of regularly assigned working hours, will be allowed a minimum of 2 hours at straight time rates, except that when called between 22 o'clock and 6 o'clock a minimum of 4 hours at straight time rates will be allowed. Employees will be allowed for services performed continuously in advance of the regular working period a minimum of 2 hours at straight time rates, the advance period to be not more than one hour. Except as otherwise provided for in this rule, all overtime beyond 16 hours service in any 24-hour period, computed from starting time of employees' regular shift, shall be paid for at the rate of double time."

The individual railways are negotiating with officers of the telegraphers' organization, to secure changes in the rules and working conditions affecting telegraphers' employment. No action has been taken toward securing changes in the train service employees' schedules.

On May 16, A. R. Mosher, President of the Canadian Brotherhood of Railway Employees, accompanied by a deputation, appeared before the Ontario Minister of Labor, to complain against alleged discrimination against the brotherhood by officers of the Timiskaming and Northern Ontario Ry. officers for having taken measures to prevent employees from joining the brotherhood. They are advised by the Chairman of the T. & N.O. Commission that the Commission has always given sympathetic consideration to every request presented by its employees, and allow confidential clerks and secretaries labor, but that it cannot be expected to join any labor organization.

A Board of Conciliation, consisting of

W. R. T. Preston, Chairman, F. H. McGuigan, representing the company, and F. Bancroft, representing the men, was appointed to hear the dispute in connection with wages on the Alcona, Eastern Ry. The employees affected are carmen and shompen. The rates which have been in effect are as follows: Machinists, 77c. an hour; blacksmiths, 77c.; car repairers, 72c.; helpers and stationary boiler firemen, 54c. and 50c. The rates which the company proposed putting in are as follows: Machinists, 66c.; blacksmiths, 65c.; car repairers, 60c.; helpers and stationary boiler firemen, 45c.

United States.—Details of the hearings by the Railroad Labor Board in connection with the applications made by the railways for reductions in the rates of pay of shompen were given in Canadian Railway and Marine World for May, p. 243. Following the termination of the hearings on the shompen's wages, evidence was presented concerning clerical employees' wages. The railways were represented by J. J. Hilsenrath, the Western roads, J. G. Walber, for the Eastern roads, and W. A. Northcutt, for the Southwestern roads, and the employees were represented by E. H. Fitzgerald, President, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. Hearings were also held by the Board in the latter part of April in connection with the telegraphers and train dispatchers' wages. J. G. Luhrs, of the train dispatchers' organization defended the present rates of pay, on the ground that any reduction would destroy the differentials existing between the rates of pay for train dispatchers and for employees in train service. He also placed great emphasis on the degree of training and skill required in the work in which the members of the organization are engaged.

The dispute between the railways and their signal employees was also heard by the Board in the latter part of April. The roads asked for a reduction of from 5½c. to 14c. an hour, and the employees contended that no reduction would be justified. The employers were represented by D. W. Helt, President, Brotherhood of Railroad Signalmen.

The hearings were proceeding satisfactorily until April 28, when the representatives of all the labor brotherhoods concerned withdrew as a protest against the appearance of representatives of the National Industrial Traffic League, and the National Industrial Conference Board, before the Board. B. M. Jewell, President American Federation of Labor Railway Employees' Department, in a statement giving the reason for this action, said that the Labor Board had no authority to listen to evidence which had nothing to do with the determination of just and reasonable wages for railway employees, and that decisions based on, or affected by, such evidence, would have no value. The National Industrial Traffic League was represented at the hearings by J. S. Burchmore, who advocated that the Government should regulate railway labor matters. He defended his appearance before the Board by saying that the League represents a large part of the shipping public, and that the public is vitally interested in the matter of railway wages. J. H. Libby, representing the National Industrial Conference

Board, presented figures to show that railway labor is overpaid. The figures showed that the "real" earnings of railway employes are on the average, 20% higher than in 1914. The wage hearings were ended by the presentation of evidence by the representatives of the two public bodies named above, and the Board has since had the matter of wages for all employes concerned under advisement.

On April 21, when representatives of the shompen who are members of the American Federation of Labor Railway Employes' Department, met in convention in Chicago, they voted to send out strike ballots and took steps to prepare for the launching of a country-wide shompen's strike. Much dissatisfaction was expressed with methods used by many railways in contracting out their repair work, it being claimed that this was but a method of escaping the necessity of paying the wages ordered by the Labor Board. No announcement of strike ballots having been sent out has been made.

The Labor Board had intended proceeding with hearings concerning the rules and rates of pay of locomotive men and firemen, beginning May 1, but the hearings were indefinitely postponed. Eastern railways have asked for separate hearings on the question of wages for these employes, which request the Board has granted, but no date for hearings has been announced.

Details were given in previous issues of Canadian Railway and Marine World concerning the dispute between the Labor Board and the Pennsylvania R.R. The Board ordered the railway to negotiate with the employes' organizations, and to deal with representatives of unorganized employes appointed in a manner specified by the Board, but the railway had arranged to negotiate with employes' representatives elected by the employes at elections arranged by the railway company. When the Board was about to issue an order censuring the railway for disobeying its previous order, the company obtained a temporary injunction restraining the Board from publishing such an order. At the end of April, Judge Page of the U.S. District Court at Chicago, upheld the railway's contention, stating that the only power given the Board by the Transportation Act, p. 301, is to hear and decide disputes jointly referred to it by parties interested in the dispute. From this decision, it would appear that the Board is subject to the jurisdiction of the Federal Courts, and that the only backing that it has in the enforcement of its rulings is that given by the existence of a favorable public opinion. Incidentally, in Judge Page's decision, the constitutionality of the labor provisions of the Transportation Act was upheld. The Board is not going to let matters rest at this point, and its Chairman having conferred with the U.S. Attorney General and Solicitor-General, it was decided to appeal to the Supreme Court. The U.S. Department of Justice will support the Board's position, and the appeal, the hearing of which has been set for June 2, in the District Court of Appeals at Chicago.

Previous issues of Canadian Railway and Marine World have given details of the way in which many U.S. railways have been contracting for their repair work, and as to how labor organization representatives protested against this procedure in hearings before the Labor

Board. In a decision given by the Board recently in the case of the Indiana Harbor Belt R.R., it was stated that the road's action in contracting out its repairs was in violation of the Transportation Act. The decision points out that by the terms of contracts entered into by various railways, employes embraced in the six shop crafts, firemen and others, signal employes, hostlers and certain clerical employes, have suffered reductions in wages. It says that the principle involved in all these cases is the duty and responsibility of the employer toward the employe, and that the contracts involved violate the spirit and purpose of the Transportation Act, and in effect set aside the wage decisions made by the Board. The decision applied only to the Indiana Harbor Belt R.R., and it was stated that further decisions will depend on the circumstances in each particular case, but it would appear that the Board will hold all of this repair and maintenance contracting work unlawful.

B. W. Hooper, a public member of the Board, and formerly Governor of Ten-

nessee, was elected to the Chairmanship of the Board on April 27, succeeding R. M. Barton. G. W. W. Hanger, also a public member, was elected Vice Chairman. It was reported that Albert Phillips, a labor member of the Board, was about to resign on account of ill health, but it is now stated that he will finish his term of office. The Labor Board has now been in operation for two years, and has passed upon 632 cases placed before it. In 1920 it issued 42 decisions and various interpretations, and in 1921 it issued 539 decisions and numerous interpretations and addenda.

It is felt that the Board will soon render decisions in the disputes having to do with the wages of all employes, excepting train and locomotive service, as the hearings were concluded before May 1. Since the conclusion of the hearings the Board has been in executive session almost continuously, and decisions on wages for the various classes of employes affected are being awaited with interest by both railway managements and employes.

Grand Trunk Railway Construction, Betterments, Etc.

Bonaventure Station.—The Montreal City Council passed the following resolution recently:—"That the executive committee be requested to ask the Dominion Government or the Board of Railway Commissioners of Canada to consider the advisability of transferring Bonaventure station to a location near McGill St., which would have the effect of settling the intricate question of level crossings, as well as that of the construction of viaducts, which would entail an expenditure of several millions of dollars by the Government and the city, and would also enable the Government to sell the large extent of land occupied by such station and by the G. T.R. tracks, and that the committee be further requested to report to council on the result of its negotiations."

Lachine Station.—Plans for a new station on the boundary line between Lachine and Dorval were approved by Lachine City Council recently. The new building will be erected on the south side of the G.T.R. tracks and will occupy a site 49 x 16 ft., with extensive platforms for both up and down tracks. The building will be of the usual small-town railway station type and will include a ticket office, general waiting room, women's waiting room, station agent's office and baggage room. The building is estimated to cost \$25,000 and it is expected it will be completed by the end of the summer.

The Lachine City Council has since discussed a suggestion to have a union station located between 15th and 20th Avenues, and it was decided to send a delegation to the G.T.R. management to discuss the matter.

Oshawa Water Supply.—We are officially advised that the company has made a contract with the Oshawa, Ont., town council for a water supply. A press report states it provides for the supply at 84¢ per 1,000 gall. The company now pumps its water from a creek adjoining the station.

Toronto Belt Line Ry. Bridge.—In connection with the lengthening of the bridge carrying the Toronto Belt Line Ry. over Yonge St., we are officially advised that the necessity for the work has arisen through the widening of Yonge

St., along this section from 66 to 86 ft. The bridge has therefore to be lengthened by 20 ft. This is being economically achieved by moving the present half through plate girder span 10 ft. to the west and supporting it on steel bents placed just behind the east and west curb lines. New steel stringers will bridge the gaps at each end between the end floor beams of the girder span and the floor beams resting on the abutments. The present east abutment remains in place, the west abutment has been moved, and a new west abutment has been erected on piles. The clearance underneath the bridge, when the new roadway is regraded, will be 18 ft. The gradient of the sidewalk remains as heretofore. The new roadway will be 54 ft. wide between curbs. The work is being done at Toronto's expense.

Huttons Bridge.—Work is reported to have been started on the approaches and abutments for a new bridge at Huttons, London, Ont. When the railway was double tracked some years ago, a dangerous turn was created in the roadway, which is now to be straightened out.

Wanstead, Ont., station was destroyed by fire, April 27. It was a frame building and contained, in addition to the ordinary station accommodation, the agent's residence. It is stated that another building will be erected immediately.

Petrolia Spur Line.—An agreement is reported to have been entered into with the G.T.R. for the construction of a spur line from Petrolia, Ont., to the Peninsular Sugar Co.'s proposed factory site.

Glencoe-St. Thomas Track Relaying.—We are officially advised that about 18 miles of track between Glencoe and St. Thomas, Ont., is to be relaid this year with re-rolled 90 lb. rails.

The Northern Pacific Ry. directors have declared a quarterly dividend of 1 1/4% on common stock, representing an annual dividend of 5% instead of 7% as heretofore. Howard Elliott, Chairman of the Board, said he was hopeful that conditions would warrant resumption of the 1 1/4% quarterly dividend in the near future.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Abitibi Pulp and Paper Co., Ltd.—We are officially advised the company has let a contract to build this year a standard gauge logging railway, from Iroquois Falls, Ont., to a junction with the National Transcontinental Ry. at Hughes, Ont., 16 miles. Iroquois Falls is the terminus of a 7-mile branch of the Timiskaming and Northern Ontario Ry., from Paroquet Jet, Ont., 225.7 miles north of North Bay. Hughes is 29 miles east of Cochrane.

Alberta and Great Waterways Ry.—The report of the Alberta Minister of Railways for 1921, states that a complete investigation was made by the Department's engineers relative to the completion of the railway from the point where the navigation of the Clearwater River was first reached at mile 282, to Fort McMurray, and it was ascertained that the cost would not be justified by the amount of traffic in sight. The estimated cost to complete the additional mileage was approximately \$210,000. As the company has title to 875 acres of land at this point on the line, situated on a heavily timbered flat well above high water level, it was determined to utilize this area. A spur 3,400 ft. long was paid from the main line to the river front, where there are wharfage sites and companies, operating steamboats on the river. The investigation of conditions at Fort McMurray showed the site selected previously for a steamboat landing and a terminus for the railway, to be altogether reasonable. The deviation from the original Clearwater Valley line, built in 1921, leaves the original line at mile 272, follows Deep Creek, and rejoins the Clearwater Valley location to Fort McMurray at mile 282. The location shows the first three miles of the deviation to be practically level, followed by 4 miles of 1% gradient, the remaining three miles having a 2% gradient. The deviation is situated on a sliding clay formation, and may be found uneconomical to maintain. The cost of the deviation to Dec. 31, 1921, was \$547,496.24, and it is estimated that it will cost \$42,670 to complete it.

A press report states that considerable ballasting will be done on the line from Lac la Biche, to the Clearwater River. The first gang of men was reported to have arrived on May 2 at Waterways, where a start was made upon the erection of a frame storehouse for track supplies, 32 ft. x 80 ft. It is reported that some small land slides have already occurred on the Deep Creek deviation. (May, p. 236.)

Canadian Transit Co.—The House of Commons railway committee gave consideration recently to the company's bill, which provides among other things for the changing of the office from Windsor, Ont., to Detroit, Mich., and the granting of power to the American Transit Co., which is the United States end of the undertaking, to issue bonds for the entire undertaking, and to dispose of the same in Canada. Objection was taken to both these features, both in committee, also in the House, on May 12, and May 14, when the bill was read a third time.

C. N. Monsarrat, Montreal, a member of the board of engineers for the construction of the bridge, is reported to have stated recently that there was every indication that construction would be

started at an early date. Field work had been completed and borings for the foundations made. It was intended to complete the highway section of the bridge and the approaches first, and then proceed with the construction of the railway deck. Owing to the reduction in the prices of steel, and the condition of the labor market, it was expected that the bridge would cost less than the original estimates. (Feb., p. 76.)

Dominion Atlantic Ry.—A press report states that a contract has been let to Cornwallis Construction Co., Kentville, N.S., for the erection of a station at Round Hill, N.S. (April, p. 185.)

Esquimalt & Nanaimo Ry.—A recent call for tenders for the superstructure of the Johnson St. bridge, Victoria, B.C., other than the bascule span, resulted in several offers being made, but as the prices were considered too high, tenders were again invited to be sent in by April 17. Three were received, and that of the Canadian Bridge Co., Walkerville, Ont., which has just about completed the erection of the bascule span, was accepted. The bridge is being built by the city under an arrangement by which the E. & N. R. Co. and the British Columbia Government contribute portions of the cost. Owing to a variety of circumstances, the cost of the work is exceeding the amount fixed in the bylaw by \$110,000. The city has been negotiating with the E. & N. R. Co. and the government to contribute a share of the increased cost, but without success. It was finally arranged to submit a new bylaw, to provide the \$110,000 by the issue of city debentures, and this was carried May 12 by 2,465 votes to 692.

The work on the bascule span is reported to be proceeding rapidly, the main part of the work having been completed early in May. The span is a 150 ft. single leaf combined railway and highway bridge, built to the Strauss Bascule Bridge Co.'s specifications and under its inspection by the Canadian Bridge Co. A general description of the whole structure was given in Canadian Railway and Marine World for March, 1920, p. 135. The then estimated cost of the bridge was \$720,000, towards which the E. & N. R. Co. was to contribute \$100,000. The entire structure is expected to be completed by Dec. 31.

The company's application to the Dominion Parliament for an extension of time for two years for the starting of construction, and for five years for the completion of the extension of the line from the present terminus at Courtenay to Duncan's Bay on the east coast of Vancouver Island, met with considerable opposition in its passage through the House of Commons, where it was read a third time May 9. The opposition developed before the railway committee, where an effort was made by A. W. Neill, M.P. for Comox-Alberni, to have the time limited to one year for starting the extension, and to three years for completing it, and was continued on the motion to consider the bill in committee of the whole house. Mr. Neill's motion to send the bill back to the committee was defeated by 95 to 91, but it was again brought forward when the House gave consideration to the bill in committee, May 2, and was again defeated on the chairman's casting vote. Some

other amendments were proposed by Mr. Neill, and were also negative on May 9, when the bill was read a third time. (April, p. 185.)

Hudson Bay Ry.—A deputation of western members of Parliament and others representing the district served by the Hudson Bay Ry. from Pas to the point to which it is being operated near the Kettle Rapids, waited upon the Minister of Railways and other members of the Dominion Government recently in connection with the condition of the railway, and to press for its completion to Port Nelson. We are officially advised that the Minister informed the deputation that provision has been made this year by the Canadian National Ry. directors to retie the portion of the line now in use where necessary so as to keep the portion of the track serving the public in proper repair, until such time as the railway management and the Government can determine upon a definite policy with reference to the whole line.

A train service is being operated over the line from Pas to mile 214 by the Canadian National Ry. The track is laid as far as the Kettle Rapids, mile 332, and grading is practically completed to Port Nelson, mile 424. (May, p. 236.)

Kettle Valley Ry.—We are officially advised recently that the head laid on the branch from Pentticon, B.C., to the head of Dog Lake, and that approximately 71% of the grading had been done between Okanagan Falls and the Government Demonstration Farm at Oliver, on the extension from the south end of Dog Lake. The barge for use on the lake to connect the two sections of the line has not yet been built. (April, p. 185.)

Michigan Central Rd.—A press report states that a contract has been let to Dominion Construction Co., Toronto, for the construction of the greater part of the second unit of the freight terminal and classification yards at Niles, Mich. The first unit was completed in Dec. 1919, and it is intended to have the entire project finished in 1923. (May, p. 237.)

Lake Huron & Northern Ontario Ry.—The Ontario Government is reported to be opposed to granting an extension of time for the construction of this railway, and that the bill, in consequence will be thrown out. The matter was brought up in the Legislative Assembly May 22, when the Premier was reported to have stated that the Timiskaming & Northern Ontario Railway Commission had been instructed to make a report, not only on the existing line from Bruce Mines to Rock Lake, but also into the prospects of extending it. The Government's policy, if the report should be favorable, would be to take over the existing line, operate it to serve the present needs of the locality and extend it farther north as the time becomes opportune. The line might be taken over at once. (May, p. 235.)

Montreal Central Terminal Co.—The House of Commons railway committee decided May 18 to recommend the refusal of the company's application for an extension of time for the construction of its projected bridge and tunnel, or either, from Montreal to the south shore of the St. Lawrence River, and for the laying out of a terminal station and yards in Montreal. The Minister of Railways informed the committee that the

Railways Department had had a report made upon the bill. In view of the need for heavy expenditures for the National Rys. terminals in Montreal, it was feared that the powers asked in the bill might interfere with the success of the National lines plans. (March, pg. 124.)

Montreal, Joliette & Transcontinental Junction Ry.—A bill granting an extension of time for the construction of this projected line from Montreal to a junction with the National Transcontinental Ry. at Parent, Que., was read a first and second time in the House of Commons recently and referred to the railways committee, which considered it on April 20, when it was claimed that the company had not done anything in the way of surveys, etc., since 1918. It was asserted on behalf of the promoters that they were prepared to build 60 miles of the line this year, and to consent to the insertion of a provision binding them to build a certain mileage every year until the line is completed. The present directors of the company are United States citizens. Consideration was adjourned, and when the committee again took the bill up, on May 9, it was stated the Premier of Quebec had intimated that that province would not grant a subsidy in aid of the construction of the line. The committee decided to report the preamble not proved, which means that the bill is thrown out. (April, pg. 185.)

Pacific Great Eastern Ry.—Some recent press reports credited W. P. Hinton, ex Consulting Officer to the Receiver, Grand Trunk Pacific Ry., with having advised the British Columbia Government to abandon the line from Quesnel to Prince George, in favor of a line into the Cedar Creek District, or a more westerly line to a connection with the Grand Trunk Pacific Ry. Mr. Hinton immediately denied this report. We were officially advised subsequently that Mr. Hinton had made a report upon the railway to the Government, but that it was simply for the directors' guidance. J. G. Sullivan, formerly Chief Engineer, C.P.R., is reported to have completed his inspection of the railway, and to be reporting upon its engineering problems to the Government. (April, pg. 185.)

Pere Marquette Rd.—We were officially advised recently that appropriations had been made for relaying track between Sarnia and Wallaceburg, 31 miles, with 85 lb. rails, and for ballasting between Sarnia and Chatham, Ont., 54 miles, but that the carrying out of the work this year would depend upon business conditions.

A press report states that it is proposed to build a new station, on Wilson Ave., St. Thomas, Ont., at an approximate cost of \$40,000. (April, pg. 185.)

St. John & Quebec Ry.—In the House of Commons on May 1, T. W. Caldwell, Victoria and Carleton, N.B., moved that it is advisable that a branch line connecting the St. John & Quebec Ry. with the Eastern Maine Ry. be built as soon as financial conditions will permit. He stated that two thirds of the traffic originating on the Canadian National Rys. was destined for the U.S., and that in default of such a connection as he proposed the traffic had to be routed by the C.P.R. Shippers, he claimed, were thus paying about \$100,000 a year in additional freight charges. The estimated cost of the connection he stated as \$1,000,000. The construction of such a connection would enable the New Brunswick Government to proceed with the construction of the projected extension

of the St. John & Quebec Ry. northerly from Centerville, thus completing the opening up of probably the best section of the province. The Eastern Maine Ry. had been given a route for a line from Houlton to Bancroft, Me., and was prepared to build a spur line to the International Boundary to meet such a line as he suggested, the length of which would be about 22 miles. The Minister of Railways stated that the Canadian National Rys. directors had investigated this particular project, and while quite willing to admit that from the standpoint of interchange of traffic there is much to be said in favor of its construction, yet they do not feel that the line is opportune. There are five possible connections with two lines of railway, and it was not thought wise for the C.N. Rys. management to commit itself to any one of them at present. The Department and the C.N. Rys. board would keep the matter before them, and he suggested that the motion be withdrawn. Mr. Caldwell did not agree, and the motion was declared lost on division.

In this connection it is to be noted that the Mattawamkeag & Eastern Rd. Co. is applying to the Interstate Commerce Commission for authority to issue \$80,000 of stock and \$500,000 of 30 year 7% gold bonds towards the construction of an extension of the Eastern Maine Ry. (See Mattawamkeag to Drews Plantation, April, pg. 185.) Oct., 1921, pg. 529.)

Timiskaming & Northern Ontario Ry. We are officially advised that Grant Smith & Co. and McDonnell, Ltd., the general contractors, and the sub contractors on the extension of the line from Cochrane, Ont., got in their supplies and prepared camps during the winter. Actual construction is now in full swing, and it is expected to get track laid to the second crossing of the Abitibi River, 46 miles from Cochrane this year. The members of the T. & N.O. Ry. Commission returned to North Bay, May 9, after making a trip over the line, and on to the extension. Lt.-Col. L. T. Martin, one of the Commissioners, is reported to have said it was expected to begin laying track by June 30, and that grading, culvert building, etc., was being pushed forward all along the 46 mile stretch.

The T. & N.O. Ry. Commission is reported to have appropriated \$200,000 for extra expenditure on tracks, to bring the line up to the standard of any other in Canada. Six new section gangs are to be put on and all section gangs are to be increased by two men each. A steam shovel and a ditcher is to be added to the track work equipment.

The question of the development of water powers and the generation and distribution of electrical energy along the line has been under consideration. It is reported that the Commission has decided to reserve the water power at the Long Sault falls of the Abitibi River, estimated to develop 60,000 h.p., for its own purposes, and to waive its rights to the falls on the river from Iroquois Falls to Tin Can Portage, a few miles short of New Post, near by, opposite the terminus of the extension now under construction. The Commission will, it is stated, develop a water power on the Frederick House River, which runs into the Abitibi River at Long Sault Rapids, and will reserve at least two water powers between Tin Can Portage and James Bay. The question of regulating the flow of the Abitibi River is being considered. (May, pg. 237.)

Canadian Railway Club's Annual Meeting.

The 20th annual meeting of the Canadian Railway Club was held May 9. The retiring President, A. Crumpton, Valuation Engineer, G.T.R., Montreal, was presented with a jewelled emblem by W. Macnab, Chairman Valuation Committee, G.T.R., as a souvenir of his term of office. The officers were elected as follows: President, G. M. Wilson, Superintendent Machine Power Shops, G.T.R.; First Vice President, H. E. Naylor, Assistant Works Manager, C.P.R., Angus Shops, C.I.M.; Second Vice President, C. E. Brooks, Mechanical Assistant, Canadian National Rys., Toronto; Executive Committee: E. R. Battley, Superintendent Motive Power, Eastern Lines, G.T.R.; J. A. Shaw, Electrical Engineer, C.P.R.; W. U. Appleton, Mechanical Superintendent, Canadian National Rys., Montreal, N.B.; R. J. Kneeshaw, Mechanical and Electrical Engineer, G.T.R., Burnaby Works Manager, Angus Shops, C.P.R.; W. C. Hunter, Air Brake Inspector, Canadian National Rys., Montreal. Auditors: C. F. Needham, Assistant to Superintendent Motive Power and Car Departments, G.T.R.; J. W. Fountain, Chief Clerk, Stores and Mechanical Accounts, C.P.R.; J. D. Brandon, Secretary, W. A. Booth, Engineer, Locomotive Construction, G.T.R.; Treasurer, P. P. Reynolds, Chief Clerk, Mechanical Engineer's Office, C.P.R. Except where otherwise stated the officers and executive committee reside in Montreal. After the business had been transacted, an interesting programme of songs, speeches, etc., was presented.

Boosters on Timiskaming & Northern Ontario Railway's Locomotives. As stated in Canadian Railway and Marine World a little over a year ago, the T. & N.O.R. had five locomotives, 4 Pacifics and 1 mikado, equipped with the locomotive booster. One locomotive of each type, so equipped, was tested in May 1921, and the results were given in Canadian Railway and Marine World for June and July 1921. We enquired recently as to the T. & N.O.R.'s experience with the locomotives during the past winter and have received the following reply from S. B. Clement, Chief Engineer:—"The boosters installed on our locomotives are giving excellent satisfaction. They have come through a very rigorous winter without giving any trouble. We are not in a position to give any information regarding maintenance costs, as they have not been installed a sufficient length of time to enable us to form an opinion in regard thereto."

Investigation of a collision between a New York Central Rd. passenger train and a motor bus at Painesville, Ohio, recently, when 16 people were killed, resulted in the crossing watchman being found guilty of negligence in allowing the bus to get on the railway crossing, he having given the driver no signal to warn him of the approaching train.

Railway Mileage, 1877 and 1921.—The Minister of Trade and Commerce gave the following information in the House of Commons recently, in answer to a question: On June 30, 1877, there were 5,574.25 miles of railway in Canada, including 25.5 miles of wooden rails. On Dec. 31, 1920, there were 39,389 miles of railway. The mileage estimated at Dec. 31, 1921, was 40,041 miles.

Canadian Pacific Railway Construction, Betterments, Etc.

Douglas Ave. Diversion, St. John.—We are officially advised that the C.P.R. submitted a general design for the proposed concrete arch at the diversion of Douglas Ave., near the approach to the cantilever bridge across the St. John River, at the Reversing Falls, and that the same has not yet been approved by the St. John City Council. Nothing is being done in the matter pending the hearing of the New Brunswick Government's action as to navigation rights on the river, which is before the Courts.

Three Rivers Station.—Grant Hall, Vice President C.P.R., is reported to have said at a dinner given by the Three Rivers, Que., Board of Trade, recently that the company had been ready for two years to build a commodious station there, but will not do so until St. Maurice St., across which the railway tracks run, is closed.

Gatineau River Bridge.—We are officially advised that a contract has been let to the Dominion Bridge Co. for the erection of a steel superstructure of a bridge across the Gatineau River, mile 115.9, Lachute Subdivision, Que. The superstructure will consist of four 200 ft. phoenix truss spans, to replace the existing four 200 ft. through truss spans. The new spans will be placed on the present substructure, and the work is expected to be finished in the autumn.

Interprovincial and James Bay Ry.—We are officially advised that the grading of the extension to Des Quizes River Falls, from mile 10, from Kipawa is pleted. It is expected to begin tracklaying in June, and to also start grading from mile 40 to mile 70 at Des Quizes River.

Kingston, Ont.—A recent press report stated that it was proposed to build an overhead crossing of the G.T.R. tracks, west of Kingston, Ont., at a cost of \$50,000, rather than comply with a Board of Railway Commissioners' order for the protection of the crossing on the level. The overhead crossing will be a little to the west of the present diamond.

Sanger Jct., Ont.—A press report states that the Osprey, Ont., Township Council is asking the company to build a line from Sanger Jct., on the Toronto-Owen Sound line, through Osprey and Collingwood townships to Collingwood, Ont.

London Division.—Work was expected to be started by May 31, on track relaying work on the London Division. A considerable mileage is to be relaid, and the rails removed are to be used to replace light ones on branch lines.

Windsor Freight Shed, Etc.—A press report states that a contract has been let for laying out the new freight yard, and erecting a new freight shed at Windsor, Ont., to Jno. Hayman & Sons, Co., London, Ont. The estimated cost of the work, which was described in Canadian Railway and Marine World for March, p. 131, is said to be \$200,000.

Kama Deviation.—We are officially advised with regard to the recent deviation of line at Kama, on the Algoma District, Nipigon Subdivision, that the work consisted of the installation of a bridge 109 ft. 9 1/4 in. long over the Kama River, giving a clearance of 10 ft. 2 in. In placing the new bridge the roadbed was raised 7 ft., thus removing a sag in the line. By moving the tracks on the east end of the bridge the curvature was

reduced by 22 degrees 6 minutes, so that the maximum curvature was reduced from 5 to 2 degrees.

Fort William Yard Office.—Tenders were invited recently for building a two story frame structure for a third office on Hardy St., Fort William, Ont. The building will be erected on the basement of the structure burned some time ago.

Manitoba Pipe Lines.—A contract is reported to have been let to the Hurst Engineering and Construction Co., Winnipeg, for relaying pipe lines for water supply at a number of points in the Manitoba District.

Coaling Plants on Western Lines.—We are officially advised that contracts for the erection of mechanical coaling plants have been let as follows: The Clayton Co., Winnipeg, for plants at Eagle River, Ont., and at La Riviere, Man.; to G. E. Hughes, Calgary, Alta., for plant at Medicine Hat, Alta. The plant at Swift Current is to be built by the company's own forces. These plants will be of 100 tons capacity, and will be of the usual C.P.R. type with continuous chain and bucket conveyors.

Sheho Northwesterly.—We are officially advised that some years ago a small piece of grading was done north of the Manitoba and Northwestern Ry. at Sheho, Sask., but the project was abandoned. The C.P.R. has a charter to build a line from near Tuffnell, on the same line, to Prince Albert, and an engineering party is working in the vicinity of Sheho, making a survey for a line from Tuffnell to Prince Albert.

Saskatchewan and Alberta Branch Lines.—The House of Commons Railway Committee during April considered the C.P.R. bill to authorize the construction of branch lines in Saskatchewan and Alberta. A list of these branches was given in Canadian Railway and Marine World for February, p. 70. Gerard Ruel, General Counsel, Canadian National Ry., opposed the bill in respect of one of the branch lines—viz., the proposed Manitou Lake extension. In 1919 the C.P.R. asked for authority to build a line from Tp. 43, Range 21, west 3rd meridian, on its Manitou Lake branch, Sask., Whitford Lake, in Tp. 56, Range 15, west northwesterly, through Lloydminster to 4th Meridian, Alta. The Canadian National Ry. have a charter covering practically the same ground, and had graded an odd mile or two on the upper end, and was building at the lower end. The C.N.R. claimed that if the C.P.R. wanted to build into the Whitford Lake territory it should only be permitted to do so on the terms that the portion west of Lloydminster might be made a joint section, and a proviso was inserted to the effect that for the purpose of avoiding duplication of construction west of Lloydminster the approval of the route map should be made subject to joint construction or operation with the C.N.R., on terms to be agreed upon between the company or certified by the Board of Railway Commissioners. The C.P.R. did not begin construction on the line within the two years, and the recent application was for a reversal of the powers granted in 1919. The C.N.R. asked for the reinsertion of the proviso, which, after some argument, the C.P.R. agreed to, and the bill went through committee. The details of the bill were discussed further when it came before the com-

mittee of the whole house, May 9, and further consideration was postponed.

British Columbia District Betterments.—We are officially advised that the betterments authorized for this district for this year include the following: Revelstoke Division.—Relining of tunnel, mile 21.45, Mountain Subdivision, extension to icehouse at Okanagan Landing, both completed.

Vancouver Division.—Repairs to washouts which occurred in Oct., 1921, the largest being at mile 104.5, Thompson Subdivision, where a 25 ft. masonry arch was damaged, and mile 112.3, Cascade Subdivision, Coquitlam Ry. (see under Coquitlam River Bridge below.) No decision had been reached with regard to the new structure at mile 104.5.

Cranbrook Subdivision.—Replacement of timber abutments at bridge 81.5, Sirdar Subdivision.

Palliser Tunnel Relining.—The Board of Railway Commissioners passed an order April 1, authorizing the company to rebuild tunnel 21.45 on its Mountain Subdivision, B.C., the lining of a portion of which gave away as the result of an accident. The construction work has been completed and the tunnel is now again in use.

Coquitlam River Bridge.—We are officially advised that a contract has been let to W. D. Grant, Vancouver, B.C., for the construction of concrete abutments for the new bridge across the Coquitlam River, at mile 112.3, Cascade Subdivision. The concrete abutments proper will be each supported on three reinforced hollow concrete cylinders, having an outside diameter of 14 ft. filled with concrete. The superstructure will consist of a 200 ft. through truss double track steel span, the contract for which has been let to the Canadian Bridge Co. This bridge will replace the one washed out by floods last winter, and which was erected in 1912 at the time of the double tracking of the line. It consisted of two 80 ft. half deck plate girder spans, triple track, on two concrete abutments and one concrete pier.

Vancouver Pier.—We are officially advised that an appropriation has been made for building a new pier at Vancouver, to be known as Pier B.C. No definite particulars as to the work to be done this year are available, as the engineers have not yet determined the type of structure. The pier is to be 800 ft. long, with provision for extending it a further 400 ft., when conditions demand. The width of the structure will be 335 ft., and there will be erected on the pier 2 sheds each 100 ft. wide, with 4 tracks between them, and 2 tracks on the outside. The estimated cost of the pier is \$2,500,000.

A contract is reported to have been let to W. D. Grant & Co., for dredging alongside Pier H, in order to enable the largest ships to be berthed alongside.

Newfoundland Loan for Railway Purposes.—A new loan of \$6,000,000 is to be raised by Newfoundland, of which \$2,110,000 is for railway purposes. The following particulars are given: Railway Commission account, \$3,260,000, less \$2,500,000 provided for in 1921 loan, \$760,000; railway capital account, spent \$200,000, to be spent, \$150,000, \$350,000; required to meet deficits on railway operations for 1922-23, \$1,000,000.

Self Propelled Cars on Steam Railways.

Canadian National Rys.—As noted in Canadian Railway and Marine World for May, pg. 231, the C.N.R. management is having two gasoline railway motor cars built by Ledoux, Jennings, Ltd., Montreal, for branch line operation. The accompanying illustration gives plan and elevation of one of them. The chief dimensions will be:—

Length over end frames	23 ft. 6 in.
Height, rail to top of roof	10 ft. 2 in.
Width inside passenger compartment	7 ft. 1 in.
Width over eaves	7 ft. 8 in.
Width over side frames	7 ft. 6 in.
Wheel base	18 ft.
Wheel base, leading truck	5 ft.
Wheel base, rear truck	4 ft.

The car underframing will be built up of special steel members, the center sills, 2 ft. 8 in. c. to c., being fish belly channels 14 in. deep. The side sills will be 3 x 2½ x 3/16 L sections. The sills will be braced by transverse members, with gussets, etc., the underframing being securely riveted throughout. Side framing will consist of steel posts 1½ x 1½ x 3/16 in. T section, and the door posts will be of steel 2 x 2 x 3/16 in. L sec-

door at the rear of the car.

The interior of the car will be finished in white and mahogany stain. The floor will consist of a lower layer of wood flooring, laid diagonally on 1¼ x 2½ in. nailing strips, and an upper layer of wood flooring laid longitudinally, with a layer of tar paper between the lower and upper flooring. The seating arrangement is shown in the accompanying plan, the total seating capacity being 33. The seats will be finished in rattan. The partition between the passenger compartment and the space for the car operator will be removable, and a double rack will be provided at the front, in the operator's compartment, for hand baggage. The window arrangement provides for adequate natural lighting. Artificial lighting will be by engine driven dynamo, and heating will be from the engine exhaust. The car will be equipped with locomotive type pilot and warning bell.

Delivery of the first of the two cars was at the time of writing, May 10, expected by the end of May, and it will be

p.m., arrive Trenton 9 p.m.; leave Trenton as train 308 at 9.15 p.m., arrive Picton 10.30 p.m.

Construction has been begun on the second car, which will, on delivery, be placed in service on the Ontario District, Ottawa Division, Brockville Subdivision, between Brockville and Westport, 44.4 miles.

We are officially advised that when the first of the two cars now under construction in Montreal, is ready for delivery, it will be run from Montreal to Trenton by its own power.

Grand Trunk Ry.—We are officially advised that the use of self-propelled cars for branch line service is being given consideration and investigation on one of the company's branch lines west of the Detroit and St. Clair River, but that nothing definite has been decided upon.

Greater Winnipeg Water District Ry.—The Greater Winnipeg Water District commissioners, who operate a railway from St. Boniface to Shepil Lake, adjoining Lake of the Woods, 92 miles, have ordered a gasoline driven railway passenger car from the Service Motor Truck Co., Wabash, Ind., which was described fully in Canadian Railway and Marine World for May, p. 231. We are officially advised that the car will probably be placed in operation about June 1.

Pacific Great Eastern Ry.—A U.S. contemporary stated recently that this railway had bought a gasoline driven passenger motor car from the Northwestern Motor Co. for operation out of North Vancouver. We were officially advised, May 9, that such a car had not been bought, but that the management was investigating a type of gasoline car with a view to purchase.

Pennsylvania and Atlantic Rd., Union Transportation Co., lessees, which extends between Hightstown and Pemberton, N.J., 25 miles, is operating 43 passenger gasoline driven rail car 150 miles daily between the points named, with a 2-man crew. Operating costs average 20c. a mile; the car will run 6.75 miles on one gallon of gasoline and 75 miles on one quart of oil. A steam train was replaced by the car, the estimated saving being \$15,000 a year.

The car was run to Washington for the American Short Line Railroad Association's annual meeting, and was one of the most interesting exhibits. It made daily trips over the Washington and Old Dominion Ry., with grades running as high as 4% and curves as sharp as 10 deg., and it is stated that the results showed a high degree of efficiency. Union Transportation Co.'s officials state that passengers prefer riding in the gasoline cars to the steam trains.

With the recent improvements made in self propelled cars, railway executives are keenly alive to the situation, and are genuinely interested in the possibilities of the car as a solution for the branch line problem. Recent months have seen much attention paid the gasoline and storage battery types on many roads, and it is evident that the method of operation provided for by their use is worthy of serious consideration.

Railway Lands Patented.—During April letters patents were issued in respect of Dominion railway lands in western Canada, to the C.P.R., for 294,600 acres.

Canadian National Rys. Gasoline Railway Motor Car.

tions. Plate will be 1/16 in. The roof will be of ¾ in. t. and g. boards, covered with canvas, and painted.

Each car will be driven by a Reo 6-cylinder 50 h.p. engine, equipped with self starter. The water cooling system will include a centrifugal pump. The drive will be through a shaft to the front axle of the rear truck, and side rods will be employed to transmit the drive to the trailing wheels of this truck.

The front truck wheels, of chilled iron, 20 in. diam., will conform to M.C.B. specifications, and the leading truck axles, of heat treated steel, will be 2½ in. diam. The rear truck wheels will be 33 in. diam., and the axles 3½ in. diam. The brakes, hand operated, will be controlled by a brake wheel convenient to the car operator, the brake shoes being applied through an arrangement of rods and levers controlled by the brake wheel and shaft. The car body will be equipped with two side doors at the front, the door opening being 2 ft., and the lower step will be 10½ in. from top of rail. There will also be an emergency

placed in service on the Ontario District, Ottawa Division. Service will be given between Picton and Trenton, 30.6 miles, on the Picton Subdivision; between Trenton and Trenton Jct., 1.6 miles, on the Maynooth Subdivision; and between Trenton and Napanee, 34.6 miles, on the Rideau Subdivision. The following is the schedule on which it is intended to operate:—Leave Picton as train 301 at 6.30 a.m., arrive Trenton 7.45 a.m.; leave Trenton as train 310 at 7.46 a.m., arrive Napanee 9.05 a.m.; leave Napanee as train 309 at 9.15 a.m., arrive Trenton 10.35 a.m.; leave Trenton as train 302 at 10.40 a.m., arrive Picton 12 noon; leave Picton as train 303 at 12.45 p.m., arrive Trenton 2.10 p.m.; leave Trenton as train 303 at 2.15 p.m., arrive Trenton Jct. 2.20 p.m.; leave Trenton Jct. as train 304 at 2.40 p.m., arrive Trenton 2.45 p.m.; leave Trenton as train 305 at 5.30 p.m., arrive Trenton Jct. 5.40 p.m.; leave Trenton Jct. as train 306 at 5.55 p.m., arrive Trenton at 6 p.m.; leave Trenton as train 306 at 6.15 p.m., arrive Picton 7.35 p.m.; leave Picton as train 307 at 7.45

Enquiry into Railway Freight Rates by Parliamentary Committee.

The Minister of Railways, W. C. Kennedy, moved in the House of Commons on May 4:—“That notwithstanding that the regulation of railway rates is a matter within the jurisdiction of the Board of Railway Commissioners, it is advisable that a select special committee be appointed to make enquiry into the question of railway transportation costs, it having been disclosed by recent conferences, held between the Government and the chief executives of the various railways, with respect to the reduction of freight rates, that the representatives of the railways deem it advisable immediately to reduce rates on basic commodities because of the expiration on July 6, 1922, of the suspension of the Crows Nest Pass agreement; that, in the circumstances, it is advisable to afford opportunity to all interested parties to submit their views upon the subject matter of the enquiry to the said committee, with particular regard to the effect of the rates established by the Crows Nest Pass agreement upon Canadian National Railways and other lines, as well as upon agricultural development and Canadian industry generally; and that the said committee shall have power to send for persons, papers and records, including the minutes and evidence taken before the committees of this House in previous sessions, to examine witnesses under oath, and to report from time to time.”

Mr. Kennedy said that while the Government was anxious for an immediate and substantial rate reduction, and while this could be effected in part by allowing the Crows Nest agreement to again become operative, it was felt that a committee should enquire into the effect which such a revival of the agreement might have. He stated that a conference had been held with the C.P.R., Canadian National and Grand Trunk Rys. managements, but that it had been claimed by the railway officials that it was not advisable to make any rate reductions, on account of the suspension of the Crows Nest agreement expiring on July 6. He traced the operation of the agreement from 1897, when it was entered into between the C.P.R. and the Dominion, until it was suspended in 1918 by order-in-council, and further suspended until July 6, 1922, by the Railway Act, 1919, sec. 325, sub-sec. 5. He claimed that the matter was beyond the Board of Railway Commissioners' jurisdiction; that there was no desire to interfere with the Commission's duties; but that the Crows Nest agreement was a matter of statute, and that a determination of what was to be done with it would be necessary before the Commission could act.

Arthur Meighen, leader of the Opposition, emphasized the need for low railway rates in Canada, and stated that railway rates must come down, at all costs. He reviewed the rate changes which have taken place in recent years, and contended that the Board of Railway Commissioners is unable to do anything till the Crows Nest matter is decided. The ability of the proposed committee to learn anything about railway rate structures in the time at its disposal he regarded as a farce, and showed the impossibility of any committee of the House of Commons being able to pass upon rate questions. He accused the Government of lacking courage in

not having a policy in connection with rates. He stated that the resolution, if passed, would have the effect of shelving the whole question. The Government should go the Board of Railway Commissioners for information, then decide on the action to be taken, and submit such decisions to Parliament.

G. P. Graham, Minister of Militia and Defence, stated that no one suggested for a moment to deprive the Board of Railway Commissioners of any of its functions, powers, and contented that the Crows Nest agreement is outside of the Board's jurisdiction. He defended the Government for proposing a committee of investigation, stating that it did not desire to evade responsibility, as suggested by Mr. Meighen, but merely wished to have all the facts in the case brought to light before deciding on the action to be taken.

Mr. Crerar, leader of the Progressive party, stated that he would oppose the formation of a committee to determine whether the Crows Nest agreement should be further suspended, for the reason that he was convinced that it should not be further suspended. While Mr. Meighen opposed the resolution on the ground that it was impractical, that it constituted an evasion of duty by the Government, and that the Government should get its information from the Board of Railway Commissioners, Mr. Crerar opposed it on the one ground, that there was no doubt in his mind that the agreement should be put into operation on July 6. He spoke at length in favor of lower freight rates in the west, and claimed that high rates are depriving the railways of a large volume of business. Continuing he said: “It is argued that the Government is not necessary to keep the C.P.R. prosperous in order that Canada's credit may be maintained; that it is necessary that the C.P.R. be given rates to enable it to pay dividends on its stock, I submit that that is not a sound argument. . . . There is scarcely a single railway in the U.S. that has not, at some period or other in its career, gone through the hands of a receiver. Has that affected the national credit? He ended by urging that the agreement be put back into force to see what the effect would be; if it should prove an undue handicap upon the railways, Parliament could again consider the matter a year or two hence, and if necessary the C.P.R. could pay its dividends in the meantime out of accumulated surplus.”

A. S. Woodsworth, Center Winnipeg, in endorsing Mr. Crerar's position, stated that if the proposed committee were to recommend that the Crows Nest agreement be further suspended, the west simply would not tolerate it.

A. K. McLean, Halifax, N.S., contended that the Crows Nest agreement is not a western matter only, but that it affects the whole of Canada; it is a national question. He showed how the application of the agreement would affect the National railway earnings, thus making greater demands on the taxpayers and believing that the fullest possible enquiry should be made, he supported the resolution.

J. Morrison, Weyburn, Sask., stated that the agreement should be brought into operation as soon as possible, and that high railway rates are depriving the railways of traffic so that their net

earnings are lower than they would be if the rates were reduced.

J. A. Stewart, Lanark, Ont., opposed the resolution on the ground that it was the Government's duty to outline its policy and submit it to Parliament, so that if Parliament approved of it, the Board of Railway Commissioners could go ahead and fix the rates as they should be fixed. He showed how conditions had changed since the Crows Nest agreement was made, and stated his belief that while it should not be scrapped, it should not be revived, but should be revised. He said that any finding returned by the committee would be a half-baked affair, because of lack of time and opportunity to learn, even if the members of the committee had the requisite ability.

Prime Minister King said that the question in connection with the proposed committee was whether, on a great national question, the Government should endeavor to become as fully informed as possible before reaching a final decision. He said that all the Government was asking was that there should be an opportunity for the Government, for Parliament and the country to understand all that is involved in the Crows Nest agreement matter, and that he therefore considered the resolution wise.

A. V. Neill, Comox-Alberni, B.C., in supporting, stated that if the Crows Nest agreement were put back into force without amendment, a great injustice would be done to British Columbia. The reduction in the westbound fruit rate, for example, would constitute a gross discrimination against the B.C. fruit growers.

E. M. Macdonald, Pictou, N.S., in supporting the resolution, claimed that the east as well as the west want low rates, and that even if the Crows Nest agreement were revived, it would apply only to the C.P.R. lines, which were in operation in 1897.

Sir Henry Drayton, West York, Ont., reviewed the rate situation and pointed out how discriminations were caused by agreements entered into between railways and municipal and other bodies before efficient regulation of railways was introduced. As to the applicability of the agreement to lines built by the C.P.R. after 1897 was concerned, he said he always took the stand that the terms of the agreement necessarily had to be applied to them so as to prevent discrimination, but he was of the opinion that as a matter of legality the agreement would not apply to those lines. He moved the following amendment to the resolution, seconded by Mr. Meighen: “That all the words after the first word ‘that’ be struck out and the following substituted therefor: A general reduction in railway rates, so essential to the welfare of Canadian production and trade, cannot, as declared by the Government, be made until Parliament decides whether or not the suspension of the Crows Nest agreement, which expires on July 6, be renewed; that it is the immediate duty of the Government—already too long deferred—to acquire the necessary information gathered and in their disposal at the hands of the Board of Railway Commissioners and to submit its policy to this House.”

Following the moving of this amendment, Mr. Meighen spoke again, urging the Government to go to the Board of

Railway Commissioners and get the advice the Commission would be prepared to give, and then come to Parliament with its policy. Prime Minister King followed, repeating his former arguments. Mr. Crerar also spoke again, saying he would support neither the main motion nor the amendment, for the reason he had given before—viz., that there was no doubt in his mind that the Crows Nest agreement should again become operative.

Sir Henry Drayton's amendment was voted by 167 to 35, the Conservatives voting for it, and the Progressives voting solidly with the Liberals against it. The motion for the appointment of a committee carried by 109 to 92, the Government getting the support of two Progressives, L. W. Humphrey, Kootenay West, B.C., and T. G. McBride, Cariboo, B.C., and of two independents, A. B. Hudson, Winnipeg South, Man.; E. M. Macdonald, Pictou, N.S.; P. Michaud, Restigouche and Madawaska, N.B.; W. G. Mitchell, St. Antoine, Que.; J. Archambault, Chambly-Verchères, Que.; A. Stork, Skeena, B.C. Progressives.—T. A. Crerar, Marquette, Man.; R. Forke, Brandon, Man.; J. F. Johnston, Last Mountain, Sask.; B. Fancher, East Lambton, Ont.; R. H. Halbert, North Ontario, Ont.; T. H. Simcoe, Battle Lake, Sask.; J. Shaw, West Calgary, Alta. Conservatives.—C. H. Dickie, Nanaimo, B.C.; G. B. Jones, Royal, N.B.; Sir Henry Drayton, West York, Ont.; J. A. Stewart, Lanark, Ont.; R. J. Manion, Fort William and Rainy River, Ont.; W. A. Boys, South Simcoe, Ont.

The committee met first on May 9, when great differences of opinion were expressed as to how it should proceed. Mr. Crerar and other western members argued that the reapplication or continued suspension of the Crowsnest agreement was the one and only question to be decided, while Sir Henry Drayton and others were in favor of a much broader enquiry into the rate situation, in which enquiry the Crowsnest agreement would be but one factor. It was made abundantly clear that the great bulk of the western people is to have the Crowsnest agreement brought back into operation, while the opinion of other members is that the agreement is to be considered merely as a means to an end, viz., to secure a general rate reduction on basic commodities.

On Chairman Maclean's suggestion, Sir Henry Drayton, W. G. Mitchell and A. B. Hudson, were appointed a sub-committee to co-operate with him in obtaining the following information:—1. The Crowsnest statute. 2. The Manitoba agreement with the Canadian Northern Ry. and the Board of Railway Commissioners' judgment in connection therewith. 3. Statement of the amount of subsidy received by the C.P.R. and the dates of payment, under the Crowsnest statute. 4. The rates affected by the Crowsnest agreement charged prior to its enactment. 5. The rates put into effect on commodities mentioned in the Crowsnest agreement subsequent to its

enactment. 6. Statement showing grain and flour rates prior to and subsequent to the Crowsnest agreement. 7. Statement showing rates on basic commodities charged in the eastern territory and the western territory prior to the Crowsnest agreement and subsequent thereto down to date. On May 11 the committee held another brief session, at which a report covering the foregoing matters was presented by the sub-committee, and at which it was decided to hear C.P.R. representatives first.

On May 19 E. W. Beatty, K.C., President of the C.P.R., appeared before the committee on invitation to the reapplication of the agreement. His objections are summarized as follows:—1. The C.P.R. does not contend that the Crowsnest agreement of 1897 will not be valid and binding on it after July 6, 1922, unless Parliament otherwise directs. 2. The Crowsnest scale of rates was extended to territory not in the contemplation of Parliament, or the C.P.R., in 1897, and the result that the benefits of the agreement have been extended to large additional territory. 3. The effect of this extension of the application has been to include not only territory contiguous to the mileage in operation in 1897, but territory contiguous to new lines of railway constructed by other companies, whether competitive to the mileage of the C.P.R. in existence when the agreement was made, or to new lines built by the C.P.R. since then. 4. The C.P.R. does not contend that, if the Crowsnest rates are applied and restricted to the territory to which they were applicable by the agreement, or to the larger territory to which they were later extended, it would not be able to finance its operations, or to raise its money by borrowing the money, or raising it by the issuance of capital securities, to pay its usual annual return to security holders and shareholders. This would, however, raise an important question of policy to be decided by the directors. 5. The company agrees that a revision downward of rates is desirable, and is quite prepared, with the approval of the Board of Railway Commissioners, to put into immediate effect reductions in rates on basic commodities that will be of greater national benefit than the re-establishment of Crowsnest rates. Such restrictions would largely affect its revenue, and could only be made in anticipation of substantial additional reductions in operating costs. 6. The grave objection to the re-establishment of the Crowsnest basis is that it will of necessity prevent general reductions in rates applicable throughout Canada. If the company's revenues are to be reasonably conserved, the gradual general reductions in basic and other rates will be retarded by the serious depletion in revenue due to the re-establishment of the Crowsnest basis. If, on the other hand, the reductions to the Crowsnest basis are to be followed by additional reductions applicable generally, or to specific commodities, or in reductions to bring the rates to the basis of 1918, or even to the level prior to Aug. 1920, the results would be too serious to be contemplated.

Mr. Beatty stated in reviewing the terms of the agreement, that the total cost of the Crowsnest line was over \$19,000,000, and the subsidy received was \$3,280,000. The comparative wages paid in 1898 and 1921 and pointed out that the daily wages of the principal classes of employees showed increases ranging from 111.1% for passenger conductors to 414%

for car repairers. Material costs had increased largely, from 7.27% in the case of black bridge paint to 258% for certain other classes of material. Rails had increased in price by 92.32%, and fuel 158.05%. The operating ratio was 58.16 in 1899 and 82.28 in 1921; in other words, it cost 43.95% more to earn a dollar in 1921 than in 1899. He showed how gross discrimination would result if the agreement were enforced only on the lines to which its enforcement could be legally restricted by the agreement, viz., those built at the time the agreement was entered into. He said it was very difficult to make an estimate of the loss of revenue which would result if the agreement were enforced, but calculated that the result would be that the C.P.R. would find itself \$15,000,000 short of being able to pay dividends and fixed charges.

On May 22, D. B. Hanna, President, and C. A. Hayes, Vice President, Traffic, Canadian National Ry., testified before the committee. Mr. Hanna said that if the Crowsnest agreement were put in effect again, the country's entire freight rate structure would be thrown into utter confusion. He showed that the decrease in Canadian National Ry. revenues, on the basis of traffic handled in 1921, would have been \$23,318,955, if the agreement had been in effect and the 1920 rates prevailing. He said: "If preferential rates or special commodities should be re-established, through the application of the Crowsnest agreement, it is impossible to estimate what further reductions might occur, or be ordered, through such rates being held to be discriminatory. Such reductions might affect not only the rates on commodities in the Crowsnest Pass territory, but might, in practice, apply to the rates on similar or analogous communities throughout Canada."

Some members of the committee having contended that high rates were retarding business, and consequently holding up the movement of traffic, Mr. Hanna said that the chief reason for certain traffic not moving was to be found in reduced purchasing power by consumers, and consequent lack of market. Replying to W. D. Euler, North Waterloo, Ont., he said the railways are prepared to make reductions on basic commodities at once, and would do so if it were not for the possible re-establishment of the Crowsnest agreement rates. He said the railways are willing to put in these reduced basic commodity rates in the hope that traffic would possibly be stimulated to some degree.

Asked as to the policy they would recommend, Messrs. Hanna and Hayes stated that the Crowsnest agreement had outlived its usefulness, and that conditions had changed, and that the agreement, while it was satisfactory under the conditions prevailing in 1898, would not meet the conditions existing today. They advocated that the agreement be further suspended, and the whole question of rates relegated back to the board of Railway Commissioners. Replying to another question from Mr. Euler, as to whether he favored the complete abrogation of the agreement, Mr. Hanna replied that he was convinced that it had outlived its usefulness and that if something more up to date were set up, it would be better for all concerned. Abrogation of the agreement would mean better business conditions generally; it would mean the doing away with the possibility of rate discriminations arising, and it would mean smaller

deficits for the Canadian National Rys. Further, it would mean that the Canadian National Rys. would not be adversely affected by an agreement to which they were not parties.

A. J. Mitchell, Vice President, Finance and Accounts, Canadian National Rys., gave testimony to show the tremendous increases which had taken place in labor and material costs.

A further meeting of the committee was scheduled for May 23, at which Hon.

John Oliver, Premier of British Columbia, and G. G. McGeer, K.C., representing the same province, were to express their views.

On May 23, W. B. Lanigan, Freight Traffic Manager, C.P.R., was examined on general rate matters, and was questioned closely as to whether the rate on lumber was interfering with its movement. The figures he submitted indicated that the lumber movement had been affected but little by the rates. In 1918,

on the C.P.R. Western Lines, lumber provided 7.9% of the traffic, and 11.1% of the revenue, while in 1921 it provided 6.7% of the traffic and but 6.2% of the revenue.

F. J. Watson, General Freight Agent, G.T.R., who was examined on the same day, favored a reduction in basic commodity rates, but he thought the Crowne agreement should be abrogated, and in his opinion it would always be a source of irritation if it were not.

Canadian National Railways Construction, Betterments, Etc.

Fresniere-Rinfret Line.—The Board of Railway Commissioners passed orders 32,265 and 32,266, April 3, approving revision of Canadian Northern Ontario Ry. proposed branch line in St. Eustache and St. Augustin Parishes, Two Mountains County, Que. We are officially advised that these orders approved of some minor revisions in the proposed line, but that the location as a whole is not affected. The proposed line, which has not been built, was described fully in Canadian Railway and Marine World for Dec. 1920.

This line, we are officially advised, will be new construction and not a revision of a branch line, the revision referred to in the Board of Railway Commissioners' order being a revision of the original location. The right of way for the line has been practically all bought. No appropriation has been provided for its construction this year.

Main Line Bridge Rebuilding.—The Board of Railway Commissioners has authorized the rebuilding of three bridges on the transcontinental line. We are officially advised that the bridges have already been rebuilt, but that owing to an oversight, the plans had not been submitted to the Board previously. Following are particulars of the bridges.

Little Madawaska River, mile 147.4 from Rideau Jct. The original structure was a pile trestle. To provide for the log drive in the spring, the trestle was replaced during the winter of 1919-20 by a through plate girder span 70 ft. over all, resting on concrete abutments, and 14 ft. high from bottom of river to base of rail.

McCarthy Creek, mile 100.8 from Brent, Ont. This was originally a timber trestle built in 1913. The new bridge, which was completed in 1921, is a steel viaduct on 2 concrete abutments, 8 concrete pedestals, and 1 concrete pier. The steel work consists of two 33 ft. spans, two 60 ft. spans and two 85 ft. spans. The height from low water level to base of rail is 60 ft.

Kenogamisish River bridge; mile 101.7 from Hornepayne, Ont. This was originally a timber trestle, across the outlet of Little Long Lake. Part of the trestle was filled, and, to take care of the flow from the lake, two 60 ft. through plate girder spans were placed on 2 concrete abutments and 1 concrete pier. All the foundations are solid rock; the distance from bottom of the river to base of rail at the center of the bridge is 31 ft. The reconstruction was completed during the winter of 1921-22.

Regina Terminal Facilities.—We were officially advised recently that the extension of the terminals at Regina, Sask., was under consideration, but that the details had not been settled.

Sturgis-Hudson Bay Jct. Connection. The Yorkton, Sask., Board of Trade, is agitating for the early completion of a

line from Sturgis to Hudson Bay Jct. This piece of line is shown on the C.N. Rys. maps as projected, and the distance between the two points is stated to be approximately 60 miles. Its construction would give a direct connection between the C.N. Rys. Saskatchewan and Alberta points and the Hudson Bay Ry.

Thunder Hill Branch Extension.—A press report states that a mixed train service has been put in operation on the extension of the Thunder Hill Branch from Lintlaw to Kelvington, Sask. About 13 miles of track was laid on it during 1921.

Lampman, Sask.—Browning Rural Municipality No. 34, has been asked to approve of plans for some new roadway construction to serve Lampman, Sask., which necessitates the crossing of certain highways. The present G.T.R. station is at Minard about a mile away, and the approved plans show that the railway intends to branch off and go into Lampman on the C.N.Ry., and pass to the east of the town, then connect again with the main line south of the town. Lampman for several years has been endeavoring to get the G.T.Ry. into town, so as to give a direct service to Regina.

Grand Trunk Pacific Ry.—Tenders were received to May 31 for the following construction: Cast iron pipe line at Kindersley, Sask., 16,200 ft. long. Line revision of G.T.P. main line 3.9 miles long, between Ansell and Bickerdike. Connection between the C.N.R. and G.T.P.R. 0.83 mile long near Magnolia, Alta. Connection between the Bashaw and Battle River subdivisions, 3.47 miles long, near Canora, Alta. Connection at Ryley 1.83 miles long, between the Viking and Battle River subdivisions, C.N.R.

Red Deer Station.—A press report states that it is proposed to build a station, freight shed and stockyards at Red Deer, Alta., at an approximate cost of \$15,000.

Kamloops-Kelowna Branch.—The Minister of Railways stated in the House of Commons recently, in answer to T. G. McBride, Cariboo, B.C., that the total expenditure in connection with this branch to Dec. 31, 1921, was \$5,268,156.45, and that its completion, as well as that of other branches, is being deferred until financial conditions will permit construction.

The question of the completion of the branch was brought up in the House of Commons by J. A. MacKellvie, Yale, B.C., during a discussion on estimates, when the Minister of Railways said:—"I have had many representations in connection with this particular line. But may I say that that district is not alone in making representations for railway accommodation? From all parts of the west I have had similar representations

of their transportation needs. The Government's policy in respect to the laying of new lines this year is simply this: We felt that, with new directors coming in, the responsibility for any capital expenditure should properly belong to them, and that for the time being, until they have had an opportunity of ascertaining whether the expenditure would be warranted, we should not go on with any new work. However, we are impressed with the necessity of doing something in the district mentioned, and I can promise that when the new board is appointed every consideration will be given to the matter."

This line, sometimes called the Okanagan Branch, would constitute a line from Kamloops Jct., passing through Kamloops, Armstrong and Vernon to Kelowna, a distance of 117.5 miles, with a branch from Vernon to Lumby, 15 miles. The part of the line from Kamloops Jct. to Kamloops, about 3 miles, is being operated over, and is used by the main transcontinental trains for connection with the towns of Kamloops, Kamloops and Ducks, 12 miles, or between Armstrong and Vernon, about 14 miles, as it is possible that an arrangement well be made with the C.P.R. for joint operation between these points. Grading has been completed from Ducks to Armstrong, about 58 miles, from Vernon to Kelowna, about 33 miles, and on the branch to Lumby, 15 miles. Work on two large lumber bridges has been completed, and about 78 track miles of fencing have been erected. No track-laying has been done on the three sections of the line mentioned above.

Prince George Station.—A press report states that a contract has been let to the Pacific Sheet Metal Works, Granville Island, B.C., for the laying of a mastic floor for the new station at Prince George, B.C., which was described in Canadian Railway and Marine World, Oct., 1921, pg. 539.

Vancouver Island Lines.—The Premier of British Columbia has sent a protest to the Dominion Government against the stoppage of track laying on the Victoria-Alberni line, which was reported recently as in progress from about mile 74, to the James Logging Co.'s plant. The Associated Boards of Trade of British Columbia have passed a resolution asking for a continuation of the track laying.

J. R. Caswell, Division Engineer, C.P.R., Sudbury, Ont., in remitting his renewal subscription, writes: "I would not be without Canadian Railway and Marine World."

Stop! Look! Listen!—"Is this a fast train?" the salesman asked the conductor. "Of course, it is," was the reply. "I thought it was. Would you mind my getting out to see what it is fast to?"—Evansville Crescent.

Mainly About Railway People Throughout Canada.

Sir George McLaren Brown, General European Manager, C.P.R., presided at a luncheon given by the Canada Club to the Duke of Devonshire, in London, Eng., on May 24.

Albert Victor Clark, whose appointment as Managing Director, Canadian Pacific Ry. Co. (France), Paris, France, was announced in our last issue, was born at Burwell, Cambridgeshire, Eng., March 8, 1877, and commenced his railway service with the Midland Ry. (England), in 1896. He entered C.P.R. service in April, 1906, in the Passenger Department, London, Eng., and from 1908 to 1910, was London traveller, and handled the arrangements for the Eucharistic Conference, and the British Association's meeting in Canada. For a time he was chief clerk, General Passenger Department, London, Eng., and from 1911 to 1912 was chief assistant, Passenger Department, C.P.R., Antwerp, Belgium; from 1912 to July 1, 1913, he was Assistant to the General Representative, C.P.R. Vienna, Austria, and from July 1, 1913 to Aug., 1914, Accounting Agent, C.P.R., in Austria. At the outbreak of the war, he was, with other members of the C.P.R. staff, in Austria, interned, and was eventually released on parole and returned to London, Eng., where he was secretary to the European General Manager, C.P.R., and in 1920, was appointed Special Continental Representative, C.P.R., London, Eng.

P. W. Clarkin, who has been appointed Division Freight Agent, Canadian National Rys., Charlottetown, P.E.I., was born at North Wiltshire, P.E.I., March 22, 1868, and entered railway service June 16, 1896, since when he has been, to Jan., 1897, assistant agent and operator, Prince Edward Island Ry., at Souris and other points; Jan., 1897, to July, 1899, relieving agent, same road; July, 1899, to Aug., 1903, assistant agent, same road, Charlottetown; Aug., 1903, to April, 1909, agent, same road, Mount Stewart Jct.; Apr., 1909, to Oct., 1913, Oct., 1913, to Apr. 30, 1914, clerk, General Freight Agent's office, Canadian Government Rys., Moncton, N.B.; May 1, 1914, to Nov. 30, 1921, chief clerk and Travelling Freight Agent same road, Charlottetown, P.E.I.; Dec. 1, 1921, to Apr. 30, 1922, acting Division Freight Agent, Canadian National Rys., Charlottetown, P.E.I.

G. W. Curtis, who has been appointed Industrial Commissioner, Eastern Lines, C.P.R., Montreal, entered C.P.R. service in Feb. 1904, since when he has been, to April 1904, stenographer, Freight Traffic Department, Montreal; April 1904 to Feb. 1913, in the Vice President's (Traffic) office; Feb. 1913 to Nov. 1916, Industrial Agent, Montreal; Nov. 1916 to Jan. 1919, on military service overseas; Jan. 1919 to May 1922, Industrial Agent, Montreal.

Miss Madeline D'Arcy, daughter of W. H. D'Arcy, General Claims Agent, Western Lines, C.P.R., Winnipeg, was married there recently, to Wm. Lennie, of Toronto, and formerly of Winnipeg.

W. P. Hinton, formerly Vice President and General Manager, Grand Trunk Pacific Ry., Winnipeg, and from Aug. 23, 1920 to Feb. 28, 1922, Consulting Officer to the Receiver, G.T.P.R., the Minister of Railways, has not been appointed Vice President and General Manager, Cadomin Collieries, in the Rocky Mountain District, south of Edson, Alta., as re-

ported in a Calgary press dispatch which was mentioned in our May issue.

Major Robert Bernard Jennings, whose appointment as Division Engineer, Canadian National Rys., Montreal, was announced in our last issue, was born at Paris, Ont., June 29, 1888, and entered transportation service in Apr. 1906, since when he has been, to Oct. 1906, chairman, Toronto-Sudbury Line, C.P.R.; Oct. 1906 to Oct. 1907, rodman, Saskatoon-Edmonton Line, Grand Trunk Pacific Ry.; Oct. 1907 to Dec. 1908, instrument man and Resident Engineer, Saskatoon-Edmonton Line, same road; Dec. 1908 to Oct. 1909, leveller, Toronto-Ottawa Line, Canadian Northern Ontario Ry.; Oct. 1909 to Jan. 1916, Resident Engineer, Toronto-Ottawa, Sudbury-Port Arthur and Hawkesbury-Montreal Lines, Canadian Northern Ry.; Apr. 1916 to Jan. 1917, Manager, Jennings & Rogers Co., Milwaukee, Wis.; Jan. 1917 to May 1919, Major 10th Battalion, Canadian Railway Troops, C.E.F., in service in France; July 1919 to Mar. 1921, Division Engineer, Canadian National Rys., Toronto; March 1921 to April 1922, Division Engineer, Canadian National Rys., Ottawa, Ont.

Capt. L. W. Klinger, M.C., whose death by drowning in the Tigris River, Mesopotamia, was reported by the British Secretary of State for India, recently, was born in Toronto, June 10, 1886, and graduated from Toronto University in 1907. From 1911 to 1913 he was Resident Engineer, double track construction, C.P.R., Perth, Ont.; 1913 to 1914, Engineer, Dominion Construction Co., Toronto. He enlisted for active service on the outbreak of the war, and served from Sept., 1914, to July, 1919, with engineer companies, being in France from Aug., 1916. He received the Military Cross for exceptional courage in bringing in a wounded Canadian officer, under enemy fire, Nov. 16, 1916. On returning to Canada in July, 1919, he was appointed Engineer and Comptroller, International Corporation of Canada, Montreal, and in 1920 was appointed District Irrigation Officer in charge of all irrigation surveys in Mesopotamia. While travelling in a motor launch from Bagdad to Serrai, he collided with a bridge pier, due to the flooded condition of the river, his boat being crushed and sunk.

Mrs. Macdonald, widow of Randolph Macdonald, railway contractor, etc., died in Toronto, May 12, aged 71.

Mrs. Murdo Macdonald, wife of the Assistant Superintendent of Weighing, G.T.R., Toronto, died there May 18, after a long illness.

A. D. MacTier, Vice President, Eastern Lines, C.P.R., has presented a silver challenge cup for the champion Rugby football team of Eastern Canada.

F. Marshall, City Freight and Passenger Agent, Chicago, Milwaukee and St. Paul Ry., Victoria, B.C., was married there recently to Miss V. Meynell, of Chatham, Ont.

George G. McKay, who has been appointed General Agent, Passenger Department, Rail and Ocean Traffic, C.P.R., Detroit, Mich., was born at Hamilton, Ont., Dec. 13, 1878, and entered transportation service in 1893, since when he has been, to June 1905, operator and ticket agent, G.T.R., at various points in Ontario; June 1905 to June 1906, ticket agent, Pere Marquette Rd. and Cincinnati, Hamilton & Dayton Rd., Detroit,

Mich.; June 1906 to Oct. 1911, City Passenger and Ticket Agent, C.P.R., Detroit; Oct. 1911 to June 1916, City Passenger and Ticket Agent, C.P.R., Chicago, Ill.; June 1916 to June 1920, Travelling Passenger Agent, C.P.R., Detroit, Mich.; June to Nov. 1920, Assistant General Agent, Passenger Department, C.P.R., Chicago, Ill.; Nov. 1920 to March 1921, General Agent, Passenger Department, Canadian Pacific Ocean Services, Detroit, Mich.; March 1921 to May 1, 1922, General Agent, Passenger Department, Ocean Traffic, C.P.R., Detroit.

Rev. Roy Melville, son of R. M. Melville, general ticket agent, Toronto, who has been curate of St. Stephen's Anglican Church there for the past three years, has been appointed rector of Allandale, Ont.

A. Price, General Manager, Eastern Lines, C.P.R., and G. H. Ham, of the company's headquarters staff, Montreal, were guests of the Trenton, Ont., Rotary Club, at luncheon, May 8.

D'Arcy Scott, K.C., ex Assistant Chief Commissioner, Board of Railway Commissioners, has been appointed chairman of the conciliation board in the wage dispute between the British Empire Steel Corporation and its employees.

Lord Shaughnessy, accompanied by Lady and Hon. Marguerite Shaughnessy, arrived in Quebec, May 11, on the s.s. Empress of France, after a trip to Great Britain and France, and proceeded to Montreal. Lord Shaughnessy is reported to have expressed the hope, just before leaving England, that the British Parliament would recognize the soundness of Canada's position with regard to the embargo against Canadian cattle and the justice of her complaint against its continuance.

P. Spence, whose appointment as General Foreman, Mechanical and Car Work, South Shops, Canadian National Rys., Edmonton, Alta., was announced in our last issue, was, from 1903 to 1906, Foreman boiler shops, Canadian Northern Rys., Winnipeg; 1906 to 1911, Boiler Inspector, Western Lines, same road, Winnipeg; 1911 to 1915, Locomotive Foreman, same road, Saskatoon, Sask.; 1915 to Apr. 1922, Locomotive Foreman, same road, latterly Canadian National Rys., Winnipeg.

H. P. Timmerman, Industrial Commissioner, Eastern Lines, C.P.R., Montreal, who has retired, was born at Odessa, Ont., Nov. 6, 1856, and entered railway service in 1872, since when he has been, to 1874, operator, G.T.R.; 1874 to 1882, dispatcher, same road; 1882 to 1887, dispatcher, C.P.R., Winnipeg; 1887 to 1890, Assistant Superintendent, same road, Port Arthur, Ont.; 1890 to April 1901, General Superintendent, Atlantic Division, same road, St. John, N.B.; April 1901 to Dec. 1906, succeeded by General Superintendent, Ontario and Quebec Division, and General Superintendent, Ontario Division, C.P.R., Toronto; Dec. 1906 to June 1908, General Superintendent, Eastern Division, C.P.R., Montreal; June 1908 to May 1922, Industrial Commissioner, Eastern Lines, C.P.R., Montreal. He will continue to reside in Montreal, and maintain his summer home at St. John, N.B.

Miss H. E. Wickstead, daughter of the late G. W. Wickstead, the first law clerk of the House of Commons, who died at Ottawa, recently, was a sister of H. K.

Wicksteed, B.A.Sc., C.E., formerly Chief Locating Engineer, Canadian National Rys., Toronto.

W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., addressed the Engineering Institute of Canada's Montreal branch recently, on railway refrigerator cars, and gave a number of lantern slide illustrations. He read a paper on the same subject before the American Society of Mechanical Engineers, in New York, on May 16.

C. A. York, station agent, Michigan Central Rd., Ruscombe, Ont., rescued two small boys who were playing on the tracks, Apr. 26, and did not hear the approach of a fast train.

C.P.R. Shares Held by Alien Enemies.—In a discussion on the estimates in the House of Commons, May 11, a vote of \$10,000 on account of the adjustment of war claims was brought forward. A minister explained that the alien enemy property taken over by the Government was originally valued at \$30,000,000, but a recent revaluation had put the value of the property now held at \$20,000,000. Among the property are 140,000 shares of C.P.R. stock. It was added that the manner of the disposition of the property was still a matter for consideration.

Toronto Freight Tonnage.—T. L. Church, North Toronto, asked in the House of Commons recently, what was the total gross freight tonnage entering and leaving Toronto on steam railways since 1914. The Minister of Trade and Commerce replied: Information in full not available, but a record begun in the Dominion Bureau of Statistics, Sept., 1920, shows the following for the year ended Oct. 31, 1921: Freight loaded on cars in Toronto, 1,155,599 tons; freight unloaded from cars in Toronto, 4,600,301 tons.

Selling Goods from Cars.—The Railway Association of Canada has issued the following circular, revising one issued previously: A certain class of dealers or merchants make it a practice to auction or sell their shipments from cars on public delivery tracks. This is a most undesirable practice and adds to delay to equipment and congestion of team tracks and roadways. In accordance with Operating Committee's instructions, member railways are requested to direct their agents not to permit the improper use of railway premises in this manner.

The Railway Centenary.—The 100th anniversary of the beginning of railways will occur in September, 1925, and as this event will be celebrated in England, it is proposed that the International Railway Association hold its regular congress in London in connection therewith. The last session of the congress was held at Berne, Switzerland, in 1910, at which it was arranged to hold the next gathering at Berlin, Germany, in 1915. This, of course, was not held owing to the war, and it was not until this year that the conference met in Rome.

Agricultural Train for Quebec.—The C.P.R. will provide and operate over its lines in Quebec, a 12-car demonstration train in conjunction with the Quebec Department of Agriculture. It will carry live stock and other exhibits, a model dairy, etc., and in the lecture cars professors and instructors in all branches of agriculture, dairying, fruit and vegetable culture, and domestic science will be in attendance.

The Dominion Express Co.'s Employees' War Memorial.

A tablet in honor of Dominion Express Co.'s employees, who served in the Great War, and in remembrance of those who gave their lives, was unveiled in the main entrance of the general office build-

ing that 707 employees went overseas on active service, and 66 lost their lives. In unveiling the tablet, W. S. Stout, President, stated that the tablet had been given by the Toronto general offices and

ing, Toronto, April 30. T. E. McDonnell, Vice President and General Manager, acted as Chairman, and a memorial address was given by Angus MacMurchy, K.C., the company's solicitor, who stated

agency employees, and though the company had had in mind the placing of a suitable memorial in the building, it gladly assented to the employees doing so, feeling that it gave added interest.

Freight and Passenger Traffic Notes.

The Canadian National Rys. notified the New Brunswick Department of Agriculture recently of special freight rates on oats, hay, corn and mill screenings on the Moncton-St. John line.

A train load of automobiles was shipped recently from Connersville, Ind., via Cincinnati, Indianapolis & Western Ry. and Grand Trunk Ry. to Montreal, and was accompanied throughout the run by F. H. Bremer, Travelling Representative, Canadian National-Grand Trunk Rys., Cincinnati, Ohio.

The G.T.R. put in force on April 27, a special excursion fare from Chicago, Ill., Flint, Grand Haven, Bay City, Muskegon, Mich., and intermediate points to Ottawa, Montreal, Quebec and Boston, Mass., the tickets being valid for return,

leaving destinations prior to midnight of May 4. The basis of fare was 70% of double one-way fare, the round trip fares from Chicago being as follows: To Ottawa, \$36.70; Montreal, \$40.90; Quebec, \$48.80, and Boston, \$50.65.

The Canadian National Rys. handled a special freight train of 55 cars of automobiles for export to England from Oshawa, Ont., to St. John, N.B., recently. The automobiles were loaded on the s.s. Canadian Conqueror, occupying about a third of its entire cargo space.

The C.P.R. is reported to have brought 3,697 bales of silk from Yokohama, Japan, recently, loaded them in 17 cars at Vancouver, B.C., and, in conjunction with the New York Central Rd., delivered them in New York, the total time between loading on the steamship in Japan and delivery in New York, being 13 days, 18 hours, 2 minutes.

D. B. Hanna Speaks on the Canadian National Railways at Springfield Ill.

D. B. Hanna, President Canadian National Rys., was the guest of the Mid-Day Luncheon Club at Springfield, Ill., on April 28. W. H. Finley, President Club and Northwestern Railway, was in the chair. Mr. Hanna, at the outset, made it clear that the plan of government ownership of railways which he claimed had after three years practical demonstration in Canada proved to be thoroughly practicable, was very different from the government operation which had been tried in United States during the period of federal control. He, Mr. Hanna, enumerated six main points of difference as follows:—1. In the U.S. the government took possession over night as a war measure. In Canada, the government acquired the railways by construction and purchase, step by step, for economic reasons. 2. In the U.S. the object was unified service, regardless of cost. In Canada the government's object was to ensure adequate and efficient railway service. 3. In the U.S. federal control was recognized as a temporary condition. In Canada the plan of a National Railway System was designed to be permanent. 4. In the U.S. the method of management adopted was political, with a cabinet minister in charge, whereas in Canada, on the creation of the National Railways, a corporate form of administration was established and the appointment of a new board for the Canadian National Rys. on their acquisition by the Dominion Government in the autumn of 1918 was made the occasion of taking away from ministerial or political control the lines formerly administered by the Railways and Canals Department. These lines were also placed under the new board, composed of outstanding business men and railway officers. Thus the entire system owned at that time by the Dominion Government was placed under an organization of a corporate character. Subsequently the management of the Grand Trunk Pacific, of which the Minister of Railways and Canals was appointed Receiver, was also placed in the hands of what is for convenience known as the Canadian National Rys. board. 5. Under the U.S. plan competition was eliminated and a great monopoly was established. In Canada competition was preserved. 6. The effect on the employees was important enough to be enumerated as a separate point of difference, although actually the result of the first five. In the U.S. the indifference to the generally accepted monopolistic operation was felt. Mr. Hanna said: "Competition is the spur to endeavor, and the result has been that our staffs have been on their toes, keen to advance the interests of the system for which they work, enjoying the contest for the nation's business."

He then stated that there are many in Canada who were opposed to public ownership of railways, that in fact public ownership had not been adopted as a plank in the platform of any one of the large political parties. The form of public ownership adopted in Canada is one which followed logically the policy of assisting the construction of railways which successive governments had adopted. He sketched rapidly the history of the main section of the National System. The Intercolonial, was built to connect the Maritime Provinces with Quebec and Ontario. The British Im-

perial Government had assisted the project by guaranteeing a load of £3,000,000 on the ground that the railway would be valuable for military purposes.

This line had always been government owned and until placed under the present board in 1918, had been operated by a Minister of the Crown. The National Transcontinental, from Moncton to Winnipeg, was built by the Dominion Government as the eastern section of the Grand Trunk Pacific scheme. In the Canadian Northern Rys. System lies the hope of success for the National System, the western lines are in the very best country, and under anything like normal expansion the development along them will be very rapid. The Canadian Northern is a transcontinental line in itself with lines from Quebec and Montreal to Vancouver. The Grand Trunk Pacific lines have been consolidated with the Canadian Northern Western lines, and with some branch lines to feed the main stem are doing much better.

This great system serves the nine Canadian provinces, and the train that is started from Sydney in the east, and which runs with through connections to Vancouver and Prince Rupert in the west, will no doubt be accepted as ranking as one of the greatest long distance lines in the world. This line, being 4210 miles long from initial point to final terminal. The system competes with the C.P.R. for the transcontinental and other business of the nation. With this system is to be consolidated the Grand Trunk Rys., which will add 4,776 miles and give the National System a total of 22,375 miles.

Mr. Hanna expressed himself as not discouraged by the record of the nationally owned lines in the last three years. While the losses in operation have been large, 1921's performance was \$20,750,000 better than in 1920, and in four months of 1921 net earnings had been made. Traffic is below normal and it is well known that a disproportion between expenses and earnings had existed since 1918, and even before, and had most adversely affected the operation of U.S. lines in 1919, 1920 and 1921. In 1921 the C.N.R. stood alone as a transcontinental that had an increase in gross earnings. The increase was just over \$1,000,000, the privately owned competitor had experienced a shrinkage of \$23,500,000 in gross. While traffic density is light on the C.N.R., train load is relatively good and has steadily improved. A fine passenger service is maintained. During the period of high prices and low rates the C.N.R. had to make large expenditures to take up deferred maintenance and was under the necessity of spending large sums for improvements, betterments and new equipment. The principal trains are now made up of the most modern type of steel cars. The lines are now in good shape.

Two consolidations of staff have been effected with an entire absence of friction, and four groups of lines, all more or less designed as competitors, have been made into a smooth working, though complex, transportation machine. A preponderance of main line mileage had increased the management difficulty of the management of the new, the main lines were completed in the last year of the war; in fact over 35% of the National System's mileage has been

taken over for operation since the outbreak of the war. Canada with a population of approximately 8,750,000, had in the ten year period ending with 1921, added to its railway systems in all 14,650 miles of railway, whereas the U.S. with a population of 108,000,000, added in the same period only 10,280 miles. Canada has only 2.3 persons per square mile of area, the U.S. has 40. To support each mile of railway Canada has 223 persons to the United States' 430. He is, however, confident that Canada would soon provide enough business to support its entire railway mileage. Canada has all the basic materials in great quantities that had contributed to the great development of the U.S. forest, fisheries and mines, as well as agricultural lands, and particularly it has the greatest hard wheat producing areas in the world. Canada's imports and exports had shown a very healthy growth until the war upset trade conditions, as shown by the following figures:—

Canadian Trade, Merchandise.			
Year to	Exports for	Imports.	Total Trade.
Mar. 31.	Consumption.	Exports.	Total Trade.
1903	\$ 8,818,211	\$ 2,232,131	\$ 11,050,342
1918	670,089,066	377,068,355	1,047,157,421
1921	962,548,746	1,586,169,792	2,548,718,538
1921	1,240,175,883	1,199,162,501	2,439,338,384
12 mos. to Feb.			
1922	761,026,361	748,792,795	1,509,820,056

Canadian exports of Canadian products only, per head of population were as follows:—1903, \$40; 1913, \$47; 1918, \$179; 1921, \$132; 1922, \$81.

The Department of Trade and Commerce report for the year ended March 31, 1921, states that during 1918 the imports of articles for the Army and Navy amounted to \$130,773,475, while for 1921, similar imports amounted to only \$228,618, and the exports of cartridges and explosives in 1918 were valued at \$386,340,293, while in 1921, they were valued at only \$1,324,376. The total decrease in the value of cartridges and explosives from 1918 to 1921 more than accounted for the decrease in total exports of Canadian commodities.

The Canadian National Rys. have a valuable ally in the Canadian Government Merchant Marine ships operated by the C.N.R. board. The fleet comprises 65 ships which took Canadian products to all parts of the world. The Canadian National Telegraphs and Express Companies operate over all lines, and the railway operates a number of hotels and runs its own sleeping cars.

Mr. Hanna continued: "Much has been said of politics interfering with efficient operation of government owned lines. That is ancient history. Under the present form of corporate administration I stand here and tell you that in the last three years there has been no political interference, and during that period we passed through an election and quite an intense affair it was, and yet at no stage nor at any point on the system can any one state that anything was done by the management to serve political ends. The directors have taken a firm stand that no one employed by the railways, from director to laborer, shall take a greater interest in politics than to exercise his franchise. It is laid down as a rule that anyone who identifies himself with a political party, to the extent of accepting nomination for a candidate, automatically severs his connection with the system. At the election referred to the Government changed, and it is announced

that the new government will continue the present plan. If this is done I can see no reason why the nationally owned lines in Canada should not, under normally adjusted expenses and earnings, eventually prove to be self supporting. From the shippers' and consignees' point of view, the plan of dual competitive service to every important community is ideal. There is no competition in service, and in principle of ownership

the one system is nationally owned, while the other was at its inception nationally endowed, the two systems compete for the nation's business. Both systems are strong and in good physical condition; both have a capacity considerably beyond normal traffic movement, at present business is sub-normal. Canada can therefore face a period of expansion, with confidence that her railways are in a position to assist in the

development work. In the past the railways have played a great part in the national progress, and I am confident that in the period immediately ahead, the Canadian National Rys. will be a big factor in the upbuilding of the country and will ultimately be recognized as one of Canada's greatest assets."

F. P. De Hoyos, General Agent, Mexican National Ry., New York, N.Y., also spoke.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—In reference to the Civil Commission's request for applications from persons qualified to fill the position of the Board's Chief Traffic Officer, particulars of which were given in Canadian Railway and Marine World for May, we were officially advised on May 16, that 17 applications had been received.

Canadian Manufacturers' Association.—G. P. RUICKBIE, Traffic Manager, Canadian Pulp & Paper Association, who has been in the Canadian Manufacturers Association's head office in Toronto for nearly three years, has been transferred to the C.M.A. office, 115 Board of Trade Building, Montreal. He will continue as Traffic Manager, Canadian Pulp & Paper Association, and his services will be available for members of the C.M.A. Quebec Division, who desire assistance in connection with transportation matters.

Canadian National Rys.—J. CANDLINE, heretofore Car Foreman, Calgary, Alta., has been appointed Car Foreman, North Battleford, Sask., vice J. Herring transferred to Calgary, Alta.

P. W. CLARKIN, heretofore acting Division Freight Agent, Charlottetown, P.E.I., has been appointed Division Freight Agent there, vice A. McDonald retired.

S. D. DULMAGE, heretofore Sleeping and Dining Car Agent, Bonaventure Station, Montreal, has been appointed Road Inspector, Sleeping, Dining and Parlor Car, Hotel and News Department, Eastern Lines.

G. HERRING, heretofore Car Foreman, North Battleford, Sask., has been appointed Car Foreman, Calgary, Alta., vice J. Candline transferred to North Battleford, Sask.

CHAS. C. JOHNSON, heretofore a roadmaster on the Campbelltown Division, has been appointed Roadmaster, Springhill Subdivision, between Truro and Sackville, N.B., and Sackville Subdivision, Moncton Division, Maritime District, vice J. C. Fulmore, retired on the Provident Fund.

F. T. KNIGHT, heretofore Locomotive Foreman, Sioux Lookout, Ont., has been appointed Locomotive Foreman, Port Arthur, Ont., vice H. Williams, transferred to Winnipeg.

W. A. McDONALD has been appointed Sleeping and Dining Car Agent, Tunnel Terminal, Montreal, vice B. H. Nevins, appointed a road inspector Eastern Lines.

J. A. McISAAC has been appointed Sleeping and Dining Car Agent, Bonaventure Station, Montreal, vice S. D. Dulmage, appointed a road inspector, Eastern Lines.

J. D. McNUTT, Assistant Superintendent, Maritime District, Halifax Division, has been transferred from Truro, N.S., to Halifax.

J. NESBITT has been appointed Car Foreman, freight repair tracks, Edmonton, Alta., vice G. S. Clarke transferred. B. H. NEVIN, heretofore Sleeping and Dining Car Agent, Tunnel Terminal, Montreal, has been appointed a road inspector, Sleeping, Dining and Parlor Car, Hotel and News Department, Eastern Lines.

A. TAYLOR, heretofore Shop Foreman, Port Rouge, Winnipeg, has been appointed Locomotive Foreman, Sioux Lookout, Ont., vice F. T. Knight, transferred to Port Arthur, Ont.

H. WILLIAMS, heretofore Locomotive Foreman, Port Arthur, Ont., has been appointed Locomotive Foreman, Winnipeg, vice P. Spence, whose appointment as General Foreman, Mechanical and Car Work, South, Shops, Edmonton, Alta., was announced in our last issue.

Canadian Pacific Ry.—A. P. ANDERSON, heretofore local agent, C.P.R. Telegraphs, Sydney, N.S., has been appointed local agent, C.P.R. Telegraphs, Halifax, N.S., vice W. S. Emery, appointed chief operator at Montreal.

C. BROSNAW, heretofore in the Operating Department during winter, and during summer assistant telegraph agent, Algonquin Hotel, St. Andrews, N.B., has been appointed agent of telegraphs, Truro, N.S., vice J. M. Sullivan, appointed local agent at New Glasgow, N.S.

G. E. CARTER, heretofore Passenger Agent, port staff, Quebec, Que., during the summer, and St. John, N.B., during the winter, has been appointed Travelling Passenger Agent, New Brunswick Division, to St. John, N.B.

G. W. CURTIS, heretofore Industrial Agent, has been appointed Industrial Commissioner, Eastern Lines, vice H. P. Timmerman, retired on superannuation.

D. DRUMMOND, heretofore Freight Agent, London, Eng., has been appointed agent, Southampton, Eng. The company's offices are being built on Canute Rd., Southampton Docks, and a temporary office is provided at 7 Canute Rd.

W. S. EMERY, heretofore local agent of telegraphs, Halifax, N.S., has been appointed chief operator, Montreal, vice C. W. Macdonald, appointed Inspector of Telegraphs, Alberta Division.

R. A. GAMBLE, who was acting Superintendent, Winnipeg Terminal Division, Winnipeg, during the absence of R. C. Morgan, in Newfoundland, is again occupying that position, Mr. Morgan having returned to Newfoundland for another seven months in connection with the Newfoundland Ry. management.

C. W. MACDONALD, heretofore chief operator, C.P.R. Telegraphs, Montreal, has been appointed Inspector, Alberta Division, C.P.R. Telegraphs, Calgary.

E. A. KELLY has been appointed Roadmaster, Coutts, Cardston and Stirling Subdivisions, Lethbridge Division, Alberta District, Lethbridge, Alta., vice C. T. Johnston, transferred.

W. McILROY, heretofore General Agent, Passenger Department, Rail Traffic, Detroit, Mich., has been appointed General Agent, Los Angeles, Cal., vice A. A. Polhamus, deceased. Office, 605 South Spring St.

G. G. McKAY, heretofore General Agent, Passenger Department, Ocean Traffic, Detroit, Mich., has been appointed General Agent, Passenger Department, Rail and Ocean Traffic there, W. McIlroy, General Agent, Passenger Department, Aail Traffic, having been transferred to Los Angeles, Cal. Office, 1239 Griswold St.

J. M. SULLIVAN, heretofore at Truro, N.S., has been appointed local agent, C.P.R. Telegraphs, New Glasgow, N.S., vice R. Blane, appointed local agent at Sydney, N.S.

Newfoundland Ry.—R. C. MORGAN, Superintendent, Winnipeg Terminal Division, C.P.R., who was given six months leave of absence to act as Chairman, Management Committee, Reid Newfoundland Co., and severed his connection with the Reid management in February, and who was subsequently acting as adviser to the Newfoundland Government on railway matters, returned to Winnipeg early in May. We are officially advised that he has been given another seven months leave of absence by the C.P.R., and that he left Winnipeg, May 21, for St. John's, Newfoundland.

English Railways and Highway Transportation.—The London and Northwest and Midland Railway group has asked the British Parliament to authorize railways to engage in highway transportation in competition with regular motor truck companies. It is urged that railways, if kept from the highways, will be forced to meet the competition of motor truck companies on unequal terms, and that they should be given the opportunity of transporting goods by motor trucks on the highways where it is cheaper to do so than by rail.

Hay on Railway Right of Way.—The Minister of Railways is reported to have advised the member for Temiscouata County, Que., that the Canadian National Ry's directors have decided to permit farmers to cut hay opposite their farms abutting in the Intercolonial Ry., free of charge during this year.

Dolly Varden Mines Ry.—A press report states that proceedings have been instituted in the British Columbia Supreme Court for the foreclosure of a mortgage of \$200,000 upon the Dolly Varden silver mining properties and railway in northern B.C.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.
Official Organ of various Canadian Transportation
Associations.

The Grand Trunk Railway's Results in 1921.

Extracts from the G.T.R. Co.'s annual report for the calendar year 1921, on another page of this issue, show that it was a most unfavorable year. The net loss transferred to profit and loss account was \$14,064,442.36, or \$9,465,338 greater than in 1920, when it was \$4,599,104. Despite an operating surplus of \$4,344,253.51 and a non-operating income of \$8,634,101.55, the deductions from gross income were so great as to bring about the results mentioned.

An examination of the deductions from gross income will be of interest. The funded debt at Dec. 31, 1921, was \$371,042,194.75, the interest amounting to \$16,492,614.70. This debt includes guaranteed and debenture stock for \$216,207,141.67, various equipment trusts and mortgage bonds, and recent Dominion Government loans amounting to \$73,702,154. In addition to the interest on funded debt, deductions from gross income for 1921 included the loss on separately owned properties, \$6,857,092.97, against \$2,926,024.97 in 1920. Of this loss, the G.T. New England lines were responsible for \$1,881,093.84; the G.T. Western lines for \$4,797,177.55, the Ottawa Terminal Ry. for \$104,994.20, and the Canada Atlantic Transit Co. for \$73,827.38. Other items in the deductions from gross income included joint facility and miscellaneous rents, amortization of discount on funded debt, etc., all deductions from gross income totaling \$27,042,797.42.

One cannot help but feel that, on the basis of the 1921 results, G.T.R. shareholders made a good bargain when they agreed to sell, even though the common and preference stocks were adjudged valueless by the arbitrator. It is not the G.T.R. shareholders who are suffering the loss made by the company in 1921, but the Canadian people are doing that. In addition, it is altogether likely that \$12,000,000 of the \$15,000, provided for the G.T. Pacific in the estimates presented to Parliament recently, will be used in payment of the loss incurred by the G.T.P.R. in 1921. It does not require much argument to show that under the conditions prevailing, a receivership for the whole system would have been necessary long ago, had not the Dominion Government intervened, and it is incomprehensible that any one should imagine that in such an event the G.T.R. common stock would have had any element of value. Even as regards the preference stock, this latest report shows that the prospects of the road being able to earn enough to pay anything on it in the near future, are very doubtful. Loans from the Dominion Government since May, 1920, have totalled \$73,702,000 and bonds issued with the Government's endorsement, have totalled \$49,743,000, while equipment trust certificates for \$11,586,000 have been issued. The situation now is, that before the preference stock could receive any return, fixed charges of \$16,492,614.70 have to be met. It therefore seems that although G.T.R. common and preference shares have been adjudged valueless, the shareholders have been fortunate in getting rid of their losses on G.T.R. operation, and their obligations in connection with the G.T.P. in the manner in which they have. They could never have secured credit to carry the whole enterprise till it was on a money making basis, and a receivership,

with all its consequences, would have been inevitable.

The country's position in relation to the whole matter of the G.T. and its subsidiaries, is most unfavorable. The only hope, it would appear, is that ultimately railway operating costs will get back to a reasonable basis, and that by co-ordination of the G.T.R. and G.T.P. in the national system, and by securing an increased traffic as the country develops, the properties may be placed on a self-sustaining basis. If the G.T.R. in 1921 had been able to secure an operating ratio of 70 instead of the ratio of 92.61, which it had, operating expenses would have been but \$53,800,622, instead of \$71,179,292, which would have meant a net of \$23,057,410, instead of \$5,678,739, and this would have meant a profit of \$3,314,228 to transfer to profit and loss account instead of a loss of \$14,064,442. It is not so far from the fact that an operating ratio of 70 was the accepted standard; whether that condition of affairs will ultimately be restored remains to be seen.

At all events, it is evident that the financial results to be secured by the Dominion from the property acquired from the G.T.R. shareholders coincides with the degree of success met with in the effort to get the operating ratio down to a reasonable level. While that will naturally depend on the amount of traffic handled and the efficiency with which it is handled, it will also depend on the rates paid for handling it. It is axiomatic that, if the rates are too low, the railway operating losses will have to be made up from taxation, but the smaller the loss to be made up from taxation the better. While results on the G.T.R. side in the past few years have been disappointing it is a fact that so far in 1922 the road has shown an operating ratio which compares favorably with that of any other road in Canada, and our feeling is that if rates are so regulated that privately owned railways may continue to derive a return adequate for the payment of fixed charges and for provision for the future, the years to come will see a steady improvement in the financial results attending the operation of the G.T.R.

Buffalo and Fort Erie Public Bridge Co.—The House of Commons private bill committee approved on May 18, of a bill for the incorporation of a company with the above title, to build a Niagara River bridge, with approaches from highway and general traffic bridge across near Walnut St., Fort Erie, Ont., to near Hampshire St., Buffalo, N.Y., and to make provision for laying of electric railway tracks over it. Security is to be given for the carrying on of navigation in the river. A United States company is to be formed for the purpose of undertaking the U.S. end of the work. The provision directors are W. F. Wilson, W. Douglass, Dr. MacGillivray, Fort Erie, Ont., and L. B. Duff, Welland, Ont.

Ties Bought in Nova Scotia.—The Minister of Railways stated in the House of Commons recently, in answer to H. Putnam, Colechester, N.S., that 150,130 railway ties had been bought by the Canadian National Ry. in Nova Scotia since Jan. 30, 1921, and gave the names of the contractors bought from. The prices ranged as follows: no. 1, 58c to 70c; no. 2, 48c to 60c; no. 3, 25c to 35c.

Canadian Pacific Railway Co.'s War Memorials.

The C.P.R. Co.'s memorials of the services of its employees in the Great War of 1914-1918, were unveiled simultaneously on April 28, at various points all over the system. The principal memorial consists of a large bronze group, designed and executed by C. O. L. McCarthy, Montreal. It typifies the uplifting of the soul of a hero from the battlefield, the armed figure of a soldier in uniform, battle stained yet tranquil, being borne heavenward by a winged and laurel wreathed angel of victory. The figures in the group are supported upon a marble pedestal. Three of these groups were cast and have been placed at the stations at Windsor St., Montreal; Winnipeg and Vancouver.

The secondary memorial, designed by Archibald Pearce, of the company's Engineering Department, consists of a bronze tablet, 50 x 40 in. The design represents Britannia, with heralds, calling to her sons in all parts of the Empire to assist her in the struggle for liberty. The C.P.R. s.s. Empress of Russia, engaged as a fast cruiser and later as a transport ship, is represented on the right and H.M.S. Lion, Admiral Beatty's flagship at the Battle of Jutland, on the left. Aeroplanes are shown above the ship and the center of the design depicts a C.P.R. train carrying battalions to embark for overseas service. Tanks are shown to the left and the ribbon at the base bears the names of the principal victories won by Canadian troops and the company's crest. Underneath the tablet is the following inscription, which is also placed on the base of each of the three statutory groups: "This tablet commemorates those in the service of the Canadian Pacific Ry. Co., who, at the call of King and country, left all that was dear to them, endured hardships, faced danger and finally passed out of sight of men by the path of duty and self-sacrifice, giving up their lives that others might live in freedom. Let those who come after see to it that their names be not forgotten."

These tablets have been placed in position at the following stations, etc., in Canada:—St. John, N.B.; Quebec; Windsor St. station; Place Viger station and Angus shops, Montreal; Yonge St. station, Toronto; West Toronto; North Bay, Ont.; Fort William, Ont.; Winnipeg, Man.; Regina, Saskatoon, and Moose Jaw, Sask.; station, and Natural Resources Building, Calgary, and Edmonton, Alta.; Nelson, Vancouver and Victoria. Similar tablets have been placed in the company's offices in London, and Liverpool, Eng., New York, and Hong Kong.

Enlistments of C.P.R. employees totaled 11,340 men, of which 1,115 were killed or died of wounds, and 2,105 were wounded. A total of 7,573 were re-employed by the company on their return to Canada, following out the C.P.R. policy of reinstating every man who left, in as good a position as that which he had when he went away, and a total of 13,112 other returned soldiers have also been taken on the company's service. War decorations and medals won by C.P.R. employees totaled 370, and include the following:—Victoria Cross, 2; Order of the British Empire, 6; Distinguished Service Order, 17; Distinguished Service Cross, 3; Military Cross, 54; Distinguished Conduct Medal, 47; Military Medal, 180.

Lord Shaughnessy, Chairman of the Board, who was in London, Eng., unveiled the tablet placed in the company's offices there.

The unveiling took place simultaneously, the signal for the starting of the ceremonies at the different points being given from Montreal at 3 p.m., C.P.R. time. Following is a partial list of those taking part in the ceremonies:—

St. John, N.B.:—The Mayor presided, the unveiling being performed by J. C. Johnson, one of the company's conductors, who lost a son on service overseas. Quebec:—Mayor Sampson presided; the unveiling being performed by Mrs. John Macdonald, mother of one of the company's Quebec employees who fell in the war.

Montreal:—Lord Byng, Governor General of Canada unveiled the statue, in the Windsor St. station at the request of E. W. Beatty, K.C., President, and placed a wreath at the base. The procession then went to the Osborne St. entrance of the station, where the tablet was unveiled.

The tablet at Place Viger station was unveiled by Mrs. W. H. Carey, whose son, station agent at Oremont when he enlisted, was killed at the front. J. K. Savage, General Superintendent, Quebec District, was in charge.

At the Angus shops, John Burns, the Works Manager, presided, and the tablet was unveiled by Alfred Cassidy, whose son, an employee at the works, was killed in action in 1916.

Toronto:—H. C. Groat, General Superintendent, Ontario Division, presided at Yonge St. station, Mayor Maguire performing the unveiling, and W. M. Neal, Assistant General Superintendent, Ontario Division, was in charge of the arrangements at West Toronto.

Fort William:—The tablet was unveiled by W. Blennerhassett, a locomotive man, the Mayor presiding.

Winnipeg:—Sir James Aikens, Lieutenant Governor; D. C. Coleman, Vice President, Western Lines, and Sir Augustus Nanton, director, took part. The statue was unveiled by Rev. Dr. Duval, whose son, Lieut. Duval, of the C.P.R. service, was killed.

Regina:—Mayor Grassick unveiled the tablet.

Calgary:—Brig. General A. H. Bell, C.M.G., D.S.O.; J. M. Cameron, General Superintendent, Albert Division; at the station and the Natural Resources Building. F. M. Walkinson, D.C.M., M.M., the youngest employee of the company who served in the war, unveiled the tablet at Ogden shops, the ceremonies being in charge of C. J. Powles, Superintendent.

Edmonton, Alta.:—Lieutenant Governor Brett unveiled the tablet; the company being represented by J. L. Jamieson, Superintendent.

Vancouver:—Hon. W. S. Nichol, Lieutenant Governor, and F. W. Peters, General Superintendent, took part. The statue was unveiled by C. S. Maharg, Superintendent, Vancouver, who lost a son.

Victoria:—Hon. John Oliver, Premier of British Columbia, spoke, and the tablet was unveiled by Oliver Gibbs, of the company's B.C. Coast Steamship Service, who served at the front, and lost a son at Vimy Ridge.

Freight Car Location on Railways.

The Railway Association of Canada has issued a report showing the location of freight cars as of May 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Central Vermont (in Canada); Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Michigan (in Canada); Napierville Jct.; Pere Marquette (in Canada); Quebec Central; Quebec, Montreal & Southern; Temiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo; Wabash (in Canada). The figures are as follows: Cars owned by reporting railways, 222,486; home cars on Canadian foreign lines, 14,849; home cars on U.S. lines, 33,872; home cars on home road, 173,765; Canadian-owned foreign cars on home lines, 11,557; owned foreign cars on home line, 15,426; total cars on line, 200,748; per cent. on line to total owned, 90.2; deficiency on line to total owned, 21,738; home cars in bad order, 21,883; foreign cars in bad order, 410; total cars in bad order, 22,293; per cent. in bad order, 11.1; privately owned U.S. cars on line, 1,957; privately owned Canadian cars on line, 1,159.

Marconi Wireless Telegraph Co.'s Contract with the Government.

The Minister of Militia and Defence gave the following information in the House of Commons recently, in answer to H. Deslauriers, St. Mary, Montreal:—The unexpired contract with the Marconi Wireless Telegraph Co. of Canada has not been cancelled, but a supplementary contract has been entered into, the principal amendment to the old contract being as follows: That for five years, April 1, 1921, to April 1, 1926, the subsidy in respect of each of the stations remaining open be increased from an average of \$2,081 per station per year to \$5,500 per station per year. That all Government messages which under old contract were free of charge be handled at half the rates charged on commercial messages. The amendments to the contract were authorized by order in council Aug. 31, 1921, and the supplementary contract was signed Dec. 15, 1921. The rescinding of the supplementary contract by the present Government has not been given consideration.

British Railways and Road Transportation.—The British House of Commons gave a second reading recently to a bill, promoted by the Northwestern and Midland group of railways, authorizing railways to establish road services for the transportation of freight, when it can be done more advantageously by road than by rail. The Minister of Transport's Parliamentary secretary stated that the second reading of the bill would afford an opportunity for a House into the whole matter, before the bill came on for a third reading, and that he considered the matter a very important one to the railway companies and to the public.

New Brunswick Coal for Canadian National Rys.—The New Brunswick Legislature passed a resolution recently asking that the C.N.R. should use New Brunswick coal on its lines within the province.

Steam Railway Operating Revenues, Expenses and other Statistics for February.

The following comparative table for Feb. 1922 and 1921 has been arranged in Canadian Railway and Marine World's office from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There is a slight increase in the number of roads included under this heading, so that the data for 1922 and 1921 will not be directly comparable with previous reports.

As the Canadian Government, Canadian Northern and Grand Trunk Pacific Railways are under one management, and operated as one system, the monthly operating reports for 1922 contain a consolidated report for these railways, under the heading "Canadian National

Railways," which includes the old Canadian Government Railways, viz., Intercolonial, Prince Edward Island, National Transcontinental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.; the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government; and the Grand Trunk Pacific Ry.

The column headed "Canadian Pacific" includes also the Montreal and Atlantic and Esquimaux and Nanaimo Rys.

The column headed "Grand Trunk" includes all the company's lines, both in Canada and the United States.

Items 1 to 6 in the table include rail line revenues only. Previous to this year they included water line. Operating in-

come items have been added. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. In former reports the total mixed train miles was added to both freight and passenger train miles when computing averages. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non-revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, excess baggage, parlor cars, etc., whereas previous reports gave an average per train mile of passenger receipts only. The number of employees is also a new feature of the report.

	All railways.		Canadian National		Canadian Pacific		Grand Trunk

The Railway's Operating Results for January and February.

Particulars of railway operating revenues, expenses and other statistics for Jan. 1922 were received by Canadian Railway and Marine World too late for publication in the May issue, and as figures for February have been received since, the latter are given elsewhere in this issue. The January figures show that the railways as a whole had an operating deficit of \$827,619 for the month, which was \$1,244,547 less than in Jan. 1921. The improvement was effected by cutting operating expenses 23%, with a reduction in freight traffic of 13% and in passenger traffic 27%, while the revenues declined 21%. There was a decrease of 19% in freight train miles, but an increase in loading of 30.7 tons of revenue freight and 19.4 tons of all freight per train mile, while the passengers per train mile were 10% less. The average freight receipts per ton mile and the average passenger receipts per passenger mile decreased 9.5% and 13% respectively, reflecting in degree the effect of the general decrease in freight and passenger rates.

Canadian National Rys. in January had a decrease in revenues of \$2,640,508 or 24.3%. Expenses, however, were reduced \$3,280,403 or 23.9%, giving an operating ratio of 127.08 for Jan. 1922 as against 126.39 for Jan. 1921. The freight and passenger traffic showed decreases of 5.7% and 14% respectively. The greater decrease in expenses was due in part to the heavier loading of trains, viz., 442 tons of revenue freight per train mile, against 338 tons in Jan. 1921. It was also due to wage reductions and to a slight increase in passengers per train mile. The payroll decreased 27.5% and there was a decrease of 287 in the number of employees.

The C.P.R. in January had an operating ratio of 95.96, against 95.94 in Jan. 1921. Revenues decreased over 22%, and operating expenses decreased 21.8%, with a decrease of 16% in freight traffic and 24% in passenger traffic. There was a slight decrease in train loading, and a decrease of 2.1 tons a car in car loading, and the average revenues per ton mile and per passenger mile both decreased. The payroll decreased \$1,554,518, and there was a decrease of 1,949 in the number of employees.

G.T.R. revenues decreased \$864,048, or over 13%, but the total expenses were reduced 27%, leaving a net revenue of \$369,363, against a deficit for Jan. 1921 of \$701,165. The payroll decreased \$925,500, and the number of employees decreased 1,882.

For February, as shown by the table published on the preceding page, the railways as a whole had an operating deficit of \$140,315, compared with a deficit for Feb. 1921 of \$1,431,892. The operating revenues decreased \$4,370,277, or 13%, over \$3,000,000 of this being in freight earnings, despite a slight increase in the revenue ton miles handled. Passenger revenues decreased \$1,419,880, or 24%, with a decrease of 30% in passenger miles. Allowing for the slight increase in the number of tons of revenue freight carried one mile, the decrease in freight earnings is representative of the decreases in freight rates which took place between Feb. 1922 and Feb. 1921, as shown by the average receipt per revenue ton mile. The passenger earnings for the roads as a whole reflect not only the lower passenger rate prevailing

in Feb. 1922, but also the reduced passenger traffic carried, as stated above.

Operating expenses for maintenance of way and structures and maintenance of equipment, show decreases which suggest that property and equipment were maintained to the same standard as in Feb. 1921, lowered material costs and decreased wages being taken into consideration. The decrease in transportation costs is particularly gratifying, the cut of \$3,815,660 being a decrease of 20%. When the figures for freight train miles and passenger train miles are examined in this connection, it is evident that the transportation expenses decreased in much greater proportion than did the train miles operated, and in still greater proportion than the traffic handled by the operation of those train miles. While, of course, lower wages played an important part in the accomplishment of decreasing the transportation expenses so materially, it is evident, on examining the figures further, that an increase in transportation efficiency played no small part. The proportion of loaded to total freight car mileage in Feb. 1922 was much better than in Feb. 1921; the number of tons of revenue freight per freight train mile was 465.8 in February 1922, compared with 442.1 in Feb. 1921, while the figures for loaded and empty freight cars under the heading "Averages per freight train mile" show that more cars per train were handled in Feb. 1922, a better proportion of these being loads, as stated above. The advantages incidental to better train loading were such as to overcome the slight falling off in freight car loading. While total expenses were greater than total revenues in Feb. 1922 by \$1,431,892, it is evident that the deficit was reduced as compared with Feb. 1921.

The large decrease in Canadian National Rys. operating revenues is painfully evident, and an examination of the figures shows conclusively the kind of proposition which the management is up against. The decrease in gross was the result, of course, of decreased traffic, combined with decreased freight and passenger rates, and the performance in cutting operating expenses to the degree shown shows that advantage has been taken of every opportunity to effect economies. The operating efficiency, as shown by the figures for train loading and car loading (the average revenue train load being 446.1 tons in Feb. 1922, compared with 394.2 tons in Feb. 1921, while car loading fell off but four tenths of one ton per car, despite the decreased traffic) was well maintained, which contributed largely to the possibility of being able to reduce expenses to meet the reduced earnings. The reduction in earnings was, however, too great to permit of any improvement in the operating ratio, and in view of the conditions, the operating ratio secured for the month was as good as could be expected. The figures dealing with traffic density, and the fact that the payroll amounting to 77.9% of the total revenue, show conclusively that the Canadian National Rys. crying need is more traffic. Until increased traffic is secured there seems but little prospect of permanent improvement under the present scales of rates and wages.

The decrease in C.P.R. operating revenue is more nearly proportionate to the decrease in rates which has taken place

than was that in the Canadian National Rys. gross revenue, for while the total number of revenue tons handled during the month by the C.P.R. decreased materially, compared with Feb. 1921, the longer haul enjoyed was such as to make the revenue ton mileage handled greater than in Feb. 1921. A decrease in the average passenger journey, however, coupled with a smaller number of passengers carried, brought down the revenue passenger mileage considerably. An examination of the C.P.R. figures shows that transportation efficiency was well maintained, in view of traffic conditions, and that operating expenses were reduced in a gratifying measure.

The G.T.R., like the C.P.R., showed a better freight traffic in Feb. 1922 than in Feb. 1921, but a falling off in passenger traffic. The figures for train loading and car loading, taken together, show an improvement in transportation efficiency. Although the average car load was smaller, the average revenue train load was much greater, and the proportion of loaded cars to total cars in train was much better. The operating expenses were reduced more than proportionately to the traffic handled, taking into consideration the wage decreases as applying as between the two months and the lower material prices prevailing, and the operating ratio for Feb. 1922 was by far the best secured by any of the roads.

It is evident that, despite the reduction secured in the operating deficit, the railways still have a long way to go before they will be on a satisfactory financial basis. The mere fact of there being an operating deficit at all, instead of a net operating revenue, shows that. For an individual railway to be a self-supporting and successful commercial proposition, the operating ratio must be about 70. The same applies to Canadian railways as a whole, and it is therefore evident that, until that operating ratio is obtained, the taxpayers will have to continue to make up railway operating deficits. As a general principle, it is desirable that any commercial venture, Government or privately owned, should be financially successful, providing, of course, that it is managed with due economy and efficiency, and for this reason it is desirable that Canadian railways be given rates which will make them self-supporting. On the other hand, our population is still limited, and there are producers of basic commodities for whom high transportation costs constitute a barrier to success, and the great problem in connection with transportation costs is to so adjust them as to have them distributed among all producers and consumers fairly and justly. But in this adjustment, it must not be forgotten that the railways also must be treated fairly and justly, for if they are not, it is probable the country will suffer more in the end than if rates were not reduced at all. An operating ratio of over 100 for the railways as a whole is certainly an indication of a highly undesirable situation, and it would be well, in the struggle for lower transportation costs, it be remembered that the railways can ill afford to make any rate reductions of consequence while expenses are at their present levels, and also that the more nearly self-supporting the railways are, the better it is for the country at large, from the points of view of both equity and economics.

United States Railways' Financial Position.

U.S. railways started 1922 with a very lean month in January, but steady improvement has taken place in their operating and financial position since the beginning of the year. In January, class 1 roads operating revenues were \$394,940,789, and operating expenses \$337,269,122, compared with operating revenues of \$470,388,976, and operating expenses of \$442,196,328 in Jan., 1921. The operating ratio for Jan., 1922 was 85.40, and for Jan., 1921, it was 95.01, so that although the ratio was not very favorable for Jan., 1922, it was much better than in Jan., 1921. The net railway operating income—i.e., the income left after the payment of taxes, equipment rents, joint facility rents, etc., was \$29,476,422 for Jan., 1922, representative of an annual rate of return on the valuation of the properties, as determined by the I.C.C., of 2.69%.

In February, results were much better. Class 1 roads operating revenues were \$401,426,672, operating expenses \$324,501,134 and operating ratio 80.84. The net railway operating income was \$47,770,897, representing an annual return on property value of 4.56%. The railways handled 14% more freight traffic in Feb., 1922 than in Feb., 1921. Operating revenues were but a little more than 1% smaller than they were in Feb., 1921, while operating expenses were almost 16% smaller. In Feb., 1921, the roads had no net operating income, but an operating deficit of \$5,176,867.

In March, the results were the best which have been obtained since the railways began operating under the Transportation Act. Of course, the impending coal strike gave a large impetus to coal traffic, but statistics for last month show that gains were made in all traffic over that for preceding months and for the corresponding month of 1921.

Operating revenues for March were \$474,669,628, and operating expenses \$360,928,443, with net railway operating income of \$83,510,888, representative of an annual return of 5.83% on the valuation of the railways. The following figures for March show how the roads in the different parts of the U.S. are doing: Eastern District, net operating income, \$47,863,471, representing annual rate of return of 7.80%; Southern District, net operating income, \$11,093,394, representing annual rate of return of 4.99%; Western District, net operating income, \$24,554,023, representing annual rate of return of 4.1%.

The total net operating income earned by U.S. railways for the first three months of 1922 was \$160,998,907, representative of an annual rate of return of 4.51%, compared with a net operating income for the first three months of 1921 of \$27,574,407, which was representative of an annual return of but 0.77%. Great improvement in 1922 as compared with 1921 is therefore evident.

Rates.—The Interstate Commerce Commission's interpretation of the Transportation Act to the effect that state commissions cannot enforce intrastate rates which caused discrimination against interstate commerce, was upheld by a Supreme Court decision, and following the decision many state commissions withdrew their orders to the railways to refrain from charging rates on intrastate traffic which they were entitled to charge by the Interstate Commerce Commission's order in ex parte 74.

In preceding issues of Canadian Railway and Marine World, particulars were given of the general investigation into railway rates which was conducted by the Interstate Commerce Commission, and which was concluded on March 13 after three months of hearings. The Commission has had the matter of possible rate reductions under consideration ever since that time, and a Washington press dispatch of May 24, states that the Commission has ordered a decrease in freight rates of 14% in eastern territory, 13½% in western territory, and 12½% in the southern and mountain Pacific territory, the reductions to be effective July 1. The press report quotes the Commission as stating in the decision that "transportation charges have mounted to the point where they are impeding the free flow of commerce, and are thus tending to the defeat of the purpose for which they were established, that of producing revenue which would enable the carriers to provide the U.S. people with adequate transportation," and that "a general reduction in rate levels as substantial as the conditions of the carrier will permit will tend to stabilize conditions of all business." The report stated that passenger rate and sleeping car surcharges were not affected by the decision, and that rates on agricultural products were not affected, the reduction of 16½% made in western hay and grain rates last autumn and the voluntary 10% cut made by the railways on all agricultural products effective Jan. 1 being substituted for the reduction made by this latest order so far as agricultural products are concerned.

The press report also stated that the Commission had decided that the railways are entitled to earn 5½% on their valuation, in place of the approximate 6% return fixed as a reasonable return in the Transportation Act of 1920.

If the press report above referred to is correct in stating the amount of the rate reductions as 14%, 13½% and 12½% in the respective territories mentioned, it is evident that a large reduction will be made in the carriers' revenues. It will have been observed that in no month since the railways began operating under the terms of the Transportation Act have they been able to obtain a 6% return, and it is obvious that a large reduction in operating expenses will be necessary if they are to secure the 5½% return which the Commission has declared reasonable and just in future. As stated in the article dealing with wages and working conditions elsewhere in this issue, the Labor Board is at the time of writing in executive session, dealing with the wage disputes before it, and on the Labor Board's decision will depend in a large degree the U.S. railways' ability to improve their financial position. The Labor Board's decision will be awaited with great interest, as affording a strong indication of the direction railway regulation will take in the U.S. in the immediate future.

The G.T.R. and First Aid.—Twenty-five women members of the G.T.R. Montreal general office staff were given St. John Ambulance Society certificates of proficiency in first aid, by W. D. Robb, Vice President, May 12. The recipients were each given a gold pin, presented by Dr. A. J. Hutcheson, Chief Medical Officer.

Dominion Millers Appeal from Board of Railway Commissioners' Order.

The Board of Railway Commissioners' order 32,227, issued March 13, dismissed the Dominion Millers' Association application for an order directing the Canadian National, Canadian Pacific, Grand Trunk and other Canadian railways to reduce export rates on grain and grain products to that on wheat, particularly for lake and rail shipments, and also dismissed the Association's application regarding flour arbitrators over wheat for export. A deputation from the Dominion Millers' Association, with D'Arcy Scott as counsel, waited upon the Ministers of Justice, of Agriculture, of Customs, and of Trade and Commerce at Ottawa on April 19, and presented a petition in support of an appeal against the Board's order. Ontario and Quebec agricultural interests joined the Dominion Millers' Association, being represented by W. B. Roadhouse, Deputy Minister of Agriculture for Ontario, and Hon. J. E. Caron, Minister of Agriculture for Quebec.

The petitioners claimed that existing rates from lake ports on flour for export are about 30% higher than the rates on wheat for export, that this disparity is an unjust discrimination against shippers of flour, and that flour rates should therefore be reduced. It was pointed out that in the European markets Canadian export wheat comes into direct competition with Canadian export flour, and that, therefore, under the Railway Act's equity clauses there should be a parity, or at least a fixed reasonable spread between the rates on the two. The agricultural interests supported the petition on the ground that the wheat offal is needed for live stock, and that the discrimination encourages grinding overseas. The railways in rebuttal contended that present rates on wheat are low because of water competition; that the rates on flour are reasonable, and that to increase the rates on wheat from bay and lake ports would have the effect of diverting the traffic from Canadian to United States ports for export. The railways contended, in short, that compliance with the millers' demands would be merely the granting of a bonus to the milling industry. Decision was reserved.

Canadian National Rys. Passenger Rates.—H. A. Stewart, Leeds, Ont., asked in the House of Commons recently, how many different passenger rates are in effect on each of the systems of railways under government ownership in Canada, under what titles or headings the classifications are made, and what is the rate per mile for each classification; what percentage of the total number of passengers carried during the last financial year in each of the classes, and what percentage of the total yearly revenue of the last financial year was derived from each of such passenger rates? The Minister of Railways, in replying in the House of Commons, submitted four detailed statements which took up over six pages in the official report of the debates.

R. W. Scott, ex Superintendent, Montreal Terminals, G.T.R., in remitting his renewal subscription, writes: "Canadian Railway and Marine World is the best transportation publication in existence, and the only reliable one."

E. W. Beatty at Montreal Board of Trade's Centenary.

The Montreal Board of Trade's Centenary was celebrated by a dinner at the Windsor Hotel on April 29, at which E. W. Beatty, K.C., President C.P.R., who was one of the principal guests, in proposing the toast of the Dominion, referred to the presence of the Governor-General and the Dominion Premier, the acquaintance of the latter of whom he made as an undergraduate at Toronto University. He stated that he was not a believer in state socialism, believing that the most important factor in the economic foundation of Canada's future would be the value and appreciation given to individual effort. State socialism in its various forms, with all that it involves will not take the place of the sincere and honest efforts given our institutions, backed by initiative, spurred forward by hope of reward, and encouraged by the belief that the industry or enterprise which they have conceived, and whose interests they are forwarding, is one which can succeed. In concluding he said: "Canada needs immigration, and when I say immigration I mean immigration of capital as well as men. The success of the company, with which I am associated, but which I am, of course, not at liberty to mention by name, has contributed to the success of numerous other enterprises which have been dependent upon foreign capital for their initiation and their expansion. It is probably more necessary now than ever that encouragement to this free flow of capital and men should be given as never before."

Brotherhood of Railroad Trainmen's Meetings in Toronto.

The Brotherhood of Railroad Trainmen held their general meetings in Toronto, opening May 11, delegates representing over 200,000 members and 968 lodges in Canada and the U.S. being present. The meetings were presided over by W. G. Lee, President, who was assisted by T. R. Dodge, Assistant to President, E. King, Secretary, and Geo. Thomas, Trustee. The Brotherhood's meetings were held in Massey Hall, and the Ladies' Auxiliary met in the Masonic Temple, on Yonge St. On the opening day, Ben Hooper, the newly appointed Chairman of the U.S. Railroad Labor Board, spoke on the Esch-Cummings railway law, embodied in the U.S. Transportation Act of 1920, particularly in connection with its labor provisions, and the work of the Labor Board.

Among the many resolutions introduced and considered at the meetings were the following: 1. Expressing disapproval of the operation of motor trucks in competition with railways. It was pointed out that the operation of fleets of trucks entailed the use of the highways without the owners of the trucks making adequate contribution to highway maintenance costs; that the railways, with which the trucks compete, have to contribute very largely through taxation to the upkeep of the roads; that the wages paid in the trucking industry are smaller than paid in railway service, and that the effect of the truck operation is to tend to reduce train service employees' wages. 2. To provide for additional safety inspectors on railways, to be used principally for educating

employees to take proper care of themselves while at work. 3. Against trainmen having to ride on freight train cars on grades where it is not necessary. 4. Calling for more safety appliance inspectors. 5. Urging co-operation in banking and the establishment of co-operative banks in all principal Canadian and U.S. railway centers. 6. Declaring for a standard brake staff and dog on cars. 7. Calling for a proper checking up of substandard officers. 8. Calling for a rearrangement of seniority regulations. 9. Demanding the elimination of the handling of excessive parcel post mail by baggage masters. 10. Declaring that members of the organization should have preference over non-union employees in matters of employment, promotion, etc.

During the meetings addresses were delivered by W. Grant Edens, a former Vice President of the Brotherhood; H. A. Adams, head of the Safety First Organization on the Union Pacific Rd., and H. A. Rowe, of the National Safety First Council, Chicago. The reports submitted by the legislative representatives at Ottawa and Washington were approved. The remainder of the time was spent in routine business, and the focus of the meetings made it clear that the Brotherhood will adhere to its conservative policy which has characterized its activities in the past, and, while it will continue to co-operate with other labor organizations in efforts to secure improved conditions for labor generally, no entangling alliances will be entered into. The meetings are continuing as this issue goes to press.

A. McGovern, Toronto, for the past 15 years General Chairman for C.P.R. Eastern Lines. Brotherhood of Railroad Trainmen, was nominated by a caucus of Canadian delegates for the position of Canadian Vice President of the Brotherhood to succeed Jas. Murdock, who has become Dominion Minister of Labor. The salary is \$7,500 a year, with a per diem allowance when travelling. The caucus of Canadian delegates named J. Bryan for the insurance committee; H. Walters, Brockville, for the executive; and Jas. Conley, Ottawa, for the Board of Trustees.

Liability for Freight Lost in Transit.

G. Galbert and Sons, tanners, Montreal, sued the C.P.R. in the Quebec Superior Court recently to recover \$162 for five bundles of salted calf skins shipped on a C.P.R. steamship from France, and not delivered. The C.P.R. admitted delivery and paid \$48.00 in to court, claiming that to be the extent of its liability under the bill of lading. Justice Archer, in giving judgment May 11, stated that the bill of lading limited the company's liability to \$2 per cubic foot, and not exceeding \$20 in respect to any one package, unless the value had been declared in writing at the time of shipment and inserted in the bill of lading. The parties were bound by the bill of lading. The space occupied by the missing skins would cover 10 cub. ft., which at \$2 a cubic foot would be \$20 or \$97.33 in Canadian currency. Judgment was given for the plaintiffs for that amount, with interest and costs; the company's confession of judgment being insufficient.

The Newfoundland Government is reported to have made a contract with the Aerial Survey Co., for the carrying of mail from St. John's round the Fogo district.

Traffic Orders by Board of Railway Commissioners.

General order 363, May 10.—The application of Canadian Freight Association, on behalf of railway companies, under the Railway Act, 1919, sec 322, for approval of a proposed supplement, 19 to Canadian Freight Classification 16, containing certain increased, reduced, and additional rates, whereof notice has been given by the railway companies in The Canada Gazette, as required by the Railway Act, 1919, sec 322, and to the mercantile organizations enumerated in general order 153, November 4, 1915, the proposed changes having been considered at a conference of the representatives of the Grand Trunk Pacific and Canadian National Railways, the Canadian Manufacturers' Association, and the Montreal and Toronto Boards of Trade, held at Montreal March 28, 1922, when various objections filed with the Board were considered, and the proposed changes agreed to, modified, or eliminated; and upon the consideration of what has been filed, and the report and recommendation of the Board's Assistant Chief Traffic Officer. The Board orders that the proposed supplement as finally revised and submitted for approval by the Canadian Freight Association's Chairman by letter dated April 13, 1922, and as amended by letter dated May 1, 1922, be approved.

Railwaymen's Meeting at Island Pond.

A meeting of officials and employees of the G.T.R. and its associated lines in the Eastern United States was held at Island Pond, Vt., April 27, at which W. D. Robb, Vice President, G.T.R., after apologizing for the absence of Sir Joseph Flavell, Chairman of the Board, and Howard G. Kelley, President, referred to the importance of such meetings, at which the officers and the operating staffs could get together and discuss matters of common interest. The idea is to encourage and develop the spirit of co-operation which is so valuable, as better operation between all ranks of the staff means better service to the public. He referred to the pension and superannuation plans, the apprenticeship system, and the recreation facilities, upon which the company is spending thousands of dollars yearly, as tending to promote the loyalty of the employees to the company, which is being amply repaid therefor in the good feeling existing between the employees. In many ways advance the railway's interests in the communities in which they live and work, and in doing so they would be promoting their own success in life.

Sydney and Louisburg Ry. Rolling Stock.

A Sydney, N.S. press report of May 18, stated that work was about to be started upon repairs to the company's rolling stock, and added that there were trucks on the company's lines absolutely full of iron and steel, awaiting repairs to fit them for work on the railway and in connection with the Dominion Iron and Steel Co.'s plant.

Australian Wage Reduction.

A Sydney, N.S.W., press dispatch says that reduction of the basic wage for workmen in Australia to £3 18s. weekly has resulted in a saving to New South Wales Harbor and Water Departments of more than \$1,000,000. The N.S.W. Government has decided to abolish the 44-hour a week which was legalized by the late labor government.

Canadian Pacific and Canadian National Rys.' March Earnings and Expenses.

Canadian Pacific Ry. gross earnings for March were \$13,847,626, compared with \$14,705,726 for March, 1921, and operating expenses were \$11,427,120, compared with \$12,254,818 for March, 1921, leaving net earnings \$2,420,506, against \$2,450,908 in March, 1921, a decrease of \$30,402. The operating ratio for March, 1922 was 82.5. While the net earnings for March, 1922, were slightly smaller than for March, 1921, a comparison with March, 1920 shows that a great improvement has been affected. In March, 1920, gross earnings of \$15,715,936, combined with operating expenses of \$13,758,172, yielded a net of but \$1,957,764, while in March, 1922, a much smaller gross yielded a net larger by \$462,742.

A comparison of the results of the first three months of 1922 with those of the first three months of 1921 shows that a gross of \$36,489,294 in the first three months of 1922 is considerably smaller than in the first three months of 1921, when the gross earnings were \$41,940,143. The reductions in operating expenses which were accomplished during the first three months of this year, while large, were not sufficient to keep the net at the 1921 figure. Operating expenses for the first three months of 1922 were \$32,930,823, compared with \$38,034,418 in 1921, which left a net of \$3,558,471 in the first three months of 1922, against a net of \$3,905,725 in the corresponding period of 1921, a decrease of \$347,253.

While the Canadian Pacific Ry. in March was unable to derive as large net earnings as in March, 1921, the Canadian National Rys., which included the Canadian Northern Ry., Canadian Government Rys., and Grand Trunk Pacific Ry.), were able to reduce the operating deficit considerably. The National system's gross earnings for March, 1922, were \$9,418,100, compared with \$10,454,250 in March, 1921; and operating expenses were \$10,397,546, compared with \$12,987,209 in March, 1921, which made the operating deficit for March, 1922, \$979,446, compared with \$2,532,959 in March, 1921, an improvement of \$1,553,513.

The C.P.R. and Canadian National Rys., operating results for January and February, 1922 are commented on elsewhere in this issue, and the February figures are given in tabular form. By reference to the table referred to, by comparing the February earnings and expenses of both the C.P.R. and the Canadian National Rys. with those of March, the fundamental principle of the railway business will be made plain. For example, in February the C.P.R. secured only enough traffic to yield gross earnings of \$11,459,574, while operating expenses were \$10,757,051. In March the company secured traffic which yielded gross earnings of \$13,847,626, while operating expenses were \$11,427,120. That is, that while gross earnings increased as between the two months by \$2,388,052, operating expenses increased by only \$670,069. In other words, additional traffic which brought in a revenue of \$2,388,052, was at the same time accompanied by but \$670,069. The same principle is exemplified in the Canadian National figures. In February, the Canadian National Rys. secured only enough traffic to yield gross earnings of \$7,650,742, while operating expenses were \$10,026,571. In

March sufficient traffic was secured to yield gross earnings of \$9,418,100, while operating expenses were \$10,397,546. That is, that while gross earnings increased as between the two months by \$1,767,358, operating expenses increased by only \$370,975. In other words, additional traffic which brought in a revenue of \$1,767,358, was carried at an increased expense of but \$370,975.

While it is probable that more favorable climatic conditions, and possibly some favorable variation in items of expense, aided the railways to carry this additional traffic at an expense so disproportionate to its value, it is nevertheless true that a railway is able to carry additional traffic, up to the limit of the capacity of its road and equipment, at low additional expense. As

Canadian Railway and Marine World has consistently pointed out, this principle in the railway business is one that should not be lost sight of in Canada, for it is the operation of that principle to which Canadian people must look if they are to obtain what they desire—continually decreasing transportation costs. It cannot be too strongly emphasized that the great and fundamental need of Canadian railways is more traffic, and it will be chiefly on a basis of increasing traffic that rate reductions will be secured. The railways are here, and a certain amount of business is here for them to carry; what is wanted and needed is more business for them. If the country will provide the additional business, the railways will carry it at lower rates, because the additional business will permit them to derive adequate earnings even with lower rates. The whole thing resolves itself into the fact that the great fundamental need of Canada today is immigration of labor and capital, for the chief factors in the creation of additional traffic are increased population and industry.

The principle of increasing and decreasing returns as applied to the railway business, is as simple as it is true, and for that reason a good many of the country's people, among whom may be numbered many of their Parliamentary representatives, would be better employed in framing a good policy for the attraction of people and capital to the country than in trying to force the railways to reduce rates before they are in a position to do so. When we see that the C.P.R. had an operating ratio of 95.96 for January, 93.87 for February and 82.5 for March, we are compelled to wonder how sane and rational people can demand large and sweeping reductions in railway rates without expressing some concern as to whether railway operating expenses will be reduced proportionately.

While it is important to recognize the principle that decreased rates will come with increased traffic, and because of increased traffic, it is equally important to recognize the principle that it will be to the country's benefit to allow its privately owned railways to secure thoroughly adequate earnings, and to allow the Canadian National Rys. to earn large proportions of their operating expenses, and, ultimately, of their fixed charges, as is possible. Canada has had in the past a safe and sane policy of railway regulation; any suggestion to so regulate the railways as

to compel the C.P.R. to pay its dividends out of surplus, such as Mr. Crerar made in the House of Commons recently, is a suggestion for confiscatory control, and should be frowned upon. The C.P.R. in 1921 earned a return on the value of the property devoted to the public service of but 3.822%. The only way in which such a return could be characterized as unreasonable would be because it is too small, and as not constituting a fair return to invested capital. Our contention is that narrow and restrictive regulation of public utilities, particularly railways, results in great ultimate harm to the community wherein such regulation is carried on. We have seen the effects of such regulation in other quarters, and hope that Canada may experience none of it.

It is most desirable that the Canadian National Rys. be placed in a position to be able to earn their operating expenses over a full year, as soon as possible. While increasing traffic would ultimately enable them to do this, provided rates were not continually decreased to offset the benefits due to the increased traffic, it would be better for the country at large if these railways could be placed on a self-supporting basis, so far as operating is concerned, in the near future. A railway should be on a strictly commercial proposition, and those who receive transportation from it should pay for it, and not be helped to pay for it by others, through taxation. We hope to see the Canadian National Rys. a fine system in every sense of the word; it cannot be considered so while operating expenses are not being earned, and not until it is able to earn operating expenses will the situation contain elements of encouragement, or will our hopes concerning the property show some prospect of realization.

On the basis of the railway earnings for the first three months of this year, the railways can ill afford any rate reductions while operating expenses remain at their present level. Operating expenses should be reduced, without any reductions in rates whatever, to place the Canadian railway industry on a proper basis, or a basis comparable to that existing in 1916. To attempt to reduce rates, without reductions in operating expenses would be the height of folly, and if such reductions are made the country will be adopting a policy of narrow and restrictive railway regulation which will result, ultimately, in great loss to it.

C.P.R. Angus Shops Assessment.—The agreement between the C.P.R. and the Montreal City Council, under which the land and buildings of the Angus shops was fixed at \$400,000 for 20 years, expires May 1. Under the contract the company undertook to spend \$250,000 on buildings and to employ continuously not less than 1,500 men. In 1905, the number of men employed reached 4,506, with a wage expenditure of \$2,074,458, while for 1920, the number was 8,388, with a wage expenditure of \$11,981,258. In the course of the negotiations for fixing the value for the future the company proposed a fixed valuation of \$750,000, but the city executive committee on May 11 decided on \$1,000,000, and recommended the city council to approve of that amount for the next five years.

Grand Trunk Railway Co.'s Report for Calendar Year 1921.

Following are extracts from the report addressed to stockholders and issued recently over the signature of Howard G. Kelley, President, the other directors being Sir Joseph W. Flavelle, chairman of the board; J. N. Dupuis, merchant, Montreal; A. J. Mitchell, Vice President, Canadian National Ry., Toronto, and E. L. Newcombe, K.C., Deputy Minister of Justice, Ottawa: The board of directors submit the following report of the operations for the year ended December 31st, 1921:—

Income Account Condensed Statement.		
	Year 1921	Year 1920
Operating revenues.....	\$76,858,032.27	\$81,443,647.32
Operating expenses.....	71,179,292.80	76,213,815.16
Net operating revenue, 5,678,739.47		5,229,832.16
Railway taxes and uncollectible railway revenue.....	1,384,485.96	1,303,067.25
Railway operating income.....	4,344,243.51	3,925,764.91
Non-operating income, 8,634,101.55		7,706,272.77
Gross income.....	13,028,345.06	11,632,037.68
Deductions from gross income.....	27,842,797.42	16,231,142.21
Deficit transferred to profit and loss.....	14,064,442.36	\$4,599,104.53

The operating revenues were \$76,858,032, a decrease from 1920 of \$4,584,615 or 5.63%. Revenue from freight traffic was \$54,239,903, a decrease of \$8,802,150 or 6.65%. Number of revenue tons carried 21,687,749, a decrease of 424,474 or 1.76%. Revenue tons carried one mile 4,052,564,411, a decrease of 976,087,113 or 19.41%. Average haul per revenue ton was 186.86 miles, a decrease of 2.19%. Freight revenue per train mile was \$5.62, an increase of 35c, or 6.64%. Average revenue per ton was \$2.50095, an increase of \$0.29363 or 13.30%. Average revenue per ton mile was \$0.01338, an increase of \$0.00189 or 15.84%. Revenue from passenger traffic was \$15,510,164, a decrease of \$1,438,016 or 8.48%. Number of passengers carried was 11,609,762, a decrease of 597,215 or 4.89%. Average revenue per passenger was \$1,335.96, a decrease of \$0.05244 or 3.78%. Average revenue per passenger mile was \$0.03045, a decrease of \$0.00154 or 4.81%. Average distance per passenger was 43.87 miles, an increase of 0.47 mile or 1.08%. Revenue from mails was \$1,133,737, an increase of \$53,498 or 5.39%. Revenue from express was \$3,285,510, an increase of \$625,539 or 23.52%. Revenue from milk was \$242,755, an increase of \$8,805 or 3.76%. Revenue from switching was \$561,858, a decrease of \$223,489 or 28.46%. Revenue from dining and buffet was \$328,045, a decrease of \$21,385 or 6.12%. Revenue from demurrage was \$815,802, a decrease of \$262,255 or 45.37%.

Operating expenses were \$71,179,292, a decrease of \$5,034,523 from 1920, or 6.61%, as compared with a decrease of 5.63% in operating revenues. Maintenance of way and structures increased \$857,413 or 7.14%. Maintenance of equipment decreased \$3,293,924 or 15.61%. Traffic expenses increased \$279,724 or 21.45%. Transportation expenses decreased \$2,943,436 or 7.64%. Average loaded cars per freight train mile were 19.64, a decrease of 0.63, or 4.05%. Average empty cars per freight train mile were 11.31, an increase 3.38 or 42.62%. Average total cars per freight

train mile were 30.95, an increase of 2.55 or 8.98%. Average load per loaded freight car mile was 22.26 tons, a decrease of 1.35 tons, or 5.72%. Average load per freight train mile was 419.55 tons, a decrease of 36.34 tons or 7.97%. Miscellaneous operations decreased \$38,040 or 7.78%. General expenses increased \$116,324 or 4.17%.

Wages and Rates.—The U.S. Labor Board, by decision 147, ordered a decrease in wages to employees of approximately 13%, effective July 16, 1921, which order was also made effective by Canadian railways. The 40% increase in freight rates established by the Board of Railway Commissioners in Sept., 1920, was reduced by order of that Board to 35%, effective Jan. 1, 1921, and to 25%, Dec. 1, 1921. The 20% increase in passenger fares established by the Board in Sept., 1920, was reduced to 10%, effective Jan. 1, 1921, and the remaining 10% was cancelled as of July 1, 1921.

Pay Rolls.			
No. Employees.	Total pay roll.	Increase.	
1918.....	23,542	\$1,375,476.36	6.01
1919.....	30,617	42,617,415.93	11.34
1920.....	31,686	53,375,736.60	77.02
1921.....	29,138	45,865,171.10	52.11

Taxes for 1921 were \$1,325,577, an increase over 1920 of \$4,515 or 3.50%. Taxes per mile of road operated were \$367.00, compared with \$354.42 in 1920.

The capital stock outstanding at Dec. 31, 1921, was \$241,237,588.83, as under, there having been no change during the year:—4% guaranteed stock, \$60,833,333.33; 1st preference stock, \$16,644,000.00; 2nd preference stock, \$12,312,666.67; 3rd preference stock, \$34,884,535.43; ordinary stock, \$116,563,053.40.

The debenture stock outstanding at Dec. 31, 1921, was \$155,373,808.34 as follows, there having been no change during the year:—Grand Trunk 5%, \$20,782,491.67; Great Western 5%, \$13,252,222.67; Grand Trunk 4%, \$119,839,014.33; Northern Ry. 4%, \$1,499,979.67.

The total of interest bearing obligations outstanding at Dec. 31, 1921, was \$371,042,194.75. Principal retirements during the year were \$4,866,666.67, 6%, 3 year secured notes, due Jan. 14, 1921, \$14,600,000.00, 6%, 3 year secured notes, due Oct. 1, 1921, and \$719,780.00, 6% 2nd equipment mortgage bonds, due July 1, 1921. Principal issues during the year were \$25,000,000, 6%, 15 year sinking fund gold debenture bonds, dated Sept. 1, 1921, \$12,000,000, 6 1/2% 15 year equipment trust certificate F., dated Feb. 1, 1921, \$4,807,725 loan from Dominion Government under Appropriation Act, 1920-21, and \$47,553,621 loan from Dominion Government under Appropriation Act, 1921-22.

The Capital Expenditure Account at Dec. 31, 1921, amounted to \$465,462,954, an increase of \$24,765,040.21.

The Board desires to express its appreciation to the officers and employees for their faithful and efficient services.

Grain Shipped Through Canadian National Ry.—Elevator at St. John, N.B.—Following are particulars of grain shipped through the C.N.R. elevator at St. John, N.B., during the winter of 1921-22: Wheat, 1,179,869 bush; oats, 522,822 bush; corn, 1,161,570 bush; barley, 172,382 bush; rye, 3,041,647 bush. No grain was shipped through the Halifax, N.S., elevator.

The Bad Order Car Situation.

The Railway Association of Canada reported the total number of freight cars on Canadian lines for the 15 days ended April 15, as 203,604. The allowance for bad order cars on the A.R.A. basis, which assumes a total of 7% of the cars in bad order, worked out to 14,252, while the actual number was 21,949, an excess of 7,697 on the 7% basis. The figures 21,949 represent a percentage of bad order cars of 10.7. There were 34,870 surplus cars in good order, making the total not in use, 56,819, or a total of 42,667 idle cars on the basis of 7% being normally in bad order. For the 15 days ended May 1, the total number of cars on Canadian lines was 200,748. The allowance for bad order cars on the A.R.A. basis worked out to 14,052, while the actual number of cars in bad order was 22,293, an excess of 8,241 on the 7% basis. The figures 22,293 represent a percentage of cars in bad order of 11.1. There were 34,875 surplus cars in good order, making the total not in use 57,168, or a total of 43,116 on the basis of 7% being normally in bad order.

The American Railway Association's Car Service Division reports that the total number of cars on line on class 1 roads was 228,087 on April 15. Of these, 317,783 were in bad order, representing 13.9% of the total. On April 1, the bad order car percentage was 14. Freight cars idle, but in good order, and fit for use should traffic order, numbered 333,393 on April 15, this representing an increase of 73,788 over previous week. The principal increase, 65,559, was in coal cars, due to the miners' strike. There were 371,764 surplus cars in good order on April 22, 371,538 on April 29. Out of 1,030,876 box cars on line on April 15, 154,457 were in bad order, or 15%, compared with 14.9% on April 1. Out of 61,879 refrigerator cars, 8,003 were in bad order, or 12.9%, compared with 12.5% on April 1. Out of 964,911 gondola cars on line on April 15, there were 130,699 in bad order, or 13.5%, compared with 13.9% on April 1. Out of 81,954 stock cars on line on April 15, there were 9,485 in bad order, or 11.5%, compared with 11.7% on April 1. Out of 98,887 flat cars on line on April 15, there were 12,113 in bad order on April 15, or 12.2%, compared with 12.5% on April 1.

No improvement is evident in the Canadian bad order car situation during the year to date. On Jan. 1, there were 9.12% of freight cars in bad order; on Jan. 15, 8.82%; on Feb. 9, 9.3%; on Feb. 15, 9.8%; on March 1, 10%; on March 15, 9.91%; on April 1, 9.96%; on April 15, 10.7%; and on May 1, 11.1%. A slight improvement is evident in the U.S. situation. On July 1, 1921, the bad order car percentage on U.S. class 1 lines was 15.4, and this had increased slightly at the middle of August. By then the percentage had been reduced to 14, and since the beginning of this year it has run at about the same figure. The situation in Canada has not become so unfavorable as it has been, and still is, in the U.S. The scattering of cars and the deferring of maintenance, which characterized the period of U.S. Federal control, coupled with the financial troubles affecting the majority of the roads, have served to aggravate the bad order car situation on U.S. lines to a large extent.

Special Passenger Tariffs for Exhibitions, Holidays, Etc.

The Railway Act, 1919, provides in sec. 333 that the tariffs of tolls which railways shall be authorized to issue under the act, for the carriage of passengers between points on the railway, shall be divided into two classes, (a) The standard passenger tariff, and (b) special passenger tariffs. Sub-sections (2) and (3) provide what standard and special passenger tariffs respectively shall specify. T. L. Church, North Toronto, moved in the House of Commons, May 5, for leave to introduce bill 71 to amend the Railway Act, 1919. Several members having asked him to explain the bill,—"The object of the amendment is to restore the special rate that applied prior to the war in regard to tickets purchased on such special occasions as Thanksgiving Day and certain other holidays, and for the purpose of attendance at the fall fairs, conventions and sporting events throughout Canada. Before the war, single fares and a fare and a third was charged, instead of the full return fare, to persons attending various functions of this character on certain days, and special occasions, and conventions of different kinds held in the spring by farmers' and other organizations. In connection with sporting events, such as soccer, lacrosse, football and hockey and other games, there was also a cut rate for week ends. I admit that during the war it was necessary, in the interests of economy, to curtail these concessions. But now that the war is over the people expect that after the country has spent some \$900,000,000 directly and indirectly in aid of the railways they shall be given some privileges in return besides the privilege of being always called upon to pay taxes. The United States have restored the old special rates that obtained for these events prior to the war, with the result that there has been a large increase in the earnings of the railways from this class of traffic. I will read from letters I have received in reference to this matter. J. Lockie Wilson, Superintendent, Ontario Agriculture Department, who has the supervision of some 360 fairs in the province, urges the restoration of the old rate in the interests of these fairs, which have a distinct educational value and make for the general good of the country. J. G. Kent, Managing Director, Canadian National Exhibition Association, writes:—"The public are clamoring for a return to pre-war conditions, and we have been urged by letter and personal interview from all parts of the country to bring before the Government the necessity of reducing regular fares for these various occasions." P. J. Mulqueen, President, Royal Canadian Henley, and chairman, Ontario Athletic Commission, also writes urging a restoration of the old special rates to prevent unrest and encourage sport and recreation. And A. P. Westwiler, Secretary, Royal Agricultural Winter Fair, urges that steps be taken to restore the old rates. There is, he says, a general and insistent demand in this matter, and I move that the bill be given its first reading."

The motion being agreed to, the bill was introduced as follows: to add to sec. 3, the following subsection:—" (4) Special passenger tariffs specifying a lower toll or tolls to be charged by the company for passengers going to and returning from places where exhibitions, fairs, games or meetings of any kind are

being held, and special passenger tariffs specifying a lower toll or tolls to be charged during holiday seasons shall be established under the provisions of this act, and if any company fails to establish such special passenger tariffs for such purposes or if the toll or tolls in any such proposed tariff are deemed by the Board" (of Railway Commissioners) "to be too large, the Board shall have power to prescribe the toll or tolls that shall be charged. The Board shall also have power to prescribe the conditions under which, and the period or periods during which, such special tariff shall apply or be in force."

The bill having been read a first time, Mr. Church moved that it be given its second reading on the same day, but the Speaker having pointed out that this could only be done by unanimous consent, and some members having objected, the second reading was deferred. On May 11, the Prime Minister said that Mr. Church was anxious to have the bill go to the committee on railways, canals and telegraph lines, and with the House's consent, he moved that the item of public bills and orders be returned to, so that the second reading of the bill might be moved. This was carried and the bill was read a second time.

Railway Rolling Stock Orders and Deliveries.

Canadian National Rys. have ordered two 30-passenger gasoline railway motor cars from Ledoux, Jennings, Ltd., Montreal.

Montreal Locomotive Works, during April, delivered one 4-wheel switching locomotive, 9 x 14-in. cylinders, to St. Lawrence Brick Co., and 4 class 4-8-2 locomotives, 22 x 26-in. cylinders, to South African Rys.

The C.P.R., between April 11 and May 11, received 3 steel sleeping cars, from its Angus shops, Montreal, the frames for which were made by National Steel Car Corporation. A self-propelling pile driver and a 160-ton wrecking crane, bought outside, were also received.

Canada Creosoting Co.'s 120-tie tram cars, which have been built by Canadian Car and Foundry Co., as mentioned in our last issue, are to be used in the creosoting of railway ties, and are built in circular shape to enable them to enter the retorts carrying a load. The framing consists of two 3 x 2½ in. angle wheel pieces, which support two angle end sills to a semi-circular shape. To the top of the end sills is fastened a semi-circular bale rod of round iron, to hold the load in position. The running gear consists of cast iron wheels 10 in. diameter, mounted on cold rolled steel axles, with roller bearings, the axles being completely encased in a cast iron housing, which also carries the roller bearings. The general dimensions are: Width extreme, 6 ft. 7½ in.; height rail to top of bale rod, 6 ft. 4 11-32 in.; length over buffer, 5 ft. 4¾ in.; wheel base 3 ft. 2 in.; back to back of wheel flanges, 2 ft. 3 in.

The 50 express refrigerator cars which the C.P.R. is having built by Canadian Car and Foundry Co., are of composite construction, with steel underframes, and wooden superstructures. They are equipped with steam heat line and air

and signal line, together with buffing gear of the passenger car type, to enable them to be used in passenger train service. The under frames consist of 2 fish belly center sills, having 5-16 in. web plate, with top and bottom cover plates, the holes braced and rivetted together. The cross bearings have 5-16 in. diaphragms, with top and bottom cover plates. The wooden superstructures are braced and fastened to the underframe construction with tie rods. The icing arrangement consists of 4 brine tanks in each end of the car, fitted with brine tank hand holds and retaining valves. The floors are insulated with 4 courses of ½ in. hair felt, and sides with 3 courses of ½ in. hair felt and 1 course of ¾ in. sheeting. The roof has 6 courses of ½ in. hair felt, with ¾ in. sheeting between every two courses. The ends are insulated with 3 courses of ½ in. hair felt and 2 courses of ¾ in. sheeting. The trucks are of the 4 wheeled passenger type with Commonwealth type cast steel casters, truck bolsters and spring planks. The cars have the following specialties: Westinghouse L.M., 1412 air brake equipment and type K air signal equipment, Miner ASPX friction draft gear and B10 buffers; A.R.A. type D couplers, and XL forged coupler yokes; Murphy outside metal roof, type XLA flexible no. 2; Mine refrigerators and door fasteners, Stuki side bearings, and wood journal boxes for 5½ by 10 in. journals, Simplex brake beams; Grod sliding chairs of 4 point suspension springs; steel tired wheels 36¼ in. diameter, with cast steel centers; quadruple elliptic and helical coil equalizer springs, and C.P.R. passenger type, cast iron brake shoes with steel insert.

Salaries of Railways and Canals Department Officials.—When the House of Commons was in committee of supply recently, on the Railways and Canals Department estimates for salaries, Hon. J. A. Stewart, Lanark, Ont., ex-Minister of Railways, said: "I desire to make an observation with reference to the salaries of the higher-paid officials. In the consideration of civil government estimates the opinion was expressed, from both groups on this side of the House, that, having regard to the general tendency towards deflation, the salaries of the higher-paid officials might very well be left on the basis of 1921. In connection with this department, in regard to which I have some little knowledge, I think that if the higher-paid officials had directed their unquestioned talents to private and corporate interests with the same devotion as they have applied themselves to the public service, they would be in receipt of very much larger salaries than are provided in these estimates. I entirely support the vote under consideration."

The Canadian Ticket Agents Association's members, and their dependents, have been invited by the Northern Navigation Co. of Ontario, to a complimentary trip on the s.s. Noronic, from Sarnia, Ont., to Duluth, Minn., and return, starting on July 7. The annual business meeting will be held on board.

C.P.R. Agents' Monthly Meeting.—The next monthly meeting of the C.P.R. eastern officials and agents will be held at Pembroke, Ont., June 6. The Pembroke Transportation Co. will take the visitors on a trip on the Ottawa River as far as Fort William.

Telegraph, Cable and Telephone Matters.

Canadian National Telegraphs have closed offices at Hillier, Kabina, Penhurst, Walsingham and Washburn, Ont.; Uno, Man.; and Lyalta, Alta.

R. E. Tait, who died at Outremont, Que., recently, was for many years until his retirement in 1920, cashier, C.P.R. Telegraphs, Montreal, which position he had held since Sept., 1886.

The Western Union Telegraph Co., which invited tenders recently for building a cable steamship, is reported to have given the order to Blohm and Voss, Hamburg, Germany, for \$650,000.

The Egyptian radiotelegraphic station was placed in operation April 24, and communication opened with the station at Leffland, Eng. The rate on messages between Leffland and Egypt is 9d. a word compared with 1s. a word by cable. Press messages are taken at 2½d. a word for northern Egypt, and 3½d. a word for Palestine.

The Pacific Cable Board will meet in London, Eng., in June, to decide as to the duplication of the Pacific cable, at an approximate cost of £2,000,000. One of the Board's representatives was in Fiji recently enquiring as to landing rights, and he was expected to report to the directors in time for the meeting. It is about two years.

The Commercial Cable Co. announces that arrangements have been made with the Irish Free State provisional government for direct cable communication with the U.S. Hitherto U.S. messages were received at Waterville, Ireland, where the cable lands, transmitted to London, Eng., and return to Ireland. By the new arrangement, this latter transmission will be eliminated.

J. Mitchell, whose appointment as Superintendent of Telegraphs, Eastern Division, C.P.R., Montreal, was announced in our last issue, was not there, and entered C.P.R. Telegraphs service in 1886 as an operator, and held different positions to chief operator, and subsequently Inspector of Telegraphs, Montreal. From 1918 to Apr. 28, 1922, he was Superintendent of Telegraph Traffic, Eastern Lines, Montreal.

The following C.P.R. Telegraphs appointments have been effective May 1: C. W. Macdonald, heretofore chief operator, Montreal, appointed inspector, Alberta Division, Calgary, Alta., succeeded by W. S. Emery, heretofore agent, Halifax, N.S.; A. P. Anderson, agent, Sydney, N.S., appointed agent, Halifax, N.S., vice W. S. Emery; R. Blake, heretofore agent, New Glasgow, N.S., appointed agent, Sydney, N.S., vice A. P. Anderson; J. M. Sullivan, Truro, N.S., appointed agent, New Glasgow, N.S., vice R. Blake.

W. D. Neil, whose appointment as Assistant Manager of Telegraphs, Eastern Lines, C.P.R., Montreal, was announced in our last issue, was born in Ontario, and entered C.P.R. Telegraphs service in 1905 as an operator. His experience covers work on the C.P.R. Western Lines, as operator, chief clerk to Superintendent of Telegraphs, and agent, and also as Superintendent of Telegraph Traffic, Eastern Lines, Montreal. From June 1916 to Dec. 1918, he was Superintendent of Telegraphs, Eastern Division, Montreal, and from Dec. 1918 to Apr. 28, 1922, Superintendent of Telegraphs, Ontario Division, Toronto.

W. J. Camp, Assistant Manager of Telegraphs, Eastern Lines, C.P.R., Montreal, who, as announced in our last issue, has been transferred to the retired list, was born at Oakville, Ont., Apr. 22, 1857, and commenced his telegraph career in the G.T.R. freight office at Prescott, Ont. He entered Dominion Telegraph Co.'s service in 1874, and was, to 1875, operator, Prescott, Ont.; 1875 to 1876, bookkeeper, Montreal; 1876 to 1877, local manager, Watertown, N.Y.; 1877 to 1878, on railway work in the U.S., and night chief operator, Dominion Telegraph Co., Montreal; from 1878, train dispatcher, Quebec, Montreal, Ottawa & Occidental Ry., now part of the C.P.R., and subsequently, to 1881, with Dominion Telegraph Co., Montreal; 1881 to 1883, with Great North Western Telegraph Co., Montreal; 1883 to 1886, in private employment. On the inauguration of the C.P.R. Telegraphs in 1886, he was appointed Electrician, and in 1889 was appointed Superintendent of Telegraphs, Eastern Division, C.P.R., Montreal; 1903 to 1911, Electrician of the entire C.P.R. telegraph system, and in 1911, Assistant Manager of Telegraphs, Eastern Lines.

William Marshall Thompson, who has been appointed Superintendent of Telegraphs, Ontario Division, C.P.R., Toronto, was born at Long Wharton, England, May 2, 1879, and commenced telegraph service Oct. 1, 1895, since when he has been, to Dec. 8, 1895, operator, C.P.R., Ingolf, Ont.; Jan. 1896 to Aug. 1, 1898, in other business in the United States; Aug. 1, 1898, to May 26, 1899, agent and operator, Manitoba and Northwestern Ry., Neepawa and Keyes, Man.; May 27, 1899, to July 31, 1900, operator, C.P.R., Medicine Hat and Calgary, Alta.; Aug. 15, 1900, to Dec. 15, 1902, operator, Great Northwestern Telegraph Co., Montreal; Dec. 16, 1902, to Mar. 5, 1904, operator and dispatcher, C.P.R. North Bay, Ont.; Mar. 6 to May 15, 1904, commercial operator, C.P.R., Montreal; Oct. 17, 1904, to Oct. 31, 1905, operator in broker's office, Montreal; Oct. 17, 1904, to Oct. 31, 1905, commercial operator, C.P.R., Winnipeg; Nov. 1, 1905, to July 1, 1910, agent, C.P.R. Telegraphs, Brandon, Man.; July 1, 1910, to July 11, 1911, manager, Grain Exchange Branch, same company, Winnipeg; July 12 to Dec. 31, 1911, agent, same company, Saskatoon, Sask.; Jan. 1, 1912, to Aug. 19, 1913, chief operator, same company, Winnipeg; Aug. 20, 1913, to Mar. 12, 1915, agent, same company, Winnipeg; Mar. 14, 1915 to May 31, 1916, chief operator, same company, Montreal; May 31, 1916 to 1918, Superintendent of Telegraph Traffic, Eastern Lines, C.P.R., Montreal; 1918 to Apr. 30, 1922, Superintendent of Telegraphs, Eastern Lines, C.P.R., Montreal.

The Canadian National Telegraphs Traffic Department held its sixth general conference at Toronto recently, extending over two days. The meeting was opened by G. D. Perry, Vice President and General Manager, who turned its proceedings over to C. E. Davies, General Traffic Superintendent, who presided. S. B. Hair, General Supervisor of Traffic Service, Western Union Telegraph Co., New York, spoke on how to obtain accuracy and speed of service. J. Hough, Division Traffic Superintendent, Western Union Telegraph Co., New York, spoke on performance attained by team work and competition. H. Krum, General Manager, Morkrum Printing Telegraph Co., Chicago, demonstrated a new automatic printer. Other addresses of an educational nature were given by

members of the head, district, and local office staffs, which were followed by discussions. A dinner and entertainment was held at the King Edward Hotel on the first evening, the tables, arranged in three columns, extending from a head table, and representing the true organization of commercial, traffic and plant departments, were decorated with a miniature telegraph line, electrical displays and Easter lilies. The gathering enjoyed a recital by radiophone, broadcasted from the Canadian Independent Telephone Co.'s plant, Dr. Culver, that company's Physician, addressing the traffic officials from coast to coast, by radiophone, extending his compliments towards the fellow craft. Songs and sketches were given by members of the Traffic Department's staff and there was also dancing. C. E. Davies, General Traffic Superintendent, was given a travelling bag.

Among the Express Companies.

The Canadian National Ex. Co. opened an office at Sherrington, Ont., Apr. 25. The Canadian National Ex. Co. will open offices, June 1, at Grand View, N.B., and Alix, Alta.

The Canadian National Ex. Co. has closed its office at Forestville, Ont.

The Canadian National Ex. Co. has opened offices at Kingsburg, Fortierville, Parisville, Duchene and Des Chailions, Que.

G. S. Armstrong, heretofore in General Superintendent's office, Dominion Ex. Co., Toronto, has been appointed agent at Fredericton, N.B., vice W. E. Little, who has left the company's service to engage in other business.

The Canadian National Ex. Co. has closed its offices at Hawes, Interlaken and Pochontas, Alta., on account of the Canadian National Rys. having discontinued its train service between Snaring Jct. and Pochontas, Alta., 14.2 miles.

Canadian National Express Co. Ltd., with an authorized capital of \$1,000,000, and head office at Toronto, has been registered under the British Columbia Companies Act, to carry on business in that province. R. W. Hamington, Vancouver, B.C., being its attorney.

Railway Accidents Throughout Canada.—The total number of accidents reported to the Board of Railway Commissioners during April, was 161, resulting in 14 persons being killed, and 163 being injured. Of those killed, 1 was a passenger, 6 were employees, and 7 were others, while of the injured, 19 were passengers, 122 were employees, and 22 were others. Under "others" are included 7 persons killed and 22 injured, in 6 highway crossing accidents, 3 of those injured being employees. In 5 of these accidents the crossings were unprotected, and in the other the crossing was protected by a flagman, who was injured. Automobiles and motor trucks were concerned in 5 of the accidents, and a wagon in the sixth.

Coal for Intercolonial Railway.—At a meeting of the House of Commons public accounts committee in Ottawa, May 17, B. Macdonald, Pictou, N.S., called attention to a discrepancy of \$2,489.94 by the Intercolonial Ry. to the Canadian National Rys. for coal, and it was decided to call R. C. Vaughan, Vice President, Purchasing, Supplies and Stores Department, C.N.R., and A. L. Graburn, General Fuel Agent, C.N.R., to be examined in regard to the same.

Electric Railway Department

The Canadian Electric Railway Association's Annual Meeting at Quebec.

As this issue of Canadian Railway and Marine World goes to press, the Canadian Electric Railway Association's annual meeting is in progress at Quebec. The program was given in Canadian Railway and Marine World for May, but as some slight changes were made subsequently, it is repeated below as finally revised. The meetings are being held in the Drill Hall on Grand Allée, on the first floor up, the exhibits being displayed on the ground floor.

May 31, Wednesday.—Starting at 3 p. m. Meeting of executive committee; preliminary meeting of associate members; registration at Chateau Frontenac.

June 1, Thursday.—9 a. m. Registration at Drill Hall in booth at east end, for both active and non active members.

9.30 a. m. Addresses of welcome by the Lieutenant Governor of Quebec Province, Sir Charles Fitzpatrick, and Mayor Samson, of Quebec City, followed by an inspection of the exhibits.

Business session. Minutes of last annual meeting; President's address; reports by Secretary, Treasurer, and special committees; appointment of nominating committee; general business; and inspection of exhibits.

1 p. m. Get-together luncheon for members, associate members and ladies, at Chateau Frontenac, with short address by prominent guest.

Immediately following the luncheon the members' general assembly around the Champlain monument, on Dufferin Terrace, to be photographed.

2.30 p. m. Paper on Valuation of Street Railway Assets, their Maintenance and Depreciation, by L. A. Herdt, D.Sc., E.E., consulting engineer, Montreal. Discussion to be led by H. E. Weyman, Manager, Levis County Ry.

2.45 p. m. For ladies, sight-seeing trip round Quebec by electric railway car.

4 p. m. Paper on the Modern Street Railway Motor, by J. K. Stotz, Canadian Westinghouse Co. Discussion to be led by W. G. Gordon, Railway and Traction Engineer, Canadian General Electric Co.

5 p. m. Inspection of exhibits.
7.30 p. m. Association dinner at Chateau Frontenac, for members, associate members and ladies, presided over by Lieut.-Col. J. E. Hutcheson, General Manager, Montreal Traction Co., and director Quebec Ry., Light, Heat & Power Co.

10 p. m. Dancing. Band concert on Dufferin Terrace, 9 to 11 p. m.

June 2, Friday.—9 a. m. Inspection of exhibits.

10 a. m. Paper on Motor Buses and Trackless Trolleys, by D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co. Discussion to be led by W. M. Manz, Ohio Brass Co.

11.30 a. m. Moving pictures, "The Romance of the Rail and Power," by Canadian Westinghouse Co.

12.30 p. m. Inspection of exhibits.

2.30 p. m. Paper on Welded Track Joints, by E. B. Entwistle, Lorain Steel Co. Discussion led by W. F. Graves, Chief Engineer, Montreal Tramways Co.
3.30 p. m. Moving picture exhibit, by National Safety League and Dominion Wheel and Foundries, Ltd.

4.30 p. m. Trip to Quebec Bridge, by

steamboat, for members, associate members and ladies. Light refreshments will be served.

6 p. m. Inspection of exhibits.
9 p. m. Reception and ball at Chateau Frontenac. Tickets, \$2.

June 3, Saturday.—9 a. m. Inspection of exhibits.

10 a. m. Unfinished business, and election of officers.

To be followed by a trip to Montmorency Falls and Ste. Anne de Beaupre. A steamboat trip to the Saguenay has also been arranged to leave Quebec June 3, at 8 a. m., returning to Quebec June 5.

The Royal Canadian Artillery Band, under the direction of Capt. Chas. O'Neill, Mus. Bacc., will provide a musical programme on June 1, at the opening by the Lieutenant Governor and will give a concert on June 1, from 9 to 11 p. m. on Dufferin Terrace. An orchestra will play in the Drill Hall on June 1 and 2.

Exhibits by Manufacturers.

As stated in previous issues, exhibits of electric railway supplies, etc., are being shown, for the first time, in connection with the meeting, and the whole ground floor of the Drill Hall on Grand Allée is devoted to them. R. Mayne-Read, chairman of the exhibits committee, has displayed great energy, and spent a large amount of time, in arranging for the location of spaces, dividing of them off, decoration of the hall, the supply of d.c. current, and the innumerable details involved.

The following are the numbers of the spaces allotted up to date, the names of the exhibitors, the principal things they will exhibit, and their representatives' names. Where full data is not given, it is owing to the fact that the exhibitors have not supplied them in time for this issue.

North Side of Hall.

1. Canadian Railway and Marine World, Toronto, the Canadian Electric Railway Association's official organ. Acton Burrows, Proprietor; A. A. Burrows, Business Manager.

2. Electric Traction, Chicago, Ill. C. L. Van Auken, Editor and Business Manager.

3. Canadian Westinghouse Co., Hamilton, Ont. Accessories for safety cars, showing door opening engine, engineer's valve, circuit breakers and parts for operating same, accessories and repair parts of street railway motors, showing coils and photographs of installations and equipment. G. F. Foot, Assistant to Manager of Sales; T. F. Dryden, Manager, Toronto office; H. T. Gibbs, Sales Engineer, and H. A. Cooch. The Canadian Westinghouse Co. will also provide a film entitled "The Romance of the Rail and Power," which will be shown as a moving picture on June 2, at 3.30 p. m.

4. Ohio Brass Co., Mansfield, Ohio. Electric railway, line material, rail bonds, third rail insulators, porcelain transmission insulators and car equipment specialties, including headlights. M. W. Manz, Commercial Engineer. D. MacLaughlin, Car Equipment Specialist. P. A. Hinds, District Sales Manager.

5. Taylor Electric Truck Co., Troy, N.Y. John Taylor, President.

6. Ottawa Car Manufacturing Co., Ottawa, Ont. Trolley wheels, trolley harps, journal brasses, motor bearings, controller fingers, seats, trolley ears, cross over switches, toggle springs, step treads, sash and anti-rattlers, no-staff brake, car fittings and trimmings. W. H. McIntyre, Manager; F. S. Beattie, Superintendent. Car Department.

7. Canadian General Electric Co., Toronto. W. G. Gordon, Railway and Traction Engineer; J. W. Pilcher, Manager, Montreal office; C. McMillan, Manager, Quebec office.

8. Lyman Tube & Supply Co., Montreal; — Anti-climbers, ball and roller bearings, brakes, car destination route and route number signs, car lighting fixtures, car signal system, carbon brushes, cord connectors, commutators, slotting files and truing stones, foot gongs, gears and pinions, gear cases, grip-lock chain, hand straps, cow head-lights, life guards, lightning arrestors, mechanical ties, oilers, rattan for snow sweepers, roll and block chain, sand traps and valves, steel tubing, trolley bases, trolley catchers, trolley cord, trolley wheels. Hugh Millar, Managing Director; H. M. Fierro, Sales Engineer.

9. Dominion Wheel & Foundries Ltd., Toronto. F. J. Neale, Vice President; G. W. Lyndon, President, Association of Manufacturers of Chilled Car Wheels.

10. Railway and Power Engineering Corporation, Toronto. Armature coils, car seats, electric car heaters, gear cases, pneumatic door and step mechanism, tail light signs, trolley catchers and retrievers. F. J. Neale and D. M. Galloway, Vice Presidents; V. E. Foreman, Sales Manager; A. F. McLachlin, Montreal representative; National Pneumatic Co., Philadelphia, Pa. J. Casey and F. Paul, Nichols-Lintern Co., Cleveland, Ohio. Consolidated Car Fender Co., Providence, R.I., and Wendell & McDuffie Co., New York.

North center of hall.

11. Canadian Car & Foundry Co., Montreal, Car products. E. R. Viberg, Mechanical Engineer.

12. Witherow Steel Co., Pittsburg, Pa. Rolled tie rods. W. C. Emory, Metallurgist.

13. Consolidated Steel Corporation, Montreal. W. H. Stewart, Canadian Agent. H. H. Hines and T. C. Berningham, also N. E. Salsich and J. Budd, Bethlehem Steel Co.

14. Canadian Street Car Advertising Co., Montreal. A. S. Laing, Secretary-Treasurer.

15. Don M. Campbell, equipment broker, Preston, Ont. Transit Equipment Co., New York. W. Marshall, President; McGuire-Cummings Mfg. Co., Chicago and Paris, Ill.; Cleveland Armature Works, Cleveland, Ohio. Lindsley Bros. (Canadian) Co., Preston Ont. C. Lindsley, President.

16. Tool Steel Gear & Pinion Co., Cincinnati, Ohio. C. E. Sawtelle, Vice President and General Manager, Allan Supply Co., Toronto, Canadian agents.

17. Southern Press Ltd., Montreal. Tickets and transfers, posters, hangers, booklets. W. W. Southern, Manager. R. B. Cairns, representative.

South Center of Hall.

18. Canadian Cleveland Farebox Co., Preston, Ont. Models of fareboxes. M. C. McElligott, President and General Manager; L. L. McElligott, Vice President and Secretary; E. M. Ross, Superintendent. Universal Lubricating Co., Cleveland, Ohio. C. B. Arthur, President; H. H. Lytle, Sales Manager; M. C. McElligott, Canadian representative.

19. Canadian National Carbon Co., Toronto. Industrial brushes, including plain and special welding carbons, railway motor brushes and automotive brushes. The display will include one of the company's brushes, showing each step of the manufacturing process. R. M. Oxley, Division Sales Manager, Province of Quebec; Mr. Webster, Brush Engineer, National Carbon Co., Cleveland, Ohio, and J. L. Bildeau.

20. Standard Underground Cable Co. of Canada, Hamilton, Ont. R. M. Dewhurst, Assistant Manager of Sales; H. C. Barber, Manager, Ontario district; G. Kirlin, Manager, Eastern district.

21. Canadian Brill Co., Preston, Ont., and J. G. Brill Co., Philadelphia, Pa.

22. Ferranti Meter & Transformer Manufacturing Co., Toronto. High tension indoor and outdoor disconnecting switch, choke coils, bus supports and pipe frame fittings, manufactured by Electric Power Equipment Corporation, Philadelphia, Pa., also Ferranti pole type service transformers, and indoor and outdoor current and potential transformers, and new type F D meter. Lt.-Col. G. C. Royce, Vice President, J. J. Dougherty, Manager, Montreal District.

24. Canadian Steel Foundries Ltd., Montreal. Track manufactures, switches, mates and crosses. W. H. Woodward, Sales Manager; O. C. Rehfs, Mechanical Engineer; J. L. Reid, General Superintendent.

South Side of Hall.

25. Hunter Joint Block Co., Ottawa, Ont. F. Hunter, representative.

26. Cheatham Electric Switching Device Co., Louisville, Ky. Automatic switch throwing device, or point shifter, and device for preventing trailing car from splitting the switch under the forward car. E. S. Olmsted, Vice President and Electrical Engineer, J. Carter Stewart, Vice President. Nachod Signal Co., Louisville, Ky. Car-counting overhead contact signal; headway recorder, of trolley contact type, to check passing of cars at any given point. The block signal will be operated by d.c. current, and a miniature train of cars will demonstrate the various conditions that the block signal is designed to take care of. R. M. Robinson, Sales Engineer.

27. United States Steel Products Co., Montreal. Sections of street railway rails and special trackwork. A. W. Allyn, Manager, Steel Department; E. B. Entwistle, General Manager Lorain Steel Co., Johnstown, Pa. W. B. Gresham, Manager Lorain Dept., New York; W. H. Lipscomb, Manager Electrical Wire Rope Dept.; C. H. Brunke, Manager and Engineer, Toronto; H. W. Maxson, Asst. Manager, Steel Dept., Montreal; G. A. Childs, Manager Wire Rope Dept., Montreal.

28. C. E. A. Carr Co., Toronto. Canadian representatives: B. J. Varney & Co., Grinnell, Ohio; Miller Trolley Shoe Co., West Newton, Mass.; National Car Wheel Co., Pittsburgh, Pa.; St. Louis Car Co., St. Louis, Mo.; Peter Smith Heater Co., Detroit, Mich.; Van Dorn & Dutton Co., Cleveland, Ohio; White Mfg. Co., Goschen, Ind. C. E. A. Carr.

29. Dawson & Co., Montreal. J. A. Dawson.

30. J. A. Everell, Quebec. Silent conductor, for electric railway cars, to announce streets and stations. R. MacMahon.

31. Northern Electric Co., Montreal. Wires and cables, and railway overhead material; full operating line of telephone car dispatching equipment, including portable telephone sets, line poles and accessories by means of which a car on any part of an electric railway system may communicate with headquarters; full size industrial automatic exchange, with telephones; also radio equipment. E. C. McGovern, Sales Manager, Appliance Division; G. B. Campbell, Radio Sales Division; and M. P. Murphy, Automatic Telephone Sales Division.

32. Sarnia Bridge Co., Sarnia, Ont. International steel twin ties. R. M. Norton, President; H. B. Fenton, Vice President.

33. Ontario Safety League, Toronto. J. F. H. Wyse, General Manager.

34. Vickers Limited, London, England, and Montreal. R. S. Griffith, Agent and Importer; L. D. Palmer, representative.

35. Electric Railway Journal, New York, N.Y. L. W. Sellingsberg, Vice President; H. H. Norris, Managing Editor.

36. Electrical News, Toronto. W. R. Carr, Ph.D., Managing Editor.

D.C. current has been installed in the Drill Hall, for the use of those who wish to have moving exhibits, and who have been located on the north side of the hall.

The President's Address.

Following is the address of the President, G. Gordon Gale, as delivered at the opening session, on June 1: "It is my privilege, and I can assure you that it is also my pleasure, to address you on this our 18th anniversary. At our last annual meeting sweeping changes were made in our constitution and by-laws to include municipally owned railways and manufacturers within the Association's membership. It will be interesting to note the effect this change of policy has had upon the Association and its work. I shall, therefore, briefly review our activities during the past year.

"Early in 1921 every electric railway in Canada, and the more important manufacturers, were fully advised of the Association's aims and objects. In addition, all prospective members were forwarded complete reports of the Association's activities, with the result that the active membership has increased to 307, including practically all the important electric railways in Canada.

"The gain in associate membership is also gratifying. We now have enrolled most of the large manufacturers of electric railway apparatus and equipment in Canada and in the United States. Including both classes, our membership shows an increase of 150%. To provide for new conditions it was found by your executive committee desirable to make further changes in the by-laws, and you will be asked to confirm these at this meeting.

"An unusual number of enquiries for information were sent in by members, and it was particularly interesting to note the prompt replies received to questionnaires, which often contained valuable and confidential data. The number and promptness of these replies enabled the Secretary to render effective service to those seeking this information. For the first time charts were prepared of wages and operating

data, and many favorable comments were received upon this method of compiling the information. In addition to the ordinary routine work of the year, the proceedings for the past five years were compiled and printed. These are now ready for distribution to member companies.

"Meetings of your executive committee were held in Ottawa, Toronto, Montreal and Quebec, at regular intervals. Following these meetings a letter was sent out to all members informing them in a general way of the more important proceedings. These communications assisted the members in keeping in touch with the Association's activities in matters affecting the industry, and perhaps developed a greater interest among the members at large in the work carried on by the Association.

"On a number of occasions the Association has been requested to report upon or give evidence on important matters. A number of the members have acted on special committees engaged in the preparation of the reports, and the Association, on behalf of its members, has appeared on several occasions before the Board of Railway Commissioners, before the Post Office Department officials and before the Board of Customs at Ottawa, with satisfactory results. One of the most important and desirable advances made by the Association during the past year is the development of a closer relationship between the Association and the U.S.A. I am sure, be pleased to know that a complete exchange of circulars issued by each Association has been arranged by and between the respective secretaries.

"The associate members have shown a sincere desire to co-operate in every way possible throughout the year. The very complete exhibits, which you will have an opportunity of inspecting, have been arranged after much preparation and expense. The presence of this exhibit indicates two things—first, the growth and importance of the industry in Canada, and second the confidence of the manufacturers in the future of our country.

"This resume only serves to accentuate the possibilities of our Association. After having spent some years on the executive committee, and during the past year in very close touch with every phase of the Association's work, I am convinced that it has a real value to its members and a sphere of action which can be broadened, strengthened, and made more and more valuable as it develops from year to year.

"You are all, I am sure, aware of the fact that our honorary member, Acton Burrows, as Honorary Secretary-Treasurer, has been responsible almost wholly for the success of the Association, from its inception until a few years ago. During the past three years we have been in a state of transition. It has been found that the activities are so varied and so numerous that we can hardly expect an honorary secretary to carry the burden; it has also been found that changes in the office of secretary every year or two destroy that continuity of thought and action which is so desirable and necessary. The need of a permanent secretary has become more and more apparent, and I commend for your serious consideration this feature of the Association's organization.

"I take this opportunity of thanking you for the honor you conferred upon me at the last annual meeting in elect-

ing me President of the Association. While the obligations have been heavier than I anticipated, it has been a real pleasure to work for the Association and with its members. I can say, with sincere appreciation, that the things which have been accomplished are due in a very large measure to the assistance and co-operation which I have received from the Vice President and members of the executive committee, from the Treasurer, the Secretary, and every member and associate member with whom I have communicated during my term of office. I wish particularly to thank the chairmen and members of the committees who have had charge of the arrangements for the annual meeting. Major Burpee, on the papers, Mr. Lynch on the entertainment, and Mr. Reade on the exhibits, have all worked with untiring enthusiasm and energy to provide an annual meeting of unusual interest."

The Secretary's Report.

The Secretary, L. C. Moreland, presented a comprehensive report covering 17 months, from which the following is extracted:—

Membership.—On Jan. 1, 1921, the Association had 27 member companies. Since then the following electric railways have joined: Brandon Municipal Ry.; Fort William Municipal Ry.; International Transit Co.; Kitchener and Waterloo St. Ry.; Lethbridge Municipal Ry.; London & Port Stanley Ry.; Port Arthur Civic Ry.; Regina Municipal Ry.; Toronto Transportation Commission. The Sudbury-Copper Cliff Electric Ry. has withdrawn, so that the total number of member companies at date is 35.

There are 31 associate members. The following joined since the beginning of 1921 and are still in: Ottawa Car Mfg. Co.; Southam Press Ltd.; C. E. A. Carr Co.; United States Steel Products Co.; Canadian Westinghouse Co.; Equipment Specialties, Canadian Cleveland Fare Box Co.; Dawson & Co.; Lyman Tube & Supply Co.; Ontario Safety League; Railway Power & Engineering Corporation; Ohio Brass Co.; Canadian National Ry. Carbon Co.; Don. M. Campbell; Canadian Steel Foundries; Standard Underground Cable Co. of Canada; Eugene F. Phillips Electrical Works; Canadian Street Car Advertising Co.; Elliott Thompson Electric Co.; Dominion Wheel & Foundries, Ltd.; Canadian General Electric Co.; Ferranti Meter & Transformer Mfg. Co.; Canadian Brill Co.; Sarnia Bridge Co.; Northern Electric Co.; Canadian Car & Foundry Co.; Witherow Steel Co.; Consolidated Steel Corporation; Cheatham Electric Switching Device Co.; Taylor Electric Truck Co.; Allan General Supply Co.; Vickers, Ltd.; English Electric Co.

Constitution and By-laws.—The executive committee has drafted the following amendments and recommends their adoption at this meeting as follows:

"That the membership shall consist of active members, honorary members, associate members and associates. That the active members may, by a majority vote admit as an associate, any person engaged as consulting engineer or as commissioner, or in such other capacity as the active members may consider as qualifying such persons for such membership, providing he is not eligible under the foregoing clauses of the section. That the associates shall be entitled to attend the Association meetings, but shall not be entitled to vote.

That the fee of \$100 a year for active

members be changed so that the yearly fees will be based on the gross earnings railway operation as follows: Under \$100,000, \$26; over \$100,000 and under \$200,000, \$50; over \$200,000 and under \$400,000, \$75; over \$400,000 and under \$700,000, \$100; over \$700,000 and under \$1,000,000, \$125; over \$1,000,000, \$150. Associate members to pay \$10 a year.

Questionnaires.—Thirty enquires were received from member companies, and where the information asked for was not on the Association's files, questionnaires were sent out. Upon receipt of replies tabulations were made and forwarded to the company requesting the information, also to all other interested companies. The subjects covered the following wide range of interest: Joint councils in industry; brake shoes; apparatus for locating trouble in field and armature coils of railway motors; also bond testing apparatus; transportation of postmen; passenger density and headway on city lines; apportioning costs for joint use of poles; remuneration for transportation of mails; fenders for attachment to pilots; conditions under which commutation tickets are issued; publications describing parks, etc.; prices paid by companies for transfers and tickets and where same were purchased; cost of power; rates of fare charged for last five years; why every car in service should not be equipped with suitable and sufficient jacks or other mechanical devices for raising a car in case of accident; transportation of Customs Department officials; legislation sponsored by Ontario Safety League and presented to the Ontario Legislature; depreciation methods adopted in making annual charges; municipal taxes on cars, wires and tracks, maintenance of pavement, snow removal; Workman's Compensation Act, part 1, schedule 2. Three charts were prepared giving information on motormen, conductors and miscellaneous wages, rates of fare and operating data. Detailed information in connection with these items is on file and available upon request.

The Proceedings for the years 1916 to 1920 have been abridged and edited to make a book about the ordinary size of a single year's proceedings, and have been printed. One copy has been forwarded to each member and to each associate member in good standing.

Legislation.—The following were requested by the executive committee to keep in touch with legislation of interest to electric railways, to advise the Association in regard to it, and to act as conveners of committees composed of member companies, when joint or concerted action might be deemed advisable, in the Dominion and each province, respectively: Major F. D. Burpee, Dominion; G. A. Kidd, British Columbia; A. W. McLimont, Manitoba; C. L. Wilson, Ontario; W. J. Lynch, Quebec; J. A. Olive, New Brunswick; W. L. Weston, Nova Scotia.

W. J. Lynch reported as follows: Legislation was passed during the session which closed on March 21, amending the Revised Statutes, 1909, article 740, respecting the Quebec Public Service Commission, by adding after second paragraph K, the following: "(1) In any dispute that a tramway company and one or more municipalities agree by resolution to submit to the Quebec Public Service Commission relative to transportation rates and operation whether or not a contract exists between them; and the order of the Commission shall be binding

on all parties; this provision does not apply to the Montreal Tramways Co."

C. L. Wilson reported certain changes in the Ontario Workmen's Compensation Act, providing that a workman seriously injured must be retained by the employer. The effort to change the Railway Act in regard to rate of fare during the 1921 session of the Ontario Legislature was unsuccessful.

Standardization Committee.—Proposed rules for the installation and maintenance of electrical supply and signal lines as drafted by the Hydro-Electric Power Commission of Ontario were referred to a committee composed of Lt.-Col. J. E. Hutcheson, W. S. Hart and E. P. Coleman, who examined them carefully and commented upon them. A report was subsequently compiled from these replies, and a copy was sent to the Board of Railway Commissioners.

Location of Power Transmission Lines.—A letter received from the Board of Railway Commissioners regarding the Railway Association of Canada's application for an order regulating the location of power transmission lines was accompanied by a copy of the technical report on the subject. A circular letter was sent from the Association's office to all electric railway companies enclosing a copy of the Railway Association of Canada's sub-committee's report regarding industrial interference. The President was requested by the executive to keep in touch with other associations and to attend a conference which has been proposed to consider the matter.

Traffic Regulation & Accident Prevention.—The following members were appointed as a committee by the executive: A. Gaboury, chairman, to be assisted by Col. Gaudet, Montreal; R. M. Reade, to be assisted by Chief of Police Trudel, Quebec; Major J. Burpee, to be assisted by Chief of Police Ross, Ottawa; R. B. Morley, to be assisted by Chief of Police Dickson, Toronto.

Relations with Other Associations.—The President and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., were appointed a committee by the executive to co-operate with the Canadian Electrical Association and others in matters of common interest. At a meeting held in Feb., 1922, in Montreal, the formation of an all-Canadian electrical association was considered by representatives of various associations. Mr. Blair represented this Association, and reported that the general feeling of the meeting would not allow of any immediate action being taken.

General.—The Association has been represented before the following bodies on matters mentioned: Board of Railway Commissioners—Fenders or wheel guards on electric cars; why every electric car in service should not be equipped with suitable and sufficient jacks, or other mechanical devices for raising the car in case of accident. Post Office Department—Remuneration for transportation of mails in connection with order-in-council 379. Canadian Engineering Standards Association—Canadian co-operation on crossing specifications for overhead wires as proposed by the A.E.R.A. and the A.E.S.A. Dominion Customs Board—Tariff status of track layouts for street railway intersections.

Finances.—From surplus funds some years ago Victory bonds par value \$500 were bought. This year a further investment in Victory bonds, par value

\$2,000, was made. The Association's yearly revenue, under the new rates and with the present membership amounts to slightly over \$4,000. The ordinary expenditure, under present methods, of an average year, allowing \$600 for an annual meeting, \$600 for printing proceedings and \$1,200 for Secretary's allowance and clerical assistance, amounts to \$3,500, leaving \$500 for contingencies.

Treasurer's Report.

The Treasurer, A. Gaboury, presented the following statement for the calendar year 1921:—

RECEIPTS.	
Cash in bank, Jan. 1, 1921	\$1,350.34
Donation of Canada war bonds (par \$500)	487.98
Interest on investments	82.50
Interest on bank account	81.57
Exchange on U.S. cheques	12.43
Membership fees, 1920, paid in 1921	1,100.00
Membership fees, 1921, paid in 1921	2,600.00
Membership fees, 1922, paid in 1921	50.00
Associate members' fees, 1921, paid in 1921	1,150.00
Associate members' fees, 1922, paid in 1921	50.00
	\$6,964.82
DISBURSEMENTS.	
Clerical assistance, etc.	\$1,227.50
Collection of cheques	3.15
Expenses, sundry	411.36
Annual meeting at Ottawa	381.10
Executive committee meetings	18.54
Office equipment	284.53
Printing, office supplies, etc.	116.41
Postage	67.40
Proceedings, paper & typing	55.87
Telegrams & telephone	18.75
Travelling expenses, Secretary	18.75
Donation of Canada war bonds (par \$2,000)	1,951.04
	\$4,196.91
Cash on hand, Jan. 1, 1922, as follows:—	
Cash in Bank of Montreal	\$2,279.33
Donation of Canada war bonds (par \$2,000.00)	2,439.02
	\$4,718.35

Levis County Railway Operation.

The Levis County Ry., we are officially advised, restarted operations April 11, on the Uptown line; on the St. Joseph line April 14, and on the St. Romuald line April 20. The service given is a restricted one, as the company has only six cars. The uptown line, 3 3/4 miles long, is served by two cars on a 20-minute schedule; the St. Joseph line, 2 3/4 miles, is served with 2 cars, with a 20 minute schedule; and the St. Romuald line, 7 1/4 miles, is served with one car on a 90 minute schedule, with an extra car giving a three quarter service when available.

The service given by the company was on the list of applications for hearing before the Quebec Public Service Commission, April 25. Objection was taken to the Commission's jurisdiction by St. Joseph and St. Romuald municipalities, by the commissioners overruled them, stating that the amendment to the Act respecting the Public Service Commission, passed last session had been prepared to meet just such cases. Application was subsequently made to Chief Justice Lemieux for a writ of prohibition against the Commission, and was refused. A press report stated that an appeal would be made against this decision.

The Commission began hearing the cases, May 3, when it was intimated that the St. Romuald Town Council had resolved that the municipality could not meet any of the company's financial demands under present circumstances, and was ready to do away with the street car service. Decision was subsequently reserved.

Toronto Transportation Commission Matters.

Canadian Railway and Marine World for May gave on pg. 263 details of the work to be undertaken by the Toronto Transportation Commission during the current construction season. The work of track rehabilitation and new construction is well under way at the time of writing (May 15), there being 2,891 extra men employed.

Expressed in terms of single track feet, various track rehabilitation jobs now being done, or about to be undertaken in the immediate future, are as follows:— (While the lengths are expressed in single track feet, the track is double on the streets named). King St., Spadina Ave. to St. Lawrence St., 12,160 ft.; York St., Front St. to Queen St., 2,750 ft.; Gerrard St., Pape Ave. to Greenwood Ave., 6,842 ft.; Parliament St., Gerrard St. to Winchester St., 2,230 ft.; Church St., Queen St. to Bloor St., 11,270 ft.; Dovercourt Road, College St. to Hallam St., 9,760 ft.; Bloor St., Lansdowne Ave. to Spadina Ave., 21,076 ft.; Queen St., Ossington Ave. to Yonge St., 20,236 ft.; Howard Park Ave., Dundas St. to western loop, 4,800 ft.; Kingston Road, Queen St. to city limits (new construction), 19,200 ft.; Lake Shore Road, Sunnyside to Humber River (new construction), 12,132 ft. Total rehabilitation, 82,154 ft., new construction, 31,332 ft.; grand total, 113,486 ft.

Canadian Railway and Marine World for Dec. 1921 gave on pg. 656, details of the different types of track construction used by the Commission, the three chief of which are referred to as 122-S-G; 122-C-G; and 122-C-A. Type 122-C-G is so called because 122 lb. rail is used, with stone foundation and granite block wearing surface. Type 122-C-G is so called because 122 lb. rail is used with concrete track foundation and granite block wearing surface. Type 122-C-A is so called because 122 lb. rail is used with concrete track foundation and asphalt wearing surface. The article referred to in our Dec. 1921 number was illustrated with longitudinal and cross section of the different types of track construction.

On the rehabilitation work on King St., type 122-C-G construction is being used; on York St., type 122-S-G; on Gerrard St., type 122-C-G; for 830 ft. on Parliament St. type 122-C-A, and 122-S-G on the remaining 1,400 ft.; on Church St., type 122-S-G is being used for 970 ft., and 122-C-G for the remaining 10,300 ft.; on Dovercourt Road, type 122-C-A; on Bloor St., type 122-S-G; on Queen St., type 122-C-G, and on Howard Park Ave., 122-C-A. On the new section of work on Kingston Road type 122-C-A will be used, and this type will also be used for the new track between Sunnyside and the Humber River. To May 15, 3,890 ft. of the rehabilitation work on King St. had been completed, also all the work on Parliament St. By "completed" is meant that traffic had been resumed.

The following intersections and pieces of special work have been installed from the beginning of the year to May 15:—Russell car house, 32 layouts; Stacey and Coxwell Aves., R. H. crossover; Dupont and Christie Sts., R.H. crossover; Lansdowne and Royce Aves., loop; Bloor St. and Avenue Rd., N.E. curve; College and Teraulay Sts., additional curves; Danforth car house, route loop; intersections at Dundas St. and Ossington Ave., King and

Church Sts., Wellington and Scott Sts., Louisa and Teraulay Sts., Queen St. and Ossington Ave., St. Clair and Lansdowne Aves., Queen and McCall Sts., Bloor St. and Spadina Ave., Harbord St. and Spadina Ave. Intersections are being installed, or are shortly to be, at Queen and Teraulay Sts., Queen St. and Kingston Rd., Queen St. and Spadina Ave., Carlton and Church Sts., Queen and Shaw Sts., Adelaide and York Sts., Church and Bloor Sts. In addition, the installation of a loop at the Woodbine race course, on Queen St. east, is about completed.

No action has been taken in connection with the car houses to be built on the land recently bought by the Commission as stated in Canadian Railway and Marine World for May. The land is bounded on the north by Eglinton Ave., on the east by Yonge St., on the west by Duplex Ave. and on the south by Berwick Ave. It is probable that actual construction will be postponed pending the completion of the "clean-up deal," in which the city is interested. Tentative plans for the construction of equipment repair shops, to cost in the neighborhood of \$1,000,000, and to be located at Davenport Road and Bathurst St., have been completed.

The Commission has secured a piece of land 90 x 126 1/2 ft., near Neville Park Boulevard, at the east end of Queen St., on which to build a loop to replace a badly congested Y.

The four trackless trolley buses, described fully in Canadian Railway and Marine World for January, pg. 39, have arrived and have been put in service on the Mt. Pleasant-Merton St. run in the northern part of the city. In the illustration in the January number, the bus was shown as equipped with a single trolley pole. One of the buses has been equipped with double pole, as an experiment, to determine whether the single or double pole current collection system is the more efficient. The chasses of these buses were assembled in Toronto by Packard Ontario Motor Co., the bodies were built by Canadian Brill Co., and the electrical control apparatus was supplied by Canadian Westinghouse Co.

The Commission is publishing in Toronto daily newspapers "service bulletins," which describe the work being undertaken and the problems which the Commission faces in its work of rehabilitation. These bulletins are informing the public as to the problems met with by the officials in charge of the work, and with the difficulties and obstacles to be overcome in rehabilitating a street railway system under traffic.

While specifications have not been issued or tenders invited, we are officially advised that in all probability the Commission will in the near future call for tenders for about 150 modern double truck cars, similar to those acquired during 1921.

Option on Niagara, St. Catharines & Toronto Ry.—As requested by a correspondent, we have made enquiry and find that the option on this company's property (owned by the Dominion Government), which was given by the former Minister of Railways, Dr. J. D. Reid, to the Hydro Electric Power Commission of Ontario, is during pleasure, and subject to cancellation at any time.

Electric Railway Employees' Wages, Working Conditions, Etc.

Proposed Cancellation of London Street Railway's Franchise.

Dominion Power & Transmission Co.—New agreements as to wages, working conditions, etc., between the D.P. & T. Co., through its subsidiary railway companies, and its employees, under the agreements reached before a board of conciliation, in one case, and by agreement between the parties, following the finding of another board of conciliation, in the second case, have been signed.

There are four agreements, viz.:—(1) The Hamilton Cataract, Power, Light & Traction Co., and its employees being members of the International Union of Steam and Operating Engineers Local 700; (2) The Hamilton St. Ry. Co. and the Amalgamated Association of Street and Electric Railway Employees of America, Division 107; (3) Dominion Power & Transmission Co., and the Amalgamated Association of Street Railway Employees of America Local Union 107; and (4) The Hamilton & Dundas St. Ry. Co., the Hamilton Radial Electric Ry. Co., the Hamilton, Grimsby & Beamsville Electric Ry. Co., and the Brantford & Hamilton Ry. Co., and the Amalgamated Association of Street and Electric Railway Employees of America, Division 876. The first agreement includes power station and other general employees; the second includes conductors and motormen employed on the Hamilton St. Ry.; the third includes the Dominion Power & Transmission Co.'s shop employees, and the fourth includes the conductors and motormen on the four radial railways operated. The following are the rates of pay per hour for conductors and motormen as fixed in the agreements:

City line Radial lines	
First 6 months	35c.
2nd 6 months	38c.
First year	40c.
2nd year	42c.
3rd year and after	45c.

Overtime to be paid at the rate of time and a half.

The first agreement is operative from March 1 and the other three from Feb. 16, and all will continue in force to Dec. 31, and will remain in force thereafter unless terminated by either party giving 30 days notice.

London St. Ry.—We were officially advised May 8 that the Minister of Labor had appointed a board of conciliation to investigate the wage dispute between the company and its employees. The company nominated F. H. McGuigan, Toronto, as its representative, and the employees nominated F. McKay, London, on their behalf. In the absence of a joint recommendation from these two as to a chairman, the Minister of Labor appointed J. M. McEvoy, London. Some negotiations for a settlement appear to have taken place after the appointment of the board, but these were futile, and the board began its sittings, May 16. The company gave notice of a reduction in wages as from March 1, of 3c. an hour, the reduced rate for motormen and conductors being: First year, 40c.; second year, 43c.; third year and thereafter, 45c. The men contended for a maximum rate of 50c., which they claimed the company will be able to pay, if the bill now before the Ontario Legislature giving power to the city council to amend the franchise by authorizing an increase of fares, should be passed.

There was a conference between the company's officers and employees May 19, but a settlement was not effected, and

the board of conciliation's report will be waited for.

Niagara, St. Catharines and Toronto Ry.—A St. Catharines press dispatch of May 18 stated that the company's employees had been notified of a 25% decrease in wages, that their representatives had been authorized to accept a reduction of 10%, and that the men would strike if a 25% reduction was enforced. We are officially advised that the management did not propose a 25% reduction. Negotiations have been going on for some time and an all-round reduction of about 10% for car crews, and line, power house and shop men have been agreed on. Following is a comparison of the old and new rates for passenger conductors and motormen: 1st year, new, 40c.; old, 46c.; 2nd year, new, 43c.; old, 48c.; 3rd year, new, 45c.; old, 50c.; 4th year and after, new, 48c.; old, 52c. There will also be some changes in working conditions.

Ottawa Electric Ry. Co.—The board of conciliation appointed in April to investigate the wages in dispute between the company and its employees belonging to the Amalgamated Association of Street and Electric Railway Employees of America, Division 279, was composed of A. Smith, barrister, Ottawa, chairman, appointed by the Minister of Labor, in the absence of a recommendation from the other two members of the board, G. D. Kelley, Ottomated by the company, and E. J. Tully, Ottawa, nominated by the men. The board began its investigation April 24, and the seventh and final sitting was held May 3. The company advised its employees February 27, that on May 1, the scale of wages put into effect under a board of conciliation award of April 21, 1920, and continued in effect for a second year in 1921, would be reduced to a rate corresponding to the reduction in the cost of living. The rate of the reduction was to have been announced in April, but was not made known, the men showing a disposition to seek for an increase, mainly by changes in working conditions. In the evidence submitted to the board the men asked for an 8-hour day, which Major F. D. Burpee, Manager, stated would cost \$140,000 a year. The company employs 626 men, of whom 452 are conductors and motormen. One employee had been with the company over 35 years; 40 had worked over 20 years; 143 for over 10 years; 93 over 5 years; and 185 under 5 years. The nine-hour day, he claimed, was the ideal, one for street railway work. The men claim that the putting in force of the eight-hour day, with a maximum rate of wages of 65c. an hour would not give them any more money, and would not cost the company anything.

Winnipeg Electric Ry.—We are officially advised that the conductor's and motormen's wages have been reduced 4c. an hour, under an agreement which went into effect May 1. A similar reduction was started on May 10, to have been agreed to by the shopmen. The new rate of wages per hour for motormen and conductors is: 1st six months, 46c.; 2nd six months, 49c.; 2nd year, 53c.; 3rd year and thereafter, 56c.; Sundays 5c. an hour extra. The only change made in the old working conditions is that the minimum wage has been reduced from \$20 to \$19 a week.

The London, Ont., city council passed the following resolution, May 15: "That immediate action be taken to terminate the franchise of the London St. Ry., and the city solicitor be instructed to serve such preliminary notification on the company as may be required to make such action effective." This is the result of the long drawn out discussion between the company and the council. The differences have been developing during the last few years. The city has been asking for extension of lines, for paving improvements, for better cars, none of which the company has been able to promise, owing to shortage of funds. The company asked that an increase of fare to a straight 5c. be authorized, and its case for such increase was strengthened by a report of the Hydro Electric Power Commission of Ontario in Dec., 1919, as to the value of the company's property. The Commission estimated the value at \$1,356,000, and it was reported that the company was willing to pay for the franchise \$1,208,000. The franchise expires in 1925, but the city claims that the company is violating its terms, and that the city can therefore take steps to end it.

A London press dispatch says: "City Hall officials do not consider that the council's decision to launch proceedings for the cancellation of the London St. Ry. Co.'s franchise, and the possible eviction of the company from the city streets, will lead to any sudden culmination. Mayor Wilson believes that the matter cannot be carried out at law in much less than two years, as in the meanwhile, a great deal of legal red tape must be followed, the sanction of the Legislature must be secured and a vote of the people must be taken on alternative final dispositions. If it is concluded to have the city take over the property, its valuation must be secured, and it is probable that the price would be determined by a board of arbitration."

Sir Adam Beck's Salary, etc.—Lt.-Col. Carmichael, minister without portfolio in the Ontario Government, and one of the Hydro Electric Power Commissioners of Ontario, gave the following information in the Legislature recently, in answer to questions: Sir Adam Beck is paid \$12,000 a year as Chairman of the Hydro Electric Power Commission of Ontario, and \$6,000 a year as President of the Ontario Power Co.; \$6,000 is paid from the consolidated revenue fund, and the balance by the municipalities under contract with the Commission, pursuant to the Power Commission Act. The Government is aware that Sir Adam Beck is employed as an arbitrator in the settlement of the amount to be paid by the City of Toronto to the Toronto Railway Co., but did not obtain leave of absence from the Government for that purpose, such leave not being required. The Government is not aware that he is being paid \$250 a day for services as arbitrator. While employed on the Toronto Ry. arbitration he is also acting as Chairman of the Hydro Electric Power Commission.

Winnipeg Electric Ry. Co.—The Montreal Stock Exchange has listed \$3,000,000 of the company's 7% cumulative preference stock which was issued in 1921.

Electric Railway Passenger Fares.

British Columbia Electric Ry. — The present arrangement for charging a 6c. fare on the company's Vancouver lines comes to an end June 30, and unless renewed the old 5c. cash fare, with tickets at rates provided in the franchise will automatically come into force again.

Following the withdrawal from the House of Commons of the Vancouver, Fraser Valley & Southern Ry. Co.'s bill, which would have placed all the company's lines under the Board of Railway Commissioners' jurisdiction, a conference was held between the company's management and Vancouver City Council, and a special meeting of the council was called for May 15 to discuss the situation.

Hull Electric Co. — G. Gordon Gale, Vice President and General Manager, Hull Electric Co. wrote the Hull, Que. City Council, recently, asking permission to stop the sale of workmen's tickets. No action was taken.

London St. Ry. — The Ontario Legislature gave a second reading, May 10, to a bill introduced by R. L. Bracklin, to authorize the company, notwithstanding its franchise provisions, to charge 5c. for adults, 3c. for children between 5 and 12 years of age, children under 5, in charge of adults, to be carried free. The private bills committee added two sections—one providing that the Ontario Railway and Municipal Board on the application of the London City Council, or of the company, may decrease or increase the fares fixed in the first section of the bill; and the other provides that except as amended in the present measure, no other part of the agreement between the city and the company as confirmed by 59 Victoria, Chap 105, is affected. The employees' union sent a delegation to Toronto to oppose the bill in its later stages, on the ground that their wages are to be decreased. Some opposition has also been given by Toronto and other municipalities.

The Moncton Tramways, Electricity & Gas Co.'s franchise provides for the sale of workmen's tickets, 8 for 25c. As a large portion of the passengers on the line are entitled to buy these tickets, the conditions do not warrant the investment necessary to provide an all the year service, consequently there has not been a winter service since the car barns were burned, together with three cars and the sweeper, about two years ago. Car service was resumed April 18.

Nova Scotia Tramways & Power Co. — The N.S. Public Utilities Commission resumed its sittings at Halifax, N.S., April 27, respecting the inventory and appraisal of the company's physical assets. Considerable evidence was given, and three inventory reports on the company's used or useful properties for electric light and power, and for electric railway service were filed. Further hearing was adjourned to May 25, to give the parties interested time to study the inventories. The object of the investigation is to enable the Commission to readjust fares, and other charges, if found necessary.

Peterborough Radial Ry. — Peterborough City Council asked the Hydro Electric Power Commission of Ontario recently to reduce fares on the Peterborough Radial Ry. from the present flat rate of 7c., and to sell 4 tickets for 25c. The Commission, in declining to grant the request, pointed out that a much

larger volume of traffic must be secured before a reduction in fares could be considered.

Winnipeg Electric Railway. — See under "Winnipeg Electric Ry. Franchise Negotiations" on another page of this issue.

Motor Omnibus Notes.

Three motor buses are being operated by two proprietors under license, in Barrie and Allandale, Ont.

A motor bus service is being operated from Edmonton to Winterburn, Spruce Grove and Stony Plain, Alta.

North Bay, Ont., town council, has under consideration a bylaw providing for a 10-year franchise for a motor bus system in the town.

A second motor bus line is reported to have started operating between St. Catharines and Queenston, Ont., serving Homer and St. Davids, en route.

The St. Thomas city council has been authorized by the Ontario Legislature to operate motor buses in connection with the municipal railway; and to provide funds by the issue of 10-year debentures.

Winnipeg Electric Ry. has started a motor bus service from Stonewall, Man., on the Winnipeg, Selkirk & Lake Winnipeg Ry., to Balmoral, Gunton and Teulon. The bus connects with the electric cars.

Jacob Leis, proprietor of a motor bus operating in the area served by the Waterloo-Wellington Ry., between Kitchener and Bridgeport, Ont., was fined, May 9, by the Kitchener police magistrate, for operating a bus over the provincial highway without having procured a license.

The Red Bird motor bus line started making three trips a day, between Brampton and Toronto, May 15, the bus being operated from Brampton along the Centre Road to Cooksville, thence by Dundas Road, but owing to the condition of the Center Road the bus ceased on May 19 for the present.

Montreal motor truck owners have organized the Montreal Motor Truck Owners' Association. There are reported to be 1,761 corporations, firms and individuals in Montreal employing trucks for transportation of goods, a large number of them operating for hire. The association is reported to have started with 58 members, representing 333 motor trucks.

The Ontario Legislature has passed an act providing that the St. Thomas City Council may operate motor bus lines in conjunction with the municipal electric railway, or may abandon the railway in favor of a bus system. The city council's railway committee decided recently to await the Lieutenant-Governor's assent before taking steps to buy a 30-passenger bus for operation on streets not served by the railway.

Detroit United Rys. — The lines of the Detroit United Ry. and other property mentioned in the agreement, which the city acquires for \$19,850,000, were handed over by the company to the city authorities at midnight, May 14. The operating headquarters under the city management will be in the administration building, St. Jean and Warren Avenues. In connection with the transfer the company has called for redemption an issue of \$2,000,000 face value of gold 7% notes, issued April 1, 1918, at 100½ and accrued interest.

Ontario Hydro Electric Railway Legislation.

The bill respecting the construction and operation of municipal electric railways, which was read a first time in the Ontario Legislative Assembly, March 16, came up again on May 17. A summary of its provisions was given in Canadian Railway and Marine World for May, pg. 256. The Premier, in moving the second reading, reviewed the entire situation, and compared the original act of 1914 and its numerous amendments, with the bill, which he claimed would allow municipalities where the needs would warrant it to go on with a feasible electric railway project. It provides autonomy on the part of the municipalities and a feasible way of financing the proposition. He stated that it was proposed to exempt the Toronto-Port Credit-Hamilton-Niagara line from the bill, when it reached the committee stage, a condition being that the ratepayers of the different municipalities vote again, and approve of the project. His reason for this was that the Government had committed itself in regard to the guaranteeing of bonds for \$1,000,000 in connection with the project, and that was a bargain that could not be lightly broken. Referring to the Toronto Suburban Ry., he said: "The question is not covered in this bill as to allowing municipalities to own and operate a radial railway running through other municipalities—the question, particularly, of the City of Toronto owning and operating the Toronto Suburban Ry. That is not covered, and cannot be covered by amendment, but, so long as we may remain in power, the needs of such a case can very well be met under private bill dealing with individual cases as it arises. And in this case we will meet the needs of a special case." The Premier then discussed the details of the measure at length, and the debate was adjourned.

New Brunswick Hydro Electric Development. — The N.B. Hydro Commission was reported recently as expecting to be in a position to begin the delivery of power for commercial purposes from the Musquash power development by the end of May, 1923. A contract is reported to have been given the Canadian Bridge Co. for the construction of the power transmission line from the generating station to St. John. The line will be carried across the river at the asylum grounds by a span of 1,000 ft., to the terminal station on Douglas Ave. A location survey is reported to be completed for the construction of a transmission line from Musquash to Moncton, 88 miles. The St. John City Council, on May 4, passed resolutions applying to the Commission for a contract for from 10,000,000 to 15,000,000 k.w. a year at actual cost, but not more than 1½c. per k.w., and decided to appoint a city commission to plan a distribution system for the city at a cost of approximately \$900,000.

Electric Energy for Vancouver. — Vancouver, B.C., city council has authorized the Mayor to look for an engineer of experience in the hydro-electric field, to advise the city authorities on the development of electric energy for Vancouver.

The Manitoba Power Co. is reported to have let contracts to Canadian manufacturers for electrical and hydraulic equipment for the new power development at the Great Falls of the Winnipeg River, Man., aggregating \$825,000.

Jurisdiction Over British Columbia Electric Railway, its Fares, Etc.

The Vancouver, Fraser Valley & Southern Ry. Co., which is a subsidiary of the British Columbia Electric Ry. Co., in its bill, which was recently given a second reading in the House of Commons and then referred to the railway committee for consideration, sought amendments to its act of incorporation, which would permit an amalgamation of all the B.C.E. Ry. Co.'s lines under one title, and declare them and the company's other undertakings, to be works for the general advantage of Canada, bringing its railway lines all under the Board of Railway Commissioners' jurisdiction. The bill was set down for discussion before the railway committee, April 25, when it was decided to adjourn the matter for a week. The purpose of the adjournment was stated to be to permit negotiations between the B.C.E. Ry. Co., the municipalities concerned and the B.C. Government, with regard to the establishment of a public utilities commission for the province. The B.C. Premier is reported to have stated in Vancouver, April 26, that the B.C.E. Ry. Co.'s officials had advised him they were willing to withdraw the bill on the assurance that the B.C. Government would establish a tribunal which would have power to settle matters in dispute between the municipalities and the company. The Government had advised the company and the municipalities that it was prepared to bring in such legislation as was required, but could not state just what form it would take. He did not think the municipalities would object to allow matters to remain as they are, provided the company withdrew its bill from the Dominion Parliament. A number of the municipalities signified their agreement with the Premier's suggestion; but Vancouver City stood out. On May 1, the city council considered a letter from W. G. Murrin, Assistant General Manager, B.C.E. Ry. Co., offering to withdraw the application on condition that the city consent to the extension of the present 6c. fare agreement, which expires in June, until the proposed new B.C. legislation is passed. The council refused to agree to this, and passed a resolution expressing its willingness to enter into negotiations with the company as regards fares. When the bill again came before the Railway Committee, May 2, the situation was that of the municipalities immediately concerned Vancouver was the only active opponent; Victoria having declined to take any action, and the majority of the others having fallen in with the Premier's suggestion. The bill was discussed some length, and the committee agreed "to report the preamble thereof not proven, on the ground that legislation has already been passed by Parliament contrary to the principle set out in the bill, more particularly in sec. 7 thereof." The report was subsequently accepted by the House of Commons, and the fees paid, less the cost of printing and translation, were ordered to be refunded.

Section 7 of the bill referred to above proposes to add a clause to the statutes of 1912, chap. 162, sec. 3, providing that when the railway undertaking and the light, power, or heating undertakings of the B.C.E. Ry. Co., and the Vancouver Power Co. or either of them, has been acquired or leased, such undertakings

shall be works for the advantage of Canada, and the provisions of the Railway Act shall apply thereto. The section of the 1912 act referred to authorized the V. F. V., & S. Ry. Co., to enter into certain agreements with the B.C.E. Ry. Co., and the V. P. Co. The proposed legislation was apparently held by the Railway Committee to be opposed to the statutes of 1920, chap. 65, which amended the Railway Act 1919, sec. 6, par. c. Under the 1919 act it was claimed that the B.C.E. Ry. Co.'s lines were declared to be works for the general advantage of Canada, while the act of 1920, amended the provision, but withheld its operation, so far as the B.C.E. Ry. Co.'s lines were concerned, for a year. (See Canadian Railway and Marine World, Dec. 1920, p. 671.)

The Vancouver City Council was asked by the B.C.E. Ry. Co. on May 2, to pass a bylaw endorsing the present agreement as to the 6c. fare, until such time as the proposed tribunal is appointed by the B.C. Government to arbitrate between the company and the city. The council decided not to take any action until after the return of G. E. McCrossen, its Counsel, from Ottawa.

Electric Railway Notes.

The Quebec Ry., Light & Power Co.'s rolling stock is being overhauled. The cars are to be repainted yellow, with a broad maroon band lined with black and gold.

The Niagara, St. Catharines and Toronto Ry. port daylight saving into effect on its lines in St. Catharines and throughout the Niagara peninsula on May 15, at 4 p.m.

The Hudson's Bay Co., in connection with the opening of its new store in Saskatoon, Sask., May 1, chartered the Saskatoon Municipal Ry.'s cars from 9 a.m. until 6 p.m., and carried everybody free.

The British Columbia Electric Ry.'s Vancouver City cars are to be equipped shortly with number signs on the roof, and the old type of dashboard sign will be abolished. Destination signs at front and side will also be used.

The new bascule bridge across the canal at Burlington Beach, Ont., was approved and taken over by the Dominion Department of Public Works, May 12.

The Hamilton Radial Electric Ry. tracks are laid across the bridge.

The Regina, Sask., Northeast Ratepayers' Association has had a report prepared on the service given in that part of the city by the Regina Municipal Ry., which it was decided to forward to the Regina City Council, and to ask the Council to receive a delegation from the association to discuss complaints as to the service.

The London & Port Stanley Ry., in order to let passengers to buy their tickets at stations before boarding the cars, put in operation on May 22, an extra charge of 10c. on each ticket bought on the cars. Stations with agents are maintained at London, St. Thomas, Glanworth and Port Stanley.

The Detroit, Mich., Municipal Ry. management is reported to be placing the name of the motorman and conduc-

tor in charge of each car on a small plate to be hung on the motorman's stool, and the fare box respectively, so that the men in charge of the cars will be known by names and not as heretofore by numbers.

Montreal Tramways Co.'s employees' representative waited on the city aldermen, April 28, and asked for the repeal of the resolution adopting daylight saving time as from May 1. Alderman Riel, informed the delegation that it was too late to go back on the Council's decision, but that next year the matter will be examined carefully. No action was taken by the Council.

The Sarnia St. Ry. is converting its 6 double truck, and 4 single truck cars for one man operation. Some of them have 2 and 4 motor equipment. Three were completed as one-man cars and placed in operation during May. The work is being done under the supervision of T. H. McGauley, formerly Manager, New Brunswick Power Co., St. John, N.B., and at one time Superintendent, Calgary Municipal Ry., Calgary, Alta.

The Nova Scotia Tramways & Power Co. has been authorized by the Public Utilities Commission, to abandon the 8-car schedule on its main line, and revert to a 6-car schedule, running the cars from the northern terminus to Inglis St., west on Inglis St. to South Park St., north on South Park St. to Spring Garden Road, then turning and going back over the same road. Transfer privileges will be extended somewhat to meet the necessities of the shortened route.

The Kitchener Light Commissioners have bought three Peter Witt cars, built by Cincinnati Car Co., from Cleveland Ry. Co., for the Kitchener & Waterloo St. Ry. They are of steel construction, the roofs being all steel, with cork insulation and canvas, painted. They are 50 ft. long overall, with seating capacity for 60, and are equipped with dividor trucks and G.E. 258 quadruple motors. It is expected that they will arrive in Kitchener, ready for operation early in June.

The Toronto Transportation Commission put daylight saving time in force on all lines at 2 a.m. on Sunday, May 14. The Toronto and York Railway Ry. has adopted daylight saving time on its Mimico, Metropolitan and Scarboro divisions. The Toronto Suburban Ry. is operating its Lambton-Guelph division on standard time, with the one exception of the car from Keele St. to Guelph on Saturday afternoons, which leaves at 1.45 daylight saving time, instead of 1.45 standard time.

R. J. Fleming's Opposition to Sunday Cars.—The Toronto Globe, in referring on May 15 to the fact that it was the 25th anniversary of Toronto voters having decided, by a majority of 480, to have electric railway cars run in the city on Sundays, said that the result followed weeks of heated campaigning on the part of the opposing forces, that R. J. Fleming, of Mimico, and subsequently Manager of Toronto Ry., was prominent among the antis, and that at the last great rally he declared that it would be a shame to inflict Sunday work on the street railway employees.

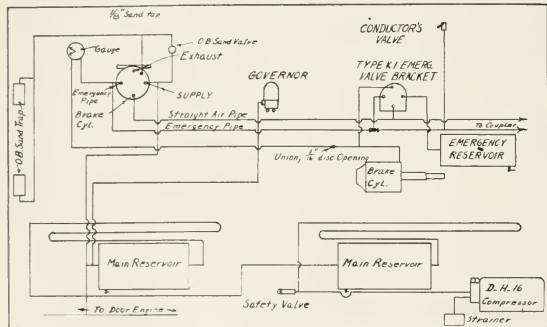

Courtesy or Curiosity.—When a man stands aside to let a young lady board a street car, one doesn't know whether it's out of courtesy or politeness. — Border Cities Star.

Rolling Stock Rehabilitation, Toronto Transportation Commission.

A large amount of equipment was taken over by the City of Toronto when the Toronto Ry. Co.'s lines came under control on Sept. 1, and were transferred to the Toronto Transportation Commission, which is rehabilitating a large number of the double truck cars. The Commission's programme provides for the improvement of 351 of these cars, the chief alterations being in connection with the air brake and heating systems. The McGann air brake system, with which these cars were equipped, is being replaced by the Westinghouse semi-automatic system, with type D-II-16 compressor. Formerly, these cars were not equipped with air compressors, and compressed air for the operation of the brakes was obtained at car houses and other points throughout the city by connecting a hose to the air reservoir on the car, from a storage reservoir supplied by a stationary compressor at the car house. By the middle of February,

system includes two main reservoirs, with cooling pipe coils between the compressor and the first reservoir, and between the first and second reservoirs. The motorman's brake valve provides for both straight air and automatic brake applications. In ordinary service applications, the placing of the handle of the motorman's brake valve in service position allows the air to flow through the straight air pipe, under the exhaust cavity of the slide valve in the emergency valve, and into the brake cylinder. Release from this position allows the air from the brake cylinder to flow to the atmosphere through the exhaust port. Straight air applications produce no effect on emergency reservoir pressure.

By placing the handle of the motorman's brake valve in emergency position, air is drawn from the emergency pipe, and exhausts to the atmosphere, causing a movement of the emergency valve, which allows air from the emer-

Arrangement of Brake Equipment, Toronto Transportation Commission's Cars.

225 of these cars had been equipped with Westinghouse brakes, by March 1, 255 cars had been equipped, and the remainder were completed early in May.

The change in the heating system involved the replacement of the ordinary stoves in the front of the cars with forced draft heaters. All of the cars have now been so equipped. No change has been made in the seating arrangement, nor have the cars as yet been repainted to conform to the Commission's standard, viz., red with cream trim and stripe.

Of the cars used formerly by the Toronto Civic Ry., 18 double truck cars, with seats arranged transversely, have been painted in the Commission's standard colors, and 20 of them have been equipped with forced draft heaters.

All of the work mentioned has been, or is being done at the Commission's central shops, under the supervision of W. R. McRae, Superintendent of Rolling Stock and Shops.

The chief details of the semi-automatic braking system applied to the Toronto Ry. Co.'s cars are shown in the accompanying piping diagram. This is the same system applied to the new cars ordered in 1921 by the Commission. The

agency reservoir to enter the brake cylinder. Release from this position allows air to exhaust from the brake cylinder, and at the same time allows pressure in the emergency pipe and emergency reservoir to again build up. The conductor's valve is connected, by piping, to the emergency pipe, so that the opening of the valve results in exhausting air from the emergency pipe, resulting in an emergency application in the same way as when air was exhausted from this pipe by a movement of the handle of the motorman's brake valve. A cord attached to the valve handle makes it possible to apply the emergency brakes from any part of the car.

When a trailer is being hauled, the brakes apply on it in the same manner as upon the motor car. The trailer being equipped with an emergency valve, emergency reservoir, and brake cylinder and associated equipment. An inspection of the drawing will make obvious the relationship between the trailer brakes and the control as exercised by the brake valve at the front of the leading car. A feature of this equipment is that in an emergency application by the motorman's brake valve, auxiliary sanding apparatus is automatically brought into operation.

Mainly About Electric Railway People.

R. A. Allaster has been appointed trainmaster, London and Port Stanley Ry., London, Ont., and W. H. Jones has been appointed master mechanic, these appointments filling the vacancy caused by the death of C. E. Lenhart, who was superintendent in charge of transportation and shops.

W. B. Boyd, M.I.E.E., Electrical Engineer, Toronto & York Radial Ry., Toronto, is President of the Dominion Alloy Steel Corporation, which has been incorporated under the Dominion Companies Act, to build and operate an alloy steel plant at Sarnia, Ont. Sir William Mackenzie, President, Toronto Ry., is a director of the new company.

Geo. Kidd, General Manager, British Columbia Electric Ry., and Mrs. Kidd, have returned to Vancouver after spending several weeks in England.

Sir William Mackenzie, President, Toronto Ry. Co., returned to Canada, May 8, from Europe, accompanied by his son in law, Count Jacques de Lesseps, the French aviator.

N. Montgomery, aged 16, son of the Superintendent, Nipissing Central Ry., and three young companions, was drowned in Lake Timiskaming, near Liskeard, Ont., May 7, when their canoe was swamped during a storm.

W. H. Moore, General Manager, Toronto & York Radial Ry., Toronto, visited Mexico recently.

H. R. Silcox has been appointed acting Engineer of Way, Ontario Hydro Electric Railways, Essex Division, succeeding R. M. Dominey, who is in charge of the Toronto Transportation Commission's track construction.

One-man Cars in British Columbia.—The B.C. Electric Ry. started operating one-man cars on May 14. An additional car was put in operation on one line to make closer connections with the Central Park interurban line. In Vancouver City eight lines will soon be equipped with one-man cars, the majority of them being so operated already. North Vancouver, with a normal equipment of six cars, augmented on rush hours and holidays, will be equipped next. The company is rebuilding its present cars for the purpose in its Vancouver shops. In order to save time on grades, mechanical derrails are being installed in New Westminster in place of the old type derrails.

Rule of the Road in Nova Scotia and New Brunswick.—In connection with the passing of an act changing the rule of the road in Nova Scotia, Hon. H. H. Wickwire stated that he had been assured that a proclamation would be issued in New Brunswick, to bring into force in that province the act, passed some time ago, changing the rule of the road, and that the change would go into effect in New Brunswick on the same day as in Nova Scotia. It was announced May 12, that the Nova Scotia Act would go into effect Jan. 1, 1923.

A fortnightly aeroplane service is in operation from Cairo, Egypt, to Baghdad, Iraq, for all classes of mail, except parcels, and accelerates letter transportation 14 days or more to Baghdad and northern Persia, down to about 3 days in the case of places as far south as Bushire.

Electric Railway Projects, Construction, Betterments, Etc.

Calgary Municipal Ry.—We are officially advised that the Calgary City Council's Street Railway Department has bought 160 tons of steel rails from the City of Moose Jaw, Sask., to be used chiefly for the extension of the East Calgary line. (May, pg. 258.)

Fort William Municipal Ry.—The Fort William, Ont., Public Utilities Committee received tenders May 11, for the construction of the Mission Park extension. (April, pg. 206.)

Hull Electric Co.—The Board of Railway Commissioners passed order 32,367, May 11, providing that the cost of installing and maintaining signals and derrails at the crossing of Montcalm St., Hull, Que., by the C.P.R. and the Hull Electric Co., be paid by the Hull Co. (a C.P.R. subsidiary), the maintenance of the gates to be paid 80% by the C.P.R., and 20% by the city, the cost of operating signals, derrails and gates to be paid 40% by the C.P.R., 40% by Hull Electric Co., and 20% by the city.

Kitchener & Waterloo St. Ry.—We are officially advised that the Kitchener Light Commissioners are building a little more than a mile of double track line, on King St. East, Kitchener, from the corner of King and Albert Sts. to 406 ft. beyond the city limits. The contract for installing the track and paving the track allowance has been let to the Standard Paving Co., which will do all the work with the exception of welding joint plates and ties, which will be done by the Commissioners' own staff. The rail for straight track is 80 lb. A.S.C.E., section in 60 ft. lengths, laid on International steel twin ties supplied by Sarnia Bridge Co. The track is laid on a concrete bed, with concrete surface between rails; the street surface being asphalt. (May, pg. 258.)

London and Port Stanley Ry.—The proposed erection of a coal handling plant at Port Stanley, Ont., at an estimated cost of \$25,000, was laid before the village council, May 8.

The proposal to build an amusement hall at Port Stanley this summer, has been postponed. P. Pocock, Vice Chairman, London Railway Commission, is reported to have stated May 10, that the proposed building would be two stories high, to provide shelter for the patrons of the park in rainy weather, and a place for amusement. The first floor would be open to all for rest, and the upper floor would be used for dancing. The estimated cost of the building is \$60,000. A press report states that the foundation work will be done after the summer season at the park. (May, pg. 258.)

We are officially advised that the Commission is replacing a mile of 60 lb. rail with 80 lb. rail between Port Stanley village station and the beach terminal at Port Stanley. The station is to be rebuilt, a little farther back from the former site, to make room for laying a second track. The concrete foundations for the altered situation are being put in, and the present building will be moved to the rear, and extended 20 ft. The outside of the building will be covered with metal lath and stucco, and the inside will be finished with rough plaster walls and tile floors. A concrete freight shed is to be built north of the passenger station.

The London Public Utilities Commis-

sion has bought a 1,000 k.w. rotary to supply power to the railway. This has been added to a 500 k.w. installed in 1915, and is expected to be delivering power to the railway on June 1. (May, pg. 258.)

Montreal Tramways Co.—The Montreal Tramways Commission has authorized the laying of a double track line on Wellington St., from McGill St. to the Lachine Canal. In order to permit this to be done the city will widen the roadway by reducing by 1 ft. the width of the pavement on either side of the street. The M.T. Co. will undertake the construction of 18 ft. of the roadway, so that the fronting properties will have to pay for the remaining 19 ft.

The City Council has accepted its executive committee's recommendation for the building of a line into Mount Royal Park, by the Shakespeare Road, and has decided to call upon the Montreal Tramways Co. to build it. (May, pg. 258.)

Ontario Hydro Electric Ry. S. Essex Division.—A Windsor, Ont., press report says that T. U. Fairlie, of the Hydro Electric Power Commission of Ontario, has informed the city council's transportation committee that new switches, which will eliminate delay and congestion at Devonshire Road, Walkerville, will be built on Walker Road, that the north track on East Sandwich St. will be rebuilt as soon as the south track is removed, and that double end cars will be used on the Walker Road run.

Winnipeg Electric Railway Franchise Negotiations.

The Winnipeg City Council's special committee, which is dealing with an extension of the Winnipeg Electric Ry. Co.'s franchise, has been considering the fixed return on the physical value of the company's railway system, which is to be the basis for fixing fares. The report of the Public Utilities Commission, now abolished, adopted a rate of 8%, but the committee does not appear to be inclined to accept this, and the suggestion was made at a committee meeting April 25, that the fixed return should be 5½ or 6%. The agreement of July 1921, required the company to be allowed a "fair return."

Winnipeg City Council, at a special meeting, May 11, considered a report of its sub-committee on street railway negotiations, which dealt at considerable length with the reasons which had led the members to recommend a reduction of fares, as an advantageous, economic move for the company. The recommendation is that from August 1, the fares shall be as follows: Cash 7c as at present; 5 white tickets to be sold for 30c good at all times; 18 blue tickets to be sold for \$1. good at all times; 5 red tickets to be sold for 25c, good from 6 to 8 a.m., and from 5 to 6.30 p.m. weekdays, and all day on Sundays; 8 green tickets to be sold for 25c, as at present. The report alleged that the most reasonable reduction possible had been asked to avoid arbitration with the company, and that the general policy had been shaped on the psychological effect of reducing fares, rather than on Price Waterhouse Co.'s report of the company's financial standing. In the discussion on the report, Ald. Douglas gave an analysis of passenger traffic and revenue under the 1920-

21 schedule of fares, and claimed that the company would suffer an added burden from the proposed cut. Ald. Shore claimed that the committee had arrived at its recommendation after giving the company's financial statement and claims every consideration. Ald. Sparring outlined the committee's general policy in dealing with the matter. Ald. Simpson claimed that cheaper fares would cause more riding. Ald. Davidson questioned whether the arguments advanced by the Committee gave the city ground for its application, and Aldermen Heaps and Blunberg regretted that the reduction asked was so slight.

A. W. McLintock, Vice President, in an interview on May 12, said: "I don't think at this time I should make an extended statement in regard to the Committee's report, which was dealt with at the council meeting, as it will be necessary to make a formal reply at a later date to the resolution passed by the council, at which time I will deal with the matter fully. There can be no reduction of fares at present. The Committee's report practically conceded that upon the financial showing made as a result of Price Waterhouse Co.'s report, no reduction of fares would be justified. The Committee, however, suggested a reduction purely as an experiment, and without any reason or basis for anticipating that such reduction is justified, or would result otherwise than in a large deficit. The basis for the Committee's suggestion appears to be psychological, and not financially practicable. If the reduction in fares, advocated by Ald. Douglas, should go into effect, would the city council indemnify the company against any loss which it might sustain by reason of trying out such psychological experiment? In dealing with the company's affairs, it does not appear that the Committee took into consideration the fact that traffic is declining very rapidly, and as a result of this, and the lower fare effective last August, there is a heavy reduction in revenue which amounts to approximately \$160,000 for 1922. The suggested reduction in fare, if adopted, would automatically increase the annual reduction in revenue by a further \$165,000."

Quebec Public Service Commission Act Amended.

The Quebec Legislature has amended the act relating to the Quebec Public Service Commission's powers, by adding to the matters coming within its jurisdiction, amending its powers relative to expropriations of land in the cities of Quebec and Montreal and by adding a new section to Revised Statutes of 1909, Article 740. This article says:—"The Commission shall have jurisdiction," and then follow a number of paragraphs stating the matters in which the Commission has jurisdiction, to which is now added paragraph L as follows:—"In any dispute that a tramway company and one or more municipalities agree by resolution to submit to the Public Service Commission, relating to tramway rates and operation, whether or not a contract exists between them; and the order of the Commission shall be binding on all parties. This provision does not apply to the Montreal Tramways Co."

A motor bus service was started on May 15, from St. Clair Ave. and Dufferin St., Toronto, to King City, Ont.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.—

	9 mos. to Mar. 31, 1922	9 mos. to Mar. 31, 1921
Gross	\$849,650	\$867,083
Expenses	\$97,901	\$17,386
Net	\$751,749	\$849,697
Interest	\$24,947	\$24,947
Surplus	\$726,802	\$824,750

Calgary Municipal Ry.—R. A. Brown, Superintendent, is reported to have given the following information as to operation for the three months ended March 31:—

	1922	1921
Earnings	\$226,388.81	\$244,469.11
Expenses	\$222,433.01	\$246,339.13
Surplus	\$3,955.80	*\$1,870.92
Passengers carried	3,908,452	4,099,032
Car miles	703,473	717,183
Car hours	71,783	72,182
Revenue per car mile	\$2.133c.	\$4.037c.

*Deficit.

The report as given in a local paper states that there were no alterations in expenditures for debenture interest, sinking fund, depreciation or administration charges, of the two comparative periods and only slight changes in the figures for insurance, taxes and contributions to uncapitalized assets. Track and road-way expenditures decreased from \$21,988.94 in the first three months of 1921 to \$2,372.92 in the same period of 1922. On the other hand, an expenditure of \$1,890.52 was necessary for car bodies and trucks in the first period of this year which was not required in the first three months of last year. Cost of electric equipment for cars was reduced from \$10,962.27 for the first three months of 1921 to \$7,386.33 for the first three months of this year but this was balanced by an expenditure of \$3,574.91 for car wheels in the latter period, whereas nothing was required for that purpose in the first three months of 1921.

Calgary Municipal Ry.—A press report states that April earnings were \$72,786.19 and expenditures of \$74,328.53, a deficit of \$1,542.34, against \$325.23 for April 1921. The receipts for the four months ended April 30 were \$298,975, and expenditures \$294,871.02, giving a surplus of \$4,103.98, against receipts of \$321,620.35, expenditures of \$325,871.02, and a deficit of \$3,764.59 for the corresponding four months of 1921.

Edmonton Radial Ry.—A report states that the public utilities owned by the City of Edmonton, Alta., showed a net profit of \$135,840 for the three months ended March 31, against \$84,239 for the corresponding period of 1921. The Edmonton Radial Ry. showed a profit of \$3,708 for the three months as against a loss of \$12,366 for same period of 1921. Since the beginning of the year Commissioner Yorath has been setting aside a proportion of the profit over operating expenses, as a reserve and to carry out betterments during the summer. About \$1,000 a month has been transferred to the reserve fund, and in March \$2,400 was set aside for maintenance of track, and overhead work.

Montreal Tramways Co.—About \$2,700,000 of 20-year 4½% bonds and debentures of the Montreal St. Ry. Co. is

sued in 1902, and payable in London, Eng., and Montreal, fell due May 1. These represent the unredeemed balance of an issue of \$1,500,000 gold bonds, and \$2,238,666 of debentures. E. A. Robert, President, is reported to have stated that the securities were being redeemed as they were presented, and that provision had been made for taking up the whole amount.

Nova Scotia Tramways & Power Co.—

The N.S. Board of Commissioners of Public Utilities has authorized the company to issue \$1,500,000 of 30-year mortgage bonds. The proceeds are to be utilized to retire \$1,000,000 of 3-year 7% notes due June 1, which will amount to approximately \$1,035,000, as the notes are payable in New York in U.S. funds; \$200,000 for street paving, and the balance for electric light and gas purposes.

The company subsequently put on the market \$1,250,000 of the amount authorized, at 97½ and accrued interest from April 1. The bonds are redeemable April 1, 1952, but are callable as a whole at any interest date, up to April 1, 1932, at 110 and interest, to April 1, 1942, at 105 and interest, and to April 1, 1947, at 102½ and interest.

Port Arthur City Ry.—A press report states that the total passenger revenue in 1921 was \$192,779.87; fare passengers carried, 3,178,840; total passengers carried, including transfers, 3,417,495; car mileage, 624,007. The report also states that the earnings for the four months of 1922 were as follows:—Jan., \$14,645.05; Feb., \$13,405.34; March, \$15,554.22; April (estimate), \$16,000.

Quebec Ry. Light and Power Co.—

The House of Commons Railway Committee has approved of a bill authorizing the company to issue bonds at a rate not exceeding 7%. The company asked for authority to issue \$4,000,000, but this provision was withdrawn and the amount to be issued was not stated. It was intimated that no bonds could be issued without the consent of holders of existing bonds.

Manitoba Public Utilities Commission.

—We were officially advised on May 12 that the act respecting public utilities, to create a public utilities commission, and in 1912, and subsequently amended, was then changed at the Manitoba Legislative session. It was stated following the passing of a resolution on March 1, censuring the Government for not having put into effect a resolution passed by the Legislature of April 28, 1921, directing the winding up of the Public Utilities Commissioner's business that the Commissioner would cease his duties under the act on May 31, and that the duties of the office would then be transferred to the Provincial Secretary's Department.

Legislation Affecting New Brunswick Power Co.

The New Brunswick Legislature has passed an act, providing for the expenditure by the N.B. Power Commission of \$800,000 additional upon the development of water power plants. The Musquash power development near St. John is reported to be well on towards completion. The power transmission line connected with this development will extend to St. John in one direction and to Moncton in the other.

The question of the distribution of the power to be delivered in St. John from this development was debated at length in the Legislature. It arose as the result of the introduction of a bill designed to give the St. John City Council authority to enter into competition with the N.B. Power Co. in the city and Rothesay parish in the distribution of power. The bill provided among other things that the city be given power to sell out the company's property under certain circumstances. The company pointed out that if by reason of the city's competition in the distribution of power the company's earnings are so reduced that it cannot continue profitable portions of its service which it is now conducting at a loss in the public interest, the city may take over all or any portion of the company's plant and operate it under the control of the Commissioner of Public Safety without any compensation to the company for the use of its property or any obligation to maintain it, and that the expense of such operation shall be a lien upon all of the company's property and to satisfy such lien the city may sell all the company's property and franchises and upon such sale being made it may execute a good and sufficient conveyance to the purchaser free and clear of all liens, or incumbrances. The result would be that the city would acquire at such sale all of the company's property without paying anything for it.

After several days' discussion in committee, the bill was amended in many details, and as it finally passed provision was made that the company may within 12 months offer to sell its undertaking to the city as a going concern, which offer the city is authorized to accept, and to proceed for arbitration to fix the actual cash value of the company's property, which includes the electric railway in St. John and its vicinity.

Toronto Electric Railway and Power Clean-Up Deal.

Progress is being made in the direction of winding up the various matters that have interfered with the completion of the "clean-up of the Mackenzie interests," which was the subject of an agreement between the Hydro Electric Power Commission of Ontario, several companies headed by Sir Wm. Mackenzie, and the Toronto City Council. The matters arising out of the agreement have resulted in a good deal of negotiation and discussion between the several interests, and have been somewhat complicated by reason of the Yonge St. situation as it affects the Toronto & York Radial Ry.'s Metropolitan Division. There were several conferences of the parties interested at the Premier's office at the Legislative Buildings in Toronto, in May, but no settlement was arrived at.

Marine Department

The Canada Steamship Lines Financing, Reorganization, Annual Report, Etc.

A year or so ago, when it became necessary to reorganize the Canada Steamship Lines' finances, and to obtain funds, the Canadian Appraisal Co. was employed to value the company's fixed assets, and is stated to have reported, in June, 1921, that their value was substantially in excess of that shown in the last previous balance sheet. In August, 1921, a bylaw was passed authorizing the issue of \$6,000,000 ten-year serial 1st mortgage 7½ collateral bonds. These were not underwritten, but it was reported that some of the directors and their friends had subscribed for over \$2,000,000 of them, and the balance was offered by local brokers, principally in the Province of Quebec, but only about \$300,000 worth were taken by the public. As it therefore became necessary to make other arrangements, the directors decided to seek funds in New York, and as a preliminary step employed Coverdale & Colpitts, consulting engineers of that city (who were engineers to a commission appointed by the Canadian Northern Ry. Co.'s directors to make a report on its properties in 1917), to make a general survey and investigation of the company's properties, affairs and transactions from its inception, and their report was submitted to the directors in due course.

In March, 1922, President J. W. Norcross went to England, to endeavor to effect a change in the voting trust, under which between 60% and 70% of the common stock was vested in trustees in England, elected by the London Advisory Committee, and to effect a change in that committee so as to equalize the voting power between the Canadian and the British interests. He returned to Montreal on April 23, and, following a directors' meeting on April 26, it was announced that arrangements had been made for refinancing the company, that a bond issue of \$6,000,000 had been underwritten, and that changes would be made in the directorate.

On May 2 it was announced that at a directors' meeting held on that day, W. H. Coverdale, of Coverdale and Colpitts, New York, had been elected president in place of J. W. Norcross, who had been elected Vice President and Managing Director, and that A. J. Brown, K.C., of Montreal, and Robt. Hobson, President of the Steel Company of Canada, Hamilton, Ont., had been elected directors, and proxies were invited in their favor for a special general meeting and for the annual meeting to be held in Montreal on May 16 to consider, and if deemed advisable, to rescind the bylaw passed in Aug., 1921, authorizing an issue of \$6,000,000 ten-year serial 1st mortgage 7½ collateral bonds, and to consider, and if deemed advisable, to ratify a new bylaw authorizing an issue of \$6,000,000 twenty-year 7½ 1st mortgage collateral sinking fund gold bonds. It was also announced that the issue of \$6,000,000 20-year 1st mortgage collateral sinking fund 7½ gold bonds had been underwritten in New York, by Kissel, Kinnicut and Co., and Blair and Co., New York, and Union Trust Co., of Pittsburgh, Pa. Of the total amount, \$4,500,

000 was offered in New York, and was reported as oversubscribed, and the balance of \$1,500,000 was offered in Canada early in May, by Nesbitt, Thomson and Co., Montreal, at 97.50 and interest, to yield approximately 7¼%. Interest is payable half-yearly on May 1 and November 1, and principal and interest are payable at the holder's option in New York, Montreal or Toronto, in gold. Coupon bonds are in denominations of \$1,000, \$500 and \$100, registerable as to principal, and callable for the first three years at 107½ and interest, and thereafter at 105 and interest. Commencing May 1, 1923, the company is to provide an annual sinking fund of 2% of the maximum amount of the bonds, payable 1½ half yearly, to be applied to the purchase of the bonds in the open market up to the call price, and if not purchasable at that price, bonds will be called by lot at the call price. As the bonds are retired, an equivalent percentage of the collateral may be withdrawn for two purposes only, for cancellation, and for the sinking fund requirements of the indenture securing each collateral. The issue is secured by a deposit of \$8,400,000 first mortgage 5% bonds due 1943, being 61.42% of a total closed issue of \$13,675,466, the balance being outstanding in the form of debentures, or first mortgage bonds, which are interchangeable. The face value of the first mortgage bonds held

as collateral for this issue exceeds its face value of this issue by \$2,400,000, or 40%.

Annual Report and Statement.

During the second week in May the directors' annual report for the calendar year 1921, was issued over the signature of W. H. Coverdale, President, and sent to shareholders, with statements signed by J. W. Norcross and G. H. Smithers, directors, as follows:

Your directors submit the eighth annual report and statement of accounts. The profits for the year were \$772,850.40, against \$1,932,772.32 for 1921. The abnormal expansion of the company's business during the war, and for a period after the war, and which was followed by great depression in the world's shipping trade, seriously affected the result of the company's operations during 1921 and the preferred dividend has since been deferred. Under the advice of expert engineers and accountants, the balance sheet has been revised to reflect existing values of tonnage and property. In order to pay off bank loans, and to provide additional working capital, your directors have arranged for an issue of \$6,000,000 of collateral bonds. You will be asked to approve certain amendments to the bylaws, the desirability of which is obvious. The company's properties are in a good condition, and the general efficiency has been well maintained.

Consolidated Balance Sheet as at December 31, 1921.

ASSETS	
Fixed Assets:

Special and Annual Meetings.

At the special general meeting on May 15 the bylaw passed in Aug. 1921 authorizing an issue of \$6,000,000 ten-year serial 1st mortgage 7% collateral bonds was rescinded and the new bylaw authorizing an issue of \$6,000,000 twenty-year 7% 1st mortgage collateral sinking fund gold bonds was ratified.

At the annual general meeting of shareholders, which followed, President Chavard, in moving the adoption of the annual report, said that at the time of consolidation, the directors and officials started under the handicap of an item included in the balance sheet as goodwill, etc., at over \$8,000,000, in order to offset capital liabilities issued at that date. Therefore the credit position at the very start was bad, rather than good, and, as there have been practically no changes in the fixed capital liabilities since that date, no criticism can be leveled at the directors and officers on that score. This bad credit condition was realized within a year of consolidated operation when the war broke out, cutting down revenue, forcing up operating ratio, and resulting in a heavy loss for 1914. This loss was due to war conditions, poor credit position and furthermore to the fact that borrowing had to

be resorted to to fulfil the terms of the consolidation. This applied to the purchase of securities and other properties. This borrowing was done under conditions disadvantageous to the company as to interest, mortgages and various other restrictions imposed at that time. Notwithstanding these burdensome restrictions and the other discouraging factors alluded to, the company has in the eight years of its life, earned \$23,026,000, having since 1914 closed each year with a substantial net income. The company had out of its operations alone established a cash reserve of \$11,198,000, after all operating expenses, the establishment of an adequate depreciation reserve and payment of dividends. This was composed of the surplus of \$3,744,000, and the \$7,454,000 reserve for depreciation and replacements of its fleet.

In referring to the purchase and sale of certain properties, he stated that they had been undertaken in good faith, and that about 50% of them had resulted in substantial benefit to the company. It was only fair to say they were covering now a period when, owing to the very extraordinary circumstances of the war, and more particularly conditions concerning ships, that a very enhanced opportunity existed during several years

for the purchase and sale of capital assets. That was a period that they hoped would not recur. In that period the company bought certain assets and securities of other companies, some of which had resulted to its great advantage and some of which had resulted to its great loss. It was very easy to judge transactions when they were two or three years old, in view of subsequent events. It was somewhat like judging the morality of a past age by the enlightenment of the present age. The transactions that had taken place included the following: The company bought the St. Lawrence & Chicago Steam Navigation Co. for \$2,002,000, and it had paid for itself in three years, and had brought in a large net income. In criticising some of the other transactions it might be well to bear this in mind. The Montreal Transportation Co. was bought at a total cost of \$3,338,000. That was a reliable company bought at a time when prices had reached about their maximum. It was bought on a 7% basis, and it had paid its own way, but no more. After the fullest investigation no adverse comment could be directed against the directors based either on assets or income at the price for which the Montreal Transportation Co. was taken over.

Then they came to a transaction which had been much commented on, and as to which they could not refer in quite the same terms. The company, through Tidewater Shipbuilders Ltd., had an account against the Davie Shipbuilding & Repairing Co. of \$622,000. The Davie Co.'s credit was not in satisfactory shape, and the question arose as to whether or not Canada Steamship Lines should write off its loss on the account, or send good money after bad and try to pull the chestnuts out of the fire, by undertaking to assist the company to a better position. The C. S. L. directors decided to buy a third mortgage to the amount of \$2,500,000. The Davie Co. had suffered by the drop in prices and business from that day to this had barely paid expenses. If the Davie Co. had to be sold today it would mean a loss of \$1,250,000. That, however, was not the case unless the property was sold for half of its outstanding mortgage, and that was improbable. Tidewater Shipbuilders Ltd. plant had been built at Three Rivers and cost \$1,548,000, and if sold today would not realize that, but there was no thought of selling either of them at this time. Eight ocean steamships had been bought at a cost of \$7,898,000, and in the first year made money, and the second year lost money, so their operations showed a profit to date, but there was no prospect of it in this year or in the next. The saddest part was that owing to the redundancy in tonnage there had been such a great fall in price as to make it unwarranted that the values of those ships should be carried at cost in the balance sheet, and there had been written off \$3,898,000, which, with the Davie Co., probable loss amounted to \$5,100,000, which represented 100% of the opinion of men who had spent 90 days in investigating their value and perhaps represented more, especially as they considered the lake and river tonnage represented \$2,500,000 more than the amount carried in the books at present.

A shareholder asked about the loss on ocean ships, and was told that in 1919-20 they had made \$729,000, and in 1920-21 they lost \$639,000, so that there was a net gain of \$80,000 for those two years, but the ships had been written down \$3,-

876,000. The shareholder remarked that the operating cost ratio for 1921 was 81%, which was a little high as compared with 70% in 1919, but the President said this was due to the amount written off for loss.

Mr. Joseph, another shareholder, asked if there was any likelihood of preferred dividends being paid, but the President could not give any hopeful or certain answer on that point, although he declared the company's credit would be rehabilitated within a year.

Changes were made in the bylaws increasing the executive from four to eight and a new bylaw was passed, the effect of which is that the original indenture of trust shall be closed at \$13,000,000 instead of \$15,000,000, as previously provided for. It was stated that there would be no change in the trustees, and that the bonds would be redeemed at the rate of 2½ a year, the trustees calling for tenders for this purpose. Resolutions were passed that there would be no increase in indemnities paid the directors or officers.

The following directors were re-elected—Senator J. P. C. Casgrain, D. B. Hanna, W. L. McDougall, J. W. Norcross, H. B. Smith and G. H. Smithers, and new directors were elected as follows:—W. H. Coverdale and Frank Humphrey, of New York; A. J. Brown, K.C., G. Caverhill, F. W. Molson and Senator Smeaton White, Montreal; J. H. Fortier and C. E. Taschereau, Quebec. Mr. Coverdale was doubtless elected as a representative of the New York financial interests which did the underwriting, and they are also represented by F. Humphrey, of Kissel, Kinnicut & Co. The general impression is that Mr. Coverdale will not retain the presidency for any great length of time. The following were not re-elected as directors: T. Bienvu, Hon. E. Bristol, K.C., M.P., W. E. Burke, Hon. F. Carroll, J. E. Dalrymple, M. J. Haney, F. S. Jard, J. P. Steedman, R. M. Wolvin. At a subsequent meeting of directors the following officers were elected:—President, W. H. Coverdale; Vice President, Robt. Hobson; Vice President and Managing Director, J. W. Norcross; executive committee, W. H. Coverdale, Robt. Hobson, J. W. Norcross, A. J. Brown, F. Humphrey, C. W. Molson, C. E. Taschereau. F. B. Smith remains as Secretary, and J. I. Hobson as Treasurer. W. Grant Morden has resigned from the London Advisory Committee, which is now said to consist of Sir A. Trevor Dawson, Sir Vincent Caillard, Viscount Long, F. T. Strong, Col. Lorne Hamilton and F. W. Brown.

The Royal Mail Steam Packet Co. announces that, in the hope that it may further business with the British West Indies, it is prepared to give free conveyance by its steamships to genuine samples of Canadian manufactured articles destined for those colonies, whether accompanied or not, but as this concession is made for the sole purpose of promoting business and is one that might be abused, a limit will be placed on the size of the package. Beginning with the Chignecto, which sailed from Halifax, N.S., May 12, and expiring with the same ship from Halifax on Oct. 27, the following reduced fares are in operation: Bermuda, \$70; St. Kitts, Antigua, and Montserrat, \$185; Dominica, St. Lucia, and Barbados, \$195; St. Vincent and Grenada, \$205; Trinidad, \$215; Demerara, \$235.

Canadian Pacific Railway Ocean Steamship Services.

During the first three months of this year, there were 17 arrivals of C.P.R. ships at St. John, N.B., carrying 6,904 passengers, of whom 2,753 were newcomers.

During the past winter the company had 33 sailings to and from St. John, N.B. There were 408 saloon, 1,664 cabin and 8,372 third class passengers inbound, and 314 saloon, 3,827 cabin and 5,458 third class passengers outbound.

The s.s. Empress of India will make her first sailing from Quebec to Liverpool, July 5. She is of the twin screw type, 17,100 tons, with quadruple expansion engines, and has a speed of 17 knots. Her dimensions are: Length, 613 ft.; breadth, 68 ft. She has accommodation for 360 first class and 248 second class passengers.

The s.s. Montrose arrived at Montreal, May 14 on her maiden trip from Liverpool, Eng. She is a sister ship of the Montcalm and Montclare, and is of the geared turbine, twin screw type, with cruiser stern and 2 funnels. Her dimensions are:—length 566 ft., breadth 70 ft., depth 51 ft., 16,400 gross tons. She has accommodation for 550 cabin and 1,250 third class passengers.

The steamships Mattawa and Methven, which have been operated for some time in the Oriental service on the Pacific Ocean, are being transferred to the Atlantic service. They will proceed from Hong Kong, China, through the Suez Canal, direct to New York. They were built especially for the cattle trade, and though they have not been assigned to any particular service, it is anticipated that they will be used in that trade.

The steamships Empress of Japan and Montclair will be withdrawn from the Pacific Ocean service shortly owing to the advent of the steamships Empress of Canada and Empress of Australia. The Empress of Japan, which arrived at Vancouver, May 25, is scheduled to sail from Vancouver, June 1, on her last trip to the Orient, and is expected to return to Vancouver about July 19. The s.s. Montclair arrived at Vancouver, May 19, on her last Oriental trip, having made nearly 100 voyages on that route.

With the sailing of the s.s. Empress of France from Quebec at the end of April, a direct all-water connection with Poland and the Baltic countries was inaugurated, and a similar service from Montreal was commenced with the s.s. Melita, May 24. Other ships on this route will be the Empress of Scotland from Quebec, and Mimodosa from Montreal. Passengers transfer at Southampton, Eng., and proceed on other C.P.R. ships to destination, thus eliminating any inconvenience in landing. At Quebec, arrangements have been made for running trains alongside the ships.

The s.s. Empress of Canada sailed from England early in May, on her maiden trip for Hong Kong, China, via the Suez Canal, and is scheduled to sail thence, June 7, for Vancouver, B.C. She will be followed by the s.s. Empress of Australia, which is scheduled to sail from Vancouver, July 27. With the placing of these ships in the Oriental service, the company will give a fortnightly service between Vancouver, Yokohama, Kobe, Shanghai, Manila and Hong Kong, and form the Pacific link in the Orient to Europe service across Canada, the Atlantic service being given

by the steamships Empress of France and Empress of Scotland.

The steamships Methven and Mattawa, each 5,000 tons, which have been operated for some time between Vancouver and the Orient, have been ordered to New York for operation in the Atlantic service. They sailed from Hong Kong via the Suez Canal and are expected to arrive at New York during June. The prospects for trans-Atlantic freight traffic are improving to an extent not anticipated early in the year. In addition to these two steamships, which have not been assigned to any definite route, the company will have the freight steamships Bothwell, 6,800 tons, running between Montreal and London; Dunbridge, 6,650 tons, between Montreal and Avonmouth; Holbrook, 6,655 tons; Bolingbroke, 6,608 tons; and Bosworth, 6,660 tons, between Montreal, London and Rotterdam; Mottisfont, 5,700 tons, and Batsford, 4,800 tons, between Montreal and London.

Drydock Subsidy to Canadian Vickers Ltd.

The Minister of Public Works stated in the House of Commons recently, in answer to H. Martineau, St. Lawrence, St. George, Montreal, that a subsidy of \$105,000 a year was paid by the former Dominion Government in connection with Canadian Vickers, Ltd., drydock at Montreal, the subsidy being based on the following valuation:—Buildings, \$561,075; fixed plant, \$199,915; machine tools in machine and ship departments, \$479,355; electrical equipment, \$178,495; patent self-docking floating dock of 25,000 tons lifting capacity, \$1,775,000; rent to be paid, capitalized at 4%, \$353,015; interest, during construction of plant, 5% for half year on \$3,000,000, \$75,000; total, \$3,622,455.

The subsidy was not originally intended to be paid, only on the construction of the actual dock, and it is to be continued. The value established was \$3,000,000, and under the Dry Dock Subsidies Act, 1914 a subsidy at the rate of 3½% is payable annually for 35 years from Jan. 1, 1914.

Welland Canal Traffic.

The Minister of Trade and Commerce, in answering a question by T. L. Church, North Toronto, recently, in the House of Commons, gave the following information as to traffic through the Welland Canal during the years 1913 to 1921:—

Vessels	No.	Registered tonnage	Cargo in tons
1913	3,229	3,164,380	8,570,714
1914	3,692	3,675,695	8,860,969
1915	3,923	3,852,192	8,861,000
1916	2,939	2,513,619	2,544,964
1917	3,251	2,776,261	2,490,342
1918	3,192	2,980,389	2,174,298
1919	2,218	2,618,014	2,170,729
1920	3,124	2,528,236	2,276,072
1921	3,770	3,829,871	8,076,422

The Canadian Stevedoring Co. Ltd. has been incorporated under the Dominion Companies Act, with \$25,000 authorized capital, and office at Montreal, to carry on a general stevedoring business. The incorporators are: F. Calaghan, J. D. Kearney, P. A. Gregory, A. Andrews and R. Bessette.

General Shipbuilding Matters Throughout Canada.

Canadian Vickers, Ltd., Montreal.—We are advised that dredge 16, for the Marine Department service on the St. Lawrence ship channel, has been completed, and it is expected that it will be delivered in June, after a series of trials. It is the intention to operate the dredge in the channel below Quebec.

The company has taken over the rights for the manufacture in Canada, Vermont, Maine, New Hampshire and Massachusetts, of sea sleds, a new type of power boat. The owner of the patents is Sea Sled Co., Ltd., incorporated under the Dominion Companies Act, in 1921, with \$1,000,000 authorized capital, and office at Montreal, for the building and selling of the Hickman surface propellers and sea sleds. The chief points about the sea sleds are, a surface propeller replacing the usual screw propeller, a side plate rudder, replacing the usual rudder operated by a rudder stock, and an inverted V bottom hull in place of the usual rounded bottom. The directors are: A. Hickman, president and managing director; C. B. Homer, Lieut.-Col. H. Molson, H. B. E. Black, J. W. McConnell, Hon. W. J. Shaughnessy and A. R. Gillham. The company has a plant at West Mystic, Conn., and Canadian Vickers, Ltd., is building a demonstration boat at Montreal, which is expected to be ready early in June. It will be 38½ ft. long, and will be equipped with 2 Sterling 6-cylinder engines of 275 h.p. each.

Collingwood Shipbuilding Co., Collingwood, Ont.—We were officially advised May 20, that the special type steamship for securing and carrying sand and gravel that this company is building for National Sand and Materials Co., Welland, Ont., and which was described in Canadian Railway and Marine World for March, page 155, was expected to be launched May 27, and christened Charles Dick, by Charles Dick, son of the President of the owning company, David Dick, Jr.

Davie Shipbuilding and Repairing Co., Lauzon, Que., received a contract from the Dominion Public Works Department, April 19, for repairs, renewal, scraping, etc., to the dredge P. W. D. 110 for \$3,807.

J. Matheson, Edmonton, Alta., is building several small boats for service in the Arctic and the Mackenzie River delta, also a fishing schooner about 40 ft. long and 12 tons capacity. They will be sent to Waterways, Alta., where they will be launched, and after the postage at Fort Smith, they will be lashed together and floated down the Mackenzie River.

Port Arthur Shipbuilding Co., Port Arthur, Ont., laid the keel of the s.s. Mathewson, yard no. 47, May 10. She will be a steel bulk freight steamship for Great Lakes service, for the Mathews Steamship Co., Toronto. Her dimensions will be: Length, 550 ft.; breadth, 58 ft.; depth, 31 ft., with capacity for over 400,000 bushels of grain. The propelling machinery will consist of triple expansion engines, with cylinders 25½, 41 and 67 in. diameter, by 42 in. stroke, supplied with steam by three Scotch boilers, each 13½ ft. diameter by 11 ft. 2 in. long, at 185 lb. working pressure, equipped with interchangeable furnaces. She is being built to the highest class for the Great Lakes, of the American Bureau of Shipping.

Turpel Shipyard, Victoria, B.C.—S. and E. Turpel, formerly connected with the Turpel Shipbuilding Yard and Marine Ry., at Victoria, are reported to be re-establishing the yard and marine railway on the old site, in the upper harbor. The original plant, which was absorbed by the Foundation Co. during the war, for the building of wooden steamships for the British Government, under orders from the Imperial Munitions Board, had been in existence for about 35 years. The marine railway is said to be in course of construction, and it is intended to operate a general ship repairing plant and to build small ships.

Vancouver Shipyards, Ltd., Vancouver, B.C., made the following repairs recently:—s.s. P. W., s.s. Jessie Mac and s.s.

Hercules, docking, cleaning, painting and under water repairs; Bank Line Co.'s s.s. Madawaska, 4,120 tons, repairs to evaporator; C.P.R. s.s. Princess Victoria, 1,643 tons, docking, scaling, cleaning, painting, repairs to hull and port A bracket; Commercial Cable Co.'s s.s. Restorer, 3,180 tons, minor engine room repairs.

Sir Alfred Yarrow, Chairman, Yarrow and Co., shipbuilders, Glasgow, Scotland, and with which Yarrow, Ltd., Victoria, B.C., is associated, has retired from the company, which is being wound up voluntarily. A new company is being formed with H. Yarrow, C.B.E., as Chairman. Sir Alfred, who is over 80 years old, will retain an interest in the new company, which will have the benefit of his experience and advice.

Dominion Marine Association.

Honorary President, A. A. Wright, President, Tidewater Shipbuilders, and Vice President and Managing Director, Davis Shipbuilding & Repairing Co., Montreal.

President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal.

First Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Second Vice President, G. J. Madden, George Hall Coal Co. of Canada, Ogdenburg, N.Y.

Executive Committee, The President, First and Second Vice Presidents, and W. E. Burke, Canada Steamship Lines, Montreal; Yvon Dupre, Sincennes-McNaughton Line, Montreal; M. J. Hart, Canada Steamship Lines, Toronto; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Algoma Central Steamship Co., Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Keystone Transportation, Montreal; Honorary members, L. L. Henderson and A. A. Wright, Montreal.

Counsel, Francis Kinz, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

Gypsy, painting; s.s. Brunette and s.s. Dolpin, general overhaul; scows E.C.1 and E.C.3, caulked and painted, and also several gasoline boats overhauled and painted.

Vulcan Iron Works, Ltd., Vancouver, B.C., did the following repair work recently:—C.P.R. s.s. Charnier, general repairs, C.P.R. s.s. Montague, general repairs; steam tug Vulcan, general repairs; steam tug Stafford, general repairs; s.s. B.C.P., new boiler installed.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.—Canadian Government Merchant Marine s.s. Canadian Highlander was docked at this company's yard recently, for overhaul, and for the installation of a complete refrigerating plant.

Yarrows, Ltd., Victoria, B.C.—The following repair work was done at this company's yards at Esquimalt during April: Hudson's Bay Co.'s s.s. Baychino, 1,000 tons, minor repairs; Canadian National Ry., car ferry Canora, 2,383 tons, docking, cleaning and painting, drawing tail shafts, and repairs to propeller and rudders; Sir John Jackson, Ltd. s.s.

Esquimalt and Vancouver Dry-docks.

The Dominion Government has decided to proceed with work on the new drydock at Esquimalt, Vancouver Island, for which P. Lyall & Sons Construction Co., have the contract, the work on which was suspended on March 31, but not to carry out its agreement with the Burrard Drydock Co., for a subsidy for the construction of a floating drydock at North Vancouver, B.C. These announcements were made in telegrams sent by the Minister of Public Works from Ottawa on May 13, as follows:

To Hon. Jno. Hart, Provincial Minister of Finance, Victoria, B.C.: "After careful consideration and investigation of the drydock policy on the Pacific coast, the Government have decided to continue the work at Esquimalt."

To the Board of Trade, Vancouver, B.C.: "The Government have carefully considered and investigated the drydock policy on the Pacific coast and have decided to continue the construction of drydocks at both Vancouver and Victoria. Owing to the progress already made with the Esquimalt drydock and the serious losses and liabilities likely to be incurred by leaving the work at Victoria in an uncompleted condition, it has been considered advisable to continue that work. A careful investigation will be made of the requirements of shipping facilities at Vancouver with a view to improving same."

Hydrographic Surveys of St. Lawrence River.—Senator Dandurand stated in the Senate, recently, in answer to a question, that surveys of the navigable portions of the St. Lawrence River, between Cornwall and Montreal, had been made by the Dominion Government's Hydrographic Survey, between 1890 and 1910, and the charts of these areas can be obtained from the Hydrographic Survey, Ottawa, or the Marine Department's Agent, Montreal. The Government is not aware of any survey of the area having been made in the United States.

British Shipbuilding Strike Settled.—The dispute between shipbuilding companies and their workers in Great Britain, involving about 300,000 men, was settled April 26. A reduction of 10s. a week was put into effect immediately, a further reduction of 3s. a week taking place in May, and another 3s. a week will be effective in June.

Principal Drydocks Throughout Canada.

Hon. H. H. Stevens, Vancouver Center, B.C., ex-Minister of Trade and Commerce, moved in the House of Commons recently, for a return showing what drydocks are located and operated at Halifax, N.S.; St. John, N.B.; Quebec and Montreal, Que.; Vancouver, Victoria and Prince Rupert, B.C. The return contains the following information:—

Halifax, N.S.—Drydock operated by Halifax Shipyards, Ltd., completed in Sept., 1889. Length from bilge of caisson to coping head, 567 ft.; length over keel blocks, 500 ft.; length if caisson is placed in outer stop, 588 ft.; breadth at entrance, coping level, 89½ ft.; breadth of floor of dock, 70 ft.; depth at h.w. springs, over sill, 28 ft. 5¼ in.

St. John, N.B.—Drydock under construction under subsidy agreement with Dominion Government. Breadth at entrance, 135 ft.; at coping level, breadth at 113 ft. from bilge of caisson to coping head, 1,150 ft.; length over keel blocks, 1,025 ft.; length if caisson is placed in outer stop, 1,179 ft.; depth at m.h.w. springs, over sill, 42 ft.

Quebec, Que.—Lorne and Champlain drydocks owned by Dominion Government. Lorne completed in 1888, and Champlain in May, 1921.

Lorne—Length from bilge caisson to coping head, 600¼ ft.; length over keel blocks, 588 ft.; no additional length if caisson is placed in outer stop; breadth at entrance, coping, 57½ ft.; breadth of floor of dock, 59¼ ft.; depth at m.h.w. springs, over sill, 25 ft. 8 in.

Champlain—Length from bilge of caisson to coping head, 1,153 ft. 10 in.; length over keel blocks, 1,138 ft.; length if caisson is placed in outer stop, 1,183-1-3 ft.; breadth at entrance, coping, 120 ft.; breadth of floor of dock, 102 ft.; depth at m.h.w. springs, over sill, 40 ft.

[Editor's Note.—The Lorne and Champlain drydocks are not in Quebec City, but opposite it, in Lauzon, Levis, on the south side of the St. Lawrence River.]

Montreal, Que.—Floating drydock Duke of Connaught, operated by Canadian Vickers, Ltd., under subsidy. Completed in 1912. Length over all, 601 ft.; length over keel blocks, 599 ft.; breadth over all, 135 ft. ¾ in.; breadth inside at top, 110 ft.; breadth inside at bottom, 100 ft.; clear breadth at water line, 100 ft.; maximum depth of water over bottom of dock — ft.; maximum depth of water over blocks, 27¼ ft. These two latter dimensions are to be increased to 33½ and 28½ respectively. There is a self-docking dock in three sections; two sections are bolted together (402½ ft.), and one section loose (198½ ft.). Lifting capacity of dock, 25,000 tons.

Vancouver, B.C.—The Public Works Department entered into an agreement with Burrard Dry Dock Co. for the construction of a floating drydock and appurtenant works at North Vancouver. Lifting capacity 15,000 tons. Construction not yet started.

Editor's Note.—The Dominion Minister of Public Works telegraphed the Vancouver Board of Trade on May 12 that the Government had decided not to carry out the agreement with the Burrard Drydock Co.

Victoria, B.C.—No drydock at Victoria, but one in operation at Esquimalt and being built at Esquimalt. Dock in operation was completed in 1887.

Old dock length from bilge of caisson

to coping head, 450 ft. 8¾ in.; length on keel blocks, 422 ft.; length from bilge of caisson to head of dock, when caisson is in outer stop, 481 ft. 9¼ in.; breadth at entrance, coping, 65 ft.; breadth at sill level of floor of dock, 41 ft.; depth at m.h.w. springs, over sill, 28.89 ft.

Dock being built: Estimated length from bilge of caisson to head, 1,150 ft.; estimated length when caisson is in outer stop, 1,186 ft.; length over keel blocks, 1,142 ft.; breadth at entrance, coping, 135 ft.; breadth at floor level of dock, 126 ft.; depth at h.w.o.s.t., over sill, 40 ft.

Prince Rupert, B.C.—Floating drydock owned by Grand Trunk Pacific Ry. Co. under subsidy agreement. Completed in 1915. Length over all, 600 ft.; length of keel blocks, no information; breadth over all, 130 ft.; breadth inside at top, 110 ft.; clear breadth at water line, 103 ft.; maximum depth of water over bottom of dock, inside, 32 ft.; maximum depth of water over keel blocks, 28 ft. This is a self-docking dock, in three sections, operated together or separately.

Mr. Stevens also asked for information as to the total gross tonnage entering and leaving the ports of Halifax, St. John, Quebec, Montreal, Vancouver, Victoria and Prince Rupert during 1921. The return stated "No information."

Cable Repair Steamship to be built in Germany.—It has been announced that the Western Union Telegraph Co. has ordered a cable repair steamship from Blohm & Voss, Hamburg, Germany, for \$650,000. Practically all of the cable steamships in operation have been built in Great Britain, but tenders were invited from shipbuilding yards in various parts of the world, as owing to the general unrest, especially in the shipbuilding trades, it was anticipated that prices would vary considerably. Reports state that the lowest prices quoted by British and U.S. shipbuilders were about equal at \$900,000, and that the lowest French tender was approximately \$750,000.

Canada Industries Ltd. is reported to have been organized, in connection with the Canada Cement Co., to operate a steamship service between Canadian ports and the West Indies, Mexican Gulf and Central America, with Montreal as the summer, and St. John and Halifax as the winter Canadian ports. H. C. Brubaker, President, is reported to have secured that arrangements have been made for the commencement of the service at once, and that 4 steamships of from 6,000 to 7,000 tons each had been bought. Cement and general cargoes are to be carried on the southward trips, and coffee, fruits and such other cargoes as are available will be brought back on the return trips.

Track Bridge for Toronto Harbor.—The Toronto Harbor Commission, on May 11, asked the city board of control to make application to the Board of Railway Commissioners for an order to permit the construction of a bridge over the railway tracks at the foot of Spadina Ave. The Harbor Commissioner's solicitor advised that a bridge at Spadina Ave. is part of the Toronto viaduct plan, and an application for its construction independently would not be prejudicial to the present situation of the viaduct proposition.

Ships Built in Canada in 1921 and Exported without being Registered.

The following table gives the number and tonnage of ships built in Canada during 1921, and exported without being registered in the Dominion. All were steel steamships.

	No.	Gross Tonnage	Net Tonnage
Nova Scotia	1	381.57	30.01
Quebec	3	13,682.24	8,013.76
	4	14,065.83	8,063.77

Quebec Harbor Improvements.—Some details of the proposed improvements to be done in Quebec harbor, were given in Canadian Railway and Marine World for May. In this connection, bill 78 was introduced in the House of Commons, May 5, providing that the Governor-in-council may advance to the Quebec Harbor Commissioners not more than \$150,000, as required by the commissioners to build such terminal facilities as are necessary to properly equip the port. Commissioners' debentures covering such advances will be deposited with the Government, and the interest thereon is to be deemed to be money of the proposed terminal facilities and to be a part of the cost, and may be paid out of the money advanced. The time for carrying out the proposed works shall terminate on dates fixed by the Governor-in-council and plans, and estimates of the work must be submitted and approved before commencing.

H.M.C.S. Shearwater, which was offered for sale by tender, for breaking up only, by the Naval Service Department, recently has been sold to the Western Shipping Co., Ltd., Vancouver, B.C. She is built of steel, wood sheathed, and is equipped with a single screw two-bladed propeller, triple expansion, surface condensing, inverted, reciprocating engines of 1,400 i.h.p., 4 water tube Belleville boilers, with a working pressure of 260 lb. a sq. in., electric light pumps, etc. Her dimensions are: Length, 200 ft.; breadth, 33 ft.; draft, 12 ft. 5 in.; and she has a displacement of 980 tons.

Canadian Built Drifters and Trawlers. A British Treasury minute, dealing with Admiralty accounts, states that 60 trawlers and 100 drifters were built in Canada in 1917 at a cost of \$19,000,000, the original estimate being \$14,000,000. After the armistice, efforts to sell these boats in Canada were only moderately successful. A British engineering company offered to take them to England and repair them at the Admiralty's expense, for sale on commission. This offer was accepted and \$165,000 was advanced by the Admiralty. Of the boats taken to England, 6 trawlers and 26 drifters have been sold, realizing £60,650.

St. John, N.B. Drydock.—The St. John Drydock and Shipbuilding Co. had a dredge working on the drydock site during May, and a second one was expected to be in operation by the end of the month. The pouring of the concrete was expected to commence at the end of May.

The Pacific Steamship Co. (Admiral Line), opened its new offices at Victoria, B.C., May 1, with W. Allan, heretofore general manager, Rhet Consolidated Ltd., formerly agent for the line, in charge as General Agent.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

General.—R. B. Teakle, General Manager, in addressing the Export Club at Montreal, recently, gave an outline of the inauguration and growth of the Canadian Government Merchant Marine, and outlined the different trade routes which have been opened up by the service. He stated that the service has 2,340 officers and other employees afloat on its various ships, and 1,152 ashore. The establishing of a fleet of 55 freight steamships in three years, required considerable effort; this has taken place when conditions in the shipping world have been very difficult to cope with, and, as a result of these conditions, two of the services have had to be suspended. The main services, however, are being carried on with all the energy the staff can put into them.

British Columbia Registration.—Canadian Government Merchant Marine, Ltd., with an authorized capital stock of \$1,000,000, and head office at Toronto, has been registered under the B.C. Companies Act, to carry on business in that province. R. W. Hannington, Vancouver, is its attorney.

Canadian Scottish, Ltd.—Canadian Reaper, Ltd., which was incorporated to own the s.s. Canadian Reaper built at Prince Rupert, B.C., in 1921, and renamed Canadian Scottish, has had its corporate name changed to Canadian Scottish, Ltd.

Officers of Steamships.—Capt. J. P. Sharp, formerly of the s.s. Canadian Voyageur, has been appointed to the s.s. Canadian Trooper, vice Capt. F. J. Ormrod, who stands by for another appointment. Capt. J. H. Hubley, formerly of s.s. Canadian Warrior, at present laid up, has been appointed to the s.s. Canadian Voyageur, vice Capt. J. P. Sharp, transferred to s.s. Canadian Trooper.

Coal Supplies for Steamships.—The following questions were asked in the House of Commons recently, by A. W. Neill, Comox-Alberni, B.C., the answers being given by the Minister of Railways:—

Q.—Has the Government's attention been called to the fact that the s.s. Canadian Freighter, one of the Canadian Government Merchant Marine, recently brought a cargo of Japanese coal to Vancouver, and that 1,200 tons of the coal were transferred to the s.s. Canadian Prospector? A.—The s.s. Canadian Freighter took on board at Muroran, Japan, 1,000 tons of coal for ballast, as it was impossible to obtain a return cargo for the ship. The Canadian Freighter is an oil burning ship, and the coal had therefore to be transferred to the Canadian Prospector on arrival at Vancouver.

Q.—If so, what was the cost of this coal in Japan? A.—\$7 a ton.

Q.—What is the estimated cost of transportation of this coal across the Pacific to Vancouver? A.—No transportation cost. It was considered more economical to bring home coal on this ship than to purchase 1,000 tons of ballast. The saving claimed by the management is as follows:

	Per ton	Per ton
Price of ballast, including loading and discharging (approximately)		
Price of coal at Union B.C.	\$3.25	
B.C.	7.65	\$10.90
Price of Japanese coal	7.00	
Cost of transport, etc.		
Canadian Prospector	2.17	9.17

Approximate saving by purchasing coal for ballast—
or, for 1,000 tons, \$1,750.00. 1.73

Q.—What is the estimated cost of transferring it by barge from one ship to the other? A.—Approximately \$2.17 a ton.

Q.—Is Cumberland steam coal recognized by the Imperial Navy as being a high-class steam coal? A.—No information.

Q.—At what prices could good steam coal from the Cumberland mines have been obtained and delivered into the bunkers of s.s. Canadian Prospector at Union Bay? A.—\$7.65 a ton trimmed in bunkers was the price paid for coal taken by Canadian Government Merchant Marine ship at Union Bay, on March 8.

Q.—Has the Government been advised that the Cumberland mines are only working half time, on account of lack of market for their coal? A.—No information.

Q.—Will the Government take steps to see that C.G.M.M. steamships hereafter use only B.C. coal on the Pacific Ocean? A.—As far as they can possibly do so, Canadian Government Merchant Marine ships will hereafter use only B.C. coal on the Pacific Ocean.

Atlantic Passenger Traffic.—The Minister of Railways stated in the House of Commons recently, in answer to L. H. Martell, Hants, N.S., that no person was employed, nor any commission appointed, by the Canadian National Rys. directors, during 1921, to proceed to England to investigate or report upon the question of passenger traffic on the Atlantic Ocean, in connection with the Canadian Government Merchant Marine.

Pacific Ocean Traffic.—Large bookings of wheat from Vancouver to Japan, and grain from Australia to Japan are reported for Canadian Government Merchant Marine ships operating on the Pacific Ocean.

Suggestions re West Indian Trade.—The Canadian Manufacturers Association's Maritime Division has suggested that all C.G.M.M. steamships under 5,000 tons be sold, and new steamships of larger tonnage be procured, in order to secure the West Indian trade.

Montreal Sailings.

Liverpool Service.—Canadian Cruiser, June 2; Canadian Commander, June 16; Canadian Explorer, June 30.

London Service.—Canadian Ranger, June 1; Canadian Pioneer, June 15; Canadian Challenger, June 29.

Glazgow Service.—Canadian Otter, June 25; Canadian Navigator, June 17; Canadian Volunteer, June 30.

Cardiff and Swansea Service.—Canadian Runner, June 15; Canadian Squatter, July 13.

Australia and New Zealand Service.—Canadian Conqueror, June 28; Canadian Spinner, July 26.

Barbados, Trinidad and Demerara Service.—Canadian Logger, June 7; Canadian Harvester, June 21.

Nassau, Kingston and Belize Service.—Canadian Fisher, June 20; Canadian Forster, July 11.

Newfoundland Service.—Canadian Sapper, June 17.

Indian Service.—Canadian Importer, June 12, Madras, Bombay.

Longshoremen's Wages at Montreal.

As announced in our last issue, the steamship companies operating into and out of Montreal, and members of the Shipping Federation of Canada, outlined the wages and working hours for longshoremen for this season. The terms were not acceptable to the men, who refrained from working, the handling of cargoes to and from steamships being in most cases done by casual labor, assisted by the ships' staffs. There was no formal strike, but there was a certain amount of disturbance caused by interference with the casual labor employed, by union members. At the Mayor's request, a meeting took place between the shipping companies' representatives and the men, May 6, followed by a mass meeting of the men, when it was decided by a large vote to accept the companies' terms. The rates being paid under the new arrangements are: from 7 a.m. to noon and from 1 to 6 p.m., 50c, an hour; from 7 to 11 p.m. and from 12 midnight to 5 a.m., 60c, an hour, double time for Sunday work; nitrate and bulk sulphur cargoes, 65c, an hour for day work and 75c, an hour for night work; grain trimming and bagging, 65c, an hour for day work and 75c, an hour for night work.

Canadian Navy Abandoned.

The Minister of Militia and Defence announced in the House of Commons, May 12, a practical abandonment of the nucleus of a Canadian Navy. The new policy provides as follows: Five ships are to be laid up. These include the cruiser Aurora and the destroyers Patriot and Patrician, presented to Canada by Great Britain after the armistice. The other two ships laid up are submarines. Canada's naval force will consist of three ships on each coast, viz., a small ship and two trawlers as tenders at both Halifax and Esquimalt. The three ships on either coast are to be used for training a volunteer force in protection of shores and harbors, mine sweeping and mine laying. Protection and care of wharves and docks at Halifax and Esquimalt is to be continued, with provision of a reserve force of officers and men numbering 233. With the exception of four, officers from the Royal Navy are to be returned to it.

Chippawa Sand & Towing Co., Ltd. has been incorporated under the Ontario Companies Act, with \$100,000 authorized capital, and office at Chippawa, Ont., to carry on the business of towing, dredging and carrying sand and gravel, and to own steam tugs, docks and other facilities for such business. The provisional directors are: J. C. Carr, J. P. Maloney and W. E. Greenwood, Chippawa, Ont.

Atlantic and Pacific Oceans.

The Hudson's Bay Co. is reported to have chartered the U.S. auxiliary powered schooner Ruby, to take supplies to its Siberian stations. The Ruby has been operated out of Seattle, Wash., in the northern trade for some time, and was expected to leave Seattle during May for Vancouver, to take on cargo.

The British s.s. Arbecco, from Liverpool, Eng., to Quebec, in ballast, struck a rock on the south coast of Newfoundland, during dense fog, May 10, and is reported a total loss. The crew landed safely. She was built at Ayr, Scotland, in 1894, and was screw driven by engine of 99 h.p. Her dimensions were, length 190 ft., breadth 27.1 ft., depth 13.2 ft.; tonnage, 745 gross, 396 net.

The Cunard Line's service to Canada was reopened April 20, after a lapse of seven years, with the sailing of the s.s. Albion from Liverpool. Other of the company's ships to be operated on the route are the Andania, Antonia, Ausonia and Tyrrhenia. Owing to labor troubles in England, the May sailings of all but the first named were cancelled, but it was expected that they would all be in service during June. On the outbreak of war, all of the company's ships engaged on the Canadian service, were requisitioned by the British Government, and were sunk by the enemy.

The White Star-Dominion Line s.s. Cornishman was the first trans-Atlantic steamship to arrive at Montreal this year, docking there April 26, Capt. A. B. Calvert being presented with a gold-headed cane on behalf of the Montreal Harbor Commissioners. She met considerable ice at the entrance to the Gulf, and also went 322 miles from her course, to aid another ship in distress. The Canada Steamship Lines s.s. Bilbster was the first steamship to arrive from the ocean, docking April 24, but as she had come in from a coasting trip, and had not crossed the Atlantic, she did not qualify for the cane presentation. It is stated, however, that this year the presentation was duplicated, the captains of both ships receiving canes.

The motorship Hauraki, which arrived at Vancouver, B.C., during May, on her maiden voyage, is being operated by the Canadian-Australasian service, by the Union Steamship Co. of New Zealand. She is one of the latest ships of this type, and is fitted for cargo, livestock, and a limited number of passengers. Her dimensions are: Length, 450 ft.; beam, 58 ft.; depth, 34 ft. She maintains a speed of 12 knots, on a consumption of 12 tons of oil in 24 hours. She is heated by electricity, which power also operates the winches, windlasses, steering gear, alarms, whistles, etc. A course indicator is also provided, by means of which the officer on the bridge can indicate the course to the quartermaster and know the position of the rudder at all times.

Baggage Insurance.—The C.P.R. has made arrangements that passengers who desire to insure their baggage and personal effects against loss or damage, when travelling by land or sea, may do so. The policies are particularly designed for Atlantic and Pacific Ocean steamship traffic and cover the property insured against all risks of transportation and navigation, except while in the permanent residence of the assured.

Maritime Provinces and Newfoundland.

The s.s. Empress, operated in the C.P.R. Bay of Fundy service, has been converted into an oil burner at St. John, N.B.

The Newfoundland Government has laid up the steamships Sebastopol, Sennef and Watchful, of its coastal service, until an improvement is evident in the shipping business.

The Newfoundland s.s. Mary, while en route from St. John's to Catalina, at the end of April, broke her tail shaft and lost her propeller. She was towed to St. John's, by the s.s. Cabot, for repairs.

Lightship 15, which has been stationed at Sambro Bank, at the entrance to Halifax Harbor, is being transferred to Heath Point, Anticosti, for the summer, her place being taken by an automatic gas and whistling buoy.

The Nova Scotia Highways Board has invited tenders for a steam ferry service across the Strait of Canso, between Port Mulgrave and Port Hawkesbury. The boat to be used must be capable of carrying not less than 4 large motor cars and other traffic, and docking facilities must be provided.

The Majestic Steamship Co.'s s.s. Champlain was burned, and afterwards sank, in the St. John River, near the Glenwood wharf, April 25. Most of the cargo was saved. The loss is estimated at \$15,000. She was built at Valleyfield, Que., in 1897, was originally named Queen, was rebuilt at St. John, N.B., in 1904, and renamed Robinault. Her dimensions were: length, 110.8 ft.; 392 gross, 267 net. She was screw driven, 22.4 ft.; depth, 7.9 ft.; tonnage, driven by engine of 28 h.p.

The F. W. Roebing Co.'s steam tug F. W. Roebing, which ran ashore at Ives Knoll, near Halifax, N.S., late in April, was released by the s.s. Chedabucto, with considerable damage to her upper works. She was towing the Canadian Government Merchant Marine s.s. Canadian Warrior from the Northwest Arm to an anchorage in the Eastern Passage, when she grounded, the Canadian Warrior overrunning her. It is claimed that the Ives Knoll, Middle Ground and Point Pleasant buoys were out of position owing to pressure of ice.

Province of Quebec.

The Memphremagog Navigation Co.'s s.s. Anthemis, which was berthed at Sherbrooke, Que., for the winter, sank

at her wharf towards the end of April, while undergoing some repairs.

G. W. Stephens, a former Chairman of the Montreal Harbor Commissioners, who returned to Montreal May 2, on the C.P.R. s.s. Montcalm, made some flattering remarks on the improvements in the harbor during his long absence.

Lachine Canal traffic, between Apr. 24, when the canal opened for traffic, and Apr. 30, was as follows: wheat, 149,000 bush; corn, 841,792 bush; rye, 74,946 bush; butter, 36 cases; eggs, 30 cases; cheese, 65 cases; coal, soft, 9,215 tons, hard 9,520 tons.

J. A. Lemay, Portneuf, owner of the steam tug Sir Lomer, is suing the Dominion and British Governments for \$1,625 alleged damage sustained by the tug by camouflaging, while she was under lease for war purposes between November 2 and 22, 1918.

The s.s. Toldjee, which arrived at Montreal, May 17, from Havana, is to be utilized in the port by the Shell Co. of Canada, as an oil tender for ships using oil as fuel. She is 168 tons gross, and is said to be the smallest steamship to enter the port from the ocean.

The Montreal Harbor Advances Act 1922, introduced in the House of Commons, May 5, provides for the advance of money to the Montreal Harbor Commissioners, in addition to previous advances heretofore authorized, not exceeding \$5,000,000, for the construction of terminal facilities in the harbor which have already been approved, and to build such additional terminal facilities as may be necessary for the proper equipment of the port. Advances will be made on the commissioners' monthly applications, which are to be accompanied by statements of the total expenditures of the different items in detail for the month which the advance is to cover. On the advances being made, the commissioners are to deposit with the Finance Minister debentures equal in par value to the advances made, repayable within 25 years from the date of issue, bearing interest at 5% per annum, payable half yearly, out of their revenues.

The Montreal City Council has awarded the contract for a ferry service to St. Helen's Island, with all refreshment, game and amusement privileges on the island, to Capt. Jos. Rinfret, Montreal. The contractor has bought the s.s. Garden City from the Niagara, St. Catharines & Toronto Navigation Co., for use in the service, and she has been thoroughly overhauled and refitted, and left Lake Ontario for Montreal, May 10. She was built at Toronto in 1892, with steel hull and wood upper works. Her dimen-

sions are, length 177½ ft., breadth 26 ft., depth 10 ft.; tonnage, 637 gross, 401 net. She is equipped with electric light and wireless telegraph, and is paddle wheel driven. She has inclined compound engines, with 48 in. cylinders 28 and 50 in. diat. by 48 in. stroke, 800 i.h.p. at 50 r.p.m., and is supplied with steam by 2 Scotch boilers 11 x 11 ft. at 125 lb. She was operated by the N. St. C. & T. N. Co. for a number of years, between Toronto and Port Dalhousie, but was displaced by the s.s. Dalhousie City a few years ago.

Ontario and the Great Lakes.

The Port Huron & Sarnia Ferry Co. is rebuilding its Sarnia dock.

The name of the s.s. A. D. Cross, owned by J. J. Harrigan, Port Dalhousie, has been changed to Austin H.

The Dominion Sugar Co. has built a wharf at Wallaceburg, for unloading raw sugar from barges brought direct from New York, via the Erie Canal.

Work on the raising of the Port Huron & Sarnia Ferry Co.'s ferry steamship, Omar D. Conger, which sank at Sarnia, after her boiler exploded, March 26, was commenced May 22.

The Reid Towing and Wrecking Co.'s steam tug Smith, bound from Midland to Sarnia, grounded near Port Hope, May 7, and was released shortly after by the s.s. Manistiquia, without damage, and proceeded to Sarnia.

Canada Steamship Lines' s.s. Arabian, which went aground at the head of Galops Rapids during the last week in April, was released Apr. 29. After reloading her cargo at Prescott, she resumed her voyage to Montreal.

The C.P.R. s.s. Keewatin grounded at the Government dock at Sault Ste. Marie, May 8, and after unloading her water ballast and a portion of her cargo, she was released by a tug and resumed her voyage without damage.

The Ontario Government locks between Lake Muskoka and Lake Rosseau at Port Carling, which have been under construction during the winter, are practically completed, and were expected to be ready for traffic by the end of May.

Sailing directions for Canadian shores of Lake Ontario have been published by the Naval Service Department's Hydrographic Survey, covering the territory from Kingston to the Niagara River, and including a description of the Trent Canal.

We are officially advised, by Canada Steamship Lines, that the barge Brighton, fully equipped as a wrecking light-er, together with the tug Bronson, will be stationed at Prescott, for this season, under the direction of the Reid Towing and Wrecking Co., Sarnia.

Imperial Oil, Ltd., has appointed Capt. J. W. Abbott and J. Lyons as master and chief engineer, respectively, of the s.s. Montrolite. No appointments have been made to the s.s. Imperial, and we are advised that it is doubtful whether she will be operated this year.

The steam tug Gracie, owned by John Maloney, Port Arthur, is reported to have been sold to parties at Meaford. She was built at Goderich in 1904, and is screw driven by engine of 13 h.p. Her dimensions are: length, 72.5 ft.; breadth, 15.1 ft.; depth, 6.8 ft.; tonnage, 41 gross, 28 net.

Canada Steamship Line's s.s. Midland

King collided with the Great Lakes Transportation Co.'s s.s. Glenfinnan near Carleton Point in Lake Superior, May 17, during a heavy fog. The Midland King was upbound to Fort William, light, and the Glenfinnan was outbound from Fort William with grain.

Considerable repair work will, it is reported, be undertaken this year at the Sault Ste. Marie Canadian canal. It is said that the old wooden pier at the west end of the locks will be replaced, and that a concrete road will be laid extending the existing road down Huron St. to the sheds below the locks.

The Northern Navigation Co.'s steamships Hamonic and Huronic were equipped with new propeller blades at Detroit, prior to commencing their summer schedules on May 2 and 6, respectively. The s.s. Noronic will be placed in service June 2, when she will take an excursion party from Owen Sound to Sault Ste. Marie.

Cleveland, Ohio, press report of May 4, stated that grain tonnage was in fair demand, charters having been made for wheat from Buffalo to Chicago at 2½c., and from Georgian Bay to Buffalo at 2c. Spot tonnage from Duluth to Buffalo was quoted at 2½c. but was reported scarce, 2½c. being offered for early loading.

We are advised that the s.s. B. F. Berry, which the Mathews Steamship Co., Toronto, purchased from the Franklin Steamship Co., Cleveland, Ohio, recently, as mentioned in our last issue, has been renamed Berryton, and that she is to be overhauled at Buffalo, N.Y., before being transferred to the Canadian register.

Canada Steamship Lines inaugurated a weekly steamship service, May 4, between Montreal and Detroit, calling at Toronto, Port Dalhousie, Welland, Cleveland, Windsor and Walkerville. Connection is made at Detroit with the Wabash Rd. for the handling of freight to Chicago and other points in the U.S. middle west. The line is known as the Montreal-Cleveland-Detroit Line.

The United States Lake Survey reports the mean stages of the Great Lakes in feet above mean sea level, for April, as follows:—Superior, 601.45; Michigan and Huron, 579.93; St. Clair 575.08; Erie 572.35; Ontario 246.06, compared with the average April levels for

the past 10 years, Superior was 0.37 ft. below; Michigan and Huron 0.45 ft. below; Erie, 0.12 ft. below; Ontario 0.35 ft. below.

The C.G.S. Lambton was reported lost towards the end of April, during a heavy storm on Lake Superior, while carrying light keepers and supplies to various light stations. There are believed to have been 17 men on board, all being lost. The Lambton was built at Sorel, Que., in 1909, and was screw driven by engine of 89 h.p. Her dimensions were: length, 108 ft.; breadth, 25.1 ft.; depth, 12.7 ft.; tonnage, 323 gross, 182 net.

The s.s. Aragon, which ran ashore at Salmon Point, near Kingston, November 17, 1921, while bound from Chicago to Kingston, with a cargo of corn, was released May 14 by the wrecking outfit owned by John E. Russell, Toronto. The work was taken in hand soon after the casualty, but was abandoned in January, on account of weather conditions. After being released she was taken to Kingston, where she was drydocked.

Masters of ships navigating into, or out of, Toronto harbor, by the western entrance, must pass north of the northerly pile dolphins situated about 800 ft. south of the harbor head walls, between Spadina Ave. and John St. The pile dolphins are well lighted from sunset to sunrise by white lights, and ships when passing the pile dolphins that are protecting the pipe line must proceed with caution as to speed.

Canada Steamship Lines' s.s. Canadian, which ran on the rocks at Giant's Tomb, near Midland, on Lake Huron, towards the end of April, and which was released by the Reid Towing & Wrecking Co., has been surveyed at the Collingwood Shipbuilding Co.'s dock at Collingwood, where she went under her own steam. She is reported to be seriously damaged at the bottom, over 40 plates having to be removed and replaced. She is expected to be again ready for service during June, or early in July.

The Northern Navigation Co. placed in operation, May 20, a ferry service between Sarnia and Port Huron, with the Canada Steamship Lines' s.s. Louis Philippe. She has accommodation for about 500 passengers and 35 motor cars, each trip, and runs from the Northern Navigation dock at Sarnia to the Reid dock at Port Huron. She was built at Lauzon, Que., in 1914, and is screw

The Canadian and U.S. canals were opened

April 17.

driven by engine of 58 h.p. Her dimensions are: length, 162 ft.; breadth, 37 ft.; depth, 11 ft.; tonnage, 600 gross, 251 net.

The Cleveland, Ohio, Chamber of Commerce is urging the repeal of what is known in the U.S. as the La Follette Steamship Act. It is stated that since the Act came into force, 76 Great Lakes bulk freight steamships have been transferred from the U.S. to the Canadian register, and that the U.S. Great Lakes fleet tonnage has only increased 1%, while the Canadian Great Lakes fleet has increased 35%, and that no additional ship has been placed in the passenger service by U.S. interests on the Great Lakes.

Canada Steamship Lines s.s. Rapids King has been transferred to Northern Navigation Co.'s service for operation on the Detroit River. Commencing June 24, she will make trips four times a week between Detroit and Walpole Island, and three times a week between Detroit and Wallaceburg. She will be used for overnight excursions four nights a week during the summer. She was built in 1907, and has since been operated regularly in the St. Lawrence River rapids service. The Northern Navigation Co. will also operate the s.s. Thousand Islander between Detroit and Chatham, commencing June 17.

The following additional appointments and changes have been made in Canada Steamships' Lines steamship officers, since those published in Canadian Railway and Marine World for April, page 212: — N. McGlenan, formerly master s.s. Quebec, transferred to s.s. Montreal; W. J. Brown and Jas. Kirk, formerly master and chief engineer s.s. Glenmount, transferred to s.s. Rapids King, which has been transferred to Northern Navigation Co. for operation; G. Batten and W. Hazlett, formerly master and chief engineer, respectively, s.s. Rapids King, transferred to Rapids Queen; F. Lumley, chief engineer s.s. Simla; A. Mondor, master s.s. Three Rivers; T. S. Patterson and L. E. Spencer, master and chief engineer, respectively, s.s. Winona.

The Henderson Transfer and Lighterage Co.'s s.s. Port Fray is reported to have been sold at Fort William recently, to C. Carlson, Minneapolis, Minn., for \$30,000. She was built at West Bay City, Mich., in 1888, and has an oak hull, with diagonal strapping on frames, wooden arches, steel boiler house, and steam pump wells. Her dimensions are: Length, 76 ft., 281 ft., breadth moulded 41 1/2 ft., depth moulded 21 1/2 ft. tonnage 1,810 gross, 451 net. She is equipped with triple expansion engines, with cylinders 19, 32 and 50 in. diameter, by 40 in. stroke, 850 i.h.p., at 88 r.p.m., supplied with steam by two Scotch boilers, each 10 ft. diameter by 11 ft. long, at 150 lb. She has been used as a grain elevator transfer ship and is equipped with hopper bottom, operating after the type of a grain elevator.

J. F. Sowards, Kingston, Ont., has bought the s.s. Brantford from the Brantford Navigation Co. Montreal, for the coal trade from U.S. lower Lake Ontario ports to Kingston and Montreal. The Brantford was built at Grand Haven, Mich., in 1888, and was formerly named Samuel Marshall, and owned by Central Canada Coal Co., Brockville, Ont. She is of the well deck type, with oak hull, bow sheathed for operation in ice, iron lined boiler house, and steam pump wells. Her dimensions are: Length

198 ft., breadth moulded 34 ft., depth moulded 16 1/2 ft., tonnage 772 gross, 540 net. She is equipped with fore and aft compound engine, with cylinders 23 and 42 in. diameter, by 36 in. stroke, 325 i.h.p., at 82 r.p.m., supplied with steam by a Scotch boiler, 12 ft. diameter by 12 ft. long, at 130 lb.

Canada Steamship Lines s.s. Joyland, which ran aground near Clayton, N.Y., at the end of April, and was reported to be in a critical position, was abandoned to the underwriters May 1. She was bound from Port Colborne to Montreal, with corn. She was built at Detroit, Mich., in 1884, and has an oak hull, with diagonal strapping on frames, and was of the spar deck type, with steel boiler house. Her dimensions are: length, 240 ft.; breadth, 37 ft.; depth, 25 ft.; tonnage, 1,530 gross, 1,440 net. She is equipped with a fore and aft compound engine, with cylinders 27 and 44 in. diameter, by 42 in. stroke, 725 h.p. at 72 r.p.m., and supplied with steam by 2 firebox boilers, each 7 1/2 ft. diameter by 15 1/2 ft. long, at 120 lb. working pressure. She was originally named William A. Haskell, and was formerly owned by the Rutland Transit Co., Buffalo, N.Y.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

Navigation from McMurray to the Great Slave Lake was reported open, May 16, when the Northern Trading Co.'s s.s. Northland Echo sailed from McMurray for Fitzgerald.

The Alberta and Arctic Transportation Co. has appointed the following captains and chief engineers: s.s. Distributor, J. P. Bucey, captain, R. Haws, chief engineer; s.s. Slave River, C. Myers, captain, F. J. Mavis, chief engineer; motor boat Canadusa, W. H. Alexander, captain, W. Scriven, chief engineer; motor boat Lady Mackworth, C. A. Gardner, captain, O. E. Polzin, chief engineer.

British Columbia and Pacific Coast.

Navigation on the Yukon River was opened during the second week in May.

Victoria, Vancouver, Nanaimo, Prince Rupert and Port Alberni port authorities have announced the abolition of the handling charge of 60c. a ton on cargo at those ports, to meet U.S. Pacific ports competition.

The Government is reported to have advanced \$1,500 for building a wharf at Sidney, in connection with the motor car ferry service between Sidney and Anacortes, Wash. It was expected that the service would be in effect at the end of April, two boats being used, one with capacity for 25 motor cars and the other for 15 cars.

A bill to amend the Vancouver Harbor Commissioners Act was introduced in the House of Commons, May 18, providing that the port warden and shipmaster of the port be controlled by the Marine Department, as in other Canadian ports, instead of by the Harbor Commissioners, as obtains in Vancouver.

A Vancouver press dispatch of May 11 stated that up to that date, 6,048,068 bushels of wheat had been shipped through the port to British and foreign markets during the 1921-22 crop season, compared with 640,000 in 1920-21. From October, 1921, to April 8, the shipments to Japan were 2,858,079 bushels, to the United Kingdom 3,189,327, and to the U.S. 6,666.

The C.P.R. British Columbia Coast Steamship Service has removed its wharf office and docking of steamships at Seattle, Wash., from pier 1 to the Coleman dock at the foot of Marion St., where all steamships will arrive and depart. The new location is more convenient for passengers to and from the uptown districts, as it is no longer necessary to cross yard tracks to reach the pier.

Canadian Railway and Marine World for May, gave a list of steamships operated by the Grand Trunk Pacific Coast Steamship Co., with their captains and chief engineers, as appointed in March, but since that time, changes have been made, so that the appointments at present stand as follows: Prince Albert, J. McKernan, captain, C. F. Davis, chief engineer; Prince George, W. S. Morehouse, captain, A. S. Munro, chief engineer; Prince John, H. E. Neddin, captain, H. G. Milvain, chief engineer; Prince Rupert, D. Donald, captain, W. E. Baillie, chief engineer. R. Knox, heretofore chief engineer of the s.s. Prince George, has been appointed acting Superintendent Engineer at Vancouver. A. L. Brownlie, granted three months leave of absence on account of ill-health. We are advised that the foregoing positions will be held until July 1, when it is possible changes will be made.

Canada West Coast Navigation Co.'s motorships Geraldine Wolvin, Jean Steedman and Jessie Norcross have been sold to Egyptian parties, and have been removed from the Canadian register. These are three of eight wooden, auxiliary powered ships of the bald-headed schooner type, built for Canada West Coast Navigation Co., associated with Canada Steamship Lines, at North Vancouver, and Victoria, B.C., in 1916 and 1917, for general purposes, and were the first of their type to be built in Canada. The particulars of each are as follows: Geraldine Wolvin, built at North Vancouver, in 1917—length 241 ft., breadth 43.9 ft., depth 19 ft., tonnage 1,472 gross, 1,259 net, screw driven by engine of 36 h.p.; Jean Steedman, built at Victoria in 1917—length 245.7 ft., breadth 43.8 ft., depth 21 ft., tonnage 1,577 gross, 1,253 net, screw driven by engine of 18 h.p.; Jessie Norcross, built at North Vancouver, in 1917—length 240.5 ft., breadth 43.6 ft., depth 19.3 ft., tonnage 1,481 gross, 1,268 net, screw driven by engine of 36 h.p.

Overages at Terminal Elevators.—J. Millar, Qu'Appelle, Sask., asked in the House of Commons, recently, what financial benefits, if any, did the Dominion Government derive from overages at Port Arthur and Fort William terminal elevators in 1921. The Minister of Trade and Commerce replied: "For the crop year 1920-21 the total value of the overages to be delivered to the Government was \$130,524.06. Accounts have been rendered for this amount, but no payments have yet been made."

The s.s. Grille is reported to have been sold by the Naval Service Department, to S. R. Guggenheim, New York, for use as a pleasure yacht. She was built at Glasgow, Scotland, in 1912, and is screw driven by engines of 6,000 i.h.p., and has the following dimensions—length 202.3 ft., breadth 18.3 ft., depth 9.2 ft.; tonnage, 287 gross, 157 net. She was owned formerly by J. K. L. Ross, Montreal, and handed over to the Dominion Government during the war, when she was used as a patrol ship.

Mainly About Marine People.

Edward Adams, formerly Chairman, Board of Steamship Inspection, Marine Department, died at Ottawa, May 11, aged 82.

G. M. Bosworth, Chairman, Canadian Pacific Steamships Ltd., returned to Montreal, on the C.P.R. s.s. Empress of Scotland, May 1, after a short business trip to England.

H. J. Bouchier has been appointed harbor master, Penetanguishene, Ont., vice M. Dusome, resigned.

G. A. Browning, Superintendent Engineer, Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., is reported to have resigned, and to have been appointed Marine Representative, Vancouver Engineering Works, Vancouver.

Wm. Hugh Coverdale, B.A., D.Sc. (Geneva College, Beaver Falls, Pa.), who has been elected President Canada Steamship Lines, Ltd., Montreal, was born at Kingston, Ont., in 1871, and graduated from Geneva College in 1891. From 1892 he was engaged in engineering work, in various capacities, in the United States, until 1903, when he travelled in Europe for six months, and in 1904 he opened an office as a consulting engineer in New York and conducted investigations and prepared reports on various steam and electric railways, harbor works, light, heat and power companies, coal mining and handling companies, industrial companies, realty developments, and hotel building propositions. In Jan. 1913, he formed a partnership with W. W. Colpitts, in consulting engineer practice in New York. Either separately, or as a member of Coverdale and Colpitts' firm, his work has included the following in Canada: 1906. Estimates Nipigon Rd. construction and traffic; examination and report on Imperial Coal Co.'s leases physical property and output in New Brunswick. 1910. Appraisal and estimate of earnings of Algoma Steel Co.'s plant at Sault Ste. Marie, Ont.; appraisal and estimate of earnings of Trans St. Mary's Traction Co., Sault Ste. Marie, Mich.; an examination and report on condition, and estimate of cost to complete, Michigan Lake Superior Power Co.'s plant at Sault Ste. Marie, Mich., with estimate of future earnings, etc. 1916. Report for Algoma Steel Corporation, on release of Lake Superior Power Co. from mortgages. 1917. Report on Canadian

Northern Ry. system, for special commission consisting of E. E. Loomis and J. W. Patten, covering physical and financial condition, traffic analysis, improvement and betterment program required to complete property, and estimates of revenue when completed. 1918. Testimony on value of Canadian Northern Ry. property before arbitration board at Toronto, 1922; report on Canada Steamship Lines, covering general investigations of the corporate, financial and operating affairs from the incorporation on June 17, 1913, to Feb. 28, 1922. Mr. Coverdale is Chairman of the Board of Directors of Pittsburgh and West Virginia Ry. and Pittsburgh Terminal Rd. & Coal Co.; president and director of West Side Belt Rd. Co., director of Gulf States Steel Co., Chicago & Eastern Illinois Ry., Gulf, Mobile & Northern Rd., Meridian & Memphis Ry. and Stutz Motor Car Co. of America. He is a member of the American Society of Civil Engineers and of the American Institute of Consulting Engineers. His partner, W. W. Colpitts, LL.D., M.Sc., McGill University, Montreal, was born at Moncton, N.B., in 1875, and was engaged in engineering work on the Intercolonial and Prince Edward Island Rys. from 1891 to 1898. In 1899 he graduated in civil engineering at McGill University, and was appointed chief clerk to T. G. Shaughnessy, then Vice President C.P.R., now Lord Shaughnessy, and was engaged principally in making an analysis of operations, and in preparing statistical data with a view of reducing unit costs of operation. In 1900 he was transferred to the Western Lines, C.P.R., and was employed on surveys and construction of lines, and in determining the economical value of grade reductions throughout the system, and wrote a paper outlining the method used in the work. In 1901 he went to the United States and was engaged in railway and other engineering work until he entered into partnership with Mr. Coverdale in Jan., 1913.

David Drummond, who has been appointed Agent, C.P.R., Southampton, Eng., entered steamship service with the Allan Line Steamship Co., at Glasgow, Scotland, in 1899, and was transferred to London, Eng., in 1910, as secretary to the Chairman, and London Secretary of the company. During the war, he acted as Embarkation Staff Officer at United

Kingdom ports, for the Canadian Expeditionary Forces. He was appointed General Freight Agent, Ocean Services, C.P.R., London, Eng., in 1920; and from 1921 has been Freight Claim Agent, C.P.R., London, Eng.

Wm. Knight, who was in charge of construction of the Ogden Point breakwater, at Victoria, B.C., from 1914 until recently, for the contractor, Sir John Jackson, Ltd., has returned to England, to take charge of another contract there.

Capt. A. Landry has been appointed harbor master at Quebec.

E. H. McMicken, heretofore General Passenger Agent, has been appointed Passenger Traffic Manager, Admiral Line, Seattle, Wash., vice A. F. Haines, appointed Vice President and General Manager.

A. S. Ray, Passenger and Freight Agent, C.P.R., Bristol, Eng., and recently elected chairman of the Bristol Steamship Owners Association, addressed the local Shipping Staffs Association recently, and dealt chiefly with the North Atlantic shipping trade as it affects the port of Bristol.

Capt. H. L. Waite, master of the C.P.R. s.s. Melita, which sailed from St. John, N.B., April 15, was operated on, at sea, for appendicitis, on April 20, and died April 22, the day before she was due at Southampton, Eng. He was born in 1872, entered C.P.R. service in 1904, and served on the steamships Empress of Britain, Empress of France, Metagama and Victorian, of the latter of which he was master, just prior to his transfer to the Melita.

Capt. J. W. Snow has been appointed harbor master, Port Wade, N.S., vice A. Holmes, resigned.

Appointment of Nautical Assessors.—The House of Commons, on May 10, passed a motion by T. L. Church, North Toronto, for a copy of all correspondence between the Minister of Marine and Fisheries, or any official of that Department, and the Minister of Justice, or any official of that department, in reference to a judgment given by Mr. Justice Morrison, of the British Columbia Supreme Court, in regard to the mode of appointment of persons to act as nautical assessors to assist Dominion wreck commissioners in the investigation of wrecks and other marine casualties.

Ships Registered in Canada During February 1922.

In compiling the following lists of ships registered, steamboats and motorboats operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

STEAM.

Dominion Marine Association's Activities.

Arrangements are proceeding for the removal of the Middle Ground shoal, which divides the upbound and down-bound channels, between Port Huron, Mich., and Sarnia, Ont. This has been recommended by the Dominion Public Works Department's engineers, and the U.S. War Office District Engineer, and is supported by the Dominion Marine and Lake Carriers' Associations.

An investigation is proceeding at the American instance and is being conducted under the Dominion Health Department into the question of an amendment of the Canada Shipping Act, for the exemption from hospital taxes in Quebec of ships hailing from any port on the Great Lakes instead of those from Ontario ports only. Statements are being collected which the Association expects will support the contention that the exemption should be granted to all ships from the Great Lakes.

With reference to the agitation for a reduction in the charges upon a ship in connection with the transhipment of grain, a conference was held at Montreal, May 3, between the Association's representatives and representatives of the Montreal Harbor Commissioners, C. P.R., Canadian National Rys., Railways and Canals Department, and elevators at Goderich and Georgian Bay, when the whole subject was thoroughly discussed. No action was taken immediately, but an understanding was reached as to the views of the respective parties, and further developments are expected in the way of proportionate reductions where costs are admittedly high.

The Association's request for the abrogation of compulsory payment of pilotage dues on the St. Lawrence River below Montreal was under discussion recently at the House of Commons. Bill 79, which was introduced and read a first time early in May, provides for the amendment of the Canada Shipping Act (Pilotage), by exempting from compulsory pilotage dues, ships of war, and hospital ships belonging to such foreign nation or nations as may be specified by the Governor in council, and ships registered in Canada engaged exclusively in fishing. The larger question, however, has not been discussed.

Shipbuilding in Newfoundland.—As mentioned in a previous issue, the Newfoundland Government is paying a bonus for the building of sailing ships in the Colony. The act under which the payments are made, provides for payment of \$30 a ton on ships from 20 to 50 tons inclusive, built under the Consolidated Statutes, Chap. 176, Schedule B, and registered in the Colony; and \$24 a ton on similar ships built under Schedule C. The keels must have been laid on, or after Oct. 15, 1921, and the ships are to be fully equipped and ready for sea on, or before, July 1, 1922, and furnished with Lloyd's tested chains of suitable size and length, anchors, chain plates, deadeyes, hawspieces, rigging, sails and spars, according to tonnage, and all of which must be new. Where a ship exceeds 50 tons, but does not exceed 100, the bonus may be claimed for each ton up to, and including, 50 tons, and the further bonus shall be payable on the excess tonnage over 50 tons, as the ship may be entitled to under Chap. 176.

Welland Ship Canal Construction.

Tenders have been invited to June 9, for the completion of the work on the combined sections 3 and 4 of Welland Ship Canal. Similar tenders were called for in Sept., 1921, but owing to the imminent Dominion elections, it was decided to postpone the matter for a while. The original contract for sec. 3, which extends from station 380 to station 490, about 2 miles, was awarded to O'Brien & Doherty and Quinlan & Robertson, in the autumn of 1913. Owing to war conditions the work was suspended at the end of 1916, and eventually the contract was cancelled. As part of the reconstruction work following the war, work was carried on from 1919 by Doherty, Quinlan and Robertson, at actual cost, plus 8%, and under these contracts the bulk of the earth and rock excavations was done, but only a comparatively small amount of the large quantity of concrete work required for the important structures was placed.

Section 4 extends from station 490 to station 597, about 2 miles. Only a comparatively small amount of excavation has been done. It crosses the present canal below lock 25, and, except for this portion, the excavation, etc., can be done in the dry. For economic reasons, due to the interlocking of different items of work on these two sections, it has been decided to complete the work under one contract. The principal items involved are: Rock excavation, 1,659,000 cu. yd.; earth excavation, 5,074,000 cu. yd.; watertight embankment, 446,000 cu. yd.; mass concrete, 1,300,000 cu. yd.; other concrete, 100,000 cu. yd.; steel bars for concrete reinforcement, 7,400,000 lb. The principal structures are: Twin locks, 4, 5 and 6 in flight, single lock, and the guard gate, together with their entrance piers and other retaining walls, safety regulating and waste weirs, bridge substructures, concrete bridges, two large syphon culverts and two docks.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

- American Association of Port Authorities—Canadian Counsel, W. D. Litchfield, K.C., Montreal.
- Canadian Air Demarcation Board—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.
- Canadian Electric Railway Association—L. E. Murphy, General Manager, 220, Queen St. W., Toronto.
- Canadian Freight Association (Eastern Lines)—G. C. Ransom, Chairman, 909 Shaughnessy Bldg., Montreal.
- Canadian Freight Association (Western Lines)—W. E. Campbell, Chairman, 805 Boyd Block, Winnipeg.
- Canadian Passenger Association—Eastern Lines, G. H. Webster, 54 Beaver Hall Hill, Montreal; Western Lines, E. J. Stone, 306 Union Station, Winnipeg.
- Canadian Railway Board of Adjustment No. 1—R. Chapple, 263 St. James Street, Montreal.
- Canadian Railway Club—W. A. Booth, 63 Rushbrooke St., Montreal. Meetings at Montreal, 2nd Tuesday, each month, 8.30 p.m., except June, July and August.
- Canadian Ticket Agents' Association, E. de la Hooke, London, Ont.
- Canadian Traffic League—R. J. Fitzgerald, 93 Western Ave., Toronto.
- Dominion Marine Association—F. King, K.C., Counsel, Kingston, Ont.
- Engineers' Club of Montreal—C. M. Strangé, 9 Beaver Hall Square, Montreal.
- Engineers' Club of Toronto—L. B. Wolsey, 44 King Street West, Toronto.
- Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.
- Express Traffic Association of Canada—C. N. Harris, Montreal.
- Great Lakes and St. Lawrence River Rate Committee—A. E. Storey, 310 G.T.R. General Office, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hennigan, Guelph, Ont.
International Water Labor Passenger Association—M. R. Nelson, Des Moines, Iowa.
Niagara Frontier Summer Rate Committee—James Morrison, Canadian National Rys., Montreal.

Quebec Transportation Club—A. F. Dion, Harbor Commissioner, Quebec, Que.

Railway Association of Canada—C. F. Riddell, General Secretary, 263 St. James Street, Montreal. Western Operating Committee, E. J. Stone, 306 Union Station, Winnipeg.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal. Transportation Club of Toronto—W. J. Hetrum, 595 Runnymede Road, Toronto.

Transportation Club of Vancouver—C. A. Donifler, 1000 West, Vancouver, B.C.
Winnipeg Traffic Club—J. Barber, 144 Canadian Bldg., Winnipeg, Man.

Transportation Conventions in 1922.

June 1, 2.—Canadian Electric Railway Association, Quebec, Que.; L. E. Moreland, Hull, Que.

June 14 to 21.—American Railway Association, Mechanical Division, Atlantic City, N.J.; V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill.

June 18.—American Train Dispatchers' Association, Chicago, Ill.; C. L. Darling, 1310 Mallers Bldg., Chicago, Ill.

June 19 to 21.—American Railway Association, Purchases and Stores Division, Atlantic City, N.J.; J. P. Murphy, General Shipkeeper, New York Central R.R., Collingwood, Ohio.

June 26 to 30.—American Society for Testing Materials, Atlantic City, N.J.; C. L. Warwick, University of Pennsylvania, Philadelphia, Pa.

June 28, 29.—American Association of General Barge Agents, Minneapolis, Minn.; E. L. Duncan, 332 South Michigan Ave., Chicago, Ill.

Aug. 23 to 25.—American Association of Railroad Superintendents, Kansas City, Mo.; J. Rothchild, 400 Union Station, St. Louis, Mo.

October.—American Electric Railway Association, Chicago, Ill.; J. W. Welsh, 8 West 40th St., New York.

Oct. 17 to 19.—American Railway Bridge and Building Association, Cincinnati, Ohio; C. A. Lichy, 215 North Waller Ave., Chicago, Ill.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, the notices are published for the same reason as advertisements, and are not for sale, either to advertisers or others.

S. F. Bowser, founder of S. F. Bowser & Co., manufacturers of oil and gasoline tanks and pumps, and other allied products, including an oil filtration system, Fort Wayne, Ind., with a Canadian plant at Toronto, another plant at Milwaukee, Wis., and assembly plants at Albany, N.Y., and Sydney, Australia, has retired from the Presidency and become Chairman of the Board of Directors after having served for 37 years as the head of the business, which he started in 1885. S. B. Bechtel, who has been elected President, entered the company's employ in 1889 in the Collection Department, subsequently becoming Assistant Superintendent of Salesmen; Manager of Mail Orders, Sales and Advertising Departments; Assistant to General Manager; Secretary, Assistant General Manager, and General Manager respectively, and since 1920 Vice President and General Manager.

Metal & Thermit Corporation, New York, N.Y., and Toronto, has removed its Pittsburgh, Pa., branch office to 801-807 Hillbush St., Corliss Station, Pittsburgh.

CANADIAN PACIFIC RAILWAY COMPANY

Dividend Notice

At a meeting of the Board of Directors held today a dividend of two and one-half per cent. on the Common Stock for the quarter ended 31st March last, being at the rate of seven per cent per annum from revenue and three per cent per annum from Special Income Account, was declared payable on 30th June next to Shareholders of record at 3 p.m. on 1st June next.

By order of the Board,
Ernest Alexander, Secretary.

Montreal, 3rd May, 1922.

DEPARTMENT OF RAILWAYS AND CANALS, CANADA.

Welland Ship Canal.

Sections 3 and 4 Combined.

Notice to Contractors.

Sealed tenders, addressed to the undersigned and marked "Tender for Sections 3 and 4 Combined, Welland Ship Canal" will be received at this office until 12 o'clock noon, on Friday, June 9, 1922.

Plans, specifications and form of contract to be entered into can be seen on or after this date at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the office of the Engineer in Charge, Welland Ship Canal, St. Catharines, Ontario.

Copies of plans and specifications may be obtained from the Department on the payment of the sum of fifty dollars. To bona fide tenderers this amount will be refunded upon the return of the above in good condition.

An accepted bank cheque on a chartered bank of Canada for the sum of \$850,000 made payable to the order of the Minister of Railways and Canals, must accompany each tender, \$700,000 of which sum will be forfeited if the party tendering declines entering into contract for the work at the rates stated in the offer submitted.

The cheque thus sent in, will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order, J. W. PUGSLEY, Secretary.

Department of Railways and Canals,
Ottawa, May 15, 1922.

NOTICE.

The General Railway Signal Company of the United States of America, the owner of the exclusive rights to Canadian patents No. 92323, No. 93127, No. 96256, and No. 97758, issued to Young and Townsend, and covering methods of signaling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents to the fact that it is prepared to sell and furnish, at short notice, all such devices and to install such systems upon any railway in the Dominion of Canada.

All inquiries regarding the above should be addressed to The General Railway Signal Company of Canada, Limited, Lachine, Province of Quebec, Canada.

THE VICTORIA ROLLING STOCK & REALTY CO. OF CANADA, LTD.

NOTICE is hereby given that a dividend of 5% on the paid-up capital stock of the Company for the six months ended May 31st, 1922, has been declared payable June 1, 1922, to the shareholders of record as of the 31st of May, 1922.

By order of the Board,
G. T. CHISHOLM, Secretary.
Toronto, May 20, 1922.

July, 1922

American Railway Association Mechanical Division's Convention at Atlantic City.

The American Railway Association's Mechanical Division, which embraces the former American Railway Master Mechanics' Association and the Master Car Builders' Association, resumed its annual conventions by meeting at Atlantic City from June 14 to 21, inclusive. It was the intention to hold a convention there in June, 1921, but in consequence of the then prevailing financial stress and serious business conditions in the United States, the idea was abandoned. The

chairman of the general committee for this year's convention was W. J. Tollerton, General Mechanical Superintendent, Chicago, Rock Island & Pacific Rd.; the Vice Chairman being J. Coleman, Assistant to General Superintendent, Motive Power & Car Department, Grand Trunk Ry. W. H. Winterrowd, Chief Mechanical Engineer, Canadian Pacific Ry., was also a member of the general committee. Mr. Tollerton was also chairman of the

arrangements committee, Mr. Coleman being another member of it. General business was dealt with on June 14, car matters on June 14, 15 and 16; election of officers was held on June 19, and locomotive matters on June 19, 20 and 21. The most important features of the convention were, as usual, reports of the standing and special committees, the principal ones are given on this and the following pages, either in full or in abstract.

Feed Water Heaters for Locomotives Committee's Report.

The committee, of which F. M. Waring, Engineer of Tests, Pennsylvania System, was chairman, reported as follows:—That considerable increase in the use of feed water heaters has developed during the last two years is evident from the number that have been applied. The committee's report for 1920 showed that there were 16 locomotives equipped at that time. A table in the report shows that 197 feed water heaters are now in service or on order. Of these 15 of the open type are in service and 110 on order; 45 of the closed type are in service and 29 on order; a total of 58 in service and 139 on order. None are reported as on Canadian lines, but the Central Vermont Ry., part of which is in Canada, has one of the closed type in service.

All new applications reported to the committee have been exhaust steam heaters either of the open type, manufactured by the Worthington Co., or of the closed type, manufactured by the Superheater Co., with the exception of one, a Foster-Thompson exhaust gas heater.

A questionnaire was again submitted to the members, and a digest of the replies received shows that considerable information of value has been obtained relative to the economy, maintenance cost and general operation of the heaters. The various important features included in the questionnaire are given below as sub-heading of the report and they are followed by a brief summary of the replies received.

Maintenance Cost.—The cost of upkeep of either the open or closed type heaters as reported by the different roads varies from \$1 to \$9 per 1,000 locomotive miles. Such a range is to be expected, as development work is still in progress and we cannot expect close agreement of the cost figures until a large number of heaters are in service and the supervision and repairs follow the general practice accorded other devices.

Tests of Heater.—No railway reports any systematic daily inspection of feed water heaters. The usual practice is to depend upon the locomotive man's report, and to supplement it by having the locomotive house inspector run the pump

and note its actions and any leaks in the pump or piping. Some roads report that at boiler wash periods they make a systematic inspection which includes special examinations of valves, tubes and other parts.

Piping.—Some trouble has been experienced in maintaining the joints, but some of the roads advise that, by using iron pipe, bracing it thoroughly, and keeping the number of joints to a minimum, little trouble will occur. A majority of the replies report the use of iron pipe with flanged joints.

Boiler Check.—A number of roads reported difficulty maintaining the boiler check, but have overcome it to a certain extent by reducing the lift of the valve. Where a small valve was in use, a larger valve was applied to compensate for the reduced lift.

Freezing of Heater.—In ordinary cold weather the heat radiated from the boiler has been sufficient to prevent freezing and where proper precaution is used no trouble should result. All roads are using drain cocks where necessary, and in addition some of them have applied a small steam supply line to the suction pipe, which is used when the pump is not working. Both the open and closed type heaters are thoroughly lagged.

Oil Separator.—The use of oil separators with heaters seems to be general. Only two roads report having found traces of oil in the boiler, and both state that it has not resulted in any damage to the boiler. One of these roads, which is located in bad water districts, attributes an increased amount of foaming to the presence of oil in the boiler. The other road, which is located in a good water district, reports that it has had heaters in service for several years and that frequent chemical analyses of the boiler scale have never shown more than a trace of oil, although one heater was in service for one year with the oil drain from oil separator closed.

Economy Tests.—A number of the roads have made economy tests of the heater in comparison with the injector, and some very excellent results have been obtained. Some of the figures submitted are given below. Your committee has no information as to how these

tests were run, and therefore cannot vouch for the accuracy of the results reported, but give them as information.

Road 1.—Closed type, Increased evaporation per lb. of coal, 15.3%; coal saving per 1,000 gross ton miles, 12.3%; increase in over-all boiler, furnace and grate efficiency, 14.3%; type of locomotive tested (cylinders 27x30 in., drivers 69 in., 200 lb. boiler pressure), 4-8-2.

Road 2.—Open type, Coal saving, 12%.

Road 3.—Closed type, Increased evaporation per pound of coal, 24.1%; decrease in fuel consumption, 10.5%; decrease in superheat, 3.6%.

Road 4.—Open type, Saving in coal per 1,000 ton miles, 14.0%; increased boiler efficiency, 16.1%; exhaust steam recovered from cylinders, condensed and returned to boiler, 8.6%; decrease in superheat, degrees F., 21.7.

Road 5.—Closed type, Saving in coal per 1,000 ton miles, 8.9%.

Road 6.—Open type, Saving in fuel oil, 12.5%.

Road 7.—Closed type, Saving in coal per trip, 12.5%; increased evaporation per pound of coal fired, 16.0%.

Road 8.—Closed type, Saving in fuel, 13.0%.

Road 9.—Closed type, Saving in fuel, 16.5%.

Road 10.—Closed type, Saving in fuel, 14.0%.

Temperature of Feed Water.—The rise in temperature of the feed water is a very definite indication of the economy which is gained by the use of feed water heaters, and accordingly, in the questionnaire, temperatures obtained, with the locomotive working at or near maximum power and also with a light train, of the delivery water, suction water and exhaust steam, were requested in order to more fully bring out this feature. A digest of the replies shows that the rise in temperature for heavy trains ranged from 135 to 185 degrees F., with an average of 156. For light trains the rise ranged from 92 to 175 degrees F., with an average of 144. Many of the roads reported but small differences in the temperatures obtained for heavy trains and for light trains. Typical examples of the results submitted are as follows:

Freight Locomotives.	Heavy trains.	Light trains.
Suction water	60	60
Delivery water	220	295
Exhaust steam	235	220

Cleaning of Heaters.—In good water districts no trouble has been experienced with the collection of mud or scale in the heaters, but in bad water districts such has been the case and consequently it has been necessary to clean them. With the open type the usual method has been to scrape the scale and mud loose and then wash it out with a hose. With the closed type the inside of the tubes are usually cleaned by pumping through them a solution of muriatic acid and the outside of the tubes are cleaned by boiling them in a solution of washing soda for about twenty minutes and then washing them with hot water.

Exhaust Nozzle.—There was no agreement as to the necessity or the advisability of changing the size of the exhaust nozzle. Four roads found it necessary to decrease the size of the nozzle and 10 have made no change at all. One of the groups of 10 referred to above has found that while in ordinary service no change is necessary, when the locomotive is forced to its maximum capacity, a decrease in the size of the nozzle is necessary if the maximum capacity is to be sustained for any period of time.

Indicating Device for Pump.—Pres-

sure gauges of various types have been the only device used to indicate the action of the pump. The opinion is general that there should be some device which will tell the locomotive men that the pump is running, but the results so far obtained with the gauges have not been entirely satisfactory due to their inability to stand the severe service.

Injector.—With a general use of heaters the removal of one of the injectors is favored.

When the locomotive is standing or drifting the use of the heater is not recommended, because the water from the heater is then colder than that delivered by an injector. Objection has been made to the application of feed water heaters on the ground that it would be impossible to prevent their use, when there was no exhaust steam to heat the water and then cold water introduced into the boiler would have a bad effect on the flues and firebox. The replies to the questionnaire indicate that while nearly everyone is opposed on principle to the introduction of cold water, there is no evidence that the use of the feed water heater has resulted in any damage to the boiler. The use of exhaust steam from the auxiliaries, such as air pump, headlight generator and stoker may be advisable in order to maintain the temperature of the feed water when the locomotive is not working. Several

roads express the opinion that any damage from the introduction of cold water to the boiler would be reduced by the use of a top head check.

Capacity of Heater.—A few of the roads were of the opinion that the capacity of the heat should be equivalent to that of one injector, while the majority desire an increased capacity ranging from 10 to 100%, with an average of about 33%. Some additional capacity no doubt should be provided to compensate for the reduction in the capacity of the feed water heater due to worn packing, worn cylinders or leaky valves.

The committee's investigation shows that it is a generally accepted fact that the use of a feed water heater will increase the efficiency of a locomotive. There is very little complaint in regard to their maintenance, but more information on this subject and further improvements in design may be expected when feed water heaters are applied in larger numbers, so that they are subjected to the same character of repair work and supervision as other parts of the locomotive. It is recommended that the committee's work be continued and that additions be made to the rules covering locomotive tests, whereby standard methods may be introduced for testing the two types of heaters so that the results of heater tests made on different roads may be comparable.

Car Construction Committee's Report.

The car construction committee, of which W. F. Kiesel, Jr., Mechanical Engineer, Pennsylvania System, was chairman, and of which W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., was a member, dealt first with the arrangement of refrigerator cars to prevent salt water dripping on the rails. The various refrigerator transportation companies have either developed a brine retaining valve of their own, or favor some particular type. The following rules were suggested for adoption as an Association standard:

For Brine Valve and Operating Rigger.—Operating rods shall be solid and

Fig. 1. Recommended Center Sill Section.

not less than $\frac{1}{4}$ in. in diameter. Operating lever at top shall be of wrought or malleable iron, with cross-section area not less than 1.5 sq. in. Rubber seats shall be made of pure rubber, to resist the action of salt water. Cast parts shall be of malleable iron, not less than $\frac{1}{4}$ in. thick. All parts of brine valves shall be heavily galvanized or sherardized. All surfaces adjacent to rubber or other seats in the valves shall be machined, and free from fins, blow holes, or other defects. Valve operating mechanism shall be so constructed that valve must be closed before plug can be put in place. Where possible, valves should be so ar-

ranged that weight of brine in tank will hold the valve closed. The diameter of wearing pins and connecting bolts shall be not less than $\frac{1}{2}$ in. All nuts shall be held in place by cotter pins at end or by lock nut.

For Clean-Out or Hand-Hole Castings.—Cast parts shall be of malleable iron,

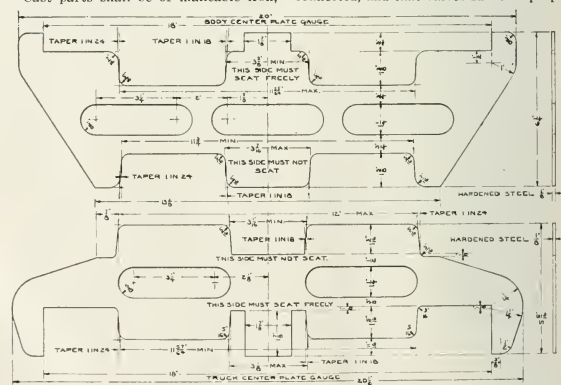

Fig. 2. Recommended Center Plate Tolerance Gauge.

not less than $\frac{1}{4}$ in. thick. All parts of clean-out casting shall be heavily galvanized or sherardized. Clean-out casting shall have a gasket between cover and clean-out frame. The cover locking device should be simple in operation and easy to close.

For Brine Tank.—The tank shall be made of heavily galvanized iron, not less than $\frac{1}{16}$ in. thick. All joints shall be

riveted and soldered. Connection castings shall be made of heavily galvanized or sherardized malleable iron castings. The brine tank shall be securely supported and fastened in end of car.

For Inspection.—See that rods, levers, and other parts of the brine valves are connected, and that valves function prop-

erly. Inspect the following parts for leaks: Clean-out castings; tanks; valves; connections between tanks; all leaks shall be repaired before a car is loaded. A card, reporting the brine tank equipment in serviceable condition, signed by the foreman in charge of the inspection, shall be filed before a car is loaded.

Standard Fundamentals for Cars.—The committee presents the center sill

section, fig. 1, for adoption as standard for all cars, except those which, on account of insufficient side sill strength, require fish-belly center sills, such as flat cars, and gondola cars with very low sides. The section proposed presents the least surface for corrosion, with a maximum section modulus. Therefore, the loss in strength per year will be a minimum. It is applicable to all cars, with few exceptions. It will reduce the number of rivets in center sills by an appreciable amount, and, therefore, will correspondingly reduce the cost of the car. Interchangeability of details will be very materially increased, reducing the amount of repair stock to be carried at the different shops. The committee earnestly recommends that this section be adopted as the association's standard for all cars which do not necessarily require fish-belly center sills, and that all railways use this center sill section for all new construction.

Marker Lamp Socket Brackets and Holders.—A slight modification, made by adding a bevel, was proposed by the committee and submitted to letter ballot.

Standard Box Car Body Designs.—A number of meetings with the Car Manufacturers' Association of the United States, Car Design and Engineering Committee, were held, to go further into the question of fundamentals of car construction, which resulted in the submission

of several preliminary designs by the manufacturers' committee, which are now under advisement by the American Railway Association's Committee, which hope to be able to submit one or more designs next year.

The committee also submitted changes in the classification of equipment to facilitate mileage allowance on privately-owned freight cars.

Gauges for Center Plates.—Communications from members indicated the desirability of adopting tolerance gauges for standard center plates. It was stated that the absence of such gauges permitted conditions where the body and truck center plates locked, causing derailments. Fig. 2 is submitted herewith for adoption as standard.

Standard Truck Designs.—The subcommittee on car trucks, in conference with the cast steel manufacturers' committee, has made considerable progress toward producing one or more designs of trucks. Preliminaries on which agreements have been reached are: Assumed methods of loading. Maximum stresses to be allowed. Design of spring plank attachment to side frames applicable to all of the three existing types of side frames, viz., American Railway Association bolted box type, semi-pedestal type, and integral box type. Designs of cast steel and pressed steel bolsters to be interchangeable. Side frames

with their boxes to be interchangeable. Complete trucks to be interchangeable. The use of standard wheels, axles, bearings, wedges, brake beams, brake shoes, hangers and springs. It is expected that truck designs can be completed in the coming year, the designs to incorporate fixed conditions, facilitating interchangeability between details, singly or in groups, and so that preferred specialities can be substituted for standard detail construction.

Arch bars for 80,000-lb. Capacity Cars.—The committee's attention was called to frequent breakage of bottom arch bars of these trucks, with request for investigation of the stresses involved. It was found that the stresses were considerably higher than in the corresponding members of other trucks. To correct this, it is recommended that the bottom arch bar be increased in thickness from $1\frac{3}{4}$ in. to $1\frac{1}{2}$ in., and that the column and journal box bolts be increased in length by $\frac{1}{4}$ in.

End Stake Pockets for Flat Cars.—An ever recurrent suggestion is to provide all flat cars with end stake pockets, the absence of which often necessitates considerable extra expense for end bracing of shipments, and sometimes loss of loading length. The committee submits for adoption as recommended practice, that flat cars be provided with end stake pockets substantially attached to underframe members.

Brake Shoe and Brake Beam Equipment Committee's Report.

The committee, of which W. J. Bohan, Assistant General Mechanical Superintendent, Northern Pacific Ry., was chairman, and of which G. E. Smart, Mechanical Assistant, Car Department, Canadian National Rys., was a member, reported as follows: The committee's past year's work has been principally the further study and consideration of subjects carried over from the previous year as follows:

1. **State of the Art, Brake Shoe Construction.**—A careful analysis was made, supplemented by reports from the general counsels of the eastern and western railroad associations, on the patent situation. The steel back brake shoe shown in the accompanying plan is the best that the committee has been able to develop not covered by patents. This design is recommended to letter ballot as recommended practice.

2. **Reversible Strut.**—Various forms of reversible struts, including those on the market and those suggested by different members, have been considered from the standpoint of demand and practicability. The committee feels that none of the designs have sufficient merit to warrant recommending them as standard or recommended practice. The subject will be continued for further consideration.

3. **Brake Beam Reclamation.**—Last year the committee submitted as a progress report a tentative standard practice for the consideration of the members and requested their consideration and criticism. No criticisms or suggestions were offered. A further study of this subject emphasizes the importance of repaired brake beams meeting the capacity and other requirements of the standard specification. To handle this work most efficiently, properly organized central repair plants, provided with special equipment for assembling and testing, are recommended. The equipment, while special in character, is inexpensive,

and can be constructed largely of second-hand material, as suggested and illustrated in detail in last year's report.

demand for improvement in present practices in brake beam maintenance generally, the brake head strength feature

Suggested Steel Back Brake Shoe.

4. **Brake Head Strength Test.**—In view of the desirability of a standard brake beam design, and the progress being made in that direction, and also the

has been deferred for action in connection with the standard beam.

5. **Brake Shoe Key Design and Details Involved in Fit of Shoes, Head Sizes**

and Key.—A canvass of the situation developed that brake shoe keys conforming to the standard drawing and properly applied give little trouble. It is believed that an improvement can be made by lengthening the head from $\frac{1}{4}$ in. to 1 in. and bending it over, instead of upsetting it. This change is recommended for submission to letter ballot, as it involves a change in the standard drawing. It is further suggested that purchasers of brake shoe keys have such inspection

made that will ensure keys conforming to standard and that railways co-operate by having repair points use more care in maintaining better fitting keys, and when manufacturing their own keys to see that they comply with the standard.

Standard Practice Brake Beam Design.—The committee is not prepared at this time to submit a standard design of brake beam and the subject will be continued.

Capacity Markings—Brake Beam Struts.—On the suggestion of the chair-

man of the Brake Beam Manufacturers Institute Mechanical Committee, in letter dated Chicago, Jan. 10, 1922, the committee recommends for letter ballot changing of the Standard Specifications for Brake Beams, Sec. 14, to read:

"The A. R. A. nos. 1, 2, 2 plus, 3, 4, 5 or 6, as the case may be, shall be cast on the center strut with raised letters and figures not less than $\frac{5}{16}$ inch high and $\frac{1}{4}$ inch in relief, where they can be readily inspected when beam is in place on car."

Locomotive Construction Committee's Report.

The locomotive construction committee, of which H. T. Bentley, Superintendent of Motive Power and Machinery, Chicago & Northwestern Ry., was chairman, and of which W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., was a member, reported as follows: "The committee has this year confined its report to the study of various details of locomotive design and construction which have been referred to it. Each of these subjects is reported upon separately in exhibits A to K, inclusive.

Exhibit A deals with formulae concerning the tractive power of Mallet locomotives.

Exhibit B deals with attachment of locomotive boilers to frames, and with frame breakages and suggested remedies, in connection with which the report says: "The study made by your committee has developed that in but a few instances it will be found the breaking of frames can be ascribed to a method of attaching boilers to frames. It is the committee's opinion that if locomotives are designed with frames of proper strength to withstand stresses, little trouble should be experienced with broken frames, provided a locomotive receives necessary running maintenance. Through neglect, however, of loose pedestal binders, loose wedges and worn rods, which cause high dynamic stresses above which the frames are designed to absorb, many of the failures result. It is the committee's opinion, also, that locomotives have been designed with insufficient frame crosssties, as well as those having crosssties deficient in strength, or improperly located so that frames are not properly tied together. When many of the older locomotives were designed, the art had not advanced to a sufficient degree to clearly understand the varied stresses set up in locomotive frames, and undoubtedly there is much yet to be learned in this respect.

"The springs and spring equalizer rigging must provide the necessary flexibility and absorb the stresses which are imposed on the locomotive laterally, due principally to centrifugal forces on curves, and due to the reaction of the guiding effect of the locomotive truck and the reacting pressure resulting therefrom, which is concentrated at the first frame pedestal as a fulcrum, with its resulting lateral bending stresses in the frame, between the pedestal and the cylinder. The longitudinal flexibility, due to brake application, would likewise be absorbed in the spring rigging, as well as the vertical pressure due to the dynamic argument resulting from the driving wheel counterbalance.

"The bracing of the frames should be applied as closely as possible to the points of application of pressure in the various directions, to absorb the rigidity of the frame work, which, if carefully done, should result in the fewest possible frame failures.

"Pedestal caps should be used on all heavy locomotives having the following or greater weight on drivers: ten-coupled, 80,000 lbs.; six-coupled, 120,000 lbs.; eight-coupled, 130,000 lbs.; ten-coupled, 140,000 lbs.

"Some of the steel companies are at this time in position to furnish one-piece cast steel locomotive bed, which does away with many of the undesirable features of the present frame design. The main advantage, however, is stronger frame with less weight, enabling larger boiler to be applied to locomotives without increasing the wheel load, decreasing parts that work loose and require repairs, with subsequent reduced cost of maintenance, and would seem to be a very great improvement over what has been used heretofore."

Exhibit C deals with the maintenance and lubrication of slide valves on the low pressure cylinders of Mallet locomotives. After describing the various arrangements for lubrication with both 5-feed and 6-feed lubricators, the report says: "The different methods of application of lubrication of cylinders and valves have not proved satisfactory, and the problem is yet to be solved. There is being tried a new lubricant recently placed on the market to be delivered through a hydrostatic lubricator, in which graphite is employed, the graphite being broken up so very fine that it is readily held and carried in suspension with the lubricating oil, the claim being that the graphite will adhere to the surfaces lubricated, thereby forming a coating, which prevents cutting of the metal. As graphite lubricant on bearing surfaces has proved to give good service, we may reasonably hope that the methods now being used will prove graphite a satisfactory lubricant for steam surfaces, and the committee will follow this with great interest."

Exhibit D deals with the use of extended piston rods on locomotives. It points out that the extended piston rods have been tried with more or less success on a large number of American roads, as a means for reduction in cylinder and piston wear. Two general methods have been resorted to in treating the extended piston rod, one, the use of another metallic packing on the front cylinder head, the other employing an extension sheath, in which the piston rod is permitted to reciprocate with the bronze or other suitable form of bearing at the inner end of the sheath, to take the weight of the rod or piston.

The report says: "The general opinion among railway men and locomotive builders is that if extended piston rods of proper design are maintained, they will reduce the wear and prolong the life of the cylinder packing. The extended piston rod adds weight to the reciprocating parts, which detracts slightly from its advantages. The committee believes finally that as there seems to be a diverse

opinion as to the merits of extended piston rod, definite conclusions should be deferred and more investigation made on this subject."

Exhibit E deals with the possibility of the use of solid front main rod, with bushing instead of keys, and two-piece brass. The committee had not received enough information to make any definite recommendations.

Exhibit F deals with tender tank bottoms, a comparison of the flanged tank bottom with the riveted joint construction being desired. "After careful consideration, the committee feels that the efficiency of the flanged tank should be equal to the old style of construction in every way. It is felt that ultimate life should be somewhat extended, and that the cost of construction should be no greater."

Exhibit G deals with a comparison of the mikado and the consolidation locomotive, and in this connection the committee said: "With a given weight on driving wheels and equal ratios of adhesion, a mikado type locomotive will show no superiority over a consolidation, as far as a starting tractive force is concerned. As the speed increases, however, the tractive force of the mikado type will fall off less rapidly than that of the consolidation, because of the greater boiler power of the former locomotive. As a result, at higher speeds the mikado type will develop a larger percent of its maximum tractive force, as compared with the consolidation. The mikado, on account of its wheel base arrangement, is somewhat easier on flanger wear, and somewhat safer in high speed without danger of derailment. The element of time in handling trains over long divisions has become so important with most roads in this country that it is absolutely necessary to provide, in modern locomotives the maximum efficiency and this maximum steaming efficiency can only be maintained when a portion of the total weight of the locomotive is carried upon the leading or trailing trucks, or both. On some roads the mikado type has made an excellent combined passenger and freight locomotive, being used interchangeably for either service as occasion requires. On consolidation type locomotives, having wide fireboxes, and comparatively large driving wheels, the depth of the furnace throat is necessarily restricted, making it difficult to apply a satisfactory design of brick arch. This difficulty is avoided in the mikado type, as there is ample space between the grate and bottom row of flues for an arch and its supporting structure. The necessity of placing a driving wheel under the firebox makes it practically impossible to apply a satisfactory ash pan to the consolidation locomotive, on account of the pocket over the driving wheel being so close to the underside of the grates. Summing up the subject, the suc-

cess of the mikado type is due chiefly to the following: Larger sustained steaming capacity provided in proportion to the adhesive weight. Greater increase in tonnage handled, with relatively small increase in weight and coal consumption. Greater power obtained without increasing the weight per pair of drivers beyond permissible limits or the necessity of increasing the rigid wheel base by adding another pair of drivers. Opportunity to provide a furnace that will burn inferior grades of coal. Increased depth of water legs and greater distance from fuel bed to flues resulting in improved and more efficient furnace conditions and reducing cost of boiler maintenance. In general a larger, more powerful and better balanced design of locomotive throughout, having greater capacity, reserve power and efficiency, resulting in greater tonnage handled, saving in coal and water per ton mile and reduction in operating costs."

Exhibit H deals with the advantages and disadvantages of lifting and non-lifting injectors. The committee says:

"It would appear from replies received to questions sent out that little is known about the comparative efficiency of the two types of injectors as regards steam consumption for a given quality of water delivered; that cost of repairs and maintenance is less with the non-lifting injector; that the non-lifting injector is more easily located and repaired; that the non-lifting injector is generally considered preferable and is gaining in favor, particularly on modern large locomotives."

Exhibit I deals with saturated steam drifting devices for superheated locomotives. Replies to a questionnaire sent out by the committee led it to the following conclusions: Automatic drifting valves on superheated locomotives are not generally being used. The common practice when drifting is to crack the throttle. The use of the manually controlled steam line from cab to valves and cylinders has not proved satisfactory. Some roads are using home made devices for supplying air compressor exhaust steam to valves and cylinders, with sat-

isfactory results. A few roads are using automatic drifting valves apparently with success. A few roads are experimenting with various forms of automatic drifting valves. An automatic drifting valve is desirable if one can be found or developed which will operate successfully both at high and at low speeds, and be simple and rugged enough to be reliable and stand the service requirements without undue maintenance cost.

Exhibit J deals with tank syphons as opposed to tank valves. In summarizing data furnished by various railways, the committee says: "It appears that the syphon is well adapted for use with lifting injectors, while the tank valve is more suitable for non-lifting injectors."

Exhibit K deals with tank hose, as opposed to metallic connections. "Your committee concludes that in the light of the information at hand, we are not justified in discarding the hose. We feel assured that with a reasonable amount of attention to this detail the present maintenance may be considerably reduced."

Train Lighting and Equipment Committee's Report.

The committee on train lighting and equipment, of which J. R. Sloan, Chief Electrician, Pennsylvania System, was chairman, reported that it interpreted its instructions to make an investigation to determine the merits of direct driving axle generators for passenger cars as being intended to cover any mechanical form of drive other than by belt. Accordingly, it investigated the following types of drive for car lighting generators: 1. That introduced by W. L. Bliss, and tested from 1898 to 1904 on the Pennsylvania Rd., between Jersey City and Washington. 2. The Deutsch, which was in service on the C.P.R. sleeper car Narbome and on about 10 G.T. and Intercolonial Ry. cars, and one Lake Shore & Michigan Southern car. These drives were in service in 1906 or 1907. 3. The Fitz drive. 4. The Gould chain drive. 5. The Sater Car Heating & Lighting Co's safety drive, applied to Long Island Rd. car 336 in Feb., 1912, and removed Oct. 1, 1912, when the car was derailed and the shaft damaged. 6. The Gould shaft drive, applied on the Delaware, Lackawanna & Western Rd., Jan. 17, 1918. At July 14, 1920, this drive was still working satisfactorily, and no expense other than lubrication and inspection had been necessary. 7. The Pitt drive. So far as is known, this drive has never been placed in service. 8. The Matthews drive, which has never been placed in service, so far as the committee could ascertain. 9. United States Light & Heat Corporation drive, which has been operating for some time in experimental service in the shop, but has never been placed in service on the road.

The report describes all of the foregoing drives at length, and says it will be conceded by all who are familiar with present day operation of axle generators, that, at present, failure of the drive is the cause of a larger number of failures of light than any other one item. The records of the company operating the largest number of axle generators show that 18% of the lighting failures and 25.2% of the equipment failures are due to the drive. The causes of the trouble experienced with belt drive are many and various, but they are not germane to the subject assigned. Their effect on car lightning, however, is and has been so

detrimental that, as has been shown, repeated efforts have been made to design a satisfactory positive drive which would eliminate the belt. The advantages of such a form of drive are: Decreased liability of failure of drive. Decreased liability of failure of light. Decreased liability of deterioration of battery, due to undercharging of battery on account of the belt slipping and sulphating on account of battery becoming discharged and standing in the train. Decreased liability of having train detentions. Decreased liability of annoyance to passengers, due to flickering of lights caused by belt slipping and to failure of lights due to loss of belt. Positive drive under all conditions of weather. Elimination of belt tension device, simplification of suspension, with consequent reduction in first cost and cost of maintenance of these parts of the equipment. The disadvantages of such a form of drive are: Increase in first cost of drive. Increase in cost of application. Increase in length of time of train detention when drive does fail. Increased difficulty in testing generator by motoring.

To be really successful, the direct drive should, of course, in addition to its advantages over the belt drive, be capable of being operated at a total cost comparable with the total cost of operating the belt drive. In order to determine what the cost of operating a belt drive might be, the committee presents data furnished by various railways, showing that the mileage per belt varies from 5,132 to 84,775, and that the average percentage renewals per belt per month vary from 3.2 to 12. As a satisfactory basis of comparison, considering the drive only, the direct drive, on the basis of the figures used, should be capable of being operated at a total cost, counting in operation, maintenance, depreciation and interest, of not more than \$56 per year.

The points that, in the committee's judgment, should be avoided in designing a positive drive for axle generators are: Construction which necessitates the use of a special axle; which in any way changes a standard axle; which necessitates the removal of the wheel from the axle in order that the equipment may be applied; which uses a helical spring in a plane other than that perpendicular to

its axis; which, on account of wear, necessitates scrapping of material other than the material worn; which does not provide for maintaining pitch circles of bevel gears in contact; which does not readily permit the turning of wheels in center drive wheel lathes; which does not provide for the full movement of the axle in all planes; which does not provide efficient lubrication and protection to all working surfaces from dirt and grit.

The points that, in the committee's judgment, should be provided in the design of a positive drive for axle generators are: Connection to axle that can readily be removed. Mounting of the axle generator on the truck or underframe of car in the simplest possible manner. That the universal joints, if used, should have a free angular movement in any direction in excess of the angle between center lines of truck and car body as found on the curve of least radius over which the car is capable of moving in service condition. That a safety device should preferably be provided which will operate to break the connection between the drive and generator, in the event of the drive tending to become overloaded. That the generators should be so mounted as to provide a maximum of accessibility. That means should be provided by which the generator may be readily "motored."

The committee feels that at present there is no type of direct or positive drive which does not include features that are objectionable to the extent of practically prohibiting its general use, nor does any drive possess all of the points that we consider necessary. The committee is, however, of the opinion that the advantages of the direct drive are of such importance as to justify its further development, and further that its use would be justifiable even at a cost in excess of the belt drive. The committee believe that there is a demand for a direct or positive drive and that its development should be encouraged by all concerned.

The report proposes a change in the specification for axle generators, in connection with the lamp regulator, making paragraph 6 i l read as follows, the words in parentheses being those of the present text eliminated: "6 i l. With the battery discharging and with the battery

voltage 31 volts or less, the drop in voltage across the terminals of the lamp regulator resistance shall not exceed 1 volt (per 25 amperes flowing) for the connected lamp load." And paragraph 6. i. 2, to read as follows, the words in parentheses being those of the present text eliminated: "6. i. 2. With armature r.p.m. increasing at an approximately uniform rate from inimum full load speed to maximum speed in not more than five minutes

and again decreasing to its original value, the voltage shall be maintained at volts plus or minus one volt (at any current value not exceeding amperes) at any current value equal to or less than the connected lamp load."

The committee presented a full schedule of train lighting lamps, divided into a standard or regular schedule and a special or intermediate schedule.

The committee's final recommendations

are as follows: That the portion of the report pertaining to the direct or positive drive on which a report was ordered be accepted. That the proposed change in paragraphs 6 i. 1 and 2 of the specification for axle generators be referred to letter ballot as recommended practice. That the schedule of train lighting lamps, together with the limiting dimensions as given, be referred to letter ballot as recommended practice.

Scheduling of Equipment Through Repair Shops Committee's Report.

The committee on scheduling of equipment through repair shops, of which H. Gardner, Special Engineer, Baltimore & Ohio R. D., was chairman, and of which E. T. Spidy, Assistant Superintendent, Dominion Engineering Works, was a member, presented a report which is summarized as follows: The last previous report from the committee, which was made in June, 1920, and published in Canadian Railway and Marine World for July, 1920, pg. 337, covered the scheduling and routing of locomotives through repair shops. One road in Canada has this work highly perfected, and claims are made for a considerable increase in output, with decreased costs due to its adoption. At least one road in the U.S. has recently introduced scheduling and routing practices in its passenger car repair shops, and indications point to an increase in understanding and appreciation of methods widely used in contract shops and which are equally applicable to railway shops.

Details covering the following items incident to installing shop systems were fully covered in the committee's 1920 report and apply essentially to passenger and freight equipment: Schedule supervisor and assistant, experience and duties; location of schedule office; description of schedule and planning boards; shop blackboards and slide rules. This information is therefore not repeated.

Passenger Equipment.—The committee recommends considering only those classes which include all repairs having a labor cost of \$50 and over. Separate master schedules should be prepared for passenger cars, mail, baggage, express, combination, dining, parlor and sleeping cars. These schedules should be further subdivided for wood or steel construction. All master schedules should show exterior, interior and paint work separately, also work in all other participating departments, such as the tin and pipe shop, electrical department, air brake shop, etc. Any convenient combination of figures and letters may be used to designate particular schedules. For example, a 1-A-2 repair schedule would indicate a class 1 heavy exterior repair, class A heavy paint repair and a class 2 medium interior repair.

Schedule and planning boards or loose sheets may be used to advantage in the schedule supervisor's or foreman's office. Shop sheets, blackboards or bulletin conveying dates transferred from master schedules to department foremen will be found useful and are recommended. A calendar slide rule will greatly shorten the work of assigning actual dates on shop sheets. Daily delay sheets should preferably be made from colored paper, to distinguish them from other forms. Departments recommended for separate shop and delay sheets are as follows: Erecting and paint shop, tin and pipe

shop, cabinet shop, smith shop, truck shop, upholstering and plating shops and electrical department.

The committee is of the opinion that passenger car repair schedules are to a large extent governed by schedules for painting and recommend examination of report by the American Railway Association, section 3, Equipment Painting Division, Committee 8, for 1920: "Classification of painting repairs and shopping of equipment." The intent is to eventually co-ordinate and standardize painting and repair schedules so far as may be possible. The operation of a passenger car repair shop scheduling system conforms generally to procedure already described in the committee's 1920 report. Schedule supervisor issues shop sheets to department, and checks all work daily, recording delays, which are posted or sent to foremen interested. Supervisor also directs material routing clerk. Delays per car day, or per month, or departmental delays should be collected weekly or monthly, in any convenient form, and forwarded by supervisor to higher shop officers for information or action.

Freight Equipment.—The committee suggests that only heavy repairs should be considered in any discussion of freight car scheduling. Such repairs require 20 man-hours and over. Separate master schedules should be prepared for flat, coal, box and refrigerator cars, these to be subdivided for wood or steel construction. For example, a steel gondola requiring class B-2 repairs would require a different schedule than a wood box car requiring class B repairs. The above separation may be varied to some extent when cars are repaired under a group system with specialized shifting gangs.

It is not possible at this stage of development to define arbitrary rules for scheduling freight equipment. Shop tracks and buildings are lacking in uniformity and a majority of shops and towns are not so arranged that practices giving excellent results in one shop will work equally well in another. In general it may be definitely stated that some easily understood and workable system can be adapted to any shop, large or small, which turns out heavy repairs. It is generally conceded that individual cars should not be scheduled, the cost would be prohibitive even if thought advisable, but groups of cars of the same type and class of repairs may be scheduled successfully. Close attention should be paid to segregation of incoming cars if best results are to be obtained. The stripping operation is important and should be given careful study. By a method used at one large shop, it is possible to schedule 10 or 15 cars in a group, on one track, as a unit. The time for each gang may be predetermined and the work on a master schedule exactly as outlined for passenger car units. This schedule, with hours,

dates and duties inserted, should hang in a conspicuous position near the head of each working track, where foremen and inspectors may check the progress of the work and quickly locate each gang, or each man, at any hour of the day. Under this shifting gang plan, when one gang loses time and another gang gains, those ahead may be used temporarily to help those behind their schedule.

The usual arrangements, where one foreman supervises all men on two or more parallel tracks, and cars are switched in or out as fast as needed, or finished, should be studied carefully, and it will be apparent that a good system for expediting repairs may also be fitted into this situation, although forces may not admit of specialization, and track room may be insufficient for the more elaborate methods described above. More experience is necessary before a system can be definitely outlined and recommended for shops operating on the single foreman plan. A daily delay sheet, similar to that for passenger cars, should be provided.

Material may be handled by a separate system, controlled by the schedule supervisor. One large freight car repair shop has a material routing plan operating as follows: An assistant foreman in the main repair shop inspects incoming cars, and lists all material required for making repairs. This list is written up on a special form, or order, which is taken up by supply men at frequent intervals daily. The material routing clerk receives copies of these orders, and periodically checks all departments visited by supply men, and also checks material arriving at destination in the main repair shop. Records of delays by departments, and delays for which supply men are responsible, are tabulated by the routing clerk, and forwarded to the schedule supervisor. The routing clerk is a higher shop officer. Material clerk co-operates closely with local storekeeper.

General.—To partially illustrate the relation between output and shop capacity. A passenger car shop having capacity for 32 cars will have 32 x 25 or 800 track-days available, considering 25 working days in the month. If records at this shop show that heavy repairs require about 20 days, and medium repairs 12 days, it is evident that an output of 25 heavy and 25 medium repairs may be allocated for the month. If 40 heavy repairs are available for shopping, 800 track-days will be needed, and no medium repairs can be shipped. Any other combination of heavy and medium repairs may be figured on a total track-day basis as explained. The next step is to assign 20 and 12 day master schedules, assuming for simplicity that no light repairs will be shipped in this month.

In conclusion the committee repeats with emphasis the recommendation that

all passenger and freight car repair shops turning out heavy repairs adopt some systematic and workable plan which will first predetermine the expected output and then carefully adjust the working forces, by gangs or otherwise, to this output. Any plan should include careful consideration of switching and truck facilities, with reference to regularity of service and segregation of cars by types and repair classes. When this is accomplished all details necessary for best conveying dates and instructions to foremen and gang leaders may be worked out to suit local conditions and the mutual interests of local shop officers.

Summarizing, an adequate scheduling and routing plan aims: To eliminate dead time in the shop. To prevent departmental delays, or one department delaying another, with resultant friction, in some cases. To plan the work and proportion the forces for maximum production with minimum cost. To enable supervision to work more effectively; making it unnecessary to hunt for material or cause for delays. To ensure prompt issue, transfer and delivery of material. To supply reliable data which will assist officers to intelligently rearrange or relocate buildings, tracks or facilities.

Nominating Committee's Report.

The committee on nominations, of which F. W. Brasier, Assistant to General Superintendent of Rolling Stock, New York Central Rd., was chairman, reported as follows: The terms of office of the chairman and seven members of the general committee expired June, 1921. As there was no annual meeting held in 1921 no election of officers was held, and the terms of these officers were continued to June, 1922, in accordance with the Rules of Order of the Mechanical Division, section 7 (a), which provides that officers of the division shall be elected at the regular meeting of the division held in June of each year. In order to avoid the necessity of electing an entire new set of officers and general committee, your committee recommends that the terms of those officers and members of the general committee expiring June, 1922, be extended to June, 1923; and that officers and members of the committee only be elected at this time to fill the vacancies created by those whose term of office expired in 1921, but who were continued in office until June of this year, and of those who have left railway service and are no longer eligible for office in the division.

In accordance with the above, your committee recommends that the term of office of the Vice Chairman and the following members of the general committee be extended to June, 1923: J. S. Lentz, Master Car Builder, Lehigh Valley Rd.; C. E. Fuller, Superintendent Motive Power and Machinery, Union Pacific System; H. L. Ingersoll, Assistant to President, New York Central Rd.; J. T. Tatum, Superintendent Car Department, Baltimore & Ohio Rd.; W. Kells, General Superintendent Motive Power, Atlantic Coast Line Rd. Your committee nominates W. J. Tolbert, General Mechanical Superintendent, Chicago, Rock Island & Pacific Ry., for member of the general committee, to serve for the unexpired term of J. Purcell which ends June, 1923, and H. C. Ottatt, General Mechanical Superintendent, New York, New Haven & Hartford Rd., to serve for the unexpired term of W. Schlafke, which ends June, 1923, as Mr. Schlafke has left railway service.

Your committee nominates the following to serve until June, 1924: For Chairman, J. Coleman, Assistant to General Superintendent Motive Power and Car Department, Grand Trunk Ry.; For members of general committee: C. F. Giles, Superintendent Machinery, Louisville & Nashville Ry.; T. H. Goodnow, Superintendent Car Department, Chicago & North Western Ry.; A. Kearney, Superintendent Motive Power, Norfolk & Western Rd.; J. T. Wallis, Chief of Motive Power, Pennsylvania System; W. H. Winterrowd, Chief Mechanical Engineer, Canadian Pacific Ry.; C. E. Chambers, Superintendent Motive Power and Equipment, Central Rd. of New Jersey; L. K. Silcox, General Superintendent Motive Power, Chicago, Milwaukee & St. Paul Ry.; For Vice Chairman (to serve unexpired term of Mr. Coleman, which ends June, 1923): J. Purcell, Assistant to Vice President, Atchison, Topeka & Santa Fe Ry.

Train Brake and Signal Equipment Committee's Report.

The committee on train brake and signal equipment, of which T. L. Burton, Air Brake Engineer, New York Central Rd., was chairman, and of which W. J. Hatch, General Air Brake Inspector, C. P.R., was a member, reported as follows:

1. Automatic Hose Connectors for Freight and Passenger Equipment.—The subject of automatic hose connectors for freight and passenger equipment has been further considered by a sub-committee during the past year, which reports in substance as follows. One maker of automatic connectors reports having 15 locomotives, 12 passenger trains, 100 ore cars and 34 slag cars equipped with its automatic connector, and that tests are progressing favorably. Another maker claims to have 5 passenger trains in Canada and one in the United States equipped with this type of connector, and is working with certain railway officials in the direction of developing a freight connector. Further than this, the reports are in the general direction of development only. It will be seen from the above that the trials in general now being made are in passenger service and, the progress of development in automatic train connectors is not such as to put your committee in possession of information at this time that will enable it to make any definite recommendations on an acceptable design for connector for both passenger and freight service.

2. Revision of Code of Air Brake and Train Signal Rules.—The present code is in need of revision, and a sub-committee has been appointed from the train brake and signal committee, to work in conjunction with a committee from the Operating Division on revising the code.

3. Stenciling Brake Cylinders.—Attention has been called to the fact that in many cases where the stenciling above the transverse center line of auxiliary reservoir, it frequently becomes illegible through drippings from the car. Experiments have been made on at least one large railway by stenciling below the center line which indicates an improvement. We believe the practice of applying stenciling approximately 1 in. below the center line should be followed, which can be done without conflicting with the present requirements, from the fact that the location for the stencil is not specifically indicated.

4. Retaining Valves for Freight Equip-

ment Cars.—The committee recommends submitting to letter ballot, for advancement to standard, the present recommended practice, two pressure spring type retaining valve for freight equipment cars.

5. Brake Beams.—At the request of the car construction committee, the committees on train brake and signal equipment and brake shoe and brake beam equipment have held several joint meetings during the past year in connection with the strength requirements of brake beams, and have submitted their recommendations to the car construction committee on the proposed status of number two and two plus beams.

Locomotive Headlights and Classification Lamps Committee's Report.

The committee on locomotive headlights and classification lamps, of which W. H. Flynn, Superintendent of Motive Power, Michigan Central Rd., was chairman, recommended the following for submission to letter ballot as recommended practice for future designs, and to be added to recommended practices previously adopted: Turbo generator to have 3 feet for support and attachment to base plate, thickness of feet at bolt hole to be $\frac{3}{4}$ in. and ribbed on sides to engage head of bolt to prevent turning, ribs to extend to body of generator to strengthen the feet, holes in feet to be 11/16 in. diameter for $\frac{1}{2}$ in. bolts, bolts to enter from the top with nuts on underside of base plate. Bolt hole spacing to provide for 1 bolt at generator end on longitudinal center line of machine 5 in. from transverse center line and 2 holes at turbine end on opposite side 5 1/2 in. from longitudinal center line and 5 in. from transverse center line. Where clearance between foot and body of generator prevents entering bolt from top, foot may be slotted, but where it is necessary to slot all feet, slot in foot at generator end should be parallel with longitudinal center line and slot in feet at turbine end parallel with transverse center line.

Steam inlet of turbo generator to be for $\frac{1}{2}$ in. iron pipe, exhaust outlet to be for 2 in. iron pipe and drain to be for $\frac{1}{2}$ in. iron pipe.

The variation in location of steam inlet from longitudinal and transverse center lines of bolt spacing, and the distance above the base plate to be in increments of $\frac{1}{2}$ in. at steam inlet to be on left side facing turbine end.

Ball bearings to be any of the following numbers which also designate the size: 306, 308, 406.

Brushes to be 1 in. wide, $\frac{1}{2}$ in. thick and not less than $1\frac{1}{4}$ in. long.

Brush holders to be equipped with springs so designed that no adjustment is necessary or possible during the full life of brush and commutator and to provide uniform pressure during 1 in. wear of brush. Brush holders to be machined inside, set 3/32 in. from commutator and at an angle of 10 degrees.

Bolt spacing for base of headlight casings to be 12 x 12 1/4 in., the center line of back holes to be not more than 5 in. ahead of rear of case, bolt holes to be 7 1/2 in. diameter for $\frac{3}{4}$ in. bolts, general design of casing to permit bolts to be applied from top with nuts on under side of bracket.

Screw sizes smaller than no. 12-28 thread not to be used, heads to be either

fillister or flat and material to be brass or steel. For sizes larger than no. 12 use $\frac{1}{4}$ in., 5/16 in., $\frac{3}{8}$ in., etc., bolt sizes, heads of $\frac{1}{4}$ in. and 5/16 in. bolts to be slotted to permit use of screw driver.

Lubrication for turbo generators to be oil.

The committee also recommended the following for submission to letter ballot as recommended practice for maintenance of turbo generators: Oil for lubrication to be as light as possible consistent with the conditions of heat under which used, to be filtered before using

and kept in a covered receptacle. Oil reservoirs to be kept free from accumulations of grease and dirt. Extensive repairs and particularly repairs to rotating parts to be done only at shops or designated points where adequate facilities are available.

Design and Maintenance of Locomotive Boilers Committee's Report.

The committee on design and maintenance of locomotive boilers, of which G. H. Emerson, Chief of Motive Power & Equipment, Baltimore & Ohio Rd., was chairman, and of which R. J. Williams, Superintendent of Motive Power, Pere Marquette Ry., was a member, was given the following subjects for special consideration: 1. The desirability of more water and steam space above the crown sheet. 2. Locomotive boiler washout

systems. 3. Dry pipe specifications. The committee's report is divided into three heads: 1, Design; 2, Maintenance; 3, Devices which reduce boiler maintenance, such as circulation, water treatment and washout systems.

On design, the committee reported as follows: Under this head will be considered desirability of more water and steam space above the crown sheet, as a matter of design. In the designing of boilers they should conform to the requirements

head crown stays for the support of the crown sheets, the committee feels that this type of stay as shown by fig. 3 should be adopted as recommended practice for other than oil-fired boilers.

Mud rings with drop corners are worthy of consideration, as they can be easily made, since it is the almost universal practice to use cast steel mud rings. This strengthens the corner of the mud ring and prevents it from breaking at this point, and provides for three rows of rivets, one row fitting into the thin sections of the mud ring which will

Fig. 1. Belpaire Type Boiler.

systems. Under this head will be considered desirability of more water and steam space above the crown sheet, as a matter of design. In the designing of boilers they should conform to the requirements

Fig. 3. Type of Stay Recommended.

draw the sheet tighter to the mud ring and give better backing up when caulking the edge of the sheet than is the case when patch bolts are used in the corner.

Consideration should be given to provide protection for return bends of superheater units. No design other than the ordinary damper appears to have been developed or at least are not within the committee's knowledge. In this connection protection to the superheater units could be obtained by locating throttle between the superheater and the engine, and developments along this line should be considered.

Improvement should be made in the usual form of tapered screw washout plugs, threaded directly in the shell of the boiler. It would be desirable to design a screw plug wherein the plug proper was not screwed directly into the shell of the boiler and the cap or plug should be so designed as to eliminate possibility of crossing threads in screwing to place.

of the Locomotive Boiler Inspection Law, amended March 4, 1915, issued by the Interstate Commerce Commission, as covered by orders issued by the commission, on June 9, 1914, as to factor of safety and stresses allowed.

Fig. 2. Belpaire Type Boiler.

There are two general styles or designs of locomotive boilers at present being applied to locomotives constructed in this country, the Belpaire and the radial stay. The radial stay type was preceded in use by the crown bar type. As the demand for larger boilers and higher pressure took place, the weight of brace-

necessary to support the crown sheet became excessive, increasing the difficulty in washing out and keeping the crown clear of sediment, due to the obstruction of crown bars. This type was superseded by the radial stay type. In the earlier style of radial type the crown sheets were so much arched that it was possible to apply only two center rows of radial stays with buttonheads to bear squarely against the under side of the

crown sheet, and the angle of the stays was such that the heads of the outer rows would not bear squarely against the under side of the crown; the end through the outer shell was at such an angle that it was impossible to get a continuous full thread fit within the thickness of the shell sheet, resulting in leaky staybolts. In the later designs of radial stay fireboxes the crown sheet was very much flattened, permitting the application of buttonhead stays to approximately the full width of the crown. In the first design of radial stay fireboxes, in order to get the number of flues to correspond with those used in equal size crown bar boilers, the crown was carried higher than in the crown bar boiler, resulting in restricted steam space. In flattening the crown sheet, the steam storage space was increased, but reduced the firebox heating surface as compared with the earlier designs.

In the Belpaire type, figs. 1 and 2, the outside and inside firebox sheets are arranged with the surfaces of sheets practically parallel, permitting the application of braces at right angles to plate supported, thus giving maximum fit for the threads of the stays or sleeves in the sheets and enabling the use of buttonhead stays through the full width of the crown, carrying out the use of buttonhead support for the crown sheets so successfully used in the crown bar boiler, and the application of stays of the upper shell sheets at right angles to the plates, fig. 2.

With the Belpaire type, a given diameter of the boiler shell gives: Greater steam storage space. Greater steam disengaging surface. Greater firebox heating surface. Greater number of tubes. All vertical stays of same length give less variation in expansion and contraction, less distortion of shell sheets, less breakage of bolts, and less number of staybolts to be kept in stock for repairs.

Since the history of boiler design shows that the firebox crowns have been shaped to provide for the application of button-

Dry Pipe Specifications.—The committee reported that communication had been entered into with the National Tube Co. to determine on dry pipe dimensions which would eliminate special size now required to be rolled for locomotives, in accordance with dimensions now used and by the adoption of the sizes of pipe now used for other purposes, thereby enabling the manufacturer to fill orders from pipe in stock, which would facilitate making prompt shipments for both new work and repairs. The committee recommended that the sizes shown in the following table be used for dry pipe and that they be adopted as recommended practice:

PRESENT PIPE			PROPOSED PIPE		
Inside diameter, inches	Thickness, inches	Outside diameter, inches	Actual inside diameter, inches	Thickness, inches	Outside diameter, inches
5	$\frac{1}{8}$	5 $\frac{1}{2}$	No corresponding size.		
5 $\frac{1}{2}$	$\frac{1}{8}$	6	5.047	.258	5.563
6	$\frac{1}{8}$	6 $\frac{1}{2}$	6.065	.260	6.425
6 $\frac{1}{2}$	$\frac{1}{8}$	7	7.023	.301	7.625
7	$\frac{1}{8}$	7 $\frac{1}{2}$	8.171	.327	8.625
7 $\frac{1}{2}$	$\frac{1}{8}$	8	8.241	.342	8.625
8	$\frac{1}{8}$	8 $\frac{1}{2}$	No corresponding size.		
8 $\frac{1}{2}$	$\frac{1}{8}$	9			

Consideration should be given to the present usual practice.

Maintenance of locomotive boilers is one of the most expensive items of locomotive operation. The renewal of firebox sheets is the principal expense in boiler maintenance. There have come into use the last few years approved methods for making repairs; viz., the gas cutting torch for cutting out, for removing defective parts, and autogenous welding for uniting plates. For cutting out staybolts and defective sheets, the gas process is used by utilizing the flame of the cutting blow pipe. The autogenous welding of fireboxes is used for the following purposes: Application of patches to firebox inside sheets; application of half and full side sheets; application of crown sheets; application of whole and part back flue sheets; application of whole and part door sheets; application of door collars and door hole patches; application of mud ring corner patches; application of welded fireboxes complete; reinforcing mud ring corner; reinforcing of rivet seams; welding broken mud rings. Autogenous welding for other than fireboxes is used for the following purposes: Welding outside side sheets; electric welding of flues; welding cracks and holes; fastening of studs. The use of the autogenous system of welding brings with it so many advantages from the standpoint of decreased thickness of material and decreased cost of maintenance that it should be developed to the fullest extent possible, but at present the state of the art is not sufficiently developed to warrant the committee making definite detailed recommendations. Attention is called to the practices of the Baltimore & Ohio R.R., Chicago, Rock Island & Pacific Ry., Atchison, Topeka & Santa Fe Ry., Union Pacific System and other leading railways, all of which have established practices well worthy of consideration and doubtless will be further developed.

Carbon arc welding can be done only with welding generator sets of 600 ampere capacity or larger. Where 600 ampere capacity set is used for carbon work, only the operator doing this work can use the machine at one time. Welding circuits, panels, welding cables, electrode holders, etc., must also be of sufficient capacity and suitable for this character of work. In this connection sufficient capacity in the welding panels and permanent wiring can be secured by operating two panels and circuits in

parallel. Portable welding cable of the size specified for carbon arc welding, should be used, but where this is not available, two cables connected in parallel of the size used for metallic arc welding can be used.

In electric welding there are certain general rules which should be observed. For welding, the pieces are to be kept thoroughly clean, and free from grease, rust, scale and other foreign substances. Same must be made on bright, clean metal, and that condition must be preserved throughout the welding operation. Places that are not chipped clean in beveling should be cleaned at least $\frac{1}{4}$ in.

PROPOSED PIPE		
Actual inside diameter, inches	Thickness, inches	Outside diameter, inches
No corresponding size.		
5.047	.258	5.563
6.065	.260	6.425
7.023	.301	7.625
8.171	.327	8.625
8.241	.342	8.625
No corresponding size.		

design of cast iron dry pipes, in view of

on each side of the bevel.

In all seams to be welded, the edges must be beveled at an angle of 45°, so that when parts are assembled for welding, a V opening will be formed, with bottom of opening not wider than $\frac{1}{4}$ " or less than $\frac{3}{16}$ " as shown by fig. 4. Never apply a weld to the barrel of the boiler. Never weld studs to the barrel of the boiler. Autogenous welding should not be permitted on any part of a locomotive boiler that is wholly in tension under working conditions; this to include arch and water bar tubes.

Devices for Economy in Fuel and Reduction of Boiler Maintenance; Water Treatment.—The committee's conclusions are summarized as follows: Boilers are designed and built for the purpose of producing steam by the evaporation of water, and they fulfil this function best when clean and free from scale, which condition can be maintained only by furnishing them with clean water, containing a minimum amount of scale-forming impurities, and these of such a nature that they will not form a hard and tenacious coating, but will be thrown down as a soft sludge that can be removed readily by blowing off or washing. The installation of treating plants in hard water districts offers an investment that will show a big return by reducing the cost, not only of boiler maintenance, but also of general operation. The committee strongly urges serious consideration by railway managements of the installation of water treating plants.

2. Circulation.—The committee urges careful consideration of the design of boilers for the end of perfecting circulation of water.

3. Feed Water Heaters.—The committee is of the opinion that attention should be given to the further development of feed water heaters, in order to effect more economical operation of locomotives.

4. Boiler Washout and Fill Systems.—There are three general types of washout and fill systems in use. 1. The ejector type, in which washout water is slightly heated and placed under pressure by injecting steam into it through a specially designed nozzle. This is the simplest and least expensive type, but appears to be the least desirable.

2. The pump and heater system, where

the water is heated in an open or closed heater, distributed through a pipe line in the locomotive house and forced under a pressure of about 130 lb. into the locomotive through a hose and nozzle. This type is fairly effective, and can be installed without violating any patent rights. For a medium sized terminal, such a system with two water tanks, one washout and one filling pump and two pipe lines into the locomotive house, will afford washout water at 150° and filling water at 200° F. at a small operating expense. Where exhaust steam is available for heating water, this type is an excellent one for a medium sized terminal.

3. The blow-back type, where the steam blown off the locomotive is utilized to heat the wash and filling water. Such systems, which also provide for the automatic tempering of the water used in washing out and the use of a circulating line to keep the water always hot in the locomotive house lines, are protected by patents. This system is the most effective one, and provides washout water at all times of the proper temperature, and reused water and steam blown off from the locomotive instead of wasting same.

The committee earnestly urges upon railway managements the importance of installing hot water washout and fill systems, thereby effecting economies and efficiency with little expenditure of capital.

Conclusions.—The committee recom-

Fig. 4. Details of V Opening.

mends that 1, Buttonhead staybolts, as shown on fig. 3, be adopted as recommended practice for crown sheets in other than oil-fired boilers. 2, Sizes of pipe as covered by the table given in an earlier portion of the report, proposed pipe, be adopted as recommended practice for dry pipe in designing new boilers. 3, The practice of autogenous cutting and welding be further developed. 4, Hot water washout systems be adopted as recommended practice in washing and testing of locomotive boilers. 5, The installation of water treating plants be generally adopted in the bad water districts. 6, Improvements be made in the usual form of tapered screw washout plugs.

Arbitration Committee's Report.

The arbitration committee, of which T. H. Goodnow, Superintendent of Car Department, Chicago & Northwestern Ry., was chairman, and of which J. Coleman, Assistant to General Superintendent Motive Power and Car Department, G.T.R., was a member, reported that during the year cases 1184 to 1232 had been decided. Changes in the rules of interchange recommended by the committee include a change in rule 2 to eliminate conflict between the Car Service Rules and Interchange rule 2; a change in rule 3, adding a new paragraph to sec. 3 as follows: "After Jan. 1, 1924, cars equipped with couplers having riveted yoke without lugs will not be accepted in interchange," and other changes in rule 3; changes in rules 4, 9, 12, 17, 32, 33, 43, 58, 59, 60, 70, 86, 88, 91, 101 and 112, and in passenger car rule 18.

Car Wheels Committee's Report.

The committee on car wheels, of which W. C. A. Henry, General Superintendent of Motive Power, Pennsylvania System, was chairman, and of which W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., and L. K. Silcox, General Superintendent of Motive Power, Chicago, Milwaukee & St. Paul Ry., and formerly of the Canadian Northern Ry., Mechanical Department, were members, reported as follows: In order to clarify the matter of condemning limits of steel and steel-tired wheels on account of wear, the com-

mittee on car wheels, of which W. C. A. Henry, General Superintendent of Motive Power, Pennsylvania System, was chairman, and of which W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., and L. K. Silcox, General Superintendent of Motive Power, Chicago, Milwaukee & St. Paul Ry., and formerly of the Canadian Northern Ry., Mechanical Department, were members, reported as follows: In order to clarify the matter of condemning limits of steel and steel-tired wheels on account of wear, the com-

mittee recommends the insertion in the Code of Rules of the following rule as interchange rule 79, under the Freight Car Code and as a paragraph of rule 7 of the Passenger Car Code of Interchange Rules: "Thin tread: Steel and steel-tired wheels.—If tread is worn to within $\frac{1}{4}$ in. of the measuring line, which is the inside edge of the limit of wear groove."

Also on this same subject there is recommended the introduction of an additional drawing, fig. 1, in the Code of Rules to follow fig. 4, now shown on pg. 220 of the 1921 revised Code; also fig. 4, M.C.B., sheet 16-A.

In 1920 the contour of the back of

flange of steel and steel-tired wheels adopted in 1912 was withdrawn from the standards and the 1909 contour readopted as standard. With the 1912 contour the back of the flange of steel and steel-tired wheels was identical with that of cast-iron wheels between the base line and the top of flange. The change to the 1909 contour reduced the width of the rim from $5 \frac{19}{32}$ in. to $5 \frac{1}{2}$ in., and the backs of the flanges of steel and steel-tired wheels are not identical with those of cast-iron wheels between the base line and a point approximately $\frac{1}{2}$ in. above same.

Due to the above change, we recommend that the drawing of the maximum and minimum flange thickness gauges for cast-iron, solid steel and steel-tired wheels be changed to show the height of the surface which comes in contact with the back of flange to be $\frac{3}{4}$ in., instead of $\frac{1}{2}$ in. With dimensions as at present, these gauges will not correctly indicate the condemning limits for maximum and minimum flanges of steel and steel-tired wheels. The proposed change will have no effect whatever as concerns cast-iron wheels. This recommended change is shown in fig. 2.

An important factor in increasing the life of wheels is to pair and mount on the same axle wheels of as nearly as possible similar physical characteristics. The committee considered the question of attempting to mate wheels of equal hardness, but it is their conclusion that the only practicable method of doing this in the case of solid wrought carbon steel wheels, to mate them within a 0.05% carbon content range, and in the case of cast-iron wheels to mate by tape sizes as already provided for in the Recommended Practice for Mounting Wheels. It is

therefore recommended that the following section be added to paragraph 8 of the Recommended Practice: "In the case of new wrought steel wheels, those mounted on the same axle should not differ in the carbon content by more than 0.05%." The committee has under consideration certain revisions in the specifications for

Maximum Flange Thickness Gauge for Cast Iron Wheels and Maximum Flange Thickness, Height and Throat Radius Gauge for Solid Steel and Steel Tired Wheels.

Minimum Flange Thickness Gauge for Cast Iron Wheels and Minimum Flange Thickness, Height and Throat Radius Gauge for Solid Steel and Steel Tired Wheels.

wrought steel wheels and cast-iron wheels. However, the investigation has not yet progressed sufficiently that it is ready to submit recommendations.

Modernization of Stationary Boiler Plants Committee's Report.

The committee on modernization of stationary boiler plants, of which L. A. Richardson, Mechanical Superintendent, Chicago, Rock Island & Pacific Ry., was chairman, continued its study of the subject from the basis of the report submitted in 1920, and reported in part as follows:

Crushed Coal Furnaces.—Some progress has been made in the development of the Schutz furnace, which uses a coal that has been finely crushed, but not pulverized. One of these was applied to a 500 h.p. boiler, in a commercial power generating station, and results obtained were very favorable. However, the experimenters are not ready to publish their findings and are waiting for additional development before recommending the furnace for a commercial proposition.

Chain Grate Stokers.—In districts where highly volatile coking coal is available, the chain grate stoker is a very popular form of coal-burning device. The coal is carried into the furnace, ignited, the combustible portion burned up, and the ash continuously dropped over the rear end of the stoker. Over 60% of all stokers west of Pittsburgh are of the chain grate type, with the exception of points where West Virginia coking coal is available.

Relative Cost of Steel, Concrete and Brick Stacks for Plants of 150 to 600

h.p.—Steel stacks increase in cost directly in proportion to the boiler h.p. of the plant, this being due to duplication of stacks for the larger plants, the cost

being much lower for small plants, but gradually approaches the cost of concrete and brick as the size of plant increases. Concrete stacks decrease in cost per boiler as the size of the plant in-

creases, the cost of same being just slightly higher than the cost of brick for the same size of plant above 500 h.p. and less for plants below 500 h.p. Brick stacks decrease in cost per boiler h.p. as the size of the plant increases, the same as for concrete stacks, only not in the same proportion, the decrease being greater, the cost of same being slightly less than the cost of concrete for the same size plant above 500 h.p. and more when below 500 h.p.

For maintenance and depreciation, an annual allowance of 2½% of total cost for concrete stacks, 3% for brick stacks and 16 % for steel stacks, should be made. These figures may vary, depending upon local conditions, design and proper maintenance, but they appear to represent a basis of comparison which is comparatively accurate.

Welding of Pipe Lines in Railway Shop Power Plants.—Curves show the cost of fitting pipes, both with flange fittings, screw fittings and welded joints, based on the cost per joint, which includes cutting two threads, fitting two flanges and bolts in case of the flange fitting, or screwing and coupling in case of the screwed fittings.

No definite recommendations are made for the welding of pipes, but the possibility of saving by use of welded instead of flanged or screwed joints is very great.

A section of the report deals with

types of prime movers for stationary power plants, and shows that while in late years the choice of such prime movers has been in favor of the reciprocating steam engine or turbine, general rules governing selections are without purpose, since each particular installation is a problem in itself. Floor space, capacity, cost of fuel, water rate, steam pressure, water supply, load characteristics, exhaust steam requirements, size of foundation, vibration, first cost, attendance, maintenance, depreciation, taxes and interest on the investment, all govern the selection of type. The principal factor governing the size of units is the station load curves; where these curves are known, the problem is comparatively simple one, but when they must be assumed, as is generally the case with a new project, it is largely a matter of experience.

The report contains numerous tables and curves, showing the steam consumption, water rate, etc., of various types of stationary engines.

The report also contains a section dealing with settings for stationary boilers of the horizontal return tubular type and says: It is of particular importance, when setting return tubular boilers, to make the boiler independent structurally from the brick work, and make stack independent from either boiler or brick work. This results in longer life of brick setting, better alignment of boilers and better opportunity for maintenance and repair work without undue expense and disturbing of such sections as are in good condition for the purpose of repairing sections in need of attention.

Tank Cars Committee's Report.

The tank cars committee, of which A. W. Gibbs, Chief Mechanical Engineer, Pennsylvania System, was chairman, reported that during the past year it had continued its efforts to secure improvement of the tank car features which reports from the Bureau of Explosives and others indicated the principle sources of trouble, viz., dome closing arrangements, heater coils, and the bottom outlets. Tests are being carried on at Altoona on three experimental tank car safety valves, and recommendations as to changes in the standard design cannot be made until these tests are completed. The tests so far have shown the importance of close adherence to the prescribed contour of valve and seat, and the committee's recommendations when made will include one that limit gauges be made with which the valves shall conform. The committee recommended that the class 4 specification tests of safety valves, sec. 24, paragraph 1 be amended to permit of the test period being extended from six months to a year.

A sub-committee which is investigating bottom outlet valves, said in part, "We believe that a valve will not be satisfactory or practical which requires two seats, the aid of gaskets, or a complication of levers and springs. The operating mechanism should be simple, strong, and positive in action. Troubles due to sticking appear to be characteristic of valves of the plug and piston type."

The committee recommended a change in the specifications for class 1 and 2 cars, in connection with the extension of the bottom outlet below sills. The committee also recommended the following:—In the case of steam jacketed

outlets, or where the construction of the outlet pipe is such as to make the breakage groove impracticable, it may be omitted." Recommendations were also made in connection with dome closing arrangements, heater pipes, compliance with building specifications in case of rebuilding cars or making extensive alterations, and tests of tanks of class 4 cars. Consideration was also given to the projection of pipes above dome heads, and to multiple unit container cars to be used for the transportation of materials usually carried in tank cars, but no recommendations were made on these subjects.

Couplers and Draft Gear Committee's Report.

The committee on couplers and draft gear, of which R. L. Klein, Assistant Chief of Motive Power, Pennsylvania System, was chairman, and of which L. K. Silcox, General Superintendent of Motive Power, Chicago, Milwaukee & St. Paul Ry., and formerly of the Canadian Northern Ry.'s Mechanical Department, submitted a progress report, making the following recommendations:—

Standard D Coupler Specifications.—Paragraph (15-B).—It is proposed to revise this paragraph to require 10% of the complete couplers to be weighed rather than all the couplers. The revised paragraph follows: "15-B. When couplers are purchased complete and assembled, 10% of the couplers in each lot of 100 or less shall be individually weighed and shall come within the limits as shown on fig. 6. Upon the failure of a coupler to come within the limits as shown on fig. 6, the weighing shall extend to the entire lot. Failure of any coupler to come within the limits shall be sufficient cause to reject the coupler unless the weight can be adjusted by the manufacturer. Detail parts shall come within the limits as shown on fig. 6, one coupler being dismantled in each 100 and weighed."

Actual experience in carrying out the D coupler specifications developed that weighing 10% of the complete couplers furnished sufficient check on the product.

Gauges for Standard D Coupler.—The following gauges are recommended for approval: 16529-1—Bottom lock lift lever gauge; 16529-2—Bottom lock lift toggle gauge; 16529-3—Bottom lock lift lever

lever specifications. The weight table has been revised to conform with the weights obtained on a large number of couplers and a column has been added giving the normal weights.

Specifications and Tests for Materials Committee's Report.

The committee on specifications and tests for materials, of which F. M. Waring, Engineer of Tests, Pennsylvania System, was chairman, which, on account of its length and also that the majority of the specifications submitted are for paints and materials used in the composition of paints, which are not of much interest to the great majority of men in the railway industry, will only be dealt with briefly.

One of the most important questions referred to the committee by the general committee was: "Has the process of heat treatment decreased the number of failures to any appreciable extent?" Out of 77 replies received to circulars sent out by the committee, 52 reported no information. Of the remaining 25, four reported that they considered heat-treated axles and crank pins more satisfactory than untreated. Nine reported that they were using heat treated material, but were doubtful as to the value of the heat treatment. Five report that they prefer annealed steel rather than the heat treated. Six reported that their experience with heat treated material has been unsatisfactory. One road reported that it considered heat treated axles satisfactory, but that it was using annealed steel for piston rods. Some of the replies pointed out that a possible reason for some of the difficulties experienced with heat treated steel were due to an improper heat treatment and that it was possible that the same material, if properly heat treated, would have given satisfactory results. In some quarters there is a strong opinion that the best steel for locomotive forgings is that which has been given a proper annealing treatment, to thoroughly refine the grain and relieve all stresses.

The committee reported that it had representatives serving with representatives of the American Society for Testing Materials on a joint committee on specifications for steel castings for railways, which held a final meeting on Mar. 24 last, and approved proposed specifica-

Limiting Weights, Standard D Coupler.

	Top operation			Bottom operation		
	Without with 9 in. fittings	Comp. knuckle	Comp. knuckle	Without with 9 in. fittings	Comp. knuckle	Comp. knuckle
Min.	266	385	389	267	389	393

Total weight of parts (with 9 in. knuckle)	119	123	127	122	126	130
Total weight of parts (with 11 in. knuckle)	125	127	133	126	130	136

gauge pin. These gauges have been developed by the manufacturers since adoption of the Standard D Coupler Specifications in 1918 and take care of the bottom operating mechanism for the coupler.

The Table of Weights for Standard D Coupler, published herewith, is recommended for approval to replace the table of weights now appearing in the D coupler

specifications for submission by each of the representatives to their parent bodies.

The committee also presented specifications and recommended practice for: 1. Revisions: a. Turpentine; b. Oxide of iron paste; c. Black paint; d. Raw linseed oil; e. Boiled linseed oil; f. Red lead. 2. New: a. Mineral spirits; b. Red lead and oil; c. Extended red lead paste.

General Committee's Report

Following are extracts from the report of the general committee, among the members of which were W. J. Tollerton, General Mechanical Superintendent, Chicago, Rock Island & Pacific Ry., chairman; Jas. Coleman, Assistant to General Superintendent Motive Power & Car Department, Grand Trunk Ry., vice chairman; and W. H. Winterrowd, Chief Mechanical Engineer, Canadian Pacific Ry.

The Membership of the division includes 206 railways, representing 379 memberships in the American Railway Association, and in addition thereto, 100 railways, associate members of the American Railway Association. These railways, members and associate members of the American Railway Association, have appointed 788 representatives in the Mechanical Division. In addition there are 1,529 affiliated members and 126 life members in the division.

Manual.—The standard and recommended practice of the division has been brought up to date and compiled under the direction of the committee on manual. The Manual contains the standards and recommended practices adopted by the former Master Car Builders' and American Railway Master Mechanics' Associations, harmonized and brought up to date, and the standards and recommended practices since adopted by American Railway Association, Mechanical Division.

Maximum Load Markings on freight cars in lieu of nominal capacity. The letter ballot ordered taken on this subject in 1919, as result of report from the car trucks committee, resulted in the proposition being approved by more than the required two-thirds majority. Conferences have been held with representatives of the Traffic and Transportation Division to arrange for the necessary adjustment in tariffs. This subject has been considered also by your committee at practically every meeting, but due to difficulties that have been encountered the committee is not prepared to make any definite recommendations as to further action.

Change in Name.—As a result of revised articles of organization and bylaws of the American Railway Association adopted in 1920, and the following resolution adopted at your 1920 annual meeting, the name of your organization has been changed from Section 3, Mechanical, to Division 5, Mechanical, Master Car Builders and Master Mechanics, and is indicated on letterheads, circular headings, etc., as follows: "American Rail-

way Association, Mechanical Division, Master Car Builders, Master Mechanics."

Mechanical Inspection Department.—Your committee has approved recommendation for the establishment of a department to investigate repairs to foreign cars and billing therefor. This department at present consists of a Chief Inspector and five inspectors acting under the direction of the general committee.

Fuel Conservation.—At the request of the board of directors for the forming of an organization within the American Railway Association, to consider and make recommendations on fuel conservation, the general committee, in co-operation with the general committees of the Operating and Purchases and Stores Divisions, appointed members to represent the Mechanical Division on the joint committee on fuel conservation, which joint committee reports direct to the directors. In view of the organization of the joint committee on fuel conservation, the Mechanical Division's committee on fuel economy and smoke prevention has been discontinued.

Inspection of Standard Material.—A joint committee to study the subject of joint inspection of standard materials has been appointed by your general committee in co-operation with the General Committee of the Purchases and Stores Division's General Committee. Final report from this committee has not yet been received.

Inspection of Equipment.—The general committee, in co-operation with the Transportation Division's general committee and the Car Service Division, appointed a special committee on joint inspection. Recommendations from this committee have been approved by letter ballot of the railways as recommended practice.

Automatic Train Control.—Your committee has appointed representatives of the Mechanical Division to serve on the joint committee on automatic train control with representatives from the Operating and Engineering Divisions and Signal Section.

Power Brakes and Power Brake Systems.—Your committee, through the American Railway Association's president, arranged for the committee on safety appliances to handle matters for the association in connection with the investigation of power brakes and power brake systems before the Interstate Commerce Commission, and further arranged for the committee on train brake and

signal equipment to assist the committee on safety appliances in this matter.

Loading Rules Committee's Report.

The committee on loading rules, of which R. L. Keine, Assistant Chief of Motive Power, Pennsylvania Rd., was chairman, and of which E. J. Robertson, Superintendent Car Department, Minneapolis, St. Paul & Sault Ste. Marie Ry., was a member reported that it had considered all suggestions for modifications of and additions to the loading rules presented by members of the association, as well as by shippers, and had held joint conferences with the latter to the end that the loading rules may be kept up to date and take care of any new methods of loading that may be presented. As a result revisions in several rules were proposed by the committee. In concluding its report, the committee expressed its appreciation of the co-operation which had been extended by large shippers in working out the details of loading rules and in seeing that they were lived up to in the loading of merchandise of all kinds.

Prices for Labor and Materials Committee's Report.

The committee on prices for labor and materials, of which A. E. Calkins, District Master Car Builder, New York Central Rd., was chairman, and of which I. N. Clark, General Car Inspector, G.T.R., was a member, reported that during the past year it carried on investigations and studies, as a result of which it submitted data under freight car rules 101, 107, 111 and 112, and passenger car rules 21 and 22. The material prices recommended were based on the average purchase price as reported by seven large roads during Jan. and Feb. 1922, as well as current quotations of several large railway supply companies.

The committee recommended an additional allowance of \$100 for cars equipped with cast steel wheels, and \$125 for cars equipped with rolled steel wheels, under rule 112, which represents the difference in value over the cast iron wheels, due consideration having been given the lower scrap credits for these wheels. The committee stated in its opinion that if recommendations, as set forth in the rules above specified, were adopted, all roads will be able to repair foreign equipment and be fully reimbursed for all work performed.

Railway Supply Exhibits at the Atlantic City Mechanical Convention.

The railway supply exhibits at the American Railway Association, Mechanical Division convention at Atlantic City, June 14 to 21, were, as usual, arranged for by the Railway Supply Manufacturers' Association, the officers of which were: President, J. F. Schurch, President T. H. Symington Co.; Vice President, C. D. Jenks, Vice President, Damasus Brake Beam Co.; Secretary-Treasurer, J. D. Conway. The exhibits, as a whole, were considered the best that have ever been shown at one of the conventions. They occupied 96,000 sq. ft. of space, there being 341 exhibitors, and it was impossible to provide space for 75 other applicants. Among the principal

exhibitors were the following:—

American Brake Shoe & Foundry Co., New York.—Standard patterns and types of locomotive and car brake shoes.

American Locomotive Co., New York.—Also reverse gear; Also reduced body and flexible staybolts with threaded and welded sleeves.

American Steel Foundries, Chicago.—Car spring bolsters, side frames and couplers; Davis cast steel wheels; Simplex clasp brakes; Ajax and Hercules brake beams; coupler yokes; Economy cast steel draft arms and miscellaneous castings.

Association of Manufacturers of Chilled Car Wheels, Chicago.—Standard 33-

in. A. R. A. car wheels as follows: 650-lb. for 30-ton car; 700-lb. for 40-ton car; 750-lb. for 50-ton car; 850-lb. for 70-ton car.

Barrett Co., New York.—Roofing; waterproofing; paving; creosoting.

Boss Nut Co., Chicago.—Boss lock nuts.

Bowser & Co., S. F., Fort Wayne, Ind., and Toronto.—Complete equipment for oil and gasoline storage at central oil houses; underground outfit for installation along the right-of-way.

Brill Co., The J. G., Philadelphia, Pa.—One 42-ft. 6-in. combination passenger and baggage gasoline rail car; standard steam car seat.

Buffalo Brake Beam Co., New York.—Brake beams and brake beam parts.

Chase & Co., L. C. Boston, Mass.—Goat brand mohair upholstery plush; Chase renovator for cleaning upholstery; Chase Leatherware.

Chicago Railway Equipment Co., Chicago.—Brake beams; brake beam supports; side bearings.

Davis Boring Tool Co., St. Louis, Mo.—Expansion car wheel and machine shop boring tools; expansion reamers; cutter grinding attachment; grinding arbors.

Dearborn Chemical Co., Chicago and Toronto.—Scientific water treating preparations; No-ox-id rust preventive.

Edison Storage Battery Co., Orange, N. J.—Storage battery cells cut away to show parts and construction; map of the railroads using Edison batteries; car lighting battery box with installation of Edison batteries; model of railway storage battery car; seven-cell battery for signal service; five-cell battery for portable lighting; three, four and five-cell batteries for car lighting.

Electric Supply Supplies Co., Philadelphia, Pa.—Golden Glow locomotive headlights, reflectors and floodlights; Keystone turbo-generators, headlight switches, classification and marker lights, gauge lights, rear tender lights and roundhouse lighting fixtures.

Flannery Bolt Co., Pittsburgh, Pa.—Tate flexible staybolts; F B C welded flexible staybolts; Reacock nuts and grease cups; Flannery rigid stays, taper head crown stays and button head stays.

Franklin Railway Supply Co., New York.—Nos. 8 and 9 firedrivers; driving belt spreader; automatic wedge; Precision reverse gear; booster; lateral motion device; Ragomont reverse gear; McLaughlin joint and ball joint models; Radial buffer and Unit safety bar; Unit safety bar.

Galena Signal Oil Co., Franklin, Pa., and Toronto.—Reception booth.

Garlock Packing Co., Palmyra, N.Y.—Packings for locomotive throttles, air cylinders, power reverse gears, shoe machinery, and slip, ball and expansions joints, boiler and pipe flange gaskets; rubber pump valves.

General Electric Co., Schenectady, N. Y.—Various applications of industrial control apparatus in operation; semi-automatic electric arc welding equipment in operation.

Gold Car Heating & Lighting Co., Brooklyn, N.Y.—Vapor and air systems of car heating; automatic temperature regulation for railway cars, buildings, etc.; pressure regulators; ventilators.

Grip Nut Co., Chicago.—Grip lock nuts; Grip locomotive nuts; Grip unit and holding nuts.

Hunt-Spiller Manufacturing Corporation, South Boston, Mass.—Locomotive parts made of Hunt-Spiller gun iron; cylinder bushings and packings; solid pistons; piston bull rings; piston valve bushings and packing; tee rings; cross-head shoes; knuckle pin bushings for freight service; air pump bushings, driving boxes; pedestal shoes and wedges; eccentrics and eccentric straps.

Independent Pneumatic Tool Co., Chicago, Ill.—Complete line of Thor pneumatic and electric tools for railway use, including latest developments.

Intersoll-Rand Co., New York.—Air compressor; pneumatic riveting hammers; chipping hammers; cross-quarter drills; staybolt tapping machines; motor hoists; grinders; wire brush cleaning machines and jam riveters.

Johns-Manville, Inc., New York.—

Roofing, building and waterproofing materials; asbestos shingles; J-M industrial floorings; Transite and ebony asbestos wood; Transite asbestos wood smoke jacks and ventilators; pipe coverings; high temperature and asbestos cements; locomotive boiler lagging; passenger refrigerator and tank car insulations; spiral locomotive pipe insulation; power reverse gear packing sets; J-M air brake cylinder expander rings; steam traps; brake band lining; asbestos-metallic friction brake blocks; friction tapes and splicing compounds; "Success" fire extinguishers; packings and gaskets.

Kerite Insulated Wire & Cable Co., New York.—Insulated wires and cables.

Keyoke Railway Equipment Co., Chicago.—Hurray all cast steel fire draft gear and several designs of cast steel coupler yokes.

Locomotive Firebox Co., Chicago, Ill.—Full size firebox with two complete Nicholson thermic syphons.

Locomotive Stoker Co., Pittsburgh, Pa.—Full size type D Duplex stoker and one-third size model; slope sheet coal pusher.

McConway & Torley Co., Pittsburgh, Pa.—Car couplers; quadruple shear yokes; uncoupling arrangements for passenger couplers.

Metal & Thermit Corporation, New York and Toronto.—Materials, appliances and samples of Thermit welding, including a new application of Thermit welding to locomotive superheater tubes; specimen of a section cut through weld in a large crank shaft.

Millburn Co., The Alexander, Baltimore, Md.—Acetylene welding and cutting equipment, including acetylene welding generators; welding torches; cutting torches; combination welding and cutting torches; pre-heaters; portable carbide lights for railroad, repair and construction work.

Miner, W. H., Chicago.—Friction draft gears; side bearings; safety hand brakes; refrigerator car door fasteners; drawbar yoke.

Nathan Manufacturing Co., New York.—In injectors; sight feed lubricators; mechanical lubricators; water columns; boiler checks; balanced starting valves; coal sprinkler; water gauges; gauge cocks; locomotive fittings.

National Lock Washer Co., Newark, N. J.—Models of car curtains, curtain fixtures and rollers; car window fixtures, including sash locks, balances and anti-rattling devices; National rib lock washers.

Norton, Inc., A. O., Boston, Mass.—Improved self-lowering speed controlled jacks; ball-bearing bridge and wrecking jacks; ball-bearing journal jacks.

Pyle-National Co., Chicago.—Turbogenerators; cast aluminum cases, complete with reflectors and focusing device; Armco iron headlight cases; back-up lamps; steam turbine; 10-in. portable lamp; switch engine headlight case; adjustable flood and searchlights; fan; Nonglare and crystal glass reflectors; 10-in. floodlight.

Railway Materials Co., Chicago.—Railway brake shoes.

Safety Car Heating & Lighting Co., New York.—Car lighting equipment (electric and kerosene); batteries and lighting fixtures; electric fans, water coolers and water heaters.

Stafford Roller Bearing Car Truck Corporation, Lawton, Mich.—Standard M. C. B. arch-bar type, 40,000 lb. capacity truck, equipped with Stafford roller bearings (shown in motion) and journal

boxes. Michigan Central 80,000 lb. capacity box car, with trucks equipped for the past 20 months with Stafford roller bearings and journal boxes.

Standard Car Truck Co., Chicago.—Barber roller motion truck device; Barber roller side bearings; Barber universal coupler carrying iron.

Superheater Co., New York.—Stationary superheater; marine superheater; exhaust steam injector; pyrometer; closed type feedwater heater; cab heater coil; system of superheater unit repairs.

Symington Co., The T. H., New York.—Freight and passenger car journal boxes; wrought steel truck bolster; wrought steel side frame; swivel butt coupler; Farlow draft attachments.

Tuco Products Corporation, New York.—Flexibilt plastic composition car flooring; National standard treated roofing canvas; National and Universal trap doors and locks; Resisto hair felt insulation; Tucork mineral insulation for car floors; Rockswul jacket insulation; Imperial car screens; Royal adjustable shoe car screens; Eclipse deck sash ratchets.

Union Draft Gear Co., Chicago.—Cardwell friction draft gear type G, classes 11-A, 25-A and 11A Duplex.

U. S. Light & Heat Corporation, Niagara Falls, N.Y.—U. S. L. car lighting equipment; car lighting generator with shaft drive; USL Planté type storage battery; USL regulator panel; USL 200 and 300-ampere portable arc welders.

Vanadium Corporation of America, New York.—Ferro-Vanadium; cold bent sections of normalized carbon vanadium steel locomotive forgings made by Erie Forge Co. and The United Alloy Steel Corporation.

Vapor Car Heating Co., Chicago and Montreal.—Vapor system of passenger car heating; locomotive specialties for train heating, including pressure reducing valves; vertical coils for baggage and mail car heating; flexible metallic steam conduits for passenger cars; steam hose couplers; end train pipe valves; steam traps; specialties for hot water heating systems; auxiliary heating stove; miscellaneous fittings.

Waugh Draft Gear Co., Chicago.—Models of draft gears; draft gears with auxiliary; platform buffers; Chaffee centering devices; freight car truck spring.

Westinghouse Air Brake Co., Pittsburgh, Pa.—Motor driven air compressor of 300-500 cu. ft. capacity; Wabco brake cylinder packing cups; new automatic lubricator for air compressors; enameled main reservoirs; friction draft gear.

Westinghouse Electric & Manufacturing Co., East Pittsburgh, Pa.—Portable arc welding outfit in operation; turntable equipment in operation; locomotive headlight generator and parts; overhead line material; drum controllers; automatic starting panels; motor starting switches; industrial lighting exhibit.

Wheel Truing Brake Shoe Co., Detroit, Mich.—Abrasive brake shoes.

Whiting Corporation, Harvey, Ill.—Model of locomotive hoist and crane trolley; photographs, drawings, etc.

The busiest railway station in the world is claimed to be the underground one at Earl's Court, London, Eng., where 120 trains a day pass through the station in the rush hours. At Charing Cross, London, where three underground stations are close together, an average of three trains a minute are handled. Clapham Junction, which held the record for many years, handles a train a minute.

Steam Railway Operating Revenues, Expenses and other Statistics for March.

The following comparative table for March, 1922 and 1921, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There is a slight increase in the number of roads included under this heading, so that the data for 1922 and 1921 is not directly comparable with previous reports.

As the Canadian Government, Canadian Northern and Grand Trunk Pacific Railways are under one management, and operated as one system, the monthly operating reports for 1922 contain a consolidated report for these railways, under the heading "Canadian National Rys." which includes the old Canadian

Government Rys., viz., Intercolonial, Prince Edward Island, National Transcontinental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.; the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government; and the Grand Trunk Pacific Ry.

The column headed "Canadian Pacific" includes also the Montreal and Atlantic and Esquimalt and Nanaimo Rys.

The column headed "Grand Trunk" includes all the company's lines, both in Canada and the United States.

Items 1 to 6 in the table include rail line revenues only. Previous to this year they included water line. Operating income items have been added. Freight

and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. In former years the total mixed train miles was added to both freight and passenger train miles when computing averages. Total train miles include freight, passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, excess baggage, parlor cars, etc., whereas previous reports gave an average per train mile of passenger receipts only. The number of employees is also a new feature of this year's reports.

	All railways.		Canadian National		Canadian Pacific		Grand Trunk	
	1922	1921	1922	1921	1922	1921	1922	1921

The Railways' Operating Results For March.

Canadian railways as a whole had \$2,228,827 less gross operating revenue in March 1922 than in March 1921 but \$5,592,030 larger than in Feb. 1922. Freight earnings for the roads as a whole were greater for March 1922 than for March 1921, but the passenger earnings decreased much more than the freight earnings increased, with the result that the gross earnings were smaller for March 1922. Although the average freight receipts per revenue ton mile were considerably smaller than in March 1921, the additional tonnage carried enabled the railways to derive larger earnings from freight. In addition to the average rate per revenue passenger mile declining largely, the number of revenue passenger miles declined by 24%, resulting in a 31% decrease in passenger revenues. The increases in freight earnings for the month were on the C.P.R. and Grand Trunk, the Canadian National Rys. decreasing \$367,844, despite the increase in the revenue ton miles handled of 107,151,246.

Maintenance of way and structures expenses decreased 13%. Taking into consideration the decreases in wages and in material prices, it is probable that about the same amount of work was done on the properties as in March 1921. The expenditure for maintenance of equipment was a little more than 8% less than in March 1921, indicating that equipment was fully as well maintained as in the same month of 1921. The decrease in transportation expenses of 16% compared with March 1921 for the railways as a whole is particularly gratifying, in view of the fact that a large additional revenue freight tonnage was handled.

The operating ratio for the month, 89.54, represents a large improvement over that for March 1921, viz. 96.24, and an even greater improvement over that for Feb. 1922, viz., 100.49. The improvement in operating ratio is evident on all the roads, as compared with March 1921, as shown by the table on the preceding page. Compared with February, the Canadian National and Canadian Pacific Rys. show great improvements in operating ratio, the Canadian National ratio for February being 131.05 and the C.P.R. 93.87. The Grand Trunk operating ratio was not quite so favorable as in February, when it was 82.95. As compared with March 1921, the more satisfactory operating ratio for the roads as a whole is reflected in the much larger operating income enjoyed in March 1922.

The operating statistics for the roads as a whole show that the increase in revenue ton mileage was derived, not only from the increase in the number of actual tons handled, but also from the greater haul enjoyed, the average haul increasing very substantially over when it was 82.95. As compared with March 1921, the more satisfactory operating ratio for the roads as a whole is reflected in the much larger operating income enjoyed in March 1922. The showing made by the railways in the operation of freight train miles, in view of the greater number of revenue ton miles, was very satisfactory, and it is evident that the number of freight train miles run has been kept down to the minimum. The decrease in passenger train miles, however, was not nearly

so large proportionately as the decrease in passenger travel; but, it is axiomatic that it is impossible to curtail passenger service in the same degree as traffic falls off, whereas in freight service it is possible to cut down the freight train mileage more nearly in proportion to the decrease in traffic offering.

The train loading statistics show efficient operation during March, 1922. The figure of 489.7 tons of revenue freight per freight train mile represents an improvement of 37.6 tons over March 1921. Train make-up, or the proportion of loads and empties in freight trains, was also much more favorable for March 1922 than for March 1921, the average train containing 2.2 more loaded cars and 0.2 less empty cars than in March 1921. Car loading, however, fell off to the extent of one ton per car, this being the result of the large increase in the total mileage of loaded freight cars. The increased efficiency in train loading and train make-up, however, more than compensated for the falling off in car loading.

On the basis of there having been 4,489 fewer employees in railway service in March 1922, than in March 1921, the decrease of \$2,452,305 in the pay roll about approximates the reduction which would be looked for on account of the wage reductions taking place during the year.

The improvement in the Canadian National Rys. operating ratio over February has already been mentioned and the improvement over that of March 1921 is evident in the table on the preceding page. While freight tonnage handled on the Canadian National Rys. increased 14%, the average receipt per ton mile decreased 16%, and freight earnings decreased 45%. Passenger revenues decreased 29%, passenger miles carried decreased 16% and revenue passenger mileage decreased 22%. The pay roll decreased 19%, and the number of employees 10%.

The C.P.R. showed an increase in revenue ton miles of 20%, but a decrease in revenue passenger mileage of 27%. Freight revenues increased 5% and total revenue declined 6%, but as operating expenses were reduced 7%, the small improvement noted in the operating ratio resulted. The increased freight traffic brought about an 18% increase in freight train mileage, and also an increase of 5% in the number of employees. The pay roll, however, decreased over 5%.

The Grand Trunk freight ton mileage increased 9% compared with March 1921 and freight revenue increased 5%. The G.T.R. average receipt per revenue ton mile declined but slightly from 1.385 to 1.325¢. Loaded car miles increased 26% while average car loading decreased from 23.9 tons to 21.3, increasing the number of cars per train from 29.1 to 32.5. Maintenance of way and structures expenses decreased 46%. These expenses, however, on the G.T.R. averaged \$127 per mile of road operated, while on the Canadian National Rys. the average was \$122, on the C.P.R. \$115 and on class 1 roads, United States, \$98. The location of the road, density of traffic and advanced season of heavy track work in the U.S. affect these figures, however, and should be considered.

Broadly the railway results for March

offer some encouragement. A reduction in the operating ratio from 100.49 in February to 89.54 is not inconsequential, while the figures for freight tonnage, with preliminary figures for following months, indicate that traffic conditions are tending toward improvement. Passenger traffic returns for March are, however, disappointing, and certainly do not bear out the assertion that high passenger rates were discouraging travel. When the average passenger rate was 3.23¢ per passenger mile, the number of revenue passenger miles was 24% higher than when the average passenger rate was 2.95¢. But it is as true now as it ever was, that it is the freight department of the railway's business that earns the money, and it is to the figures covering freight traffic that the greatest importance must be attached.

On the basis of the relationship as between traffic, wages, material prices and freight and passenger rates which obtained in March, it may be said that the railways can look forward to developing sufficient traffic, coincident with the restoration of good business conditions, to place the industry as a whole on a sound financial basis. The Canadian railway industry is not now on a sound financial basis, with the operating ratio of 89.54, but with an increased freight traffic, and with a passenger traffic approximating that of 1920, the operating ratio could be much reduced from the March figures, with the March relationship as between returns and expenses maintained. But if freight rates are reduced in response to the popular demand, without expenses being correspondingly reduced, the relationship which obtained in March would be changed adversely to the railways, so that the operating ratio could not be reduced even though traffic increased. Much stress has been laid on the theory that rate reductions would act immediately to bring about great increases in traffic, but it must be borne in mind that the greatest incentive for the origination of traffic is the demand by consumers for the products of industry, and it is probable that market and trade conditions generally are much more important than comparatively small differences in rate levels, in the determination of the amount of business offering to the railways. At all events, the proposition that the railways, as an industry, will never be on a sound financial basis in Canada, if expenses are kept a step ahead of receipts, through rates being cut continually to balance benefits secured by traffic increases and cheaper labor and materials, is evidently correct. It is desirable that the railway industry be on a sound financial basis, as it is in the interest of the whole community that any properly conducted industry be successful, and for that reason it is desirable that any losses to the railways through the anticipated rate reductions be counterbalanced by reductions in expenses, so that the railways may be left with as good a chance to bring their operating ratio down to a reasonable level as they had prior to the rate reductions.

Railway Y.M.C.A.—Sunday, June 11, was the 50th anniversary of the foundation of the Railway Y.M.C.A. movement in North America. There are reported to be 269 associations, with a total membership of 125,000, in operation on Canadian and United States railways.

Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filled the paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

General order 3,245, 3,405, 3,419, 19.—Rescinding general order 3,245, 3,405, 3,419, and 197, and prescribing new regulations to be adopted by railway companies for the prevention of fires.

General order 3,463.—Approving proposed supplement 19 to Canadian Freight Classification 16, containing certain increased, reduced, and additional ratings, as finally revised and submitted for approval by Canadian Freight Association, Eastern Lines, April 13, and amended May 1.

32,295, April 12.—Authorizing Canadian National Ry. to rebuild bridge over Indian River, Stafford Tp., Ont.

32,297, April 13.—Rescinding order 27,578 in so far as it relates Canadian National Ry. from fencing between miles 22 and 25.1, 27.2 and 27.8, south side, 22.5 and 27.2 north side, and 31.5 and 31.5, south side, and ordering that fencing at those points be completed within 30 days.

32,298, April 13.—Authorizing Canadian National Ry. to rebuild bridge over McCarthy Creek, mile 100.8 from Brent, Ont.

32,299, April 13.—Approving clearances at G.T.R. spur serving C. Beck Mfg. Co., Penetanguishene, Ont.

32,300, April 12.—Authorizing Quebec & Lake St. John Ry. to build second crossing at Highway between 44 and 48, Metabetchuan, W. Que.

32,301, 32,302, April 13, 12.—Authorizing Canadian National Ry. to rebuild bridges over Kenogami River, mile 111.7 from Hornepayne, and over Little Sandawaska River, mile 147.4 from Rideau Jct., Ont.

32,303, April 10.—Approving clearances at Michigan Central Rd. crossing station at Windsor, Ont.

32,304, April 19.—Authorizing C.P.R. to rebuild bridge 100.2 over Riviere du Lievre, Lacoste Subdivision, Que.

32,305, April 12.—Authorizing Canadian National Ry. to open for traffic, north connection with Grand Trunk Pacific Ry. at 196.80, Three Hills Subdivision, authorized under order 32,177.

32,306, April 19.—Approving plan showing layout for proposed automatic signals, derails, and flagmen for protection, and steam and electric street traffic at crossing of Grand Trunk Pacific Ry. and Winnipeg & Northern Ry. at Pembina Highway Winnipeg, Man.

32,307, April 13.—Amending order 31,371, requiring Canadian National Ry. to employ a maintain caretaker agent at Elgin, Ont., to provide for appointment of caretaker.

32,308, April 12.—Authorizing C.P.R. to divert and close, within right of way, road allowance on south boundary of s.w. ¼ Sec. 21, Td. 24, Range 2, west end meridian, Sask.

32,309, April 13.—Rescinding order 30,623, Feb. 2, 1921, requiring C.P.R. to appoint station agent at Nevis, Alta., and directing it to appoint caretaker.

32,310, April 13.—Rescinding order 29,221, Jan. 2, 1920, in so far as it relates Canadian National Ry. from fencing between miles 37.46 on west side from mile 37.46 to 38.03, Sudbury Subdivision, Ont.

32,311, April 21.—Approving agreement between Bell Telephone Co. and Harwood Rural Telephone Co.

32,312, 32,313, April 13.—Approving clearances at G.T.R. sidings serving Canadian Express, Ltd., Bellefleur Parish, Que., and Dominion Stock & Foundry Co., Penetanguishene, Ont.

32,314, April 13.—Approving Canadian National Ry. from erecting fences, gates and cattle guards at certain points on Rideau Subdivision.

32,315, March 31.—Approving C.P.R. to locate its station at Napanee, Ont., and approving location of proposed joint station there; authorizing G.T.R. to connect with C.P.R. at Northern Ontario Ry., and authorizing Canadian Northern Ontario Ry. to deviate its main line in Napanee, to cross road allowance between C.P.R. and Canadian freight house track across Centre St.

32,316, April 19.—Relieving Canadian National Ry. from maintaining signalman at crossing of Canadian Northern Ry. and C.P.R. at Napanee, Ry. at Empire Ave., Fort William, Ont., so long as the present character of movements over continues.

32,317, April 19.—Approving location of C.P.R. station at Carbon, Alta.

32,318, April 24.—Approving revised location of Canadian National Ry. Meeting Lake branch mile 0 to 23.01, Sask.

32,319, April 20.—Authorizing C.P.R. to build extension to passing track across road allow-

ance between Secs. 27 and 34, Td. 17, Range 4, east principal meridian, St. Andrews, Man.

32,320, April 19.—Approving agreement between Bell Telephone Co. and Rochester Tp., Ont.

32,321, April 26.—Relieving Canadian National Ry. from erecting fence between miles 9.5 to 9.5, Cordova Branch, Ottawa Division, Ontario District.

32,322, April 21.—Approving view by Pere Marquette Ry. of Michigan Central Rd. turntable in Montrose Yard, Ont.

32,323, April 19.—Relieving Canadian National Ry. from erecting fences, gates and cattle guards between miles 2.5 to 8.5, Bessemer Branch, Ottawa Division, Ont.

32,324, 32,325, April 19, 20.—Authorizing Ontario Lands & Forests Department to build highway across C.P.R. at crossing of Trunk Road from North Bay to Sudbury, one mile west of Stimson, Ont., and at crossing of deviation of Trunk Road from North Bay to Sudbury on Lot 8, Con. 11, Hagar Tp., between Warren and Markstay, Ont.

32,326, April 20.—Declaring that for the present, first public crossing of G.T.R. east of South Indian, Ont., is protected to Board's satisfaction.

32,327, April 20.—Relieving Canadian National Ry. from erecting fences, gates and cattle guards between certain points on Maynooth Subdivision, Ottawa Division, Ont.

32,328, April 20.—Correcting error in book of order 32,113, approved under 4,713, April 19, 1908, Michigan Central Rd. spur for Essex Canning Co., Essex, Ont.

32,329, April 24.—Declaring that for the present C.P.R. crossing at Union Road, near Innes, Ont., is protected to Board's satisfaction.

32,330, April 24.—Authorizing G.T.R. to rebuild bridge 109 at milepost 122.12 west of London, Ont.

32,331, April 24.—Authorizing Saskatchewan Highways Department to carry highway across Canadian National Ry. on production of Main St., Deben townsite, Sask.

32,332, April 24.—Ordering C.P.R. to appoint station agent at Wrentham, Alta., by May 1.

32,333, April 24.—Approving Canadian Northern Ry. revised location from mile 213.74 to 214.75, through Savana Ferry townsite, and from mile 214.75 to 218.64 east from New Westminster, B.C.

32,334, April 26.—Relieving Grand River Ry. from maintaining speed limit of 15 miles an hour imposed by order 29,558, April 10, 1920, between Preston and Lot 9, Con. 2, Waterloo Tp., Ont.

32,335, April 24.—Ordering C.P.R. to remove certain fence along east and west of Ryland Road crossing, 1½ miles east of Myrtle station, Ont., to improve the view.

32,336, April 25.—Approving general plan of Hamilton Radial Ry. Highway bridge across channel at Burlington Reach, Ont.

32,337, April 25.—Approving agreement between Bell Telephone Co. and Victory Telephone Ltd., Chalmers, Que.

32,338, April 25.—Authorizing Canadian National Ry. to divert Ontario Lake Trail where it is crossed by its Jackfish Lake branch at milepost 136, Sask., and authorizing Saskatchewan Highways Department to carry highway across the railway there.

32,339, April 25.—Authorizing Canadian National Ry. to build spur for Eugene F. Phillips Electrical Works, at mile 0.2 Brockville Subdivision, Ont.

32,340, April 28.—Extending to June 1, time within which Canadian National Ry. must complete cattle guards and protection fences on its Rideau Subdivision, required by order 31,941, Dec. 21, 1920.

32,341, April 28.—Approving location and details of Canadian National Ry. station building and washstand at Dunsmuir, Ont.

32,342, May 1.—Extending for six months, time within which C.P.R. may complete spur for J. G. Harvey & Co., Winnipeg, authorized by order 31,653, Oct. 18, 1921.

32,343, May 1.—Authorizing C.P.R. to rebuild bridge over the Gattineau River, Lacoste Subdivision, Que.

32,344, April 28.—Approving location of Edmonton, Dunvegan & British Columbia Ry. at Belloy, Alta., at location that crosses a driveway, 14 ft. wide from north and south highway at west end of station grounds, to station building, 10 ft. wide from north and south highway at least 12 ft. wide and 150 ft. long; also track to turn track driveway on north side of commercial road, 14 ft. wide and 14 ft. long, 200 ft. long, work to be done by Sept. 1.

32,345, May 2.—Ordering Canadian National Ry. to provide by Sept. 1, portable loading chute at Fabvan, Alta., and to build a two-carripen there by Sept. 1, 1923.

32,346, May 2.—Amending order 30,777, March 19, 1922, authorizing Canadian National Ry. to build grain loading siding at mile 26, Sturgeon River Subdivision, Sask., to provide that it be extended at least 350 ft., and completed by Sept. 1.

32,347, May 1.—Approving agreement between Bell Telephone Co. and Scotch Lake & Stanleyville Telephone Co., Lanark County, Ont.

32,348, May 2.—Declaring that for the present, first public crossing of G.T.R. at Bedford station, Ont., is protected to Board's satisfaction.

32,349, May 2.—Authorizing C.P.R. to relocate and extend spur for Saskatchewan University, near Saskatoon.

32,350, May 2.—Authorizing Alberta Public Works Department to build highway crossing over Canadian National Ry. in s.w. ¼ Sec. 29, Td. 41, Range 18, west 4th meridian.

32,351, May 2.—Approving C.P.R. to build spur for Miller Florists, Ltd., in Lot 7, Con. 3, Vaughan Tp., Ont.

32,352, May 2.—Authorizing C.P.R. to build spur from mile 3.25 Bedford Branch, Bedford Tp., Ont., for 0.82 mile.

32,353, May 3.—Extending to June 10, time within which Canadian National Ry. may complete fencing at 4 points on its Kamloops Subdivision, provided by order 32,297.

32,354, May 3.—Relieving C.P.R. and Canadian National Ry. from maintaining signalman at nights and on Sundays to operate crossing near Emerson station, Man., so long as present character of movements over continues.

32,355, May 2.—Ordering Kitchener Light Commissioners to relocate, within 30 days, interlocking of crossing of G.T.R. at intersection of St. crossing, of G.T.R. and Kitchener & Waterloo Ry., Waterloo, Ont.

32,402. May 17.—Relieving Canadian National Ry. from fencing right of way from mile 106.6 to 85.5 and 68.5 to 70, Swan River Subdivision; mile 110 to 133, 135 to 136, 140 to 142, 143 to 171; and 175 to 197, Erwood Subdivision, Dauphin Division, Prairie District, until any land in vicinity becomes settled or improved.

32,403. May 6.—Ordering that not exceeding \$292.75 be paid out of Railway Grade Crossing Fund, Interior Highways Department, in payment of work done in flattening curve at southern end of bridge on Kingston Road, Brighton, Ont., to lay storm sewer under G.T.R. on Wellington Road.

32,404. May 18.—Authorizing G.T.R. to rebuild bridge 320.4, at mile 100.65 from Toronto, on Lot 15, Con. 2, west of Penetanguishene Road, Tiny, Ont.

32,405. May 18.—Authorizing C.P.R. to rebuild bridge over Chalk River Subdivision, near Arnprior, Ont.

32,406. May 18.—Authorizing Central Ontario Ry. to build spur for Dominion Wool Combining Mills, Ltd., Trenton, Ont.

32,407. May 18.—Authorizing C.P.R. to rebuild bridge over Public Creek, Montreal and Ottawa Subdivision, Quebec District.

32,408. May 18.—Authorizing C.P.R. to build

spur for Scotstown Granite Corporation, Scotstown, Que.

32,409. May 18.—Approving plan showing alteration of intersection at crossing of Canadian Northern Ry. by Grand Trunk Pacific Ry., at Dana, Sask.

32,410. May 18.—Authorizing St. Jean Baptiste de Belles, Municipality, Que., to make highway crossing over C.P.R. in Lot 31, Range 11, Morin Tp., Que.

32,411. May 18.—Authorizing Town of Aylmer, Que., to make highway crossing over C.P.R. on Helen St. (not open) at intersection of Metcalf St. 32,412. May 19.—Approving agreement between Canadian Northern Ry. to rebuild bridges over Chicoutimi River, mile 226 from Quebec; over Rouze River, mile 3.7 from over Blanche River, mile 5.17, from Joliette, Que.

32,413. May 22.—Authorizing Canadian Northern Ry. to build bridge for traffic connection with G.T.R. at Washago, Ont.

32,414. May 26.—Authorizing C.P.R. to rebuild bridge 81.1 over Kettle River on Boundary Division, British Columbia District, and rescinding order 32,374, May 12.

32,415. May 23.—Approving agreement between Bell Telephone Co. and Ivy-Thornton Telephone Co., Simcoe County, Ont.

32,416. May 23.—Relieving C.P.R. and Michigan Ry. from maintaining signalman between 6 a.m. and 10 p.m., Sundays, at crossing at Appin, Ont., so long as present character of movement exists.

32,417. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,418. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,419. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,420. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,421. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,422. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,423. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,424. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,425. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,426. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,427. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,428. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,429. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,430. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,431. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,432. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,433. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,434. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,435. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,436. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,437. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,438. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,439. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,440. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,441. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,442. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

32,443. May 25.—Ordering that the crossings and diversion of highway between Secs. 35 and 36, Lot 22, west 3rd Con. 2, west principal meridian, 13.7, Haldimand rural municipality 440, Sask., over Grand Trunk Pacific Ry., be completed by June 30.

tional Ry. station at St. Dorothee, Que., be removed to mile 15.21.

32,454. May 31.—Approving City of Medicine Hat, Alta., bylaw 102, in so far as it prohibits the following or source of locomotive whistles approaching a highway crossing at rail level within the city.

32,455. May 31.—Authorizing Alberta Public Works Department to make highway crossing over Canadian National Ry., in a. e. 1/4 Sec. 30, T. 22, Range 8, west 5th Ry. to build a crossing over its tracks at corner of Gravel and Grand Marais Roads, Windsor, Ont.

32,456. May 31.—Authorizing Canadian Northern Ry. to build viaduct over East Burrill Creek, St. Boniface Parish, Que., mile 93.7 from Quebec.

32,457. June 1.—Authorizing Canadian National Ry. to build transfer track with C.P.R. at Moose Jaw, Sask., and to build a portion of east extension thereof on Maple St.

32,458. May 31.—Authorizing Windsor, Essex Co., and Shore Rapid Ry. to build a crossing over its tracks at corner of Gravel and Grand Marais Roads, Windsor, Ont.

32,459. June 1.—Relieving G.T.R. and C.P.R. from maintaining a signalman on Sundays at Vankleek diamond, mile 33.2, Montreal-Ottawa Subdivision, so long as present character of movements exists.

32,460. May 30.—Authorizing British Columbia Railway Department to extend its narrow gauge construction track under Esquimalt & Nanaimo Ry. trestle (John St. Subway), Victoria, B.C.

32,461. May 31.—Approving crossing of C.P.R. over Highway 10, between Cornet and Port Arthur roads, mile 62.5, Laggan Subdivision, Alta.

32,462. June 2.—Authorizing Kettle Valley Ry. to build bridge 4.2 over Nicola River, Nicola Branch, B.C.

General order 364. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,463. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,464. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,465. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,466. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,467. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,468. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,469. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,470. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,471. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,472. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,473. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,474. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,475. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,476. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,477. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,478. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,479. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,480. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,481. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,482. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,483. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,484. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,485. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,486. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,487. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,488. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,489. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,490. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,491. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

32,492. May 23.—Ordering railways file tariffs effecting change in the amount of line mileage scale to apply on agricultural limestone, or stone dust, east of Port Arthur, Port Arthur and Armstrong, Ont., in lieu of specific commodity rates or mileage scale now in effect.

Railway Labor Organizations' Requests for Dominion Legislation Etc.

Prime Minister King was waited on at Ottawa during the recent session of Dominion Parliament, by a deputation from railway labor organizations, consisting of Byron Baker, Secretary and Treasurer, Brotherhood of Locomotive Engineers; W. L. Best, Chairman, Legislative Board, Brotherhood of Locomotive Firemen and Engineers; L. L. Feltner, Dominion Legislative Representative, Order of Railway Conductors; and T. J. Coughlin, Brotherhood of Railway Trainmen, who made a number of requests as follows:

Criminal Code.—It is suggested that secs. 97A and 97B as enacted in 1919, be repealed. These sections declare that certain associations, organizations, etc., whose professed purpose is to bring about any governmental, industrial or economic change within Canada, by use of force, violence or physical injury to person or property, or by the use of such injury, or which teaches, advocates, advises, or defends the use of force, violence, terrorism, or physical injury to person or property, or threats of such injury in order to accomplish such change, or for any other purpose, or which shall by any means prosecute or pursue such purpose or professed purpose, or shall so teach, advocate, advise or defend, shall be an unlawful association, that the property shall be liable to seizure and its members to imprisonment, and also provides punishment for the issuing of seditious literature. The brotherhood representatives contend that this legislation is unjustifiable and unduly drastic, and is capable of being interpreted to the curtailment and abridgment of British liberty. They submit that Canada got along very well without such summary legislation, and that without the Government may have believed itself justified, because of alleged conditions existing in enacting such legislation, it seems that prevailing conditions in Canada do not warrant such legislation remaining in the statutes.

The Immigration Act, sec. 41, as enacted in 1919, provides as follows:

"41. (1) Every person who by word or act in Canada seeks to overthrow by force or violence the government of, or constituted law and authority in, the United Kingdom of Great Britain and Ireland, or Canada, or any of the provinces of Canada, or the government of any other of His Majesty's dominions, colonies, possessions or dependencies, or advocates the assassination of any official of any of the said governments, or of any foreign government, or who in Canada defends or suggests the unlawful destruction of property, or by word or act creates or attempts to create any riot or public disorder in Canada, or who without lawful authority assumes any powers of government in Canada or in any part thereof, or who by common repute belongs to or is suspected of belonging to any secret society or organization which extorts money from or in any way attempts to control any resident of Canada by force or by threat of bodily harm, or by blackmail, or who is a member of or affiliated with any organization entertaining or teaching disbelief in or opposition to organized government, shall, for the purpose of this act, be deemed to belong to the prohibited or undesirable classes, and shall be liable to deportation in the manner provided by this act, and it shall be the

duty of any officer becoming cognizant thereof and of the clerk, secretary or other official of any municipality in Canada, wherein any such person may be, forthwith to send a written complaint to the Minister, giving full particulars; provided, that this section shall not apply to any person who is a British subject, either by reason of birth in Canada, or by reason of naturalization in Canada.

"(2) Proof that any person belonged to or was within the description of any of the prohibited or undesirable classes within the meaning of this section at any time since May 4, 1910, shall, for all the purposes of this act, be deemed to establish prima facie that he still belongs to such prohibited or undesirable class or class."

It is submitted that this is an attack upon British subjects' liberty, and an uncalled curtailment of the rights to due process of law, as practiced hitherto in Canada and the British Empire.

The further restriction of Asiatic immigration is also suggested.

Dominion's Election Act, 1920.—

Sec. 10, sub-sec. (1) provides that no unincorporated company or association or no incorporated company or association other than one incorporated for political purposes alone, shall contribute funds for election purposes. It is suggested that this be amended so as not to prohibit a labor organization, as such, from contributing to an election fund, or collecting from its membership voluntary subscriptions for such purposes, and for defraying legitimate election expenses.

Sec. 40, sub-sec. (8) paragraph (b) provides that nomination paper shall be valid or acted upon by a returning officer unless it is accompanied by a deposit of \$200. It is suggested that this paragraph be eliminated, or so amended that the deposits shall be returned to all candidates within 10 days after the successful candidates have been declared elected, regardless of the number of votes cast for the candidates, and that sub-sec. (9), which requires the returning officer to the close of the nomination proceedings to forward to the Auditor-General the deposits, be amended to conform with the other amendment proposed.

Sec. 100 provides for advance polls for railway employees, etc., the returning officer being empowered to establish as many special polling stations as may be necessary and empowers the Chief Electoral Officer to amend the schedule of places by striking therefrom the name of any place where less than 50 votes were polled at the election immediately preceding. It is suggested that 25 be substituted for 50. The purpose of this proposed amendment is to ensure advance polls being established wherever it seems probable that 25 votes of the persons within the scope of the section will be polled, and also that no name be struck from the schedule unless less than 25 votes are polled at the preceding general election.

The Income War Tax Act, 1917, sec. 3, sub-sec. (b), as amended, provides an exemption for the purposes of the normal tax only, of \$200 for each child under 18 years of age, who is dependent on the taxpayer for support. It is suggested that this exemption be increased to \$400.

That the act be amended to provide that the balance of income, after deducting personal expenses away from usual place of residence, shall be considered as the net income for the purpose of the act, the returns for such expenses to be made on oath.

That sec. 4, sub-sec. (1), paragraph (a), providing for payment of normal tax, be amended to read as follows: "Four per centum upon all income exceeding \$1500, but not exceeding \$6000, in the case of unmarried persons, and widows or widowers without dependent children, and persons who are not supporting dependent brothers or sisters under the age of 18 years, or a dependent parent or parents, grandparent or grandparents, and such persons are not householders and assessed by the municipality as such, and exceeding \$2500, but not exceeding \$6000, in the case of all other persons." This would provide that the normal tax would be levied in the case of unmarried persons, widows or widowers without dependent children, etc., and certain other persons without dependents, on all incomes exceeding \$1500, instead of \$1000 as at present, and in the case of all other persons on incomes exceeding \$2500 instead of \$2,000, as at present.

The words in the section as proposed to be amended, and which are printed above in bold face type, viz:—"and such persons are not householders and assessed by the municipality as such" are not in the act now, and would be an addition.

Duplication of Income Taxation.—

With a view to preventing a duplication of taxation upon incomes from personal earnings by Dominion, provincial and municipal governments we suggest the calling of an inter-provincial conference of representatives of the various provinces with the Dominion Government in order that the necessary adjustments may be made in existing legislation.

Industrial Disputes Investigation Act, 1917.—Amend to ensure a more equitable application of the act, particularly in the matter of employers arbitrarily changing wages and conditions of employment.

Protection At Highway Crossings of Railway at Rail Level.—That, with a view to greater protection and safety to the public and the employees in respect of highway crossings the work of eliminating such crossings under the provisions of the Railway Act, 1919, sec. 262 be undertaken with due expediency. This proposal, if carried out, will undoubtedly reduce the number of accidents at highway crossings, and the work undertaken would provide employment for numbers of citizens and materially relieve the present acute unemployment situation.

Canadian National Railways to be under Board of Railway Commissioners.

—That the necessary action be taken, under the provisions of the Canadian National Railway Act, 1919, to bring all lines of railway owned, controlled and operated by the Dominion Government under the Board of Railway Commissioners' jurisdiction, in respect to operation and equipment.

Consolidation and Co-ordination of Government Owned Railways.—We urge the desirability of the consolidation and co-ordination of all government owned

or controlled railways, under one board of directors, in order that government ownership and operation may be given a fair and impartial trial. In the reorganization of the board of directors of the Canadian National Railways it is requested that the employees be given representation thereon.

Uniform Pension Plan for Canadian National Rys. Employees.—That prior to the adoption by the Government of any pension plan for Canadian National Rys. employees, the legislative representatives of such employees be given an opportunity of familiarizing themselves with the proposed plan and refer same to the employees concerned for approval.

Unemployment Insurance.—With a view to the enactment of unemployment insurance legislation as early as expedient, we respectfully suggest that an investigation be undertaken into the entire question and a report of such investigation be made to the Second Session of the present Parliament.

Tariff Revision.—That the customs tariff on foodstuffs coming into Canada be removed. This item has been included in former legislative proposals to the Government.

Signing of Letters by Railway Chief Clerks.

A Montreal reader of Canadian Railway and Marine World writes: "I am much interested in the paper 'The railway chief clerk, his problems, duties and required qualifications,' published in your May issue, and in your Editor's note in which he says that in some offices the practice is for the chief clerk to simply sign the head's name, without anything to show that it is not a personal signature; that in other offices the clerk's initials are added, but frequently very indistinctly, and that in your Editor's opinion the name of the head should be typed, or written, followed by 'per,' and the chief clerk's signature. I wish to express my hearty concurrence in your Editor's opinion as quoted above. Letters of criticism of subordinates, those making recommendations to superior officers, and those outlining policy for future guidance, should, no doubt, be signed personally by the head of the department, as far as possible. General correspondence which is signed by the chief clerk should have something about it to indicate the individual responsible. This practice is already quite general in commercial houses, and I believe it tends to a feeling of responsibility on the part of the man who signs the letter. Some officers make a practice of signing all their mail personally. It obviously has not had very much of their personal attention, and the effect of the personal signature is somewhat weakened. On the other hand, the man who signs another man's name, with merely an initial or cabalistic mark to indicate the individuality of the signer, assumes thereby only a very small portion of the responsibility for the letter. After an experience on various railways and in different offices, covering a period of some years, I am confident that if those who sign letters on behalf of the heads of their departments were required to sign their own names, it would have a very good effect, both on the writer and upon those who receive the letter."

F. F. W. Lowie, Local Freight Agent, C.P.R., Edmonton, Alta., writes: "Referring to your Editor's note, appended to H.

A. Balkwill's paper in your May issue. My opinion is that any letter or document sent from office or sheds, and not actually signed by the agent, should have his name typed at the same time as the letter, with 'per' and initial of party signing. Letters addressed to transportation men, officers or otherwise, should omit 'Yours truly' and have agent's name typed with 'per' and the clear initials in ink of the party responsible, but communications to the public might have 'Yours truly' inserted. One cannot help feeling, when reading a part of Mr. Balkwill's paper, which refers to the selection of a chief clerk is called upon to make in recommending certain members of the staff for various positions, that the selection under present conditions is extremely narrow, owing to the schedule regulations insisted upon and agreed to with the various organizations."

Editor's note.—Mr. Lowie's suggestion for the omission of 'Yours truly' in letters, and that transportation men is certainly practicable, and is practiced in many cases. Why not go further in such correspondence, and omit 'Dear Sir'? It might also be considered whether the name of the official addressed might not be omitted and simply the title and headquarters address be used.

Vancouver Island Transportation Problems.—C. P. W. Schwengers, in addressing the Victoria, B.C., Chamber of Commerce, recently, on transportation problems, stated that Victoria's future prosperity is wrapped up entirely in her transportation problems. He advocated the building of a mosquito fleet for water transportation; criticised the Canadian National Rys' management for being absolutely indifferent to Vancouver Island and Victoria interests, and recommended that the C.P.R. should be asked to create an Island District separate from the British Columbia District, with a complete staff in Victoria. He contended that the present staff, being located in Vancouver, naturally looked at matters through Vancouver spectacles, and as a consequence Victoria does not get full justice. The Canadian National Rys. have 89.9 miles in operation on Vancouver Island, and the C.P.R., through its subsidiary, the Esquimalt and Nanaimo Ry., has 196.7 miles. It is needless to say that such mileages would not justify the establishment of separate districts.

Canadian High Commissioner's Offices in London.—In reference to recent press reports that the Canadian High Commissioner's office in London, Eng., would probably be removed to the Grand Trunk Ry. building, 17 Cockspur St., now occupied by the Canadian National-Grand Trunk Rys' European Manager and staff, we are advised that while consideration has been given to the taking over by the High Commissioner of the upstairs office accommodation in that building, it has been decided not to make the change.

Railway Lands Patented.—Letters patent were issued during May, for Dominion railway lands in Manitoba, Saskatchewan, Alberta, and British Columbia, as follows:—

Canadian Northern Ry.	Acres
Canadian Pacific Ry.	1,62
Manitoba & Northwestern Ry.	3,05
Total.	483.27

E. F. L. Sturdee, General Agent, Passenger Department, C.P.R., Seattle, Wash., in remitting his renewal subscription, writes: "I could not do without Canadian Railway and Marine World."

Gaspé Peninsula Railway Service.

The train service in the Gaspé Peninsula of Quebec, which is served by the Quebec Oriental Ry. and the Atlantic, Quebec & Western Ry., extending from Matapédia, on the Intercolonial Ry. to Gaspé, 202.5 miles, has been under consideration by the Dominion Government, upon the appeal of the people of the district. We were officially advised, June 5, that the joint management of the two railways had a conference with the Minister of Railways and the members of the House of Commons for Gaspé and Bonaventure Counties, the principal object being to impress upon the Government how valuable these branch railways are as feeders to the Canadian National Rys., and the desirability of the Government doing something to help them to further develop the traffic which has been steadily increasing for several years past. As a result, arrangements were made for the Canadian National Rys. to lend some passenger cars for use on the Matapédia-Gaspé lines.

An Ottawa press dispatch of June 16, stated that following the conference referred to above, R. H. Fraser, of the Railways Department's engineering staff, had made an inspection of the two railways and presented a report. The result is stated to be that it has been decided to treat these railways as forming parts de facto of the Canadian Rys., without change of ownership or management. In order to bring the lines up to the regular branch line standard a quantity of rails will be supplied for the construction of additional sidings, and rolling stock, consisting of sleeping cars, first-class passenger cars, freight, coal and platform cars, will be leased to the two companies at a nominal rental. The companies will lay the tracks, and will supply ballast for the lines, so as to bring them up to the standard desired. The Canadian National Rys. will, it is stated, treat the two railways in the matter of rates in such a way as will develop traffic.

Division of Wheat Transportation Between the Railways.

Geo. Stephen, Freight Traffic Manager, Canadian National Rys., has issued the following statement as to the handling of the prairie provinces' grain crops in 1920 and 1921, by the Canadian National, Canadian Pacific and Great Northern Rys., from Sept. 1 to May 31, each year:

	1920 crop	1921 crop
C. N. R.	Cars 164,003	Cars 166,516
C. P. R.	Cars 96,321	Cars 101,171
G. N. R.	Cars 175	Cars 892
Totals.	164,499	268,514

The C.N.R. and C.P.R. shipments were both to Fort William and Port Arthur, Ont., and to Vancouver, B.C. The G.N. R. shipments were to Duluth, Minn.

Railway Accidents Throughout Canada.

The total number of railway accidents reported to the Board of Railway Commissioners during May, was 156, resulting in 5 employees and 21 others being killed, and 42 passengers and 119 employees injured. In 19 cases being injured, a total of 26 killed and 151 injured. Under "others" are included 6 persons killed, and 6 injured in 7 highway crossing accidents. In each of these accidents, the crossings were unprotected, and in 3 cases, automobiles were concerned, in 2, other vehicles, and in 1, a pedestrian.

Newfoundland Railway Affairs Settled to Nov. 15.

Owing to the fact that the Reid Newfoundland Co. had no funds to meet their April payroll, the Newfoundland Ry., with the associated steamship lines, ceased operating May 16. The company stated that the shortage of funds was due to the Government not having paid over an amount provided by the Legislature to reimburse it for the deficiency of the year's revenue to June 30, while the Government asserted that the company owed it \$517,000, against which the company put forward a counterclaim. Owing to the disruption of business caused by the stoppage of traffic, an arrangement was made for its resumption, and trains and steamships were again put in operation May 23, the arrangement made being up to June 18, and subsequently continued. Negotiations followed as to the future, the company having offered to sell the whole of its interests in the railway and steamships to the Government for \$2,500,000, a number of claims on either side to be abandoned. As a result of the negotiations, the Premier submitted to the House of Assembly, June 17, an agreement proposed to be executed between the Government and the Reid Newfoundland Co., respecting the operation of the railway, express, and steamship services.

The agreement, dated June 15, consists of 16 sections, the first three of which deal with the extraordinary situation created by the ceasing of operations in May, and the remainder with the operations of the three services from July 1 to Nov. 15, inclusive. These sections provide that the Government shall supply the funds necessary to meet the company's employees payrolls for May and June, and in addition \$70,000 to assist the company to meet present liabilities other than the Bank of Montreal, on account of railway, steamship and express business. The company assigns to the Government as security for any excess of the amounts paid by it over the \$1,500,000 provided by the agreement of 1921, for losses in operation for the year ended June 15, all its book debts, etc., receivable on account of railway, express and steamship operations, and bank balances up to June 30. The sections also provide for the manner of paying the money over to the company, and for the keeping of special accounts with respect to the security. New accounts are to be opened in the company's books and at the Bank of Montreal, on July 1, to cover the operation of the railways, express and steamship service from that date to Nov. 15. The Government is to provide all funds necessary to operate the three services; is to keep in force all insurances at present maintained by the company, but shall not be responsible for losses not covered by insurance, except such loss or damage as is properly chargeable to ordinary maintenance. Any profits in the operation of the services during the period are to be applied towards meeting the losses in operation incurred between July 1, 1921, and June 14, 1922, both inclusive. Inventories of coal and other supplies, etc., are to be made at June 30, to be credited to the accounts under the 1921 agreement, and debited to accounts of the new period. The Government shall be entitled to all money received for the operation of the services during the currency of the agreement, and shall pay all debts contracted during the agreement and not discharged at Nov. 15.

Up to Nov. 15 the three services shall be operated under the management of R. C. Morgan, who shall have the title and powers of General Manager; and R. G. Reid, the company's Vice President, but no change in operating policy shall be made without the consent of both. No change is to be made by the Reid Newfoundland Co., by way of rent or otherwise in respect of property used by the three services, or for depreciation. No salary is to be paid to R. G. Reid, or any other director of the company, in respect of services rendered in connection with the railway, express or steamship services. The agreement is made without prejudice to the rights of either party, or to any other disputes or claims out of any other dealings between the parties, their respective positions in relation thereto to be the same as if the present agreement had not been made.

The House, in committee, passed a vote of \$250,000 out of the last loan raised to finance railway operations from July 1 to Nov. 15.

On the House reassembling June 20, the Premier stated that the final draft had been drawn up and assented to, and the signatures would be affixed in due course. He then moved the adjournment until Oct. 31, to which an amendment was moved that the House do not adjourn until the agreement had been signed. Subsequently the Premier stated that the agreement would be signed within half an hour thereafter, and the amendment was withdrawn. The Legislature then adjourned to Oct. 31, when it is expected that an announcement will be made respecting the railway's future, and the plans decided on between now and then will be submitted for discussion.

Traffic Dispatching by Radiotelegraph.

A recent Winnipeg press dispatch says:—"Canadian National Ry. officials are considering the idea of dispatching trains by radio. This plan, if adopted, will be in operation more at night than by day. Those considering the plan point out that it will obviate the necessity of keeping night operators at many obscure stations, thereby reducing costs. They claim that with trains equipped with radio, running orders could be sent direct to the train crews, this they also claim would have a tendency to prevent head-on collisions, between stations." We are officially advised that there was absolutely no truth in the report, that the information was not given to the press by any responsible officer, and that the matter has not been considered at all.

The Terminal Warehousing Co. has been incorporated under the Dominion Companies Act with authorized capital of \$1,000,000 and office at Montreal, to carry on the business of warehousing and cold and dry storage; to construct, hire or purchase any conveyance for cold storage by land or water; to act as customs brokers or agents, to carry on the business of general cartage, transfer and transportation agents, expressmen, and other business incidental thereto.

Point Edward Grain Elevator.—We are officially advised that the G.T.R. is not contemplating the erection of a grain elevator at Point Edward, Ont., as stated in recent press reports. Certain private interests have been considering such a project, but no definite decision has been announced.

United States Railways' Financial Results.

In April, the U.S. Class 1 roads' total operating revenues were \$416,668,620, and total operating expenses, \$336,178,422, leaving a net railway operating revenue of \$80,690,198. Deducting from this \$24,604,143 for railway tax accruals, and \$112,910 for uncollectible revenue, the railway operating income was \$55,973,145. Deducting from this equipment rents debit balance of \$4,344,331, and joint facility rents debit balance of \$1,356,949, the net railway operating income for the month was \$50,271,865. The operating ratio for the month was 80.64. For the first four months of 1922, the net railway operating income was \$211,293,393, compared with \$57,408,932 for the first four months of 1921, and the operating ratio for the first four months of 1922 was 80.50, compared with 90.56 for the first four months of 1921. A large improvement in the first four months of 1922 over the corresponding period of 1921 is therefore evident. The net operating income for April of \$50,271,865 represents an annual return of 3.93% on the railways' tentative valuation.

Car loading in the U.S. during the past few weeks has been showing large increases over that for corresponding weeks in 1921, and it is stated that if it were not for the miners' strike, resulting in largely restricted movements of bituminous and lignite coal, the increases in car loading would have been even more pronounced.

Transportation Contributions to Montreal Hospital Fund.—Among those associated with transportation interests who have contributed to the fund being raised in Montreal for its hospitals, are the following: R. B. Angus, director, C.P.R., and the C.P.R. Co., each \$50,000; Jas. Caruthers, \$25,000; S. B. Elmer, Holt and C. R. Hosmer, director, C.P.R., each, \$15,000; Senator L. C. Webster, President, Webster Steamship Co., \$10,000; E. W. Beatty, K.C., President, C.P.R., \$5,000; Farquhar Robertson, a former Montreal Harbor commissioner, \$3,000; Dominion Transport Co., \$2,000; Lt. Col. G. S. Cantlie, formerly General Superintendent of Car Service, C.P.R., and Lt. Col. G. R. Starr, President, Dominion Transport Co., each, \$1,000; A. D. MacTier, Vice President, Eastern Lines, C.P.R., and Mrs. MacTier, jointly, \$1,000; White Star-Dominion Line, and W. G. Ross, ex President, Montreal Harbor commissioners, each, \$200; and Fraser, Brace & Co., shipbuilders, \$100.

Taxation of Grain Elevators.—The Alberta Corporations Taxation Act has been amended by providing that every company which stores or distributes grain shall pay \$50 for each elevator used by it in its business. An elevator is described as an elevator or warehouse, or flat warehouse which receives grain for storage before the grain has been inspected under the Canada Grain Act, and which is situated on a railway right of way, siding or spur track connected therewith, or on station grounds, or on any lands acquired or reserved by any railway company to be used in connection with the railway at any station or siding.

Rails for Pere Marquette Ry.—The Algoma Steel Corporation, Sault Ste. Marie, Ont., is completing an old contract for 2,500 tons 85 lb., C.P.R. section, steel rails for the P.M.R.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—W. E. CAMPBELL, heretofore Chairman, Canadian Freight Association, Western Lines, Winnipeg, who, on March 21, was appointed by Dominion order in council as a rate expert to assist the Board in an advisory capacity, has been appointed the Board's Chief Traffic Officer, at Ottawa, succeeding the late Jas. Hardwell. The appointment was made by the Civil Service Commission, in accordance with the notice inviting applications, which was published in Canadian Railway and Marine World for May on pg. 241. The salary is \$8,500 a year.

Canada Steamships Lines.—See under "Canadian Steamships Lines Appointments" on pg. 379 of this issue.

Canadian Railway Board of Adjustment, No. 1.—GEO. HODGE, Assistant to Vice President, Eastern Lines, C.P.R., who has been a member of the Board since its inception, and Vice Chairman for over three years, has been elected Chairman, succeeding the late G. K. Wark.

ASH KENNEDY, Assistant Grand Chief, Brotherhood of Locomotive Engineers, has been elected Vice Chairman.

Canadian Freight Association.—We were advised from Winnipeg, June 12, that no appointment had then been made of a Chairman for the Canadian Freight Association, Western Lines, to succeed W. E. Campbell, appointed Chief Traffic Officer, Board of Railway Commissioners.

Canadian National Rys.—G. CLARKE, heretofore Car Foreman, Edmonton, Alta., has been appointed Car Foreman, Paddington, Man., vice N. C. Hooper, transferred to Mission, B.C.

N. C. FERGUSON has resumed duty as Road Foreman of Locomotives, Dauphin Division, Dauphin, Man., and P. Henze, acting Road Foreman of Locomotives, has been transferred to Prince Albert, Sask.

W. H. HENDERSON has been appointed Roadmaster, Ottawa, Ont., vice O. Orden, deceased.

C. H. COOPER, heretofore Car Foreman, Paddington, Man., has been appointed Car Foreman, Mission, B.C., vice J. K. Nesbitt, transferred to Edmonton, Alta.

J. K. NESBITT, heretofore Car Foreman, Mission, B.C., has been appointed Car Foreman, Edmonton, Alta., vice G. Clarke, transferred to Paddington, Man. **ROBT. WM. SIMPSON**, Assistant to General Superintendent, Maritime District, Moncton, N.B., is carrying on the duties of that position, which is vacant consequent on J. C. O'Donnell's recent death.

S. B. WASS, heretofore Construction Engineer, Moncton, N.B., has been appointed Construction Engineer to supervise the construction of the Mount Terminal Yard, near Fort William, Ont.

Canadian Pacific Ry.—A. ANDERSON has been appointed Roadmaster, Expense Subdivision, and Shaunavon Subdivision from Assiniboia to mile 21, Moose Jaw Division, Saskatchewan District, vice P. Tapsay, appointed section foreman at Assiniboia. Office, Assiniboia, Sask.

R. DOUGLAS, heretofore Chief Dispatcher, Nelson, B.C., has been appointed Chief Dispatcher, Moose Jaw Division, Saskatchewan District, Moose Jaw, vice E. G. Trump, transferred to Winnipeg.

J. F. GILDEA, formerly Division Master Merchandise, Pennsylvania Division, Delaware & Hudson Co., Carbondale, Pa., at one time District Master Mechanic, District 2, Eastern Division, C.P.R., Montreal, has been appointed Assistant Foreman, Smiths Falls, Ont., vice F. G. Perkins, promoted.

GEORGE HODGE, heretofore Assistant to Vice President, Eastern Lines, Montreal, has been appointed Assistant General Manager, Eastern Lines. Office, Montreal.

D. L. HOWARD, Superintendent of Telegraphs, Alberta District, Calgary, is reported to have been appointed Superintendent of Telegraphs, British Columbia District, vice R. N. Young, transferred to Calgary, Alta., Office, Vancouver, B.C.

H. J. HUMPHREY, heretofore Superintendent, Trenton Division, Ontario District, Toronto, has been appointed Assistant General Superintendent, Ontario District, vice W. M. Neal, appointed General Superintendent, Algoma District. Office, Toronto.

H. J. MAIN, heretofore Car Service Agent, Quebec District, Montreal, has been appointed Superintendent, Trenton Division, Ontario District, vice H. J. Humphrey, appointed Assistant General Superintendent, Ontario District. Office, Toronto.

C. E. MANSFIELD, heretofore at Regina, Sask., has been appointed Chief Dispatcher, Nelson Division, British Columbia District, Nelson, vice R. Douglas, transferred to Moose Jaw, Sask.

W. M. NEAL, heretofore Assistant General Superintendent, Ontario District, Toronto, has been appointed General Superintendent, Algoma District, vice J. J. Scully, appointed General Manager, Eastern Lines. Office, North Bay, Ont.

F. G. PERKINS, heretofore Assistant General Superintendent, Ontario District, has been appointed Locomotive Foreman, Schreiber, Ont., vice S. W. Gardiner, who has left the service.

A. PRICE, General Manager, Eastern Lines, Montreal, after over 40 years of faithful and most efficient service, upon the advice of his physicians, and to the great regret of all, finds it necessary to relinquish his duties for an indefinite period, and has therefore been granted extended leave of absence.

J. J. SCULLY, heretofore General Superintendent, Algoma District, North Bay, Ont., has been appointed General Manager, Eastern Lines, vice Alfred Price, granted leave of absence on account of ill health. Office, Montreal.

J. W. SLATER has been appointed Roadmaster, Outlook Subdivision, Moose Jaw Division, Saskatchewan District. Office, Outlook, Sask.

H. M. TAIT, heretofore Assistant General Agent, Steamship Department, Calgary, Alta., has been appointed General Agent, Passenger Department, Rail and Ocean Traffic, Minneapolis, Minn., succeeding G. G. Albertson, who has resigned on his appointment as Manager, Royal Mail Steam Packet Co. and Pacific Steam Navigation Co., San Francisco, Cal. Office, 611 Second Ave. South.

W. N. TILLEY, K.C., Toronto, has been elected a director, succeeding the late Sir John C. Eaton.

E. G. TRUMP, heretofore Chief Dispatcher, Moose Jaw Division, Saskatchewan District, Moose Jaw, has been appointed Chief Dispatcher, Portage Division, Manitoba District, Winnipeg.

R. N. YOUNG, Superintendent of Telegraphs, British Columbia District, Vancouver, is reported to have been appointed Superintendent of Telegraphs, Alberta District, vice D. L. Howard, transferred to Vancouver. Office, Calgary, Alta.

Grand Trunk Ry.—**J. J. KILLINGSWORTH**, heretofore Supervisor of Signals, St. Thomas, Ont., has been appointed Electrical Supervisor, Ontario Lines, vice F. J. Coleman, deceased. Office, London, Ont.

W. STEELS, heretofore signal foreman, Toronto, has been appointed Supervisor of Signals, St. Thomas, Ont., vice J. J. Killingsworth, promoted.

Lacombe & Northwestern Ry.—**H. W. TYE**, heretofore Construction Engineer, Acme-Drumheller extension, C.P.R., Acme, Alta., has been appointed Resident Engineer, in charge of operations and construction, L. & N.W.R., vice H. G. Dimsdale, appointed Highway Commissioner for Alberta. Office, Lacombe, Alta.

Michigan Central Rd.—**B. W. GRIFFITH** has been appointed General Storekeeper, vice G. T. Dunn, resigned. Office, Detroit, Mich.

G. T. R. Co's Shareholders' Appeal Against Arbitration Award.

The G. T. R. shareholders' appeal against the award of the arbitration board, which was appointed to fix the Dominion Government's liability for certain of the company's shares, will, a press dispatch states, come before the Imperial Privy Council, in London, Eng., on July 10.

In connection with this matter there has been a good deal of controversy in London recently as to the position of holders of certain G.T.R. securities. A letter from the Dominion Railways Department was made public in London, June 1, in which the following reference was made to a statement of Sir Alfred Smithers, chairman of the board, G.T.R., made in 1920, to the effect that the payment of interest on the junior securities was the Government's own proposal and was the only concession offered: "It is understood that the reason for paying interest on the junior securities was that in making the bargain the London management of the G.T.R. insisted that the Government give a guarantee of dividends to holders of the guaranteed stock, as their votes were necessary to constitute the majority voting power required to authorize the acquisition arrangement. Any criticism therefore would lie against the G.T.R.'s English board."

Replying to an enquiry from England in reference to the matter, Major Graham A. Bell, Deputy Minister of Railways, wrote a lengthy letter, which was given out in Ottawa on June 1, for publication. In it he said: "The position of the holders of G. T. Pacific Ry. Co's 4% debenture shares is appreciated, but the Canadian Government is scarcely in a position to make good unfortunate business investments of that nature." He added that up to the end of 1921, the Dominion Government had advanced to the G.T.R. Co. \$73,702,154.42, and to the G.T.P.R. Co. \$82,480,303.66.

Mainly About Railway People Throughout Canada.

R. B. Angus, director, C.P.R. Co., since its inception, has recovered from his recent indisposition, and celebrated his 91st birthday at his country home, Sonnevill, Que. May 28.

W. A. Booth, Engineer of Locomotive Construction, G.T.R., Montreal, and Secretary, Canadian Railway Club, was elected Chairman of the Society of Railway Club Secretaries, at the annual meeting in Atlantic City, June 16.

Sir George MacLaren Brown, European General Manager, C.P.R., presided at the Canadian Club's luncheon, in London, Eng., on Empire Day.

W. E. Campbell, who has been appointed Chief Traffic Officer, Board of Railway Commissioners, Ottawa, was born at Mount Vernon, Ont., Dec. 19, 1882, and entered railway service in 1901, since when he has been, to Aug., 1902, stenographer, General Freight Office, G.T.R., Montreal; Aug., 1902, to Apr., 1906, secretary to Division Freight Agent, G.T.R., Hamilton, Ont.; Apr., 1906, to Dec. 31, 1907, chief clerk, Eastern Lines, Canadian Freight Association, Toronto; Jan. 1, 1908, to July 31, 1910, Secretary, Advisory Committee, Eastern Lines, Canadian Freight Association, Montreal; Aug. 1, 1910, to Sept. 18, 1921, Secretary-Treasurer, Western Lines, Canadian Freight Association, Winnipeg; Sept. 19, 1921, to March 31, 1922, Chairman, Western Lines, Canadian Freight Association, Winnipeg; Apr. 1 to May 31, 1922, rate expert in an advisory capacity, Board of Railway Commissioners, Ottawa, Ont.

F. J. Coleman, of the G.T.R. Electrical Department, London, Ont., died at Detroit, Mich., May 26, aged 55.

James Coleman, who has been elected chairman of the American Railway Association Mechanical Division's general committee, to serve until 1924, was born at Port Huron, Mich., and started work with the G.T.R. as a car department apprentice in 1873. He worked at Port Huron until 1889, when he was appointed foreman at Chicago, remaining in that position until 1899, when he was appointed Master Car Builder, Central Vermont Ry., at St. Albans, Vt. In 1905 he entered the Canada Car Co.'s service at Montreal, taking charge of the manufacturing department, and in 1906 returned to his former position with the Central Vermont Ry. In Jan., 1908, he was appointed Superintendent, Car Department, G.T.R., at Montreal, and on May 1, 1920, was appointed assistant to General Superintendent, Motive Power and Car Department, G.T.R., Montreal, which position he still holds. He was second Vice President of the Master Car Builders' Association for the year 1916-17, and in 1920 was elected Vice Chairman, American Railway Association, Section 3, Mechanical.

G. S. Donaldson, General Agent, and W. W. Creighton, Travelling Agent, Chicago & Northwestern Ry., Toronto, were injured, the former somewhat seriously, and their companion was killed, when their motor car overturned in a ditch near Oakville, Ont., as they were proceeding to attend the Toronto Transportation Club's annual picnic near Hamilton, on June 23. At the time of writing, June 27, Mr. Donaldson is reported to be progressing satisfactorily, but it is not expected that he will be able to leave the hospital for a week or two. Mr. Creighton returned to duty June 26.

Nathaniel Stewart Dunlop, who died at the General Hospital, Montreal, June 2, was born near Almonte, Ont., Jan. 17, 1861. For seven years he was a public school teacher, and in 1886 entered a law office in Toronto, and was subsequently Secretary, and later, President, of the Canadian Shorthand Society. He entered C.P.R. service in Sept., 1888, as clerk in the Legal Department, Toronto, and was, from July 1, 1893, to Sept. 21, 1901, chief clerk, Legal Department, Toronto; Sept. 21, 1901, to July 1, 1904, Tax Commissioner, Montreal; July 1, 1904, to Feb. 1, 1910, Tax Commissioner and Claims Adjudicator, Montreal; Feb. 1, 1910, to Sept. 30, 1916, when he retired from the service, Tax and Insurance Commissioner, Montreal. He was the creator of the C. P. R. Floral Department, which is responsible for the floral decoration of the company's stations throughout the Dominion.

W. E. Campbell,
Chief Traffic Officer, Board of Railway Commissioners.

Sir John Eaton, President, The T. Eaton Co., Ltd., who died in Toronto, March 30, and who was a C.P.R. director, left an estate valued at \$13,098,622.82, including 250 C.P.R. shares, valued at \$36,000.

James Frederick Gildes, who has been appointed Assistant Foreman, C.P.R., Smiths Falls, Ont., was born at Strood Park, near Horsham, Sussex, Eng., and entered railway service in June, 1900, as an engineering apprentice, Nine Elm Works, London & South Western Ry., and on the conclusion of his apprenticeship, in June, 1904, he was presented by the directors with a special prize for the highest place in the apprentices' examinations; June, 1904, to June, 1905, fireman, all classes of service, L. & S.W.R., Salisbury, Eng.; June, 1905, to Jan., 1906, on engineering staff, Southampton Docks and R.M.S. Alberta, L. & S.W.R., Southampton, Eng.; Jan. to June, 1906, locomotive draftsman, Nine Elm Works, L. &

S.W.R., London, Eng.; June, 1906, to Jan., 1907, supervising locomotive statistics and operation, same company; Feb., 1907, to Mar., 1909, fitter, Angus Shops, C.P.R., Montreal; Mar. to Oct., 1908, in tests department, Angus Shops, C.P.R., Montreal; Oct., 1908, to July, 1909, Assistant Locomotive Foreman, C.P.R., North Bay, Ont.; Aug., 1909, Assistant Locomotive Foreman, C.P.R., Chapeau, Ont.; Sept., 1909, to Sept., 1912, Locomotive Foreman, C.P.R., Schreiber, Ont.; Sept., 1912, to July, 1914, Locomotive Foreman, C.P.R., Hochelaga, Que.; July, 1914, to Mar., 1918, Master Mechanic, Montreal Terminals Division, Quebec District, C.P.R., Montreal. In March, 1918, he was appointed Division Master Mechanic, Pennsylvania Division, Delaware & Hudson Co., Carbondale, Pa., but had been out of the service for some time.

A. E. Griggs, Bridge and Building Master, C.P.R., Brownville Jct., Me., was found dead in bed in an hotel at Fredericton, N.B., June 14. He was born in 1861, and had been in C.P.R. service for 39 years.

George Hodge, Assistant to Vice President, Eastern Lines, C.P.R., Montreal, who has been elected Chairman of Canadian Railway Board of Adjustment No. 1, vice the late George K. Wark, was born at Montreal, Oct. 2, 1874, and entered C. P. R. service Mar. 24, 1890, since when he has been, to Aug., 1890, junior clerk, Passenger Department; Aug., 1890, to Apr., 1892, clerk, Vice President's office; Apr., 1892, to June, 1896, secretary to Vice President; June, 1896, to Jan., 1907, chief clerk to Vice President; Jan., 1907, to July, 1908, Superintendent, Montreal Terminals; July, 1908, to Feb., 1911, Superintendent, District 3, Eastern Division, all at Montreal; Feb., 1911, to Mar., 1912, Superintendent, District 2, Ontario Division, London, Ont.; Mar., 1912, to May, 1915, General Superintendent, Eastern Division, Montreal; May, 1915, to Oct., 1918, Assistant to General Manager, Eastern Lines, Montreal; and from Oct., 1918, Assistant to Vice President, Eastern Lines, C.P.R., Montreal.

C. R. Hosmer, director, C.P.R., Montreal, has been elected a trustee of the Mackay Companies, in place of the late G. W. Wark.

Miss Marion Beryl Hungerford, youngest daughter of S. J. Hungerford, Vice President, Operating & Maintenance, Canadian National Ry., Toronto, was married there, June 7, to Alex. Romeril.

S. J. Hungerford, Vice President, Operating & Maintenance, Canadian National Ry., made an inspection trip over the system's principal eastern lines, leaving Toronto, June 8, and returning June 23, during which he went as far as Sydney, N.S., and St. John, N.B. He was accompanied by C. B. Brown, Engineering Assistant, and Alistair Fraser, General Solicitor.

J. W. N. Johnstone, General Agent, Canadian National Ry., and Canadian Government Merchant Marine, St. John's, Nfld., made a trip to the Canadian Pacific coast recently.

Mrs. McAvity, wife of Thomas McAvity, President, T. McAvity & Sons, Ltd., railway and marine supplies manufacturers, etc., St. John, N.B., died there, June 2, after a long illness.

Samuel McLwain, whose appointment as Division Engineer, Ottawa Division, Canadian National Ry., Ottawa, Ont.,

was announced in our last issue, was born at Goderich, Ont., May 24, 1885, and entered railway service in Dec., 1906, since when he has been, to Feb., 1907, chairman, Canadian Northern Ontario Ry., Parry Sound, Ont.; Feb., 1907, to Dec., 1908, rodman, Canadian Northern Quebec Ry., Garneau cutoff; Jan. to Mar., 1909, rodman on location, Gowganda Branch, Canadian Northern Ontario Ry.; Apr., 1909, to Apr., 1910, rodman, Rawdon Branch, Canadian Northern Quebec Ry.; May, 1910, to May, 1911, rodman, Toronto-Ottawa line, Canadian Northern Ontario Ry.; May to Dec., 1911, instrument man, same line; Jan. to Apr., 1912, instrument man on location, Ottawa to Pembroke, same road; May, 1912, to Sept., 1913, Resident Engineer, same road, Beachburg, Ont.; Oct., 1913, to Jan., 1914, Resident Engineer, same road, Brockville, Ont.; Jan., 1914, to Apr., 1915, not in railway service; May, 1915, to Oct., 1916, instrument man, Toronto-Hamilton Highway Commission, Burlington, Ont.; Sept., 1916, to May, 1918, Assistant Engineer, Canadian Northern Ry., Capreol, Ont.; June, 1918, to Apr., 1922, Division Engineer, Nipissing Division, same road, latterly Canadian National Ry., Capreol, Ont.

W. R. MacInnes, Vice President in charge of traffic, C.P.R., returned to Montreal, at the end of May, after a short trip to Europe.

Sir William Mackenzie, President, Toronto Ry. Co., and formerly President, Canadian Northern Ry., has retired from the Hudson's Bay Co.'s directorate.

William Nicholson, General Foreman, Blacksmith Shop, Angus Shops, C.P.R., Montreal, died there, May 31, aged 66. He was born at Kingston, Ont., and was for several years in Canadian Locomotive Co.'s service, entering C.P.R. service in 1906.

P. S. O'Hagan, Assistant Station Master, Bonaventure Station, G.T.R., Montreal, died at the end of May, following a paralytic seizure in his office. He had been in G.T.R. service for about 35 years.

Alfred Price, General Manager, Eastern Lines, C.P.R., who had not been well for some two or three weeks, entered the Ross Memorial Hospital, at Montreal, on June 8, for examination and observation. We were advised, June 21, that it was expected he would be able to leave the hospital in a few days thereafter, but that he might not be able to return to his office for a little while.

R. Ritchot, Assistant Claims Agent, G.T.R., Montreal, has retired on superannuation, after 51 years service with the company.

J. G. Rutherford, C.M.G., a member of the Board of Railway Commissioners, was elected a corresponding member of the Central Society of Veterinary Medicine, of France, at its annual meeting in Paris, recently.

Lord Shaftnessy, Chairman of the Board, C.P.R. Co., has offered to give \$500 a year for five years towards the granting of a number of scholarships at Loyola College, Montreal.

Lewis Ketcham Silcox, who has been elected a member of the American Railway Association, Mechanical Division's general committee, was born at Germantown, Pa., April 30, 1886, and was educated at Trinity School, New York, and the Institution of Mechanical and Electrical Engineering, Brussels, Belgium. He entered railway service in 1903, and has been to 1906, apprentice, New York Central & Hudson R.R., Highbridge, N.Y.;

1906 to 1909, machinist and Assistant Superintendent, in charge of foundries and machine shops, McSherry Manufacturing Co., Middletown, Ohio; 1909 to 1911, shop engineer, Canadian Car & Foundry Co., Montreal; 1911 to April 1, 1916, Mechanical Engineer, Canadian Northern Ry., Toronto; April 1, 1916, to April, 1921, Mechanical Engineer, Illinois Central R.R., Chicago, Ill.; from 1921, General Superintendent of Motive Power, Chicago, Milwaukee & St. Paul Ry., Chicago, Ill. He was not able to attend the recent Atlantic City convention, owing to having a number of important matters to attend to at Chicago. The C., M. & St. P. Ry. has recently ordered a number of locomotives and cars, and has taken over the Chicago, Terre Haute & South-eastern Ry., which serves the Illinois coal fields, and he is getting the equipment on that line ready to handle the heavy business which will develop when the coal strike is ended.

William Woollett,
Vice President and General Manager, Essex
Terminal Railway.

Robert Wm. Simpson, Assistant to General Superintendent, Maritime District, Canadian National Ry., Moncton, N.B., who is carrying on the duties of that position, which is vacant consequent on J. C. O'Donnell's recent death, entered the Intercolonial Ry.'s service as clerk in the Engineering Department, July 22, 1899, since when his other appointments have been as follows: May, 1896, engineer; July, 1899, assistant engineer; Nov. 7, 1912, Advisory Engineer; Sept. 1, 1913, General Fuel, Oil & Tie Agent; June 11, 1917, Assistant to General Manager; Dec. 1, 1918, Assistant to General Superintendent, all at Moncton.

Hugh Sutherland, ex General Executive Agent, Canadian Northern Ry., Winnipeg, and Mrs. Sutherland have returned there, from England.

W. K. Tilley, K.C., who has been elected a director, C.P.R., studied law at Osgoode Hall, Toronto, and was called to the bar in 1894, and appointed a K.C. in 1913. He has been engaged in a number of important legal cases, and was assist-

ant counsel for the Dominion Government in an insurance investigation, and also in the Newfoundland Fisheries arbitration at The Hague, Holland. Latterly, he has been chief counsel in a number of important railway rate cases, and also acted as chief counsel for the Dominion Government in the arbitration respecting the valuation of Canadian Northern Ry. common stock, when that company's lines were taken over by the Dominion Government. He was also chief counsel for the Dominion Government in a similar arbitration respecting the value of G.T.R. stocks; and counsel for the City of Toronto in connection with the valuation of the Toronto Ry. Co.'s assets on their acquisition by the city. He has been for some years Generally Consulting Counsel for the C.P.R. In addition to general railway legal work, he has argued several important cases before the Privy Council in England, and also before the International Waterways Commission. He is the head of the legal firm of Tilley, Johnson, Thompson & Parmenter, Toronto.

Walter Vaughan, formerly Secretary and Bursar of McGill University, Montreal, and author of "The Life and Work of Sir William Van Horne," died at the Royal Victoria Hospital, June 15, aged 56, after several months illness.

Herbert L. Wallis, a former Chief Mechanical Superintendent, G.T.R., Montreal, died there, at the end of May. He was born at Derby, Eng., March 10, 1844, and was educated at the Commercial College, Halifax, Eng., after which he entered Midland Ry. service as a pupil of the Locomotive Superintendent, and served in the drafting offices and workshops at Derby, until Aug., 1866, when he was appointed Foreman, Locomotive Carriage Department, Midland Ry., Bradford. In March, 1817, he was appointed Assistant Mechanical Superintendent, G.T.R., Montreal, and in Jan., 1873, Chief Mechanical Superintendent, which position he held until his resignation, April 30, 1896. He was a member of the Institute of Civil Engineers, and of the Institute of Mechanical Engineers (England), and also of several engineering associations in the U.S., and in 1896 was President of the Canadian Society of Civil Engineers. His father was engaged in coaching before the advent of railways, and later became a cartage agent for the Midland Ry.

G. K. Wark, Canadian Vice President, Brotherhood of Locomotive Foremen and Enginemen, and Chairman, Canadian Railway Board of Adjustment No. 1, who died in Toronto, April 24, left an estate valued at \$83,624.

Silas B. Wass, who has been appointed Construction Engineer to supervise the construction of the Mount Terminal Yard, Canadian National Ry., near Fort William, Ont., was born in Perth County, Ont., July 11, 1880, and entered railway service, July 1906, since when he has been, to Jan. 1908, Resident Engineer, C.P.R., Walkerton, Ont.; Jan., 1908, to Jan., 1909, Assistant Engineer, C.P.R., Durham, Ont.; May, 1909, to Sept., 1910, Chief Engineer, Arrostook Valley Rd., Presque Isle, Me.; Sept., 1910, to Jan., 1912, Assistant Engineer, C.P.R., Montreal; Jan., 1912, to Apr., 1914, Assistant Chief Engineer, St. John and Quebec Ry., Fredericton, N.B.; Apr. to Dec., 1914, Chief Engineer, same road; Jan., 1915, to Apr., 1918, Assistant Superintendent, Intercolonial Ry., Fredericton, N.B.; Apr., 1918, to May, 1922, in Engineering Department, Canadian Government Ry.

and Canadian National Rys., latterly as Construction Engineer at Moncton, N.B.

G. W. Webster, who has been appointed Vice President, Minneapolis, St. Paul & Sault Ste. Marie Ry., Minneapolis, Minn., was born at Oshkosh, Wis., Dec. 1, 1870, and entered railway service Sept. 1, 1886, as a clerk on the Milwaukee, Lake Shore & Western Rd., and was employed in various capacities until Sept. 27, 1893, and has been, to July 1, 1899, secretary to Receiver, Wisconsin Central Ry.; July 1, 1899, to Oct., 1906, chief clerk to President, same road; Oct., 1906, to Sept. 21, 1909, Secretary, same road; Sept. 21, 1909, to March 1, 1920, also Secretary, Minneapolis, St. Paul & Sault Ste. Marie Ry., which acquired control of the Wisconsin Central Ry.; and from March 1, 1920, he has been Secretary, Minneapolis, St. Paul & Sault Ste. Marie Ry., Duluth, South Shore & Atlantic Ry., and subsidiary companies.

H. Wheeler, General Manager, White Pass & Yukon route, was recalled from Skagway, Alaska, to Victoria, B.C., in May, owing to his father's death. He returned to Skagway, early in June.

W. H. Winterrowd, who has been elected a member of the American Railway Association Mechanical Division's general committee, was born at Hope, Ind., Apr. 2, 1884, and educated at Shelbyville, Ind., and Purdue University, whence he graduated with the degree of B.S. in 1907. He entered railway service in 1905, since when he has been, to 1906, blacksmith's helper, Lake Erie & Western Ry., Lima, Ohio; 1906 to 1907, air brake and car repair man, Western Lines, Pennsylvania Rd., Dennison, Ohio; 1907 to 1908, special apprentice, Lake Shore & Michigan Southern Ry., Elkhart, Ind.; 1908 to 1909, Roundhouse Foreman, Lake Erie, Al., 1909 to 1910, Night Roundhouse Foreman, Lake Shore & Michigan Southern Ry., Youngstown, Ohio; 1910, Roundhouse Foreman, same road, Cleveland, Ohio; 1910 to Sept., 1912, Assistant to Mechanical Engineer, same road, Cleveland, Ohio; Sept., 1912, to May, 1915, Mechanical Engineer, Angus locomotive shops, C.P.R., Montreal; May, 1915, to Apr. 1, 1918, Assistant to Chief Mechanical Engineer, C.P.R., Montreal; from Apr. 1, 1918, Chief Mechanical Engineer, Montreal.

Wm. Woolatt, Vice President and General Manager, Essex Terminal Ry., Walkerville, Ont., whose portrait is published herewith, and who has recently completed 50 years continuous transportation service, was born at Weeden, England, April 2, 1855. His service record is as follows: May 13, 1872, to April, 1877, office boy and assistant time-keeper, Mechanical Department, Northern Ry., Toronto; April, 1877, to June, 1879, stenographer, Traffic Department, Northern Ry., Toronto; June, 1879, to Aug., 1881, chief clerk, Passenger Department, Northern Ry., Toronto; Aug., 1881, to May, 1884, Rys., Toronto; Aug., 1884, to May, 1888, chief clerk, Audit Department, Northern & Northwestern Rys., Toronto; May, 1884, to June, 1888, chief clerk, passenger Department, Northern & Northwestern Rys., Toronto; June, 1888, to Dec., 1888, in charge of passenger business west of Toronto, in General Passenger Department, G.T.R., Montreal; Jan., 1889, to Jan., 1894, Traffic Manager, Lake Erie & Detroit Ry., Ry., Walkerville, Ont.; Jan., 1894, to Jan., 1903, General Manager, Lake Erie & Detroit Ry., Ry., Walkerville; Jan., 1903, to Nov., 1904, in charge of Buffalo Division, Pere Mar-

quette Rd., which company took over the Lake Erie & Detroit River Rd., Walkerville; Nov., 1904, to Nov., 1915, General Manager, Essex Terminal Ry., Walkerville; Nov., 1915, to date, director and General Manager, Essex Terminal Ry., Walkerville. He has been Mayor of Ojibway, Ont., since its inception in 1913. Among other positions held were chairman of Essex County Council's highway committee for several years; member of the Border Chamber of Commerce executive; member, Essex Border Utilities Commission; President, Essex Conservative Association. He has been Superintendent of the Lincoln Road Methodist Sunday School, Walkerville, since 1892.

Traffic Orders by Board of Railway Commissioners.

General order 364, May 23.—Re application of Canada Cement Co. for rates on agricultural limestone from Belleville, Ont., on the same basis as those in effect from Beachville and Kirkfield, Ont. Upon hearing the application at Ottawa, May 18, 1920, the applicant, the Canadian Freight Association, the Grand Trunk, Canadian Pacific, and Canadian National Railways being represented at the hearing, and what was alleged; and upon reading the further submissions filed, and the report of its Assistant Chief Traffic Officer, the Board orders that all railway companies subject to its jurisdiction file tariffs, to become effective not later than June 15, 1922, showing the following mileage scale, to apply on agricultural limestone or stone dust east of Port Arthur, Fort William, and Armstrong, in lieu of the specific commodity rates or mileage scale now in effect, viz.:

Miles	Rates in cents per 100 lb.
Not over 10.....	5 1/2
Over 10, not over 20.....	6 1/2
Over 20, not over 30.....	7 1/2
Over 30, not over 40.....	8 1/2
Over 40, not over 50.....	9 1/2
Over 50, not over 60.....	10 1/2
Over 60, not over 70.....	11 1/2
Over 70, not over 80.....	12 1/2
Over 80, not over 90.....	13 1/2
Over 90, not over 100.....	14 1/2

Over 100 miles to 300 miles, the rates to be increased one-half cent per 100 lb. for each group of 25 miles. Over 300 miles, the rates to be increased 1c per 100 lb. for each group of 50 miles.

Application for Refund of Demurrage on Coal.

May 8.—Re application by E. L. Hedstrom, Buffalo, N.Y., for an order authorizing the G.T.R. to refund to him \$1,000 demurrage paid by him to the Canadian Car Demurrage Bureau. The applicant alleged that, during the summer of 1920, H. B. Johnstone, coal jobber, Toronto, ordered 10 cars of slack coal to be shipped to him from East Palestine, Ohio, to Toronto, via G.T.R., that due to lack of facilities at the shipping point for making out export declarations and other documents necessary to Canadian shipments, the applicant had the coal shipped to himself at Buffalo, N.Y., and re-consigned it from there to Johnstone at Toronto; that when the coal began to arrive in Toronto, Johnstone cancelled the balance of his order, but that in the meantime it had been shipped, and that Johnstone accepted four of the cars, and the applicant succeeded in diverting one car, but upon the arrival of the last five cars, Johnstone refused them and allowed them to stand on the tracks in Toron-

to until \$1,000 car service accrued. The applicant further alleged that the G.T.R., after a considerable length of time, unloaded the coal and sold it to a local Toronto concern for \$1 a ton; that, as the applicant's name appeared on the freight bills as the shipper from Buffalo, the G.T.R. demanded payment of the Canadian freight charges as well as the demurrage; that he paid the freight charges from Buffalo to Toronto, as well as the car service charges; that he had been unable to effect any settlement with Johnstone; and that his loss in the transaction is some \$2,700, including the price of the coal, freight charges to Buffalo, as well as the charges paid to the G.T.R. The Canadian Car Demurrage Bureau admitted that the applicant had not received fair treatment at the hands of Johnstone, but it could not, under the Car Demurrage Rules which were approved by an order of the Board, authorize refund of any portion of the amount.

Assistant Chief Commissioner McLean gave the following ruling, which was concurred in by the Chief Commissioner and Commissioners Boyce and Rutherford: The applicant does not raise any question as to the demurrage tolls having been improperly or illegally charged. The accrual of demurrage, as set out in his letter, arises from the fact that in the case of five cars the consignee refused to accept them. On the facts as set out, this is a situation for which the railway company is not in any way responsible. The applicant's remedy, if any, would appear to be by way of action against the consignee. The demurrage charges, on what is before the Board, were properly charged, and, therefore, the Board is not able to assist the applicant by way of directing a refund.

Special Passenger Tariffs for Holidays, Exhibitions, Etc.

The bill introduced in the House of Commons, May 5, by T. L. Church, North Toronto, for the restoration of special passenger tariffs for holidays, exhibitions, etc., and which was read a second time on May 11, and published in full in Canadian Railway and Marine World for June, pg. 365, was rejected by the railway committee of the National Canadian National Exhibition directors, Toronto, sent a delegation to support it, but it was opposed by the railways. Gerard Ruel, K.C., General Counsel, Canadian National Rys., favored the principle of the bill and expressed a readiness to have special rates restored where practicable, but pointed out that the bill was unworkable. If railways were required by Act of Parliament to give excursion rates, they would have to provide for excursions in every direction, and to provide equipment to a greater extent than at present.

Another bill affecting passenger traffic, which was introduced April 10, by S. W. Jacobs, George Etienne Cartier, Montreal, proposed to make a return ticket issued by a railway company between any two points in Canada available on any other railway running between the same termini, was read a second time, May 3, and was referred to the railway committee, which rejected it on May 30. The railway committee, in reporting to the House on these bills, stated that they should not be proceeded with as their passage at the present time would not be in the public interest.

Enquiry and Report on Railway Freight Rates By Parliamentary Committee.

The evidence submitted to the House of Commons committee appointed to enquire into railway rates and transportation costs, particularly with reference to the Crownsnest Pass agreement up to May 23, was dealt with in Canadian Railway and Marine World for June. The committee's next session was held on May 26, at which, before the first witness was heard, the chairman, Hon. A. K. Maclean, read a telegram from the British Columbia Salmon Canniers' Association, asking consideration of rate reduction on B.C. fish.

Premier Greenfield, of Alberta, appeared on May 26, and spoke strongly in favor of the reinstatement of the Crownsnest agreement. He said: "The Alberta farmer and Alberta business interests are of the opinion, the Legislature is on record as being of the opinion, and the Government of the province is of the opinion that the Crownsnest agreement should not be further suspended, but that it should remain as a statutory maximum basis for the freight rate structure of Western Canada." He gave a thorough account of economic difficulties facing western farmers, and of way of presenting the importance of freight rates in the west, filed a statement showing that the Alberta crop of 1921, which was valued at \$82,000,000, would have been worth \$171,000,000 if grown in the Province of Quebec. He was asked if he would be satisfied with a reduction in grain rates if such were brought about otherwise than by the restoration of the Crownsnest agreement, and replied that he and all the people of his province considered the agreement a statutory maximum basis for freight rates and were of the opinion that it should stand. He emphasized that the rate on grain is the important thing, and contended that a reduction in rates would bring about a large increase in traffic. He concluded by stating: "Which is the best thing to do, to stand a deficit for a few years and fix your freight rates at a point where they will carry the industry, or kill that industry? Will it pay this country to carry deficits on the National and other railways for a few years until this country gets established, or will you kill the business right now?"

Premier Oliver, of British Columbia, also appeared before the committee on May 26, and made a preliminary statement in which he pointed out that if the Crownsnest agreement grain rates, providing for eastbound movement only, was restored, there would be no westward movement of grain to the Pacific coast. He appeared again on May 29, armed with a large number of rate statements, designed to show that B. C. is being discriminated against in the matter of rates, and that the Crownsnest agreement, if brought back into operation, would serve to increase the discrimination very materially. His testimony soon developed into a long and detailed statement of what he termed gross discriminations that B. C. is suffering on account of high railway rates. He said the provincial authorities had been appealing to the Board of Railway Commissioners for redress ever since 1906, and he characterized the committee's proceedings as an example of "placing the cart before the horse." He said: "The Board of Railway Commissioners has been enquiring into this matter for over a year, and I say the Board's report on the evi-

dence adduced before it should have been placed before this committee, and that the findings of the Board should be known not only to Parliament, but to the public, so that this hearing might show whether or not any improvement could be made on the Board's recommendations." He then told how much land British Columbia had given to the C.P.R.; claimed that Canadian National Rys. operating costs were not higher in B. C. than on the prairies, and pointed out that the C.P.R. should have chosen the grades over the mountains which the C.N.R. had, and should not use the fact of having chosen unfavorable grades as a reason for charging B. C. higher rates. He presented the committee members with copies of a communication addressed to Prime Minister King, in which the removal of the discrimination claimed is asked for, and in which the existing scales of freight rates are blamed for all the troubles and misfortunes which ever befell the B. C. people, individually and collectively, since Confederation. Finally, the committee's chairman reminded Mr. Oliver that the committee wanted his opinion of what should be done with the Crownsnest agreement, to which he replied that he would suggest that it be suspended for a year while legislation is passed "to remove this power of discrimination which exists and which we complain of so bitterly," and further that the Board of Railway Commissioners be instructed to "construct a new rate structure, based on principles of equity and applicable to all parts of the country." Mr. Oliver told the committee that at one time B. C. had been forced to appeal to the British Government to force the Dominion of Canada to observe the terms of union, and added, "I just want you to bear in mind that we are fast approaching the time when another appeal to the Imperial Government may be necessary in connection with transportation rates." A little later he said, "The man, or the community, or the province, that will submit to wrong, a known wrong, a grievous wrong, when every other legitimate means of trying to remove that grievance fails, then I say, and I say it advisedly, that that man or the people of that province have the right to resort to the last argument, and that is the argument of brute force."

Norman Lamont, of the Canadian Council of Agriculture, on May 29, urged the restoration of the agreement. He claimed that present freight rates are hurting the west, first, by cutting too drastically into the direct monetary return which the farmer receives for grain, and second, by adding too heavy a charge to the price of commodities which the farmer has to bring from the east. When asked as to whether he would not be willing to let the agreement go and trust the Board of Railway Commissioners to adjust the rates downward, he stated that the western people preferred to keep their statutory agreement. He claimed that the railways would not lose by reinstating the agreement, as there would be more traffic and better earnings.

Geo. Langley, President, Saskatchewan Co-operative Elevator Co., on May 30, advocated the agreement's restoration. He said, in order to have railway wages reduced, railway rates must first be reduced, and described at length the conditions obtaining in Western Canada, all tending to make rate reductions impera-

tive. He also said: "If we do not get the Crownsnest agreement reinstated, we are immediately thrown into the Board of Railway Commissioners' hands, and I want to say this just as emphatically as I can say it, that the farmers of the west have lost all confidence in that body. The impression is abroad among our farmers, and I am a representative farmer, that the Board has ceased to be a board of railway commissioners, and has become a board of railway company commissioners." Asked for some information on this point, he claimed that the Board had practically ignored representations made by him and others at a western hearing, but the fact developed that the hearing was in connection with the rates equalization case, on which no judgment has been delivered. At the conclusion of his testimony, he was asked whether, if a new agreement would give the west as favorable rates on grain as the Crownsnest agreement, he would consider it preferable. He replied that if he were promised a reduction in grain rates equal to the reduction which the Crownsnest agreement would make possible, he would be willing to consider anything else in a spirit of concern for the interests of other portions of the Dominion. He emphasized that grain rates are the important thing.

J. F. Reid, representing the Canadian Council of Agriculture, also appeared on May 30, and argued strongly for the return of lower freight rates on western grain. He stated emphatically that it is wrong to try to encourage immigration to Western Canada under present conditions, and contended that a decrease in freight rates would serve to better these conditions. He endorsed Mr. Langley's statement that the western people have no confidence in the Board of Railway Commissioners. When asked as to whether he would not consider a general reduction of rates advisable, he said the western people would be glad to have a definite covenant in the Crownsnest agreement and do not want to give it up.

H. J. Symington, representing the Manitoba, Saskatchewan and Alberta Governments, appeared on May 31, and began by stating that he wished to dissociate himself most emphatically from criticisms made concerning the Board of Railway Commissioners. He argued for the reinstatement of the Crownsnest agreement, and urged his argument as a contention that it would not create a disparity against the east, but to some extent would remove the disparity which has existed for years in favor of the east as against the prairie west. He severely criticized the figures presented to the committee by President Beatty, of the C.P.R., and while he agreed with Mr. Beatty that the loss on grain traffic for the C.P.R. would be \$7,000,000, he was certain that all the rest of the loss occasioned by the agreement's reinstatement would not total more than \$1,000,000. He argued that the maximum enforced by water and U.S. rail competition in Eastern Canada had been of service in keeping down eastern rates, while the Crownsnest agreement had been of no use to the west for many years. Only time the Crownsnest agreement would be of any good to the west, he said, is in abnormal times like the present, and, therefore, he argued, the west should be allowed to derive some protection from the agreement when it has

the chance. He claimed that the west never got any protection from the agreement till 1917. As justification for his statement that the reinstatement of the Crownsnest agreement would but serve to remove some of the disparity in favor of the east as against the west, he said that in 1921 the C.P.R. Eastern Lines operating revenues were \$85,500,000; and Western Lines \$101,900,000; operating ratio, Eastern Lines, 77.21, and Western Lines, 70.54; net earnings, Eastern Lines, \$11,000,000, Western Lines, \$30,000,000. He disputed the contention that the Crownsnest agreement would apply only to the C.P.R. lines built at the time it was made, and quoted decisions by the Board of Railway Commissioners to the effect that all lines would be affected in order to prevent the making of discriminations. Then, by an examination into the C.P.R. earnings on grain, he contended that the company was deriving too large a proportion of its revenue from grain traffic. He stated that the greatest thing to benefit eastern lines earnings is increased purchasing in the west, and that therefore every aid possible should be given the producers in Western Canada. In a summary of his evidence, he stated that the grain rates provided for by the Crownsnest agreement would pay reasonable profits to the railways and are from 7 to 40% higher than the rates in 1917, and for many years previous. When asked as to what he thought about the offer made by Messrs. Beatty and Hanna to effect reductions on basic commodities, he said he had presented his argument for the retention of the Crownsnest agreement, and desired just that, but if, in the committee's wisdom, this could not be recommended to Parliament, he would ask that lower rates given should be incorporated as statutory rates. He explained his request by saying that the whole matter of rate determination should not be left to the Board, as that body is not untrammelled in the east, on account of natural conditions, and it would be only fair that a statutory maximum should exist in the west.

Hon. R. E. Finn, K.C., representing the Nova Scotia and New Brunswick Governments, appeared on June 5 and told the committee that he did not want the Crownsnest agreement reinstated, for the reason that, if it were, the railways' revenue would be reduced to such an extent that no rate reductions could be made in territory not covered by the agreement. He would prefer to have the railways make general rate reductions on basic commodities so that the benefits of such reductions would be distributed over the whole country. He presented many statements to show that industry in the Maritime Provinces is peculiarly sensitive to fluctuations in transportation costs, and placed great stress on the increase in differentials over Montreal which the Maritime interests have faced in recent years. He said: "To-day the Maritime Provinces are not only up against a high tariff wall, but a railway freight wall. We submit first that the conditions which warranted the suspension of the Crownsnest agreement in the first instance, and the subsequent continuance of the suspension of the Railway Act (sic) have not passed away, and as the reasons remain clear justification for the further continuance of the suspension. In the next place, the economic conditions of the Maritime Provinces are such as to demand an immediate relief from the transportation charges which are at present effective in that district, and, as between the east and

the west, it cannot be said that the conditions of the one are any worse than those of the other. We submit emphatically that now is the time, not for the settlement of old and doubtful contentions, but for the extension to all parts of the country of measures of relief." In concluding, he said he did not want to have the Maritime Provinces thought of as selfish, because they did not want the agreement reinstated, and pointed out that if general reductions on basic commodities were made, the west would receive the benefit of them to the same extent as the east.

G. G. Porter, representing New Brunswick potato producers, appeared before the Committee on June 5, and made a strong plea for lower rates on potatoes. He detailed a very unfortunate situation in the industry, caused by its overdevelopment in the war years, the erection of the U.S. tariff wall, extremely low prices caused by market restriction, and high local and export freight rates. While he did not say anything directly about the Crownsnest agreement, his testimony was directed to showing that there are producing interests in Canada outside of the Prairie Provinces which need all the assistance they can get in the way of reduced freight rates. It was pointed out to him by a committee member that the great trouble with the potato industry is lack of market rather than high rates, and he stated frankly that he was seeking as low rates as possible in order to make up for losses occasioned by market restriction.

Angus Maclean, President, Bathurst Lumber Co., Bathurst, N.B., representing eastern pulp and lumber interests, appeared before the committee on June 5, and stated that during less than a year the balance of the 40% increase made in rates in Eastern Canada in 1920 would appreciably help the industry. He was certain that such action would give the railways a big revenue they are not getting because of small traffic, and he cited numerous instances of pulp and lumber companies receiving raw materials and shipping their products by water to avoid the high rail rates, whereas these shipments had always been made by rail previously, and would be again if the rate were reasonable. His argument was distinctly against the reinstatement of the Crownsnest agreement, in that it showed that the lumber and pulp industries are greatly in need of rate reductions which they presumably would not receive if the agreement were reinstated.

H. Martell, M.P. for Hants, N.S., addressed the committee on June 5, on behalf of Nova Scotia fruit growers, and made a strong plea for the reduction of N. S. apple rates.

A. E. Clark, president, Canadian Lumbermen's Association, on June 6, submitted that, if the railways' representatives were correct in stating that if the Crownsnest agreement were reinstated no other reductions could be made, he would be unalterably opposed to its restoration. He recommended a further suspension of the agreement, reductions on basic commodities, and orders to the Board of Railway Commissioners to conduct a thorough investigation into the whole Canadian rate structure, to the end that before the period of suspension ended, the rates which would be done away with all the discriminations complained of could be recommended. In reply to a question, he stated that his association would be satisfied to leave the whole question of freight rates in the Board of Railway Commissioners' hands,

untrammelled by any agreements.

Thomas Marshall, Manager, Toronto Board of Trade's Traffic Department, on June 6, presented a statement to the effect that if the reinstatement of the Crownsnest agreement would prevent the railways from making rate reductions in other parts of the country, it would be better if the agreement were further suspended, so that full effect could be given to the Board of Railway Commissioners' general order 308, whereby rates in effect prior to Sept. 13, 1920, could be restored throughout the country. He said that certain interests had for many years been able to derive large savings from the operation of the Crownsnest agreement, and as this conflicted strongly with Mr. Symington's argument, a lot of questioning by committee members resulted.

F. J. Watson, General Freight Agent, G.T.R., appeared before the committee again on June 6, and was examined as to what commodities would be affected by the reductions proposed by the railways. In connection with the theory that lowered rates would mean increased traffic, he said: "I am quite certain that if the railways could be assured of materially increased tonnage, and that their equipment would be kept fully employed for the greater part of the year, even at a reasonable reduction in rates, they would be the first to adopt that means of increasing their revenues. As far as the G.T.R. is concerned, the reinstatement of the Crownsnest agreement would mean perhaps a \$100,000 loss to it, but as it is throwing in its lot with its big brother, the Canadian National, it is prepared to lose more." He figured that the concessions that the G.T.R. was prepared to make would mean a decrease in revenue of \$1,000,000 yearly.

W. B. Lanigan, Freight Traffic Manager, C.P.R., appeared again on June 7, and in a carefully prepared statement, contended that the Crownsnest agreement, if reinstated, would be a creator of gross discrimination. He explained thoroughly how it was determined that the reinstatement of the agreement would mean a loss to the C.P.R. on grain traffic of \$7,159,537 in 1922, and also showed how he estimated that rate reductions on other commodities caused by the application of the agreement would mean an additional loss to the C.P.R. of \$5,831,291. In an analysis of operating revenues and expenses, he claimed that Mr. Symington had placed erroneous interpretations on various figures, and more particularly, by demonstrating that but 14.4% of total C.P.R. earnings came from the western grain traffic, and he questioned Mr. Symington's assertion that such traffic has been contributing in too great a measure to the C.P.R. earnings. In an examination of the expenses of operation incidental to the moving of the western crop, he claimed that the revenue derived from the movement of that crop was based on expenses made months before in the way of repairing equipment, and that the crop movement involved much westbound empty car movement and the loss of a large number of car days. An able argument adopted by him was to the effect that a lot of the division of railway earnings on the basis of different parts of the line is most misleading, and he contended that the way must be considered as a whole, and that the rates prevailing for the transportation of grain east of Fort William are as much an advantage to the western farmer as anyone else. He showed clearly why the C.P.R. had to carry grain to the

Atlantic seaboard at what may be said to be a loss, on account of competition, and he made evident to the committee that if such rates were not in effect, the crop would move via the U.S. route, to the detriment of Canadian railway labor, Canadian ports and Canadian business generally.

In a statement presented to the committee, Mr. Symington had summarized his evidence under 11 headings, and these Mr. Lanigan answered one by one. In reply to Mr. Symington's contention that Canada had entered into the Crownst agreement with the C.P.R., and that benefits which accrue to Canada cannot be taken away, Mr. Lanigan stated that Canada made the contract all right, but if it is found to be in Canada's interests to suspend or abrogate it, that discretion rests with Parliament. Mr. Symington had contended that the east has maximum protection through the operation of water and U.S. rail competition, while the west has no protection except what was bought and paid for under statutory agreement. Mr. Lanigan answered that the east has no monopoly of the advantages of waterways or U.S. rail routes; that the west benefits by both, and that the west has the protection afforded by the Railway Act and the Court instituted to interpret it. In answer to Mr. Symington's argument that the maximum protection in the west is effective only when rates are higher than the traffic will bear, he said that the Railway Act is a continuing protection both east and west, and that as a matter of fact, the west pays no more proportionately than the east. Mr. Symington had contended that grain rates under the Crownst agreement will pay reasonable profits to the railways, and are from 7 to 40% higher than the grain rates in 1917. Mr. Lanigan replied that the grain rates in Western Canada have not been shown to pay even a fair profit to the carriers on the present basis, and, in fact, pay a lower return per ton mile than any other traffic carried. In reply to the contention that the return of the agreement would not create disparity in favor of the west, but would remove some of the disparity against the west, Mr. Lanigan stated that the present disparity has been shown to favor the west. In reply to Mr. Symington's point that eastern rates will automatically come down as the result of U.S. reductions, Mr. Lanigan replied that U.S. reductions are merely those which the Board of Railway Commissioners ordered on Jan. 1, 1921, and Dec. 1, 1921. In reply to the argument that the Crownst rates will only be a protecting maximum until normal rates return, he replied that it was the Board of Railway Commissioners, who, in 1914, reduced the general level of rates below the Crownst basis; these rates and those of the Crownst agreement would be subnormal. In reply to Mr. Symington's statement that rates above the Crownst maximum had been tried with disastrous effects, Mr. Lanigan replied that lower grain rates would benefit only one section of the west, while a reduction on basic commodities would benefit the whole country. In reply to Mr. Symington's statement to the effect that "rates without traffic are useless," Mr. Lanigan stated that that is a "mere platitude," and he could cap it with another platitude, to the effect that traffic at non-paying rates creates deficits. In reply to Mr. Symington's statement that grain rates have borne more than their fair fare of railway financing, he said that had not been shown and is not

the case. In reply to Mr. Symington's statement that the abolition of the maximum provided by the agreement would completely change the whole theory and structure of the Railway Act, Mr. Lanigan replied that the Act certainly does not provide that in the present condition of Canadian business an obsolete act should be revived to provide for the special difficulties of one section to the detriment of other equally important sections of the Dominion.

In conclusion, Mr. Lanigan said: "I am suggesting, 1. That the Crownst Act is out of touch with today's necessities, out of gear with today's sources of supply, out of line with the trend of traffic. It is discriminatory in its application and fails to provide for a Dominion-wide economic problem. 2. The placing of all control of rates should be unrestrictedly in the hands of the special tribunal created and equipped for that purpose. 3. An immediate reduction be made on basic commodities that constitute the rough products of the field, the mine, the forest and the sea." He then outlined what he would include in the list of basic commodities. Asked by Sir Henry Drayton whether he thought about the advantage the U.S. farmer has in his average shorter grain haul to the lake head, he said that the U.S. farmer undoubtedly has some geographical advantage, and added that if a man could grow wheat on the dock at Montreal he would have "a wonderful advantage."

Mr. Lanigan appeared again on June 12, and was questioned by committee members as to how much the Crownst agreement suspension had added to C.P.R. earnings. While admitting that the suspension had added to revenues, he quoted Board of Railway Commissioners' decisions to show that the C.P.R. is entitled to its dividends and a surplus, the inference being that if the agreement had not been suspended, higher rates would have been necessary on commodities not covered by the agreement. Further questioning in connection with figures submitted drew from Mr. Lanigan an explanation of the impossibility of segregating railway operating revenues and expenses by divisions.

D. B. Hanna, President, Canadian National Rys., appeared before the committee on June 12, and explained at length the impossibility of determining whether any individual shipment, or any one commodity, is carried at so much profit or so much loss, and of determining how profitable any branch line may be. He was questioned at length by A. J. Hudson, Winnipeg South, in an effort to show that the Canadian Northern was a profitable venture when its lines were confined to the west and that deficits began when it secured its eastern connections, but he pointed out that operating expenses began to increase largely just about the time when operation on the eastern lines was commenced. He said that the scientific way of cutting rates would be to start the decreases on basic commodities. Speaking of the extent of proposed reductions, he pointed out that the disparity between increased wages and material prices and the rate increases granted had always been very wide, so that too large reductions should not be expected. In connection with wages, he stated that the salaries of executive and general officers would not represent 1% of operating expenses, and that such salaries are no higher than on the National Railways' physical condition. He showed conclusively how the maintenance

expenditures made in 1919 and 1920 were justified. The remainder of the time on June 12 was spent in a discussion of what commodities the railways were proposing to reduce rates on, and in a recapitulation of the loss in revenue which would accrue to the National Railways on account of those reductions.

G. G. McGeer, representing the British Columbia Government, appeared again on June 14, and in addition to renewing his demands that the Crownst agreement be not reinstated, made several lengthy statements dealing with alleged rate discriminations against B. C.

W. B. Lanigan also testified again on June 14, in connection with statements filed, and was afforded an opportunity to explain them, and incidentally to inform the committee as to the difference between the functions of a railway accounting department and statistical department, and the varying nature of the work of each. At the close of the June 14 session it was decided that the committee would proceed to the preparation of its report.

The committee held private sessions on June 16, 18 and 19, when consideration was given to a proposition submitted by the railways, providing for the following reductions: 1. On grain, from the northwest to the head of the Great Lakes, and to Vancouver, for export, 20%. 2. Forest products, Western Canada, 16.66%; Eastern Canada, 20%. 3. Coal, bituminous, except westbound coal from head of lakes, 10, 15 or 20c a ton, according to haul. 4. Building material, cement, iron, steel, 10, 15 or 20c a ton. 5. Fertilizers, other than chemical, 16.66% west of Great Lakes, 20% east. 6. Pig iron, billets, blooms, wire rods and scrap iron, 16.66% west of Great Lakes, 20% east. 7. Ores, 16.66% west of Great Lakes, 20% east.

On June 20, the committee examined W. B. Lanigan and C. A. Hayes on the proposed reductions. Mr. Lanigan stated they would bring about reductions in C.P.R. revenues as follows: On grain traffic, \$5,354,139; on other traffic specified, \$9,084,330; total, \$8,338,469. Adding to this the reduction in C.P.R. revenue which will be brought about by the reduction in rates on international traffic, viz., \$2,220,000, the total reduction in C.P.R. revenue on the basis of the proposition submitted would be \$10,558,469. Mr. Hayes stated the reduction in Canadian National Rys. revenue on grain would be \$4,844,115, and on other traffic specified, \$2,127,285; adding a reduction on revenue on international traffic of \$1,250,000, the total reduction in revenue would be \$8,221,400. A statement was sent by F. J. Watson that the loss on Canadian traffic to the G.T.R. would be \$1,053,789, which, added to the loss of \$2,275,000 on international traffic, would mean a total reduction in G.T.R. revenue of \$3,328,789.

Following the railways officials' examination, the committee again went into private session on June 20, and it was reported that after long discussion, Mr. Cramer, Progressive leader, made a motion which is reported to have been substantially as follows: "That the Crownst agreement be suspended for one year, except in so far as it is related to grain and grain products, and that it is the committee's opinion that reductions in the rates on basic commodities should be in accordance with the suggestion made by the railway interests." This resolution was defeated by the casting vote of Mr. Cramer, 13 to 12. A resolution introduced by W. A. Boys, Con-

servative, South Simcoe, Ont., is reported to have been substantially as follows: "That the Crownsnest agreement be suspended for one year, and that the Government be given power, by order in council, to suspend it for a further period of one year, if deemed necessary, and we also recommend a general reduction in freight rates throughout Canada and similar reductions in basic commodities." This resolution carried by 13 to 9, three Liberal members abstaining from voting.

The committee's report was not made on the basis of this majority vote, however, and additional private meetings were held by the committee on June 21 and 22. Practically all the Progressive members at Ottawa expressed a determination to wage a big fight in the House, with the object of having the Crownsnest rates on grain and grain products restored. On June 22 rumors were current to the effect that the railways had offered to restore the Crownsnest rates on grain and grain products, and on June 23 these rumors were confirmed by people in close touch with the situation. On June 24 a report was submitted to the committee, proposing to reinstate the Crownsnest rates on grain and grain products. When the committee met in the morning, Sir Henry Drayton asked the chairman if it were true that members of the Government had interviewed the railways' representatives and determined upon a policy. While this was at first denied, it was admitted afterwards that the Minister of Railways and Shipping had been in consultation with C.P.R. executive officers who were in Ottawa, and on the strength of this the Conservative committee members took the position that the committee was being used as a sort of rubber stamp for endorsing the Government's policy in the matter, and left before the vote was taken, the members who left being Sir Henry Drayton and Messrs. Duggan, Jones and Macdonald. The resolution providing for the adoption of the report was moved by Wm. Duff, Liberal, Lunenburg, N.S., and was carried by 16 to 1. W. M. German, Liberal, Welland, Ont., voted against it. Of those voting for it, 8 were Liberals, 7 Progressives, and one Independent Liberal, A. B. Hudson, Winnipeg South.

The Committee's Report.

Following is the full text of the report, which was presented to the House late on June 24 (Saturday): "Your committee, appointed pursuant to resolutions of Parliament passed on May 8, has had altogether 29 sessions or meetings and has heard and considered the evidence of many witnesses and as well received many written representations from interested sources. Witnesses were heard on behalf of the Canadian railways, several of the provincial government, industrial organizations, and particular industries and interests. The proceedings of the committee have been from time to time, as printed, circulated among members of the House of Commons, and of the Senate, and have been as well widely circulated outside of Parliament. "Your committee was charged with duty of inquiring into the question of transportation costs with particular regard to the effect of rates established by the Crownsnest Pass agreement on Canadian National and other railways and upon agricultural development and Canadian industries generally. The Crownsnest Pass agreement was an undertaking entered into in 1897 between the Government of Canada and the Canadian Pacific Ry., whereby in consideration of a sub-

sidy to be earned by the construction of the Crownsnest Pass railway, which amounted to \$3,404,720, a reduction should be made in the rates upon the classes of merchandise below stated, westbound from, and including Fort William and all points east of Fort William on the company's railway, to all points west of Fort William or the company's main line or on any line of railway throughout Canada, owned or leased by, or operated on account of the company. The commodities, the classes of merchandise to be effected, are as follows: Upon all green and fresh fruit, 33 1/3%; coal oil, 20%; cordage and binder twine, 10%; agricultural implements of all kinds, set up in parts, 10%; iron, including bar, band, Canada plates, galvanized, sheets, pipe, pipe-fittings, nails, spikes and horse shoes, 10%; all kinds of wire, 10%; window glass, 10%; paper for building and roofing purposes, 10%; roofing felt, box and packing, 10%; paints of all kinds and oils, 10%; livestock, 10%; woodenware, 10%; household furniture, 10%. The agreement also provided for a reduction of the rates on grain and flour at all points on the main line, branches or connections of the C.P.R. west of Fort William to Fort William and Port Arthur. The decrease was fixed at 3c per 100 lb., to be reached in two annual reductions of 1 1/2c.

"The Crownsnest rate on grain and grain products remained in entirety from Sept. 1, 1899, until Oct. 7, 1903, when it was modified by a lower rate levied on an agreement made between the Province of Manitoba and the Canadian Northern Ry. Lower rates continued until March 15, 1918, when an increase of 15% on rates generally was made by order of the Board of Railway Commissioners. This increase was granted because of representations by the railways that they could not successfully maintain their services at the granted rates that would enable them to meet the increased operating costs due to substantial increases in cost of fuel, coal, materials, supplies, equipment of all kinds and wages. This increase was subject to the Crownsnest Pass agreement, but it brought western grain rates up to Crownsnest maximum rates from most points in Saskatchewan and Alberta, though not in Manitoba. Shortly afterwards, the first of the so-called MacAdoo series of wages awards was adopted in the United States and in view of the continued increase in the cost of living, Canadian railway employees organizations claimed wages in Canadian territory should be similarly advanced. Order in council 1768, of July 16, 1918, authorized the wage increase on Government owned railways and recommended that similar increases be adopted on other lines. The same order authorized a general rate increase to meet the increased operating costs. It thus became necessary to exceed the Crownsnest maximum rates, and to accomplish this a further order 1863, of July 27, 1918, authorized the Board of Railway Commissioners to disregard any existing rate-controlling agreements. This prepared the way for the rate increase of Aug. 12, 1918, which was 25% in the east, but less in the west, because there the 15% increase which came into effect on March 15, 1918, was included in the 25% increase. The several orders in council referred to were passed under the authority and power vested in the Governor in council under the War Measures Act, and at the end of the war it was deemed desirable to continue in statutory form the authority of the Board of Rail-

way Commissioners to disregard rate-controlling agreements and in due course subsec. 5, of sec. 325, of the Railway Act was enacted, enabling the Board to disregard rate-controlling agreements for three years from July 6, 1919. Thus, the Board's power to disregard special agreements, and in particular the Crownsnest agreements, will terminate on July 6 next, unless Parliament shall, in the meantime, otherwise enact.

"Subsequent to the enactment of subsec. 5 of sec. 325 of the Railway Act, the upward trend in railway operating costs in Canada continued, largely owing to what is known as the Chicago labor board, and on Sept. 13, 1920, the Board of Railway Commissioners, under general order 308, ordered a further advance of 35% in Western territory and 40% in Eastern territory. With that order, the peak of the rate increases over Crownsnest rates was reached. The order provided for a decrease of 5% on Jan. 1, 1921; a further decrease amounting to 10% was made effective under general order 308. The duration of the remainder of the increase directed by general order 308 is limited to July 1, 1922, owing doubtless to the fact that on July 6, the Crownsnest agreement would come into operation if the suspension were not further continued by statute, and which would doubtless necessitate a reconsideration of the whole freight rate structure.

"Your committee has heard the representations of the railways, Messrs. Leamy and Lanigan on behalf of the C.P.R.; Messrs. Hanna and Hayes on behalf of the Canadian National Ry., and Mr. Watson on behalf of the G.T.R. In addition to hearing evidence as to the effect of Crownsnest Pass rates on Canadian railways, certain other aspects of the railways situation were impressed upon your committee. Representatives of the Maritime Provinces urged the equalization of the Mountain scale of rates with the Prairie scale, and for the placing of the Port of Vancouver in a position of relative equality with the head of the lakes. It was contended that equal consideration with the rest of Canada in the matter of railway rates was implied in the railway arrangement made with British Columbia at the time of Confederation. The case for the Prairie Provinces was also presented. Stress was laid on the fact that the earnings from prairie lines are greatly in excess of the earnings in the east. It was stated that the rates in the east, being controlled and limited by water and U.S. rail competition result in deficiencies in revenue which prairie rates were designed to make up and it was urged that the Crownsnest Pass agreement was the only controlling factor at the disposal of the people of the Prairie Provinces. Therefore, they objected strongly to its further suspension. It was their 'sheet anchor,' as one witness put it. Representatives of the Maritime Provinces urged that their situation was one of special character, because of the conditions under which the Intercolonial Ry. was constructed as a result of the Confederation agreement. They contended that there was an implied obligation necessarily attaching to these terms which guaranteed to them special consideration in regard to railway freight rates, on account of their distance from the central and western provinces. It was claimed that the increases in rates of the Intercolonial Ry. and the excess of rates allowed by the Board of Railway Commissioners on many of their products, which

excessive rates greatly interfered with interprovincial trade, and are contrary to the obligation accepted by the Government of Canada at Confederation. The Government was, therefore, asked to take cognizance of the situation and endeavor to arrange such reductions of rates as will, having regard to the actual cost of operation of these railways, remove as far as possible the difficulties complained of, and that the Board of Railway Commissioners should, for the same reasons, and in so far as their jurisdiction extends, restore the differential rate formerly applicable to traffic to and from the Maritime Provinces, and we recommend that the Minister of Railways and Board of Management take steps to meet the situation in these provinces by a substantial reduction in rates. While your Committee was impressed by the arguments put forward on behalf of the Maritime Provinces and British Columbia, they are possibly without the scope of the reference to us, and, in any event, are too intricate and involved, and would require more time than is at the disposal of your committee, to form a proper judgment regarding them. Moreover, these matters have been before the Board of Railway Commissioners during the past 12 months; the Board has heard voluminous evidence, much expert testimony and lengthy arguments; it has had to call men trained in railway rate matters, and the committee feel that it would be inadvisable and generally unsatisfactory to even appear to invade the Board's jurisdiction or to interfere with its judgment. The claim of the Maritime Provinces with regard to local rates is a matter for the consideration of the Minister of Railways and the management of the Intercolonial Ry.

"Whether the Crownsnest Pass agreement should come into effect on July 6 next, or whether it should be further suspended to enable the Board of Railway Commissioners to regulate freight rates for a fixed period, regardless of rate-controlling agreements, upon a consideration of all the abnormal economic conditions still prevailing and upon other considerations, was the important matter referred to your committee. The question is not without its difficulties. The problem is largely one of approximating the net financial results upon the operation of Canadian railways with the Crownsnest Pass agreement scale of rates again operative, and the resultant effect upon the ability of the railways to sustain further reduction on basic commodities outside of those mentioned in the agreement, and the probable results as to railway revenues if such additional reductions were made. It was from these points of view that your committee considered the matter. There are many unknown factors which enter into a consideration of this matter, some of which are as follows: 1. The precise general effect of rate reductions upon railway traffic and its influence in stimulating business and producing railway revenue. 2. The probable future wage reduction in connection with our railways and when they shall become effective. 3. The probable degree of deflation in the costs of materials used by railways. 4. The action to be taken by the Board of Railway Commissioners, upon the applications of the Province of British Columbia, and the Prairie Provinces, or the action of the Board, or of the Government on the application of the Maritime Provinces for rate reductions, etc., and which matter judgment is shortly to be rendered, the action to be taken by the Board

of Railway Commissioners in respect of special applications for rate reductions and the probable action of the board in the way of general rate reductions upon basic commodities or upon class rates. Without a determination of some or of all of these matters, it is difficult for your committee intelligently to approximate the effect of the Crownsnest Pass agreement if put into operation, or its effect upon the future action of the Board of Railway Commissioners, in respect of future rates upon other commodities. Further, conditions relative to a consideration of this question are changing, or are likely to change, so rapidly that conclusions presently made will soon be found unreliable. Again, the Crownsnest agreement was suspended first by order in council and later in effect by act of Parliament. Such action was based upon inflated railway operating costs, and increased value of commodities, as well as the general economic conditions resulting from the war. It was chiefly for these reasons, we believe, that the Board of Railway Commissioners was empowered to disregard rate controlling agreements, if it saw fit.

"If freight rates by legislation is no doubt generally a bad principle, because it hampers the free action of the Board of Railway Commissioners and may create a discrimination in favor of the commodities covered by statutory rates. The Crownsnest Pass agreement was enacted before the institution of the Board. This Board, created in 1903, has been charged by the government with the duty of regulating railway rates and of establishing just and reasonable rates. It is the only body in Canada equipped for the determination of the intricate matters relative to railway rate making. The matter of the Crownsnest agreement becoming effective or being suspended is related to other concrete railway rate issues either pending or imminent. The one reacts upon the other, and both upon the whole freight rate structure, which must, in a short period of time, undergo many substantial changes. The question would seem to be largely one that can best be treated by one body, the Board of Railway Commissioners. But it has been represented to your committee that three important provinces of Canada are mainly devoted to the basic industry of grain. The growing prosperity of this basic industry is a factor vitally affecting the economic welfare of the nation at large. The grain grown in the prairie provinces is mostly for export purposes and the price of that commodity is settled by competition on the grain markets of the world. During the war, due to reduced production and increased consumption and large stocks that had to be accumulated by the governments of warring countries, grain prices were greatly inflated. Since the termination of the war, a rapid deflation of grain prices took place, due to increased production, and reduced consumption, and also due to the fact that so many nations with a depreciated currency have largely lost their purchasing power. These factors have forced down grain prices towards pre-war levels much more rapidly than what has been the case in respect of other commodities that grain growers are obliged to buy. On the other hand, some of the reasons advanced in 1918 as justifying the suspension of the Crownsnest Pass agreement have disappeared, and your committee has reached the conclusion that an immediate reduction of freight rates on grain and flour is in the national interest.

"Your committee, therefore, recommends a suspension of the Crownsnest Pass agreement, except in respect of grain and flour, for one year from July 6, 1922, with power to the Governor in council to suspend for a further period of one year, if in its judgment the then existing conditions justify the same, and your committee recommends that suitable legislation be enacted to make effective this recommendation. The recommendation of the committee for the further suspension of the Crownsnest agreement in accordance with the foregoing sentence, is made in view of the great necessity of a general reduction in freight rates on basic commodities as a whole and in what is considered to be the general public interest. It is intended that the period for which a further suspension of the Crownsnest Pass agreement is recommended shall not necessarily preclude the adoption of Crownsnest rates prior to the expiration of the period of suspension. Basic commodities which may be afforded reductions should have the earliest possible consideration by the Board of Railway Commissioners.

"The evidence given to your committee and the various representations made to it, in one form or another inevitably lead to the conclusion that a general reduction in railway rates is essential to the economic life of the country. To this end should be directed the best efforts of the managers of our railways, and the attention of the Board of Railway Commissioners. It is impossible to predicate the precise effect of rate reduction upon commodities in stimulating business or railway traffic. Doubtless, however, high freight rates are a discouragement to trade, and even the fact that rate reductions are in anticipation tends to retard business and railway traffic. Further, your committee is of the opinion and wishes to declare in the most emphatic manner, that railway operating costs should be decreased, and towards the achievement of this end, we recommend the closest co-operation between the management of the different Canadian railways, and between the management of the railways and their employees."

On June 26 (Monday) a bill embodying the recommendations contained in the committee's report, was given all three readings and passed. An amendment proposed by Sir Henry Drayton, to give the Board of Railway Commissioners power to suspend the Crownsnest agreement and adjust rates as it might find necessary and desirable, was defeated by 169 to 43, being opposed by all the Progressives, all the Liberals, except W. M. German, Welland, Ont., and two Conservatives, T. L. Church, North Toronto, and W. F. Maclean, South York, Ont. Mr. Meichen, opposition leader, in supporting the amendment, stated that the committee's report did not intend to embody the evidence submitted to the committee during its sittings. It was subsequently passed by the Senate.

The result of the action taken means that the C.P.R. revenue on grain traffic will be approximately \$7,156,543 a year less than at present rates. On the basis of the proposed 20% reduction it would have been \$5,354,139 less, so that the reinstatement of the Crownsnest rates means an added decrease of \$1,805,404. It is estimated that the Canadian National Rys. revenue on grain traffic will be reduced \$8,606,453. On the basis of the proposed 20% reduction the decrease would have been \$4,844,115, a difference of \$3,762,338. According to the statement filed, the C.P.R. was prepared to

suffer a reduction of \$8,338,469, exclusive of that suffered on account of reduced rates on international traffic, so that the reduction in revenue on grain traffic of \$7,159,543 leaves \$1,178,926 applicable for reductions on other traffic. The Canadian National Rys. were prepared to suffer a reduction of \$6,971,400, exclusive of that on international traffic, but the reinstatement of the Crownsnest rates on grain and grain products is a much more serious matter.

Grain in Store at Elevators.

Reports to the Dominion Bureau of Statistics, Internal Trade Branch, for the week ended June 16, show decreases in the bushels of grain in store at the different elevators through Canada, as follows: Wheat, 1,960,546; oats, 264,681; barley, 286,227; flax, 122,494; rye, 26,714; a total net decrease of 2,660,642.

In the western country elevators the decreases were: Wheat, 253,112 bush.; oats, 286,259; barley, 70,196; flax, 2,463; rye, 4,258; a total of 616,268. The receipts of all grains were 2,295,982 bush., and the shipments were 2,911,845.

The interior terminal elevators showed decreases, as follows: Wheat, 142,291 bush.; oats, 49,143; flax, 180; while there was an increase of 404 in barley. The receipts of wheat at Vancouver were 65,490 bush., and the shipments were, by ship, 103,675, and by rail, 10,417.

The public and private terminal elevators at Fort William and Port Arthur showed decreases as follows: Wheat, 671,869 bush.; oats, 145,819; barley, 85,743; flax, 130,124, while there was an increase in rye of 26,896. The total receipts were 2,457,299, and the shipments by ship, 3,102,689, and by rail, 361,260.

Private terminal elevators at Winnipeg showed increases as follows: Wheat, 2,558 bush.; oats, 7,025; barley, 1,777.

In the eastern public elevators increases were shown as follows: Oats, 508,879 bush., and flax, 10,273. The decreases were: Wheat, 32,398 bush.; barley, 177; rye, 51,878. The total receipts were 2,836,505 bush., by ship, and 782,357 by rail; the shipments being, by ship, 2,298,233 bush., and by rail, 1,125,837.

The U.S. grain in store at eastern public elevators was 7,282,190 bush., compared with 3,284,040 for the same period last year, the bulk of the former being corn, 3,319,213, and wheat, 1,701,655.

U.S. lake ports showed decreases in wheat, 441,582 bush.; oats, 39,662; barley, 40,257, and U.S. Atlantic seaboard ports showed decreases in wheat, 21,652 bush.; oats, 59,691; barley, 53,035; while there was an increase in rye of 2,435.

Canadian Night at Atlantic City.—The mechanical convention's entertainment committee arranged a Canadian night for June 16, in honor of the Canadian members and others from Canada attending the convention, which was held in the ballroom on the pier, at which British flags were displayed with the U.S. ones. There was a dancing programme, interspersed with vaudeville sketches given by performers from Montreal, including Jack Hunter, who impersonated Sir Harry Lauder; Jean Thompson and James Robertson, juvenile comedians; and five members of the Royal Highlanders. Rhyon Morgan, of New York, also sang. The committee in charge comprised W. J. Carrigan, chairman; Webb G. Krauser, assistant chairman; O. C. Hayward, A. R. Miller and W. A. McWhorter.

J. C. O'Donnell's Death.

J. C. O'Donnell, General Superintendent, Maritime District, Canadian National Rys., died in the city hospital, Moncton, N.B., on June 5. He had not been in very good health for over a year, had been more or less under medical care, and had been treated in Montreal for internal trouble, but he was able to attend to his work until towards the end of May, when he suffered considerable pain, and on May 25 it became necessary to operate on him for ulcer of the duodenum. He was considered to be progressing favorably until June 4, when pneumonia developed, and he sank rapidly, dying on June 5 about 6.30 p.m.

The funeral arrangements in Moncton were made by the Knights of Columbus, who accompanied the body from his house to St. Bernard's Church, where a service was held on the evening of June 6. The pall bearers were: S. L. Shannon, Comptroller and Treasurer, Canadian

J. C. O'Donnell, General Superintendent, Canadian National Rys., Maritime Division, who died in Moncton, N.B., June 5.

Government Rys.; F. O. Condon, Division Engineer, C.N.R.; B. A. Bourgeois, Assistant to Comptroller and Treasurer, C.G.R.; J. T. Hallisey, Superintendent, Halifax Division, C.N.R.; Truro, N.S.; Reid McManus, M.L.A.; and G. Stone, General Organizer, Brotherhood of Railroad Trainmen. The body was taken from the church to the C.N.R. station and placed on his official car No 54, which conveyed it to Winnipeg, accompanied by his widow and their two young daughters. A. F. Stewart, Chief Engineer, Canadian Government Rys., and W. U. Appleton, General Superintendent of Rolling Stock, Eastern Lines, C.N.R., Moncton, N.B., and A. H. Eager, General Superintendent of Rolling Stock, Western Lines, C.N.R., who was in Moncton when Mr. O'Donnell died, also went along; and R. W. Simpson, Assistant to General Superintendent, Moncton, went as far as Montreal. On arrival at Winnipeg, on June 9, the train was met by A. E. Warren, General Manager, Western Lines; H. Brewer, Assistant General Manager, Western Lines; A. Wilcox, General Superintendent, Manitoba District; B. T. Chappell, General Superintendent, Saskatchewan District; W. A. Brown, General Superintendent, Alberta District; and a number of other C.N.R. officials.

The body was taken to his father's house, and on the morning of June 10 was removed to St. Mary's Cathedral, where high mass was celebrated. The burial took place in St. Mary's cemetery, Winnipeg, the pall bearers being W. I. Munro, Superintendent, Portage Division; T. J. Brown, Superintendent, Dauphin Division; H. G. Hubbell, Assistant Superintendent, Portage Division; A. V. Redmond, representing the General Superintendent's office; W. J. Quinlan, representing the General Passenger Department; D. F. Coyle, a former representative of the Mackenzie-Mann interest; H. E. Barker, representing the railway conductors, and T. O'Connor, the locomotive men.

Mr. O'Donnell was born at Cobden, Ont., Dec. 17, 1879, and entered railway service, Sept. 15, 1899, since when he had been, to Sept. 1, 1901, freight brakeman, C.P.R., Chapleau, Ont.; Sept. 1, 1901, to May 1, 1902, freight conductor, C.P.R., Chapleau, Ont.; June 10, 1902, to May 1, 1905, brakeman and conductor, C.P.R., Cranbrook, B.C.; May 5 to July 2, 1905, brakeman, Canadian Northern Rys., Kamsack, Sask.; July 2, 1905, to Nov. 1, 1909, conductor, C.N.R., Battleford, Sask.; Nov. 1, 1909, to Feb. 20, 1911, Trainmaster, C.N.R., Dauphin, Man.; Feb. 20, 1911, to June 30, 1912, Trainmaster, C.N.R., Winnipeg, Man.; July 1, 1912, to July 1, 1914, Trainmaster, C.N.R., Rainy River, Ont.; July 1, 1914, to Oct. 31, 1916, Superintendent, District 3, Western Division, C.N.R., Edmonton, Alta.; Oct. 31, 1916, to Dec. 1, 1920, Superintendent, Districts 2 and 3, Central Division, Canadian Northern Rys., now Manitoba Division, Central District, Canadian National Rys., Winnipeg, and from Dec. 1, 1920, General Superintendent, Maritime District, Eastern Lines, Canadian National Rys., Moncton, N.B. His father, Wm. O'Donnell, is Roadmaster, Canadian National Rys., Manitoba District, Portage Division, Victoria Beach and Pleasant Point Subdivisions, and Gladstone Subdivision, between Carman Jct. and Portage la Prairie, with office at Fort Rouge, Man.

FOR SALE CONSTRUCTION PLANT

The Commission offer for sale the following plant:—

- 3 Locomotives, 3' gauge, four-wheel connected;
- 13 Dump cars, 3' gauge, 4-yard capacity;
- 150 Tons 45-lb. A.S.C.E. rail, with bolts, plates, and switches.

Tenders addressed to the Chairman, sealed and endorsed "Tender for Construction Plant," to be delivered at the Commission's office, Public Utilities Building, corner Front and Yonge Streets, on or before Noon, July 26, 1922.

The highest or any tender will not necessarily be accepted.

Toronto Transportation Commission

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir, Donald F. Keir and
Edwin Windfield.

United States Business Representative,
A. Fenton Walker, 115 Liberty St., New York.

Member of
Associated Business Papers, Audit Bureau of Circulations,
Canadian National Newspapers and
Periodicals Association, Canadian Press Association.

Authorized by the Postmaster General for Cana-
da, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British pos-
session (except Australia), and to Mexico, \$2 a
year. Extra postage to United States, \$6 a year;
to other foreign countries, except Mexico, \$1.50
a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.
ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

TORONTO, CANADA, JULY, 1922.

A Western Charge Against the Board of Railway Commis- sioners.

Geo. Langley, President, Saskatch-
ewan Co-operative Grain Elevator Co., in
testifying recently before the special
parliamentary committee appointed to
enquire into the Crownstest Pass agree-
ment and other freight rate matters,
said:—"If we do not get the Crownstest
Pass agreement reinstated, we will be
immediately thrown into the hands of
the Board of Railway Commissioners, and
I want to say just as emphatically as I
can say it, that the farmers of the west
have lost all confidence in that body."

The impression is abroad among our
farmers, and I am a representative farmer,
that the Board of Railway Commis-
sioners has ceased to be a Board of Rail-
way Commissioners, and has become a
Board of Railway Company Commis-
sioners."

If, as Mr. Langley stated, this impres-
sion is abroad all throughout the west, it is
indeed an unfortunate thing. While the
sympathies of any broadminded and in-
formed person cannot fail to be with the
western farmers, who have suffered
greatly in the past two years because of
restricted markets and greatly lowered
prices for their products, it cannot fail
to be evident that the farmers are plac-
ing the blame for the conditions with
which they are faced upon that body
which they do not believe does not
belong. The Board of Railway Com-
missioners is in no way responsible for
the conditions facing western farmers,
and the Board has done all it has been
able to do to make those conditions more
favorable.

The Board has no authority over the
railways' expenses; it is faced with the
duty of prescribing rates for the rail-
ways which will enable them to meet
their expenses, and that duty is com-
plicated by the proviso that in the framing
of these rates, the railways shall avoid
discrimination. Counsel for the prairie
provinces placed great stress on the fact
that rates, generally, are lower in east-
ern Canada than in western Canada, but
the Board has held—it could not do other-
wise—that water and United States rail
competition in eastern Canada are such
that rate discrepancies as between east-
ern and western Canada are not discrim-
inatory.

Rate making in Canada, a land of
vast distances, and with many and
varied influences operating in different
parts, is a task to baffle the most ex-
pert. Add to this the fact that the
Board of Railway Commissioners has no
say as to what the total earnings of the
railways shall be from these rates, but
must allow rates to make total earnings
to meet the expenses of railway opera-
tion, and it will be seen that the Board
is faced with a most difficult proposition.
Consider the fact that the Board has
had to deal with complaints from British
Columbia in the west, to the Maritime
Provinces in the east, directed to secur-
ing lower freight rates in the same way
as the complaints from the prairie pro-
vinces; consider the number of varied
interests the Board has to conciliate;
consider the efficiency of the railway ser-
vice which Canada enjoys; and then turn
to a consideration of the entire reason-
ableness of the return which the C.P.R.
has secured, in relation to its property
investment, since the Board was insti-
tuted. We are certain that the net re-
sult of these considerations will be the

formation of an opinion to the effect
that the Board of Railway Commis-
sioners has been, and is faced with a mul-
titude of complex and difficult problems,
and that it has solved and is solving
them as well and efficiently as could be
done by any other similar body.

Railway Officials' Attitude to the Public.

F. J. Watson, General Freight Agent,
G.T.R., in testifying recently before the
special parliamentary committee enquir-
ing into the Crownstest Pass agreement
and railway rates generally, said: "Just
at this point I would like to refer to the
impression that may have been created
by some of the statements made here
that the sole aim and object of the rail-
way traffic men is to grind the last dol-
lar possible out of the unfortunate ship-
per and consignee, and that no regard is
paid by the railways as to whether or
not traffic is destroyed by high freight
rates. Any railway man that tries to
adopt this policy is either a knave or a
fool, a knave because anyone who tries
to extort more than his service is reason-
ably worth is a knave; and anyone
who, to put it concisely, 'kills the goose
that lays the golden egg,' is a fool, and
I do not think those who have the largest
dealings with the railways are of the
opinion that the average railway official
is either one or the other."

There can be no doubt as to the abso-
lute correctness of Mr. Watson's state-
ment, and it has been unfortunate that
in the past a large part of the public has
not been aware of the truth to which he
gave expression. Large numbers of men
in public life—men who should know
better—have declared railway officials to
be representative of the utmost in
capitalistic greed, and railway compa-
nies are being denounced as the most soul-
less of corporations. This public atti-
tude has been the cause of severe regu-
lation of railways in the United States
in years gone by, resulting in large losses
to railway investors who were deserving
of better treatment. There is no doubt
that the "Public be damned" attitude of
the hard-fisted railroaders of pre-regu-
lation days was largely responsible for
this attitude on the part of the public,
but the cause of such an attitude has
long been removed.

The public should know that the rail-
way officials of today are men who must
be capable of fulfilling their responsibil-
ities, not only to the railways which em-
ploy them, but to the public; that the
railways are dependent on the prosper-
ity of the community, in just the
same way that the community is depend-
ent on the railways, and that what is in
the interest of one is ultimately in the
interest of the other. The railway traffic
official knows this, and governs himself
accordingly, while the very nature of his
work, and of the knowledge he has to
acquire, serves to make him tolerant
and able to see the other person's view-
point. As Mr. Watson says, those who
have the largest dealings with the rail-
ways know the railway official as the
man he should be. It would be well if
the public at large held a similar view.

The Canadian National Ry.'s Toronto
employees' annual picnic was held at Co-
bourg, Ont., June 24, about 1,500 persons
going from Toronto, in two special
trains.

Railway Wages and Working Conditions in Canada and the United States.

Canadian Railway and Marine World for June contained details of the agreement arrived at between the Railway Association of Canada, representing member railways, and the shop employees, members of the United Federation of Labor, Railway Employees' Department, Division A. A Winnipeg press dispatch of June 8 stated that shopmen on the railways in and near Winnipeg were displeased with the officers of their organization for having entered into the agreement with the Railway Association, and that at a meeting held in the Winnipeg Labor Temple the shopmen's leaders were strongly attacked for "agreeing to relinquish conditions which have prevailed on Canadian railways since the first road was built." The dispatch stated that a strike vote was to be taken because of the agreement, and that the Winnipeg shopmen refused to work under its conditions. No information has been received in verification of these statements, and in view of the fact that the agreement was signed by responsible officers of the shop employees' organization, it is difficult to see how the attitude ascribed to the shopmen could logically be taken by them.

An agreement was reached in Montreal on June 19 between the G.T.R., represented by C. F. Needham, Assistant to General Superintendent, Motive Power and Car Departments, and officers of the Canadian Brotherhood of Railway Employees and the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, in connection with working conditions for clerical and station employees, freight handlers, baggage handlers, etc. The rules and working conditions which came up for revision were those agreed upon in May, 1921. The employees affected are represented by the G.T.R. by five different organizations, the Canadian Brotherhood of Railway Employees; the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; the International Brotherhood of Railway Stationmen; the United Federation of Railway Employees, and the International Brotherhood of Stationary Firemen and Oilers. The G.T.R. opened negotiations with the first two organizations, upon which the officers of the other three organizations asked for conferences with the management in order to arrive at an understanding with it on rules and working conditions for the employees who are members of those organizations.

R. P. Neil, President of the International Brotherhood of Railroad Stationmen, went to Montreal to secure representation for his organization at the conference, and the United Federation of Railway Employees spoke of applying for a board of arbitration if it was not represented. It is stated, however, that the negotiations were concluded between the company and representatives of the first two named organizations, and although President Neil of the International Brotherhood of Railroad Stationmen, is credited with stating that employees who are members of that organization would not accept the conditions determined upon at the conference, we are not aware that any action has been taken to refuse to abide by the conditions agreed upon. About 7,000 men are affected by the agreement. It provides that overtime will be paid for pro rata, for the 9th and 10th hours, for

the following classes: shop and round-house laborers, scrap yard employees, stationary engineers and firemen and other boiler room and power house employees; time and a half to be paid after the 10th hour. All other classes will be paid pro rata for the 9th hour of service and time and a half thereafter. Monthly rated employees are to be paid double time if they work the seven legal holidays; if not working on these holidays they will receive the ordinary rate. Hourly rated employees will receive straight time for holidays. Sunday work will be paid for at straight time rates for all employees. Two weeks holidays with pay will be given, after one year service, to all clerical workers, station masters, baggage masters, station gate-men, ticket examiners, supervisors of crews and crew dispatchers, car checkers, train checkers, car markers, baggage checkers, and various grades of station employees. The Canadian Brotherhood of Railway Employees was represented at the conference by J. F. McGuire, General Chairman of the Grievance Committee; A. E. Lawrence, General Secretary; Chas. Stewart, acting Vice Chairman, and other members of the grievance committee.

The Canadian National Rys. and their employees who are members of the C.B.R.E. also came to an agreement on rules and working conditions about June 17, when points arising out of the award made in 1921 by the arbitration board, of which Rev. Byron Stauffer was chairman, on which disagreement existed, were also settled.

Notice has been given by the Railway Association of Canada to maintenance of way employees' representatives that a downward revision of wages paid to such workers is intended. The reduction contemplated is from 3c. to 5c. an hour, and would amount to approximately 10%. The date of notice would make the reduction effective July 10. About 30,000 men are affected. Notice has also been given by the Railway Association to the shop employees, members of A.F. of L., Railway Employees' Department, Division 4, that reductions in pay approximating those recently made for shopmen by the U.S. Railroad Labor Board are to be made. In addition, the individual railways have informed their employees outside of shop, maintenance of way and train service, that a reduction in wages corresponding to reductions recently ordered by the U.S. Labor Board is intended.

Speaking generally, developments in the wage situation in Canada are coinciding very closely with those in the U.S., as is to be expected in view of the inter-relationship of the railways and the employees' organizations, and the similarity in conditions. It may be anticipated that reductions made on U.S. railways will be followed by reductions on Canadian lines applying to the same classes of employees. So far, in Canada, as in the U.S., no action has been taken to reduce wages or alter working conditions of train service employees.

United States.—Following the conclusion of hearings on wage reductions sought by the carriers, the U.S. Railroad Labor Board on May 25 issued decision 1028 (docket 1300) by which, effective July 1, the wages of maintenance of way employees and railway shop laborers are reduced about 13%. From the

wages prevailing as fixed by decision 147, the following reductions per hour are made: 1. For bridge, building, painting, construction, mason and concrete, water supply and plumber foremen, 5c. 2. For assistant bridge, building, painting, construction, mason and concrete, water supply and plumber foremen, and for coal wharf, coal chute, and fence gang foremen, pile driver, ditching and hoisting engineers and bridge inspectors, 5c. 3. For section, track and maintenance foremen, and assistant section, track and maintenance foremen, 3c. 4. For mechanics in maintenance of way and bridge and building departments, except those that come within the scope of agreements with the Federated shop crafts, 4c. 5. Mechanics' helpers in maintenance of way and bridge and building departments, 1c. 6. Track laborers, and all common laborers, in maintenance of way department and in and around shops and locomotive houses not otherwise provided for herein, 5c. 7. Drawbridge tenders and assistants, pile driver, ditching and hoisting firemen, pump engineers and pumpers, crossing watchmen or flagmen, and lamp lighters and tenders, 5c. 8. Laborers employed in and around shops and roundhouses, such as locomotive watchmen and wipers, fire builders, asphalt men, flue borers, coal passers, coal chute men, etc., 5c. According to a report made by the Board's statistical department, maintenance of way employees' purchasing power, on the basis of wage rates, was 39.5% greater in Jan. 1920 than in Dec. 1917. After the wage increase in May 1920 it was 57.8% greater; then, owing to decline in living costs, it was still 54.1% greater after the wage reduction in July 1921, and after this latest reduction it is still 44.5% greater. It is estimated that this decision will save to U.S. railways \$3,000,000 annually. A dissenting opinion was filed by the Board's labor members, in which the majority decision was severely criticized.

By decision no. 1036 (docket 1300) issued June 5, the Board cut shopmen's wages by from 5 to 9c. an hour. The reduction is effective July 1, and it is estimated that the saving to the railways will be \$50,000,000 yearly. The order stated that the reduction in wages should be made from the prevailing wages, as established by decision 147: 1. Supervisory forces, whether paid by the month or by the hour, no decrease. 2. Machinists, boilermakers, blacksmiths, sheet metal workers, electrical workers, carmen (except freight car men), moulders, cupola tenders and core-makers, including those with less than four years experience, all crafts, 7c. an hour. 3. Freight carmen, 9c. an hour. 4. Regular and helper apprentices and helpers, and helpers all classes, c. an hour. 5. Car cleaners, 5c. an hour. This leaves the average wages of machinists 70.3c. an hour and car repairers 64.4c. an hour. In a report dealing with the relation between these wages and living costs, the Board states that the machinists' new wages give them a purchasing power 18.8% greater than in Dec. 1917, and that carmen's new wages give them a purchasing power 45.7% greater than in Dec. 1917. A dissenting opinion was filed by the Board's labor members.

On June 16 the Board issued a third decision, affecting the wages of clerical and station employees, stationary engine and boiler room employees, signal em-

plies, etc. The chief reductions ordered by this decision are as follows, in cents per hour: A. Clerical and station forces. 1. Storekeepers, assistant storekeepers, chief clerks, foremen, subforemen and other clerical supervisory forces, 3c. 2. Clerks with experience of two or more years in railway clerical work, or clerical work of a similar nature in other industries, or where their cumulative experience in such clerical work is not less than two years, 3c. 3. Clerks with an experience of one year or less than two years, 4c. 4. Clerks with less than one year experience, 4c. 5. Clerks without previous experience hereafter entering the service will be paid \$60 a month for the first six months, and \$70 a month for the second six months. 6. Train and locomotive crew callers, assistant station masters, train announcers, gate-men and baggage and parcel room employees (other than clerks), 3c. 7. Janitors and elevator operators, office, station and warehouse watchmen, and employees engaged in sorting waybills and tickets, operating appliances or machines for perforating, addressing envelopes, numbering claims, and other papers, gathering and distributing mail, adjusting dictaphone cylinders and other similar work, 4c. 8. Office boys, messengers, etc., 4c. 9. Station, warehouse, platform, transfer, dock, pier, storeroom, stock-room and team truck freight handlers or truckers and others similarly employed, 4c. 10. All common laborers in and around stations, storerooms and warehouses not otherwise provided for, 4c. B. Stationary engineers, stationary firemen, engine room oilers, boiler room water tenders, and coal passers, are all reduced 2c. an hour. C. Signal Department employees. Signal foremen, assistant signal foremen and signal inspectors are not reduced. Maintenance and gang foremen are reduced 5c. an hour, as are also signalmen, and assistant signalmen. Foremen are reduced 6c. an hour. D. Floating equipment and other property remanded to interested parties. E. Train dispatchers, no reduction. This decision is also effective July 1. It is estimated that it will mean a saving to the railways of \$27,000,000 annually. In this case also a dissenting opinion was filed.

At the time of writing (June 23) the Board had issued no decision in connection with wages for telegraphers and it is not considered likely that one will be issued in time to become operative July 1. The Board has taken no action in connection with train service employees' wages.

Consequent upon the decision affecting maintenance of way employees being issued, a meeting was held at Detroit, headquarters for the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, attended by general chairmen for the organization, and presided over by E. F. Grable, President. It was unanimously decided to contest the Board's ruling, and to issue a strike vote to all members. At a meeting in Cincinnati on June 6, attended by representatives of the 11 organizations whose members' wages were concerned in the Board's hearings, it was decided to submit strike ballots to all shopmen at once, and to the members of the other organizations as the wage reductions were announced. Following other meetings at Cincinnati, formal notice was served on the Labor Board by leaders of 10 of the organizations to the effect that a strike would be called if one is authorized by a majority vote of

the employees affected, about 1,225,000 in number. A Cincinnati press dispatch of June 16 stated that no general strike ballot would be sent out by the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, but that the general committee of that organization on each road would determine whether to call for a strike vote, and where such votes were taken the men would be bound by the result. A Cincinnati press dispatch of June 19 however, stated that a strike vote would be taken among all the organization's membership, and that all employees belonging to the organization would be called out on strike if the leaders were given authority by the vote.

This organization has agreements on several roads binding the men to abide by the Labor Board's decisions, but, according to the press report quoted, E. H. Fitzgerald, President of the organiza-

tion, stated that if the employees vote to participate in a strike, these agreements will be abrogated on due notice. If the press report is correct, it is evident that the wage decreases ordered will be opposed by every organization representing the employees affected. It is stated that the U.S. Government is taking the necessary steps to back up the Board's decision in the event of a strike.

The controversy between the Labor Board and the Pennsylvania R.R., detailed in previous issues of Canadian Railway and Marine World, was brought up recently in the U.S. Circuit Court of Appeals at Chicago, as the result of an appeal made by the Labor Board from a former decision made against it. After hearing, the court took the case under advisement. It is stated that if the Labor Board does not get a satisfactory decision in the Court of Appeals, it will carry the case to the U.S. Supreme Court.

Birthdays of Transportation Men in July.

Many happy returns of the day to:

A. A. Allen, Vice President, The Holden Co., Montreal, formerly Master Mechanic, Timiskaming & Northern Ontario Ry., born at Grafton, Ont., July 7, 1870.

J. H. Black, ex-Superintendent, Timiskaming & Northern Ontario Ry., now at Toronto, born near Smiths Falls, Ont., July 8, 1874.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., July 25, 1877.

D'Alton C. Coleman, Vice President, Western Lines, C.P.R., Winnipeg, born at Carleton Place, Ont., July 9, 1879.

G. C. Conn, ex-Freight Traffic Manager, Perc Marquette Rd., Detroit, Mich., now Director of Traffic, Buick Motor Co., Flint, Mich., born at Woburn, Mass., July 1, 1867.

A. R. Curran, Paymaster, Eastern Lines, Canadian Northern Ry., Toronto, born there, July 3, 1877.

H. Darling, Locomotive Foreman, Grand Trunk Pacific Ry., Smithers, B.C., born in Northumberland, Eng., July 27, 1873.

H. Eager, General Superintendent of Rolling Stock, Canadian National Ry., Winnipeg, born at Waterloo, Que., July 15, 1868.

J. T. B. Foote, Manager, Prince Edward Hotel, Canadian National Ry., Brandon, Man., born at Quebec, Que., July 17, 1878.

E. Hartshorn, Assistant Superintendent, Montreal Division, Quebec District, Canadian National Ry., Montreal, born at West Stewartstown, N.H., July 21, 1877.

S. J. Hungerford, Vice President, Operation and Maintenance, Canadian National Ry., Toronto, born at Bedford, Que., July 16, 1872.

C. W. Johnston, Assistant General Passenger Agent, G.T.R., Montreal, born at Actonville, Que., July 27, 1879.

M. Kelly, Resident Engineer, Farnham Division, Quebec District, C.P.R., Farnham, born at Thamesville, Ont., July 6, 1878.

T. King, Superintendent, Detroit Division, Western Lines, G.T.R., Durand, Mich., born at Dunbarton, Ont., July 18, 1869.

A. E. Lock, Superintendent Car Service, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Albany, N.Y., July 14, 1879.

W. B. Logan, District Storekeeper,

Maritime District, Canadian National Ry., Moncton, N.B., born at Amherst, N.S., July 30, 1869.

G. A. McNichol, Assistant General Freight and Passenger Agent, Canadian National-Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Montreal, July 31, 1876.

H. D. Mackenzie, Master Mechanic, Canadian National Ry., Edmundston, N.B., born at Churchville, N.S., July 22, 1864.

M. H. MacLeod, Vice President, Construction, Canadian National Ry., Toronto, born in Skye, Inverness-shire, Scotland, July 13, 1857.

J. M. Macrae, Assistant General Freight Agent, Canadian National-Grand Trunk Pacific Ry., Winnipeg, born at Stornoway, Scotland, July 31, 1884.

W. G. Manders, Assistant Freight Traffic Manager, Canadian National Ry., Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., Winnipeg, born at Owen Sound, Ont., July 24, 1876.

Neil Marple, Foreman Blacksmiths and Iron Machines, Michigan Central Rd., St. Thomas, Ont., born in McKillop Twp., Ont., July 1, 1860.

J. E. Morozain, General Superintendent, Quebec District, Canadian National Ry., Quebec, born at Wheatland, Que., July 31, 1875.

P. C. Perry, Assistant Resident Engineer, Canadian National Ry., Regina, Sask., born at Fort William, Ont., July 27, 1889.

R. E. Perry, Assistant General Freight Agent, Canadian National Ry., Montreal, born at Drayton, Ont., July 5, 1876.

R. Preston, Superintendent of Motive Power, Eastern Lines, C.P.R., Montreal, born at Toronto, July 28, 1863.

Gerard Ruel, K.C., General Counsel, Canadian National Ry., Toronto, born at St. John, N.B., July 5, 1866.

Capt. J. Springett, Agent for Holland, C.P.R., Rotterdam, born at Eastbourne, Eng., July 20, 1879.

George Stephen, Freight Traffic Manager, Canadian National Ry., Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., Toronto, born at Montreal, July 5, 1876.

Sir Thos. Tait, President, Frederick & Gray, Ltd., Ry., and Coast Co., Montreal, born at Melbourne, Que., July 24, 1864.

M. M. Todd, Vice President and

Treasurer, Grand River Ry. and Lake Erie & Northern Ry., Galt, Ont., born there, July 22, 1891.

H. B. Walkom, ex-Assistant Engineer, C.P.R., Vancouver, now at Port Haney, B.C., born at Montreal, July 31, 1858.

G. A. Walton, General Passenger Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, July 17, 1881.

N. B. Walton, Assistant General Superintendent, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Palmerston, Ont., July 27, 1884.

G. T. R. Webster, Commercial Agent, G.T.R., Moncton, N.B., born at Pictou, N.S., July 2, 1885.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry., Grand Trunk Pacific Ry., and Canadian Government Rys., last including the Intercolonial Ry., Prince Edward Island Ry. and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government:—

	Revenue	Expenses	Net	deficits
	1922	1921	1922	1921
Jan.	\$3,210,401	\$10,433,564	\$2,223,163	\$2,363,058
Feb.	7,659,743	10,026,572	2,375,829	2,986,998
March	9,413,100	10,937,547	979,412	2,382,699
April	7,804,222	9,153,738	1,349,516	2,636,639

\$33,083,466 \$10,411,421 \$6,927,955 \$1,019,654
Deer. \$7,665,331 \$11,737,150 \$4,091,699

Approximate earnings for May, \$9,481,224, and for two weeks ended June 14, \$3,073,969, against \$3,343,394 for May, and \$9,444,292 for two weeks ended June 14, 1921.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1922, compared with those for 1921. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimaux & Nanaimo Rys. and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net	Decreases
	1922	1921	1922	1921
Jan.	\$3,237,075	\$10,434,498	\$3,838,477	\$15,749,448
Feb.	11,303,698	10,649,206	654,488	158,904
March	13,847,627	11,427,120	2,420,507	30,402
April	12,331,371	10,782,598	1,548,773	1,097,559

\$18,920,665 \$43,713,421 \$5,107,244 \$1,444,612
Deer. \$6,881,319 \$5,436,707 \$1,444,612

Approximate earnings for May, \$13,253,000, and for two weeks ended June 14, \$6,095,000, against \$13,490,000 for May, and \$6,198,000 for two weeks ended June 14, 1921.

Grand Trunk Railway.

Following are monthly gross earnings, expenses and net earnings, with increases or decreases, for 1922:—

	Gross	Expenses	Net	Increase
	1922	1921	1922	1921
Jan.	\$5,551,317	\$4,984,955	\$3,566,544	\$1,512,320
Feb.	5,657,487	4,709,385	966,062	934,767
March	6,118,814	5,159,028	965,286	387,605
April	\$17,440,118	\$14,589,966	\$2,001,152	\$2,392,902
Iner.	\$862,742	\$3,256,647	\$2,392,902	
Deer.	\$862,742	\$3,256,647		

Whistling for Railway Crossings.—The Railway Association of Canada has issued the following circular: "The following communication has been received from the Board of Railway Commissioners in regard to sounding of highway crossing warning signals by engineers: 'One of our inspectors informs us that he has watched the matter and very few of the engineers give the proper whistle when approaching highway crossings. He suggests a closer supervision on the part of the railway officers, as a remedy. Will you please take the matter up in that direction?' It is suggested that member lines take such action as may be necessary to have the requirements of circular 18, March 17, 1922, made effective."

Reductions in United States Railway Rates.

The U.S. Interstate Commerce Commission concluded its hearing in the general railway rate enquiry on March 13, after three months of sittings, and on May 24 last, its long-awaited decision was made public. It did not issue a formal order requiring the railways to place certain rate reductions in effect, but simply issued recommendations, stating that it had come to the conclusion that certain reductions should be made on July 1 and asking the railways to let it know if they proposed to make such reductions without the necessity of formal orders being issued. The percentages of reductions recommended by the Commission for the railways to place in force would bring about, on the average, a 10% general reduction, this being accomplished by the recommendation that in the eastern group, rates should be reduced to leave them 26% above what they were prior to the rate increase by ex parte 74, in 1920, instead of 40%; in the western group, 21½%, instead of 35%; in the southern and mountain-Pacific groups, 12½%, instead of 25%, and on inter-territorial traffic, 25%, instead of 35%. It was also recommended that rates reduced as a result of the Commission's orders in the western grain and livestock cases, and by the railways' voluntary 10% reduction on agricultural products, should not be further reduced, but should be continued in effect. The Commission also found that the fair return prescribed by the Transportation Act of 1920 should be set at 5.75%. No reduction in passenger fares was recommended.

The Commission stated in part as follows: "The carriers took the position at the hearings that we must be guided solely by how much traffic we have and certain in the past. With this we cannot agree. Our function under the law is not that of mere computers, and cannot thus be atrophied. The duty to prescribe rates for the future carries with it the obligation to exercise an informed judgment upon all pertinent facts, present and past, in order to forecast the future as best we may. Practically all agree that stability of freight rates is highly desirable and that normal traffic may not well be expected until the present widespread expectation of rate reductions is realized or dispelled. To assume that rates can or should be stabilized on the present high basis is futile. The period of deflation has been in progress more than 15 months; demand is reviving; prices are showing a tendency to stabilize upon a level much below that of 1920, but above that of pre-war years, and conditions of the agricultural and manufacturing industries have greatly improved in the past few months. We are of opinion that general reduction in the rate level, as substantial as the condition of the carriers will permit, will tend not only to lessen the transportation burden, but also to equalize and stabilize the conditions under which commerce and industry are carried on, with consequent fuller assurance to the carriers of realizing the fair return contemplated by law."

On May 29 a large number of eastern U.S. railway executives voted to govern themselves in accordance with the Commission's recommendations, and to place in effect the reduced rates prescribed. Southern and southern railway executives came to a similar decision on the

same date, but at both meetings strong exception was taken to the Commission's action in finding that 5.75% on the value of the railways constitutes an adequate annual return, the view being held that such a rate does not constitute a fair return and that it will not enable the roads to properly finance themselves and render an adequate transportation service to the public. On June 1 the western railways' presidents decided to adopt the Commission's recommendations.

All the members of the Commission did not agree in the findings, although all were convinced of the necessity for some reduction in freight rates. Some of them were in favor of ordering reductions on specific commodities, instead of a general decrease, and it is stated that these commissioners represented the views of the Washington Administration. It would, however, be a very difficult thing to effect large reductions on specific commodities on the U.S. roads without causing gross discriminations, for the reason that many of the roads derive by far the larger part of their revenue from the transportation of one or two important commodities, and for other reasons. It seems that the recommendations for a reduction will be put into effect substantially as made by the Commission.

Self-Propelled Cars on Steam Railways.

Canadian Railway and Marine World for June gave on pg. 289, details of two gasoline railway passenger motor cars, which the Canadian National Rys. are having built in Montreal and one of which is to be operated between Pictou and Trenton, 30.6 miles, on the Ontario District, Ottawa Division, Pictou Subdivision, and between Trenton and Trenton Jet, 1.6 miles, on the Maynooth Subdivision, also between Trenton and Napanee, 34.6 miles, on the Rideau Subdivision. We are advised that the first car has been delivered, and made its first run on June 28. The second car, of the same type will, it is expected, be completed about the third week in July, when it will be placed in service on the Ontario District, Ottawa Division, Brockville Subdivision, between Brockville and Westport, 44.4 miles.

The Canadian National Rys. have also ordered a gasoline railway passenger motor car from the Service Motor Truck Co., Wabash, Ind., for operation on the Maritime Division, Campbellton District, Bathurst Subdivision, between Bathurst and Campbellton, N.B., 62.96 miles, to replace the storage battery car which has been operating there, and it is expected that the storage battery car will be run between Montreal and Ottawa. The gasoline car ordered is similar to one ordered for the Greater Winnipeg Water District Ry. and which was described and illustrated in Canadian Railway and Marine World for May, pg. 231.

The Canadian National Rys. have arranged to put two storage battery cars in operation on the Ontario District. The car bodies will be constructed and the electrical and mechanical equipment assembled in the Niagara, St. Catharines & Toronto Ry. shops at St. Catharines, Ont. While arrangements for this work are not yet made, rapid progress is being made, and it is the intention to have the cars ready for service as quickly as possible.

The Bad Order Freight Car Situation.

The Railway Association of Canada reports the total number of freight cars on Canadian lines for the 15 days ended May 15 as 199,354. The allowance for bad order cars on the A.R.A. basis, which assumes a total of 7% of the cars in bad order, was 13,955, and the actual number was 23,045, an excess of 9,090 on the 7% basis. The figures 23,045 represent 11.5% of the cars in bad order. There were 30,450 surplus cars in good order, making the total not in use 53,495, or a total of 40,540 idle cars on the basis of 7% of the cars being normally in bad order. For the 15 days ended June 1, the total number of freight cars on Canadian lines was 200,319. The allowance for bad order cars on the A.R.A. basis was 14,022, and the actual number was 22,408, an excess of 8,386 on the 7% basis. The figures 22,408 represent 11.2 per cent. of cars in bad order. There were 37,616 surplus cars in good order, making the total not in use 60,024, or a total of 46,002 on the basis of 7% being normally in bad order.

The American Railway Association's Car Service Division reports that the total number of freight cars on line on class 1 roads on May 15 was 2,271,998. Of these 334,108 were in bad order, representing 14.7% of the total, compared with 14.1% on May 1. Out of 1,027,623 box cars on line on May 15, there were 16,530, or 1.57%, in bad order; out of 58,325 refrigerator cars, there were 8,725, or 15%, in bad order; out of 964,443 gondolas, there were 137,704 or 14.3% in bad order; out of 81,876 stock cars, there were 10,190 or 12.4% in bad order, and out of 97,487 flat cars, 12,718, or 13% were in bad order.

In both Canada and the U.S., the change in the bad order car situation from a month previous to the dates given above has been very slight.

Railway Rolling Stock Orders and Deliveries.

The C.P.R., between May 12 and June 12, received 9 steel sleeping cars, the frames for which were built by the National Steel Car Corporation, from its Angus shops, Montreal.

Montreal Locomotive Works, during May, delivered 6 locomotives, 4-8-2 type, with cylinders 22 x 26 in., for the South Atlantic Rys., and 1 switching locomotive, type 0-4-0, for John B. Smith & Sons.

Telegraph, Telephone and Cable Matters.

Frederic Roper, Secretary-Treasurer. Dominion Telegraph Co., who died in Toronto Jan. 17, left an estate valued at \$12,274.

J. B. Paterson has been elected a director of the Montreal Telegraph Co., succeeding his brother, the late R. McD. Paterson.

The Commercial Cable Co.'s s.s. Mackay-Bennett sailed from Halifax, June 6, for England, where her crew will be transferred to the company's new cable repair steamship, John W. Mackay.

Canadian National Telegraphs have opened offices at Lake Joseph and Rainy Lake, Ont., and closed offices at Carrier Jet and Pont Rouge, Que., and Solina, Ont. The name of the office at Notta-

way, Que., has been changed to Semnetere.

The Marconi Wireless Telegraph Co., on June 1, opened a continuous wave coast station at Louisburg, N.S., for communicating with ships at sea, at long ranges. The charge is 18c. a word, in addition to the land line rates to the wireless station.

G. W. Gard, Vice President and General Manager, Commercial Cable Co., died at New York, June 16, after a long illness. He was also a director of the Halifax and Bermuda Cable Co. and the Direct West Indies Cable Co. operated between Halifax, N.S., and Bermuda and Jamaica.

Evan H. Goodfellow, heretofore Inspector of Telegraphs, C.P.R., Calgary, Alta., has been appointed Superintendent of Telegraph Traffic, Eastern Lines, C.P.R., Montreal, vice J. B. Mitchell, whose appointment as Superintendent of Telegraphs, Eastern Division, C.P.R., Montreal, was announced in a recent issue.

William Stanton Emery, whose appointment as chief operator, C.P.R. Telegraphs, Montreal, was announced in our last issue, was born at St. John, N.B. July 18, 1865, entered telegraph service there in 1889, with the Western Union Telegraph Co., and worked for a short time as operator at Fredericton, N.B. He entered Canadian Pacific Telegraphs service in 1889 at Fredericton, and was transferred to St. John, N.B., as operator there, and then transferred to Halifax, N.S., as local agent, which position he held up to the time of his present appointment.

Evan Holmes Goodfellow, who has been appointed Superintendent of Telegraph Traffic, Eastern Lines, C.P.R., Montreal, was born at Campbellton, N.B., Aug. 20, 1878, and entered transportation service, March 23, 1893, since when he has been, to Aug. 1899, agent and operator, British Columbia Division, C.P.R.; Aug. 1899 to March 1901, operator, C.P.R. telegraphs, Vancouver, B.C.; March 1901 to July 25, 1903, operator, Canadian Government telegraphs, Northern British Columbia and Yukon; July 1903 to May 5, 1915, consecutively operator to May 5, 1915, consecutively, operator and wire chief, C.P.R. telegraphs, Vancouver, B.C.; May 5, 1915, to May 1, 1922, Inspector of Telegraphs, C.P.R., Calgary, Alta.

Among the Express Companies.

The Canadian National Ex. Co. has opened offices at Folleigh, N.S., Beresford, N.B., and Cushing Jet, Que. The office at Cushing Jet is about a mile west of Cushing, which is now a star point.

The Canadian National Ex. Co. has opened offices at Deschailons, Petite Riviere, St. Irenee, Les Eboulements, Fortville, Que., Nash Creek, N.B., and has closed its offices at Solina and Sellwood, Ont.

John Pullen, President, and W. C. Muir, Vice President and General Manager, Canadian National Express Co., made an inspection trip to the Pacific coast in June.

The Canadian National Ex. Co. has opened offices at St. Anthony, N.B., Chaudiere and Dixie, Que., Grand Beach, Narcotche, Victoria Beach and Libau, Man., and Stewart, B.C., and has changed the name of its office at York, Ont., to Danforth.

The Canadian National Ex. Co. has

placed its service on the Canadian National Rys., between Charlottetown and Murray Harbor, Lake Verde and Vernon, Harmony Jet and Elmira, P.E.I.; Campbellton and St. Leonards, Gloucester Jet and Shipigan, Pokenouchette Jet and Tracadie, Moncton and Buctouche, and Havelock and Elgin, N.B., and has opened offices at Elmira, Murray Harbor, Murray River, Vernon River, Vernon, P.E.I., Buctouche, Burnsville, Caraque, Elgin, Grand Anse, Havelock, Inkerman, Kedgewick, Notre Dame, Stonehaven, Shipigan, St. Quentin, Tracadie and Upsalquitch, N.B.

The Special War Revenue Act, 1915, has been further amended by providing, among other things, that every express company carrying on business in Canada, shall, before, issuing a money order or traveller's cheque, affix thereto a 2c. adhesive stamp, if the amount does not exceed \$50, and for every additional \$50 or fraction thereof, 2c., but not to exceed, in any case, \$2. The company may charge the amount of the stamps affixed, and collect same, from the purchaser of the order or cheque, or from the payee. The company shall, before delivery of the order or cheque, cancel the stamp by writing across them, initials, or other identification, of the company with the date of issue.

R. Mason, for 31 years messenger, Dominion Ex. Co., between Calgary, Alta., and Vancouver, B.C., is to be superannuated on July 1. He entered the service July 17, 1889. In Jan. 1909, in a railway accident, he went, with his car, over a steep bank into the Fraser River, at Saddle Rock, B.C., and had a narrow escape from drowning. He was severely injured and was unable to resume his duty until April 1, 1910. He is 73 years old, and until a few months ago was in active service. In Nov. 1921, while crossing the street, after leaving the C.P.R. station at Vancouver, he was struck by an automobile, and had both legs and one arm broken, besides other injuries. Although he made a satisfactory recovery, and was anxious to resume duty, it was felt, in view of the seriousness of the accident, that he should enjoy a rest.

The Niagara Peninsula Growers, Ltd., applied to the Board of Railway Commissioners for suspension of American Railway Express Co.'s tariff 150-A, C.R.C. 1,333 and the Express Traffic Association for Canada's tariff C.R.C. no. ET 752, as applicable to rates on fruit and vegetables moving from Ontario ports. The Board passed order 32,448 on May 31, suspending the American Railway Express Co.'s tariffs C.R.C. 1,333, 1,341 and 1,344, also item 1 in Express Traffic Association's tariff C.R.C. no. ET 732, and ordered that the rates published in American Railway Express Co.'s tariff C.R.C. 1,193 be continued in effect until further order. The board passed order 32,511, June 19, as follows: Upon it appearing that an agreement has been made between the American Express and the American Express shippers and the American Express Co., as to rate on fruit from Ontario ports, order 32,448, is rescinded, provided that the company publish and file a local rate on fruit and vegetables from Fenwick to Hamilton, Ont., of 40c per 100 lb. in lieu of the rate of 50c per 100 lb., published in the company's tariff C.R.C. 1,344.

Standard Specification for Steel Railway Bridges has been issued by Canadian Engineering Standards Association, Ottawa, in book form, 78 pages.

Electric Railway Department

The Canadian Electric Railway Association's Annual Meeting at Quebec.

The Canadian Electric Railway Association's 18th annual meeting, held at Quebec, Que., June 1, 2 and 3, was undoubtedly the most largely attended, and in every way the most successful in the Association's history. The principal innovations, both of which proved very acceptable, were the presence of ladies at the social functions, and the exhibits of electric railway equipment, appliances and supplies, which were shown for the first time by manufacturers. The great success of the meetings was the result of weeks of enthusiastic and untiring preparatory work by the Association's President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.; its Vice President, Major F. D. Burpee, Manager and director, Ottawa Electric Ry., who was also chairman of the papers committee; W. J. Lynch, General Manager, Quebec Ry., Light, Heat & Power Co., who was chairman of the entertainment committee; and M. Reade, Superintendent, City Division, Quebec Ry., Light & Power Co., who was chairman of the exhibits committee. As the meeting was in progress when Canadian Railway and Marine World for June went to press, we were able to give considerable information as to the programme and some of the proceedings in that issue, which will therefore not be repeated in this one.

The Business Meetings.

On June 1 the members, associate members and guests attending registered at the Drill Hall, on Grand Allee, starting at 9 a.m., and at 10 a.m. President Gale took the chair and introduced Sir Charles Fitzpatrick, Lieutenant Governor of the Province of Quebec, who welcomed the members, in a very interesting and practical speech, in which he dwelt on the necessity of Canada developing its great water power resources, so as to make it less necessary to depend on the United States for coal supplies. He paid a warm tribute to the Quebec Ry., Light, Heat & Power Co.'s services, and to the unfailing courtesy with which its patrons are treated. The Mayor of Quebec, Jos. Sampson, also gave an address of welcome. The members then accompanied the Lieutenant Governor and the Mayor to the Drill Hall's ground floor, where a thorough inspection of the exhibits was made.

President Gale resumed the chair at noon, and read his address, which was followed by the presentation of annual reports by Secretary L. E. Moreland and Treasurer A. Gaboury. The address and reports were published in Canadian Railway and Marine World for June pgs. 308 to 310. President Gale then appointed the ex-presidents of the Association who were present, viz., A. Eastman, E. A. Evans, A. Gaboury, Lt. Col. J. E. Hutcheson and C. L. Wilson, to act with him as a nominating committee to recommend the names of members for election as officers, etc., for the ensuing year. This was followed by a display of moving pictures "Safety for all," and "The only way," by National Safety League.

The afternoon session opened with a paper on valuation of street railway assets, their maintenance and depreciation, by L. A. Herdt, D.Sc., and F. G. Burr, B.Sc., consulting electric engineers,

Montreal, which is given in full further on in this issue, together with the discussion.

This was followed by a paper on the modern street railway motor, by J. K. Stotz, Canadian Westinghouse Co., which was discussed at length by W. G. Gordon, Railway and Traction Engineer, Canadian General Electric Co.; W. R. McRae, Superintendent of Rolling Stock and Shops, Toronto Transportation Commission; W. H. Sawyer, East St. Louis, Missouri; and T. C. Berkeley, English Electric Co. The paper will be published fully in a future issue.

Canadian Electric Railway Association.

Honorary President, E. A. Robert, President, Montreal Tramways Co., and Quebec Ry., Light, Heat & Power Co.

Honorary Vice President, Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co.

Honorary Council—Thos. Ahearn, President, Ottawa Electric Ry.; Acton Burrows, Proprietor, Canadian Railway and Marine World; Geo. Kidd, General Manager, British Columbia Electric Ry.; Lt.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., and director, Quebec Ry., Light, Heat & Power Co.

President, Major F. D. Burpee, Manager and director, Ottawa Electric Ry.

Vice President, H. H. Couzens, General Manager, Toronto Transportation Commission.

Executive Committee, The President, the Vice President, the immediate past President (G. Gordon Gale, Vice President and General Manager, Hull Electric Co.) and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; D. W. Houston, Superintendent, Regina Municipal Ry.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.; R. Mayne-Reade, Superintendent, Quebec Railway, Light & Power Co.; W. R. Robertson, General Superintendent of Railways, Hydro-Electric Power Commission of Ontario; W. L. Weston, Manager, Nova Scotia Tramways & Power Co.; H. E. Weyman, Manager, Lewis County Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Treasurer, W. S. Hart, Managing Director, Three Rivers Traction Co.

Auditor, Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Ry.

Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry., Ottawa, Ont.

Organizing Committee, Canadian Railway and Marine World, Toronto.

lished fully in a future issue.

On June 2, D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., read a paper on motor buses and trackless trolleys, which is given in full further on in this issue. It was discussed at length by M. W. Manz, Ohio Brass Co., who illustrated his remarks by a number of pictures, plans, etc.; also by Capt. Gordon Bell, Vice President, Eastern Canada Truck Co., Hull, Que.; L. H. Palmer, Assistant to President, Baltimore, Electric and Light Co.; W. R. Robertson, General Superintendent of Railways, Hydro Electric Power Commission of Ontario; and W. G. Naegle, Canadian Brill Co.

This was followed by moving pictures "The romance of the rail and power," by Canadian Westinghouse Co.

J. F. H. Wyse, General Manager, Canadian National Safety League, suggested that a safety section of the Associ-

ation be formed, to be affiliated with the Canadian National Safety League, and that a committee be appointed by the incoming executive to deal with the subject. It was decided to refer the suggestion to the incoming executive committee.

In the afternoon, E. B. Entwistle, Lorain Steel Co., read a paper on welded track joints which will be given in full, later. It was discussed by W. F. Graves, Chief Engineer, Montreal Tramways Co., R. L. Brown, Metal and Thermit Corporation, and others.

The National Safety League then showed moving pictures "The rule of reason," and "Comrades of success," after which G. W. Lynden, President, Association of Manufacturers of Chilled Car Wheels, of which the Dominion Wheel and Foundries Ltd., Toronto, is a member, showed pictures depicting various processes of manufacturing chilled iron car wheels.

On June 3 there was a session in the morning devoted to unfinished business and the election of officers. The nominating committee reported suggesting the following members as officers and members of the executive committee.

Honorary President—E. A. Robert, President, Montreal Tramways Co., and Quebec Railway Light, Heat & Power Co. Honorary Vice President—Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co.

Honorary Council—Thos. Ahearn, President, Ottawa Electric Ry.; Acton Burrows, Proprietor, Canadian Railway and Marine World; Geo. Kidd, General Manager, British Columbia Electric Ry.; Lt.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., and director, Quebec Ry., Light, Heat & Power Co.

President—Major F. D. Burpee, Manager and director, Ottawa Electric Ry. Vice President—H. H. Couzens, General Manager, Toronto Transportation Commission.

Executive Committee—The President, the Vice President, the immediate past President (G. Gordon Gale, Vice President and General Manager, Hull Electric Co.) and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; D. W. Houston, Superintendent, Regina Municipal Ry.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.; R. Mayne-Reade, Superintendent, Quebec Railway, Light & Power Co.; W. R. Robertson, General Superintendent of Railways, Hydro Electric Power Commission of Ontario; W. L. Weston, Manager, Nova Scotia Tramways & Power Co.; H. E. Weyman, Manager, Lewis County Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Treasurer—W. S. Hart, Managing Director, Three Rivers Traction Co. Auditor—Lieut. Col. G. C. Royce, General Manager, Toronto Suburban Ry.

The committee's report was adopted unanimously.

Subsequently the President, with the

executive committee's approval, appointed D. N. Gill, Comptroller, Ottawa Electric Ry., as Secretary.

Votes of thanks were passed to the retiring President, G. Gordon Gale, and other members of the executive committee, also to Secretary Moreland, for the way in which the Association's work had been carried on and developed during the past year, and also for the very excellent arrangements made in connection with the annual meetings; to the Que-

bec Railway, Light, Heat & Power Co., for courtesies extended during the meetings; to W. J. Lynch, R. M. Reade, H. G. Bosse, P. J. Quinn, Mr. Cassels, and other officials of the company, for their untiring energy in arranging for the entertainment and instruction of the members; to the manufacturers and supply men for the enthusiastic way in which they had arranged for display and ex-

hibitors as well as the members. He was

plies occupied the whole of the Drill Hall's ground floor, the most complete arrangements for them having been made by the chairman of the exhibits committee, R. M. Reade, who worked unceasingly and secured splendid results. The other members of the committee, Don M. Campbell and A. Gaboury, not being able to be in Quebec much previous to the meeting, the great bulk of the work fell on Mr. Reade, who did it admirably, and received great praise from the ex-

Association's annual meeting.

The programme provided the following times for the inspection of exhibits: June 1, following the opening addresses, also from 12.30 to 1 p.m., and from 5 p.m.; June 2, from 9 to 10 a.m., from 12.30 to 1 p.m., and from 6 p.m.; June 3, from 9 to 10 a.m. Owing to business meetings being in progress during some of the periods allotted for the inspection of exhibits, the latter feature was somewhat interfered with and it has been suggested that in future years at least a whole afternoon, preferably on the second day of the meeting, be devoted to them.

The associate members presented R. M. Reade with an inscribed silver mounted cane; P. J. Quinn with a silver cigarette case; and Mr. Garrett with a gold eversharp pencil.

The associate members re-elected their committee for another year, viz.:—Don M. Campbell, Preston, Ont., chairman; H. T. Gibbs, Canadian Westinghouse Co.; and O. C. Rehfuess, Canadian Car & Foundry Co.

Entertainment and Social Features.

A splendid series of entertainment for the members, associate members and the ladies accompanying them was carried out, the arrangements for which had been made most thoroughly by the chairman of the entertainment committee, W. J. Lynch, General Manager, Quebec Ry., Light, Heat & Power Co. It was started on June 1 at 1 p.m., with a get-together luncheon for members, associate members and ladies at the Chateau Frontenac, some 300 attending. President Gale, who occupied the chair, expressed satisfaction at having among the guests the members of the American Electric Railway Association's executive committee, which had met in Montreal on the previous day, all the members of that Association's way committee, and the New England Electric Railway Association's President, Don M. Campbell, chairman of the electric railway supply men's committee, proposed the health of the American Electric Railway Association, to which its President, R. L. Todd, President Indianapolis Traction & Terminal Co., responded. In the evening a perfectly arranged and excellently served dinner was held at the Chateau Frontenac, some 350 members, associate

Exhibits in Drill Hall at Quebec, during Canadian Electric Railway Association's Annual Meeting.

bee Railway, Light, Heat & Power Co., for courtesies extended during the meetings; to W. J. Lynch, R. M. Reade, H. G. Bosse, P. J. Quinn, Mr. Cassels, and other officials of the company, for their untiring energy in arranging for the entertainment and instruction of the members; to the manufacturers and supply men for the enthusiastic way in which they had arranged for display and ex-

hibitors as well as the members. He was ably assisted by P. J. Quinn, Master Mechanic, Quebec Ry., Light & Power Co., and Mr. Garrett of Mr. Reade's office staff. The hall was divided into separate spaces for each exhibitor, as shown in the diagram published in Canadian Railway and Marine World's May issue. Each space was neatly railed off, and the hall was profusely decorated with

Canadian Electric Railway Association's Annual Meeting at

hibits; to the military authorities for giving the use of the Drill Hall; and to the technical and local press for the interest taken in the meeting and the very complete reports of it. This was followed by moving pictures, "Careless America," and "The high cost of hurry," by National Safety League, and "The St. Maurice River and Hydro Electric Development," by Shawinigan Power Co.

The Exhibits

of electric railway equipment and sup-

flags and adorned with flowers. Direct current was installed for the use of those having moving exhibits. A list of the exhibitors, their exhibits and the names of their representatives was given in Canadian Railway and Marine World for June, on pgs. 307 and 308. The various exhibitors made a very complete display, which was most creditable in every way, particularly when it is borne in mind that it was the first time there had been an exhibit in connection with the

members, ladies and other guests being present. The chair was occupied by Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., and director Quebec Light, Heat & Power Co., who proposed the King's health.

The other toasts were "Our Guests," proposed by Vice President Burpee and responded to by J. H. Welsh, Executive Secretary, American Electric Railway Association, and Capt. Emile Trudel, Chief of Police, Quebec City; "The Lad-

ies," proposed by F. J. Neale, Vice President, Dominion Wheel and Foundries, Toronto, and responded to by C. L. Wilson, Assistant Manager, Toronto and York Radial Railway; "The Association," proposed by C. L. Henry, President Indianapolis & Cincinnati Traction Co., and responded to by President Gale; "The Press," proposed by Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry., and responded to by F. Carrell, President, Quebec Telegraph; Acton Burrows, Proprietor, Canadian Railway and Marine World, and H. H. Norris, Managing Editor, Electric Railway Journal. The dinner was followed by an informal dance, during which the Royal Canadian Artillery band played on Dufferin Terrace.

On June 2, the members, associate members, ladies and other guests went in the afternoon by steamboat from the Champlain wharf, up the St. Lawrence

River, to a little above the Quebec Bridge, a splendid view of which was obtained. Refreshments were served during the trip. In the evening there was a reception and ball at the Chateau Frontenac, the guests being received by Mesdames G. Gordon Gale, F. D. Burpee, W. J. Lynch, H. G. Bosse, R. M. Reade and Don M. Campbell.

Through the Quebec Ry., Light, Heat & Power Co.'s courtesy the ladies were given a trip around the city, on an open observation car, and on return to the Drill Hall were entertained at afternoon tea.

A group photograph of a large number of the members, associate members and guests was taken in front of the Drill Hall and is reproduced herewith.

On the morning of June 3, the Quebec Ry., Light & Power Co. gave a number of the members, associate members, ladies and other guests an electric car

ride to Montmorency Falls and the shrine of Ste. Anne de Beaupre, and some of the members and guests started on a steamboat trip to the Saguenay, returning to Quebec on the morning of June 5. On the Saturday afternoon a number of the members and guests were present at a garden party given by Sir Charles and Lady Fitzpatrick, at Spencerwood, the beautifully situated Government House, in honor of the King's birthday.

W. J. Lynch's efforts as chairman of the entertainment committee were greatly assisted by Mesdames Lynch, Bosse and Reade, of Quebec, who were most assiduous in their attentions to the visiting ladies.

The Royal Canadian Artillery Band, under the direction of Chas. O'Neill, Mus. Bac., provided most excellent music in the Drill Hall during each morning, and on Dufferin Terrace during the first evening.

Motor Buses and Trackless Trolleys.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., read the following paper:—The evolution of urban transportation has reached a stage where serious consideration must be given to the various developments of the trackless vehicle. It is not the intention of this paper to demonstrate the advantages of any particular scheme, but an effort will be made to introduce some of the questions that must be considered before making a choice of satisfactory and economical equipment to meet various sets of conditions. A healthy discussion of these questions may help some of us to make wiser decisions than would be the case if we were to follow our personal fancies. It will be as well to keep in mind the fact that the subject has been forcibly thrust upon us by the competitive efforts of jitney and independent bus drivers, whose competition may be unfair and unprofitable, but which, nevertheless, takes away from us a certain proportion of our most desirable business.

Competitive Business.—It would appear to the writer that, in some cases,

There is no doubt that greater comfort can be obtained on the rails, and, in equally congested district, the rail-borne vehicle should be faster and more economical when comparisons of costs are made on an equal basis.

Non-competitive Business.—There are cases where, owing to topographical reasons and narrow streets, it may be found more economical to handle certain traffic by running buses over a short distance, rather than to carry passengers around a longer distance over existing tracks. Where such a condition exists, it is liable to attract competitors, especially if transfer privileges are of no value. This competition might be anticipated to the net advantage of the company. As soon as deflation of costs allow of a generous building programme, we will be confronted with many demands for extensions through thinly populated districts, and, in many cases, connections with separate small but thriving suburban communities will be desirable. This kind of business is admittedly unprofitable, for a time, and even if an extra fare is charged at first

be profitable to the company, has been reached. Due consideration must be given to the fact that good pavings do not usually precede population in outlying districts in this country. Steel rails may be essential in many cases.

Expediency.—In almost every city, there are examples of existing lines that are a source of actual loss, but which must be maintained on account of contracts, commission rulings, level crossing regulations and other restrictions. The point has been stressed by many writers that full consideration of such conditions might show that losses could be reduced by trackless operation. A decision in favor of the bus or trackless trolley, in such cases, will usually be dependent upon the necessity of track renewals or regrading of streets.

Unfairness of Competition.—When making comparisons of operating costs between buses and electric cars, it will usually be noted that the electric railway is called upon to build and maintain its own roadbed which carries, at the railway's expense, a large part of the independent street traffic and that it is heav-

Quebec—Members and Guests in front of the Drill Hall.

ily taxed in many other ways for the public benefit. The development of bus traffic on this side of the water has not reached the point where the public conscience demands an equivalent rate of taxation on bus operation for profit over the public highways. Furthermore, it is usual for the independent bus to appear only at such hours and places that show promise of fair profits. Municipal regulations of street cars, on the contrary, oblige them to maintain a service throughout the lean hours at a loss. The operation of buses by organized com-

panies to offset the low density of traffic, there is always the danger that political pressure will force the extension of city fare zones long before the traffic becomes profitable on such a basis. The tendency will be to leave this business to independent bus operators, but the suggestion is offered that such communities might be efficiently served, without loss, if a definite contract were arranged under which the community will undertake to make good any operating losses and to guarantee a fair return on the investment until a density of traffic, that will

ily taxed in many other ways for the public benefit. The development of bus traffic on this side of the water has not reached the point where the public conscience demands an equivalent rate of taxation on bus operation for profit over the public highways. Furthermore, it is usual for the independent bus to appear only at such hours and places that show promise of fair profits. Municipal regulations of street cars, on the contrary, oblige them to maintain a service throughout the lean hours at a loss. The operation of buses by organized com-

panies may hasten the day when both methods of transportation will be subjected to the same treatment.

Questions.—The writer suggests that each delegate to the Association's annual meeting be prepared to express an opinion on the following questions as applied to his own peculiar set of conditions.

Has the self propelled vehicle a legitimate place in the economical operation of my system?

What are the obvious advantages of such operation?

What are the possible disadvantages of such operation?

What are the limitations of such operation?

Will the service be competitive with existing lines or not?

Is it to be considered as a temporary expedient or as permanent?

How do ultimate costs of operation compare?

What is the best type of vehicle? Gasoline propelled or trackless trolley? Double or single deck? Low floor, quick loading type with easy riding springs, or just a small street car body mounted on a high truck designed for freight handling? Will the cost of a heavier chassis, heavier engine and wheels, and the cost of an extra man, as well as the cost of hauling extra weight all day, justify the addition of a double deck for fine weather and rush-hour traffic?

Would the district affected be better and more economically served by a larger fleet of single deck, one man buses, operating to suit changing traffic conditions or by a smaller number of two-man, double deck buses, costing more per bus unit for both investment and operating charges?

What kind of tires should be used? Is roadway smooth enough to allow use of solid tires? Is roadway so rough that pneumatic tires are essential for comfort as well as to keep down cost of engine, chassis and body maintenance? Are cushion tires satisfactory? Are cushion wheels, with hard tires satisfactory? Does the pneumatic tire offer better traction on snow-covered roads?

Is light weight of great importance? Would the possible saving of fuel and tires justify the higher rate of maintenance and depreciation of a light body? Does not a light body construction allow of consequent saving of weight and cost of engine, chassis, lighter tires and lighter engine?

Is the nature of the route such that sight-seeing traffic and joy-riding will be a factor?

What are the controlling factors in laying out a satisfactory bus system for a given service? Should the size and carrying capacity of the unit be based upon satisfactory and efficient operation during 90% of the daily performance under normal conditions, or are the prin-

ciples of efficiency and overall economy to be ignored in order that we may handle temporary overloads during 10% of the time in service? Is it not more economical when both operating and interest charges are included, to utilize buses designed for the light service of the normal hours, and to provide extra equipment of a suitable character to take care of the rush hours only? Should overloading of buses with standing passengers be allowed at rush hours or at any other time?

Passenger load is so great a proportion of the total weight carried that the practice of overloading of buses can only result in low efficiency and high cost of service, because a vehicle having capacity for overloads must be designed throughout to carry these overloads safely. The extra capacity is taken advantage of for only about 10% of the time. During 90% of the running time, this extra weight and rigidity under light loading will result in a higher cost of operation than necessary. The first cost and unusual charges will also be relatively high. The most successful bus operating company in America, after long experience and careful study, has adopted a cast-iron rule of "a seat for every passenger." Real economy is thus obtained under conditions that make for comfort and satisfaction of the passengers and a correspondingly high hope of success.

Valuation of Street Railway Assets, Their Maintenance and Depreciation.

The following paper by L. A. Herdt, D.Sc., and E. E. Burr, E.Sc., consulting electrical engineers, Montreal, was read:—According to the *Encyclopedia Britannica*:—"An efficient service of street traction may be defined as one which, while giving a reasonable return on the capital invested, provides the public, without disfigurement of the highway, with a quick and frequent service of cars. To ensure this efficient service, given by electric tramways, two systems of management are known, viz.: public management and private management."

Absolute public ownership and operation is believed in by many. It has been tried on electric tramways and on railways as well. The tramway is but a particular type of railway. Railways have a great bearing on the agricultural, industrial and commercial interest of a country, and both their organization and their rates are matters of vital public concern. The street railway plays a similar part in the welfare of the towns and cities. Electric tramways are an essential public necessity and it is a matter of grave importance to make certain that such essential public service be effectively performed and the rates charged equitable.

A Federal commission of enquiry was appointed in May, 1919, by President Wilson, of the United States, to enquire into the alarming situation confronting street railway companies in America, due to the sudden sharp rise in wages and cost of material, and the utter inability of the companies to face these new charges with a 5c fare limit. After an enquiry lasting from June, 1919, to July, 1920, during which the most competent of experts, as well as the leaders in banking, commerce, civil government, street railways employees' associations, and street railway companies had been heard; conclusions and recommendations were made, a few of which are listed as

follows:—The electric railway is an essential public utility and, as such, should have the sympathetic understanding and co-operation of the public. The electric railway industry, as it now exists, is without financial credit and is not performing its public function properly. The industry can be restored to a normal basis only by economical operation, improved tracks, equipment and service, and the certainty of a fair return on the investment. The electric railways must expand to meet the growing needs of their communities; therefore, the first essential is to restore their credit, in order to enable them to secure the new capital required for the extension and improvement of service. Restoration of credit involves a readjustment of relations, which will remove public antagonism, provide public co-operation, and ensure to the investor the integrity of his investment and a fair rate of return thereon. The fair valuation of the property employed in the public service is an essential condition to a fair solution of the street railway problem. Municipal governments should tax the companies as lightly as possible. Cost-of-service contracts are in the experimental stage, but, where tried, they seem to have secured a fair return upon capital, established financial credit, and resulted in reasonably satisfactory service. Subject to a proper safeguarding of the public's right eventually to acquire the property, such contracts are advisable. Public operation not being practicable under present conditions, private ownership and operation should be maintained.

It will be seen from the above that this Federal commission placed great importance upon a fair valuation of the property and the necessity of protecting the investment. It stated amongst other recommendations that:—"A fair valuation of the property employed in the

public service is an essential condition to a fair solution of the street railway problem. Again—in the words of Mr. Justice Harland, of the U. S. Supreme Court: "What a company is entitled to ask is a fair return upon the value of that which it employs for the public convenience."

The correct principle is thus briefly stated, the practical application of this principle, however, is a matter of some difficulty. This principle involves the conception of a property which has an actual value and a fair return is to be given to the owner for the service provided by his property. This value being ascertained, the determination of what constitutes a fair return becomes a matter of consideration of the financial risk involved and the facility with which money can be attracted for an investment in such properties. What then is "the value of a property which is employed for the public convenience?" In one sense, value cannot be separated from its fair return. A property only has value inasmuch as it is a paying venture, and from this point of view, the above statement of principle becomes merely a statement of the right of a company to hold property and gives no light on the further matter of the right for that property to earn a return for its owners.

It is clear that some other meaning must be attributed to the word "value" and that a property may be considered valuable for public service irrespective of its power to earn a return for the owners. The company should therefore receive a fair return based on the service value to the public of that property which is employed in this public service. How can this service be ascertained and what are the items of property which perform this service? There is the physical property engaged in the service, consisting of the various structures,

pieces of apparatus, equipment, land, etc., which are used for public service, together with such contingencies and overhead expenses as are necessary to build the property completely. There are the items which are not tangible or appreciable to the physical senses, but which are employed in the public service, and without which the service could not be given. The chief of these are the brains and the experience of the management of the company. The whole value is the sum of the two.

The difficulty of appraisal of the intangible values has made it customary to base the fixed return on the value of the physical property only, but the other part of the value should not be lost sight of, and some means must be provided for paying a fair return thereon, if by capable and efficient management such value to the public is created. The lack of incentive to create such an intangible value has been the chief reason of failure of many public owned and operated utilities, and the compromise plan of public control, but privately owned operated utilities cannot hope for better fate unless this value is realized and practical means devised for paying a return when such value is created. The Montreal franchise includes such a feature, in the form of an operating profit or bonus available to the company if it keeps within the fixed allowances while maintaining service to standards laid down each year by the Tramways Commission, and provision is also made for its participation in such surplus as may be earned, after meeting all the charges of the service.

We have then to determine the value of the physical property which is employed for the public service, as the available basis for computing the fair return to the company. It is seldom possible to use the capitalization of the company as a fair measure of the value of the physical property. The possibility of additions and betterments to the property having been made from earnings resulting in a too low value on the one hand, watering of stocks on the other hand, makes such data unreliable. Complete purchase records are seldom available. If available, they must be modified to conform to the general trend of prices. The many difficulties of obtaining a proper basis of fact under such circumstances has led to the preparation of an estimate of the cost of reproducing a property of identical items to be completed at the date of the appraisal, and including all costs of organization of the company and financing the works ready to give the service in the manner and at the cost of operation of the existing company. The value thus estimated is generally called the reproduction cost, and some notes on routine of this part of the work are given in the appendix hereto. Some considerable difficulty occurs where the reproduction of items to be thus estimated are of a type which in the progress of the art have been superseded by later designs. A reasonable procedure in this case appears to be to estimate on the modern equivalent of the actual item, and make allowance for any operating saving resulting, which is regarding merely changes of fashion. This amounts in fact to an allowance for obsolescence in the old equipment, and must be done with judgment and intimate knowledge of the trend of design of apparatus. This may also be taken into account after completing the above estimate.

With the completion of the reproduction

estimate comes the question of depreciation. A number of public utility commissions in the United States have adopted the idea that, for rate cases as well as in purchase proceedings, the depreciated value of the reproduced property should be ascertained. If the property has not been maintained up to a standard of full service efficiency by the discarding of worn out or obsolete parts, an allowance for obsolescence in the old equipment can be made. Full service standard will, however, represent in a street railway property probably not more than 85% of the reproduction cost, that is to say, at no time is a property actually new, time is required to construct it, and it begins to wear before it is actually placed in service. The 15% difference between its reproduction cost new and its value representing full service standard has been employed in the public service, and the property could not exist without the company making this 100% expenditure, and it would seem required to rehabilitate the property to a full operating condition of standard

E. A. Robert,

Railway, Light, Heat & Power Co., and
Honorary President, Canadian
Electric Railway Association.

efficiency. This, adopted as a principle in rate cases, would safeguard the undoubtedly right that in rate cases the value allowed should be determined as the value of the physical property new, and that depreciation should only be deducted for the amount which would be due from paying a return on the full new value of obsolete parts of a property, or of nearly worn out parts, as well as high operating and maintenance charges, while granting the company its return on the value of that which it uses in the public service.

It will be noted that the above suggestion amounts to depreciating the property value only if parts of the same are obsolete, while making no deduction from new value for parts which are merely worn, as it is the undoubted right of the company that its property value shall be maintained unimpaired under the stress

of the service rendered to the public. It may be claimed that in many cases past rates have been insufficient to allow the company to replace obsolete parts or to maintain the property to full service standard. Such cases may be considered on their merits, by an examination of the history of the particular company and allowances made if found desirable. In a large property it is often feasible to provide for replacements in the annual budget and pay for the same as a current expense. This is the scheme adopted in the Montreal Tramways contract. It has the advantage of meeting such charges from the people who benefit by the expenditures, rather than making the people of today provide the money to reduce the cost of service to later generations. Smaller properties, however, may find it impossible to assess current revenue for such major replacements, and should accumulate a fund from revenue for this purpose. Such fund should be limited, as its purpose is to meet replacements for obsolescence, and with the standardization of the art the risk of obsolescence, is growing smaller. Experience has shown that a definite annual contribution to such fund, if no limit is set, results in an accumulation for which no proper use can be found, and therefore is an unjustifiable charge under public service.

Appendix.

Routine of Estimating Reproduction Cost New.—Inventory, Classification.—It is desirable to prepare the inventory under a standard schedule of accounts. The Interstate Commerce Commission's schedule is frequently adopted, but several accounts may be grouped for convenience when the property is small. The Board of Railway Commissioners of Canada schedule is very similar to that used in the United States.

Establishing Unit Cost Prices.—From 1899 to 1915 the price of labor and material increased or decreased, in a sufficiently normal manner to enable the establishing of a curve showing the rise and fall in prices each year for the period covered. This is called establishing a "trend curve" and such curves are of very great assistance in obtaining unit cost prices. Starting late in 1915, the costs of material and labor showed abnormal increases due to war conditions. The peak was reached in 1920, the present day costs have receded somewhat from the peak, but they are still high. It is possible, however, if the "trend curve" is established to 1915, to extend this curve from 1915 to 1922, not following the actual costs of labor and material during this period, but to increase relatively equal to the average increase per year during the period from 1899 to 1915. It will, however, be found that regulating commissions hesitate in approving or disapproving any theory in arriving at a replacement value which is not based on actual costs, considered in conjunction with the actual local conditions.

Functional and Physical Depreciation.

In addition to the operating expenses and ordinary maintenance charges, a fair return on a fair valuation of a public utility company must take care of depreciation, whether functional or physical. That is, the wastage in property, called physical depreciation, or the discarding of property due to functional depreciation, must be taken care of. This can be done in either of two ways, by setting up a reserve fund into which annual appropriations, from revenue, are made.

Replacements and renewals are chargeable to this fund; or, by providing additional capital for replacements and renewals. If one or the other of these are not done, the property and service will in time disappear. No one will admit that it is possible for any length of time to charge to capital account all such items of property as go entirely out of existence, due to wastage or obsolescence.

Maintenance and Renewal Fund.—The Montreal Tramways contract provides in article 92, paragraph 2, as follows: "The entire plant and property of the company used and necessary to provide the public transportation service shall at all times be maintained at the highest practical standard of operating efficiency. For the purpose of maintenance, renewals, replacements and substitutions made necessary by wear and tear, age, obsolescence, inadequacy, accident or other cause, a sum shall be set aside for each revenue car-mile, exclusive of car-house and car-yard miles, made by cars equipped with motors, and other sums for each revenue car-mile made by trailers and by freight cars, always exclusive of car-house and car-yard miles. Such sums shall be known as the maintenance allowance, and shall be placed in a fund to be known as the maintenance and renewals fund. Any items of property contained in the valuation schedule A, or added to the tramways system since June 30, 1917, which shall become worn out, or which for any other reason shall at any time be deemed no longer useful as a part of such system, shall be disposed of under the direction of the Commission, subject to the provision of any trust deed, upon the most advantageous terms obtainable, and the proceeds thereof, with, when required, the consent of any trustee for the bondholders of the company, shall be paid into said maintenance and renewals fund, or if such consent be not forthwith obtained, then said proceeds shall be deducted from capital value. The proceeds from the sale of land and buildings shall not form part of said fund, but shall, however, be deducted from capital value. Out of said maintenance and renewals fund shall be paid from time to time the actual necessary expenses of maintenance and renewals, and of replacements and substitutions as hereinafter provided, and any moneys not needed for such purposes during any year shall remain in said fund and be held in reserve until required for such purposes, or for substitutions, betterments, additions and extensions as hereinafter provided. Whenever any portion of the plant is replaced, or other property substituted therefor, the cost of such replacement or substitution up to the full reproduction cost of the unit or article so replaced or substituted for, as fixed by the said valuation, shall be paid out of the maintenance and renewals fund, and any cost in excess of such reproduction cost shall be paid out of moneys supplied by the company as hereinafter provided, and the amount thereof shall be added to capital value. In case any item of property which shall have been added to the plant subsequent to June 30, 1917, shall be replaced or substituted for, then the actual cost to the company of such item shall be paid from the maintenance and renewals fund, and any cost in excess of such actual cost shall be paid out of moneys supplied by the company as hereinafter provided, and the amount thereof shall be added to capital value. In case the cost of any such replacement or substitution shall

be less than such reproduction cost or such actual cost, as the case may be, or in case any item of property included in said valuation or thereafter added to the plant shall become worn out or be abandoned or sold as hereinafore mentioned, and shall not be replaced or substituted for, then the difference in cost or the full amount of the reproduction cost or the actual cost, or the proceeds of the sale, as the case may be, shall except to the extent that capital value shall be reduced by the proceeds of the sale of land and buildings as hereinafore provided, be appropriated out of the maintenance and renewals fund from time to time with the approval of the Commission, for the making of betterments, additions to and extensions of plant, as may be required, and the cost of such betterments, additions and extensions paid from such appropriations shall not be added to capital value.

"If at the end of the first year of operation under this contract or at the

Major F. D. Burpee,
Manager, Ottawa Electric Ry., Director, Ottawa
Traction Co., and President, Canadian
Electric Railway Association.

end of any subsequent year, it shall appear to the satisfaction of the Commission that the maintenance allowance herein fixed is insufficient, such allowance shall be increased for the ensuing year and from year to year as may be deemed necessary. If at the close of any year the Commission shall find that the maintenance allowance is excessive or that the maintenance and renewals fund is greater than prudent management of the tramways system required, then the Commission may reduce such allowance to any extent which it may see fit; provided that the maintenance allowance shall never be so reduced as to cause a reduction in the maintenance and renewals fund, except temporarily, below \$500,000, and in case such fund is at the end of any year found to be reduced below such sum, then the Commission shall forthwith increase the maintenance allowance in an amount sufficient to restore said fund to at least \$500,000. Said

fund shall be under the control of the Commission, and no moneys in it shall be paid out or loaned or invested except with the Commission's approval. In case the moneys in such fund are deposited in bank or invested, the interest thereon or the revenues derived therefrom shall be added to and become a part of said fund.

"In case the city shall purchase or acquire the property of the company at the termination of this contract, the maintenance and renewals fund, as then existing, shall become the property of the city, and the amount of such fund shall not be added to the purchase price, and any moneys then due by the company to said fund shall be deducted from the purchase price."

This paragraph is a long one, but of great importance. In brief it states that a basic condition of good service is that the entire plant and property be properly maintained. Replacement and substitutions are to be paid out of revenue up to the full reproduction cost of the item or part of the property so replaced, as fixed by the valuation which was made at the time of the contract. Any cost in excess of the reproduction cost now fixed in the valuation is charged to capital; any cost less than such reproduction cost is placed into the fund to be used for the making of betterments, additions to or extensions of the plant as ordered by the Tramways Commission.

J. F. St. Cyr, chairman, Montreal Tramways Commission, explained the working of the Montreal Tramways Co.'s franchise and said that the city preferred co-operation with the company, rather than municipal ownership. A. B. Ingram, Vice Chairman, Ontario Railway & Municipal Board, and L. Tait, Secretary, London Street Ry., also took part in the discussion.

H. E. Weyman, Manager, Lewis County Ry., in opening the discussion, said:—I will endeavor to consider this valuable paper from the public authority's point of view, and not our own, and I think this should be borne in mind during the discussion. The paper covers vital and important subjects, in fact it covers so wide a field that it is not possible with the limited time at our disposal to more than touch on the high spots. The valuation of a property must be impartial if it is to be effective. We have during the recent year heard a lot about valuations receiving a living wage, etc., which the public generally have upheld as only fair. Does not the same principal apply to those who have invested their money in street railway properties for the use and benefit of the public? They are just as much entitled to a living wage as any workman. Up to the present there appear to be two well known theories advanced upon which to base a valuation: 1. Reproduction cost. 2. Reproduction cost less depreciation. Dr. Herdt and Mr. Burr have suggested that Reproduction Cost be taken, which is the cost of reproducing the property, under certain conditions, and not, as advocated by some engineers and experts, the reproduction cost under the actual conditions existing at the time of the valuation, which is clearly advantageous to the company interested. The reproduction cost, less depreciation theory, upheld also by some prominent authorities, holds that it is improper to grant a reasonable return upon the actual reproduction cost at time of valuation, since the property has depreciated perhaps up to 50% of the reproduction cost, and the unit cost may be abnormally high or

low at that particular period of valuation. There is little doubt that there have been many cases where there has been a tendency to permit the property to depreciate much below a good operating standard, and when this is permitted, the ordinary operating and maintenance costs increase rapidly in practically the same ratio as the property has been allowed to depreciate, the final result being rehabilitation at a cost out of all proportion with the saving made in maintenance in previous years. "A stitch in time saves nine" still stands as a good motto. The Montreal Tramways starved the property, or permitted maintenance to accrue, but what a different tale is told of other properties.

The paper puts forward certain fundamental principles upon which to base a valuation. It is suggested that the reproduction cost, based on a "tend" curve of unit costs, covering a number of years, be adopted as fair, and that the full service standard, or standard of maintenance, be expressed as 85%, which shall be equivalent to 100% reproduction cost. In other words, the total depreciation is divided up into physical and functional, and 15% physical depreciation is allowed, the physical depreciation being the depreciation which starts during construction, and is always present, even if the property is maintained at the highest standard possible. The 15% represents the difference between the theoretical and actual practical conditions, and, therefore, should be taken care of. If the property is and has been maintained at 85% full service standard, 100% reproduction cost is the basis of the valuation. This, in itself, is an advancement, and will be, I think acknowledged as such by public authorities. We, therefore, come to the functional depreciation, which is obsolescence, accrued maintenance, and worn out parts, and is expressed at any figure under 85%, according to the condition of the property at the time of valuation. The whole question appears to hinge on this point. For instance, there are properties where the track has been permitted to deteriorate considerably, even to a point where the rails are held by the pavement only, and joints shimmied on the concrete base, so that when the pavement finally gives up the ghost a very heavy rehabilitation expenditure will have to be made, which the depreciation fund, in existence, will not pretend to take care of. The track is the foundation of the whole system and its condition affects the total operating expenses right along the line. Drainage is the foundation of the track, and, generally speaking, not enough attention is paid to this item. Other properties may be operating today only on account of the track having been maintained at a fairly high standard, the remaining portion of the property being in a considerably deteriorated state, but the effect in operating expenses not being as bad as in the former case. In any case, someone is paying abnormal high operating expense when the functional depreciation is high. If the company has been taking everything out and putting nothing back into the property, it is entitled to reproduction cost, suppose the equipment is and has been poorly maintained, so that its operating standard is low, and maintenance high, is it to be valued at reproduction cost? Should the company in both cases be allowed full reproduction cost, always allowing the 15% physical depreciation. If so, what inducement is there for a company to maintain its property at the

service standard. If someone was about to purchase the property, would not the functional depreciation be deducted from the value, which also would include an allowance for poor maintenance. This question would hinge on whether functional depreciation has been taken care of in the company's accounts. If adequate reserves for depreciation covering all accrued functional depreciation have been established, which means that the company has been granted an allowance through the annual depreciation charge, and at the same time received a return on its investments, and if this depreciation has not been used to liquidate bonds, or other indebtedness, but employed in making extensions or betterments, a valuation on reproduction cost should be allowed. On the other hand, if the company has not taken care of functional depreciation, but employed its net to the advantage of its stockholders, then the valuation is affected by the amount of functional depreciation. The question as to whether abnormal deferred and accrued maintenance of the pro-

ceeded. It is essential that careful and proper accounting be employed: A property or plant ledger should in all cases be employed, together with perpetual inventory, and the functional depreciation should be taken care of in this ledger. Such well kept records ought to be an aid, rather than a hindrance in securing justice and fair treatment at the hands of the public authorities. The Interstate Commerce Commission realized this, and in 1914 published a uniform system of accounting, which U.S. electric railways are supposed to follow. This system takes care of depreciation and property accounts. Had this been established and followed earlier many companies would have been the gainers. In Canada very few companies appear to follow this prudent system.

As pointed out by Dr. Herdt, functional depreciation is an expense and should be deducted from gross revenue before net profits are determined, and not as some do from net profits. Mr. Weyman concluded by suggesting that a sub-committee be appointed to consider the standard classification of accounts, and the including of depreciation in its various forms as an expense account.

An Electric Railway Declared to Be a Common Carrier.

The Ontario Legislature, at its recent session, passed an amendment to the Ontario Temperance Act providing that no intoxicating liquors may be transported for export on any public highway unless by a common carrier. Under this provision the Ontario License Board, seized 60 kegs of beer, belonging to the British American Brewing Co., on the cars of the Ontario Hydro Electric Ry., Essex Division, at the end of the Petite Cote spur line on June 19. Proceedings were taken against the brewery company for contravention of the provisions of the new Act, the summons being returnable June 21. When the case was called on that day, it was intimated that the defence would be that the electric railway is a common carrier within the meaning of the Act. An adjournment was made to June 23, when the police magistrate heard arguments and dismissed the case, holding that it was quite clear that the electric railway has the full powers of a railway, and is a bona fide common carrier.

Guelph Radial Railway Operation, Betterments, Etc.

Guelph, Ont., press dispatch: The Hydro-Electric Power Commission of Ontario, which is operating the Guelph Radial Ry. for the City, has presented to the city council's finance committee a complete statement of the operations under its management up to May 8, which shows that it has expended practically the whole of the \$150,000 which the city provided to put the road in good operating condition, and it now asks another \$150,000, which it says will be necessary to complete the job. Of this amount nearly \$90,000 is for new rolling stock, comprising a number of safety one-man cars. The Commission proposes to relay a large amount of the track with new steel, and put in new ties and otherwise improve the road. There is considerable dissatisfaction among a number of the citizens regarding the operation of the road, but Chief Engineer Gaby is optimistic as to it finally being made a paying proposition.

H. H. Cousins, A.M.I.E.E.,
General Manager, Toronto Transportation Commission
and Vice President, Canadian
Electric Railway Association.

property should be included in the functional depreciation, is one that I would like to ask. It is not clear to me that in the case of a piece of property poorly maintained, and in consequence, expensive in operation, which is being paid for by the public, and in order to bring it back to the service standard, which will cost a considerable amount over and above the depreciation allowance, that reproduction cost should be allowed. The company has taken a certain amount of money out of that item and the public is paying high maintenance in consequence. Should the company be allowed full value of an item which must have a certain amount on it, in addition to the depreciation allowance, if allowed for, to bring it to an efficient operating item?

It appears that if the functional depreciation is not taken care of, the bondholders are not properly or safely pro-

Mainly About Electric Railway People.

Major F. D. Burpee, Manager, Ottawa Electric Ry., and director Ottawa Traction Co., Ottawa, Ont., who has been elected President, Canadian Electric Railway Association, was born at Ottawa, Apr. 25, 1876, and commenced railway work in 1891 on District 4, Eastern Division, C.P.R., Ottawa, and transferred to Ottawa Electric Ry. service in 1893, since when he has been, in 1896, stationmaster; 1896 to 1898, cashier and paymaster; 1898 to Aug. 1912, accountant, during which time he also acted as assistant to the Secretary-Treasurer, and to the Superintendent. In Aug. 1912, on the resignation of Lt. Col. J. E. Hutcheson, to become General Manager, Montreal Tramways Co., he was appointed Superintendent. He enlisted in the 207th Battalion, C.E.F., in Feb. 1913, assisted in recruiting the battalion, and sailed for England as second in command in May 1917, with the rank of Captain, where the battalion was eventually broken up. He then transferred to the Canadian Railway Troops, reverted to the rank of lieutenant and went to France July 7, 1917, and was engaged at points all over the British front, becoming Captain and then Major. He returned to Canada again in 1919, and resumed his duties as Superintendent, Ottawa Electric Ry., in March 1919, and in 1920 was appointed Manager. In Feb. 1922, he was elected a director, Ottawa Traction Co. He was Vice President, Canadian Electric Railway Association, Feb. 1, 1921, to June 3, 1922.

Abner Coleman, father of E. P. Coleman, General Manager, Dominion Power & Transmission Co., Hamilton, Ont., died at Taunton, Mass., May 30. He was born at Stockport, Eng., May 31, 1845, and for many years was the Taunton Locomotive Manufacturing Co., and was one of the pioneers in the telephone business in southern Massachusetts.

Henry Herbert Cozens, A.M.I.E.E., General Manager, Toronto Transportation Commission, who has been elected Vice President, Canadian Electric Railway Association, was born at Totnes, Devonshire, Eng., Oct. 16, 1877, and was educated at the Independent College (Taunton School), Taunton, Eng. He served subsequently as an articled pupil in both mechanical and electrical engineering, with Allen & Sons, Taunton, and the Taunton Corporation Electrical Works respectively, and in 1898 was appointed Assistant Engineer, Bristol Corporation Electrical Department, Bristol, Eng., and held that position until 1901, when he was appointed Deputy City Electrical Engineer, Bristol. He resigned in 1909 on his appointment as Manager and Engineer, West Ham (London, Eng.) Corporation Electric Supply, and in 1912 was appointed to a similar position with the Hampstead Borough (London, Eng.) Council and continued for a year as Consulting Engineer for West Ham. He resigned that position at the end of 1912, on his appointment as General Manager, Toronto Hydro Electric System, and took up the duties of the latter position early in 1913. In 1920 he was given an indefinite leave of absence to become General Manager, Toronto Transportation Commission.

Max. A. Pooler, who has been appointed General Manager, New Brunswick Power Co., St. John, N.B., which operates the St. John Ry., succeeding Percy W. Thomson, resigned, was born at

Austin, Minn., in 1880, and graduated from the Case School of Applied Science, Cleveland, Ohio, in 1904, and the Purdue University, Lafayette, Ind., in electrical engineering, in 1905. From 1905 to 1907, he was with the Mahoning and Shinagou Ry. and Light Co. (now Pennsylvania-Ohio Electric Co.), Youngstown, Ohio; 1907 to 1914, Superintendent, New Castle, (Pennsylvania) Electric Co.; 1914 to May 26, 1922, General Manager, Hagerstown and Frederick Ry. (now Potomac Public Service Co.) and its subsidiaries, Northern Virginian Power Co., Potomac Light and Power Co., Chambersburg, Greencastle and Waynesboro Street Ry., Waynesboro (Pennsylvania) Electric Co. These companies as well as the New Brunswick Power Co., are under the managing directorship of Sanderson and Porter, New York.

E. A. Robert, President Montreal Tramways Co. and Quebec Railway, Light, Heat & Power Co., who has been elected Honorary President, Canadian Electric Railway Association, was born at Beauharnois, Que., March 3, 1865, and received his early education there, completing it in Montreal. During his early business life he was engaged in manufacturing in Beauharnois with his father, who had a woolen mill at that place. For several years he was in the wholesale woolen business, and after having made a success of it, sought a wider field and turned his attention to the power situation in the Province of Quebec. He organized the Canadian Power Co. and the erection of a big power plant at St. Timothee, followed. Later he obtained control of several smaller power companies in and around Montreal which merged into the Montreal Public Service Corporation, which is proving a big factor in the distribution of light and power throughout Montreal Island. Recently he has organized the Carillon water power project, which promises to result in the development of considerably over 200,000 h.p., and with the acquisition of other power sites throughout the province he will ultimately be in control of a power corporation that will prove a decided factor in the industrial life of the province. As President of the Montreal Tramways Co. for about twelve years, he has developed the system into one of the best on the continent, and he has in contemplation far-reaching improvements and extensions.

The Toronto Electrical Clean Up Proposition.

The various matters affecting the "clean up" deal between the Toronto Ry. Co., the Hydro Electric Power Commission of Ontario and the City of Toronto, having been the subject of conferences between the Premier, the Commission, the City Council and the company, are now thought to have been finally adjusted. As a result the bills relating to the matter, which were introduced at the beginning of the Ontario Legislature's recent session, were passed, and was stated, June 23, that things were shaping up for the signing of the various agreements at an early date.

One of the acts deals with the filing of claims against certain companies or their properties. It provides for filing of claims in respect of matters arising before Dec. 1, 1920, when the Commission

took over the various properties, following advertisements to be published by the Commission, after which the claims will be barred. The limit is April 1, 1923, and actions in respect of any such claim will be barred after Oct. 1, 1923, but this section is not to apply to certain claims under certain conditions. Claims in respect of certain broad issues are specifically exempt from the provisions of the act. It is also expressly provided that the act does not revive any right or claim against the companies which is already barred by statute or extend the period of limitation fixed by any statute in force in the province for the enforcement of any such claim.

Moncton Tramways, Electricity & Gas Co.

A contract is reported to have been made between the New Brunswick Hydro-Electric Commission, the Moncton City Council, the Moncton Tramways, Electricity & Gas Co., and the Canadian National Rys. for electric current. The contract provides for the supply to the city by the Commission of from 5,000,000 to 7,000,000 k.w. hours of power and energy at a cost not to exceed 2½¢ per k.w. hour from the Commission's development now nearing completion; the M. T. E. & G. Co. undertakes to take over one-half of the supply at 2½¢ per k.w. hour, and to distribute it to consumers at a cost not to exceed 10¢ per k.w. hour, for three years, during which the price may be reduced on appeal to the New Brunswick Public Utilities Commission, and on the expiration the Commission will fix the future price, in the absence of an agreement between the parties. The fourth party to the agreement, the Canadian National Rys., agrees to take 2,500,000 k.w. hours at cost price. The contract is to run for 15 years, subject to the reference to the Public Utilities Commission as stated above by users of power distributed by the M. T. E. & G. Co.

Fixing of Ontario Electric Railway Fares.

R. Cooper, Welland, introduced a bill at the Ontario Legislature's recent session to amend the Ontario Railway Act by repealing Sec. 210, and replacing it by a new one as follows: "Notwithstanding anything to the contrary contained in any agreement with a municipality or other corporation or persons, or in any special act, the fare to be taken by a railway operated by electricity shall be such as shall be approved of by the Ontario Railway and Municipal Board, and no fare shall be charged upon such railway which has not been so approved."

The bill was read a second time and referred to the municipal committee, which amended the proposed new section to read as follows: "Notwithstanding anything to the contrary contained in any agreement with a municipal or other corporation or person, the fare to be taken by a company on a railway operated by electricity shall be such as shall be approved of by the Board, and no fare shall be charged upon such railway which has not been so approved. The approval of the Board may be given subject to such terms and conditions as it may deem proper."

The opposition to the bill, which had been apparent from its introduction, culminated on June 7, when it came up in committee of the whole house, and was thrown out.

Toronto Transportation Commission's Works, Etc.

Canadian Railway and Marine World for June, contained on pg. 310 details of the track construction and rehabilitation work which was under way in May on the Toronto Transportation Commission's lines. On the section on King St., between Spadina Ave. and Sherbourne St., which embraced 12,160 single track feet of rehabilitation, the portion between York and Church Sts. has been completed, and the portion between Church and Sherbourne Sts. is nearly completed at the time of writing (June 15). The work on York St., between Front and Queen Sts., is about finished. The work on Gerrard St., between Pape and Greenwood Aves., is completed, as is the rehabilitation of track on Parliament St., between Gerrard and Winchester Sts. On Church St. the rehabilitation of the west track, between Queen and Dundas Sts., was completed June 1; the rehabilitation of both traffic on Church St. between Dundas and Bloor Sts. remaining to be done. On Dovercourt Road, the section between Bloor and College Sts. is nearly finished, and on Bloor St., west of Spadina, 6,600 ft. of work is completed. The extension along the Lake Shore Road, from Sunnyside to the Humber River, which was commenced April 24, is well under way; a connection has been installed with the track at Sunnyside, and construction of a loop at the western end of the new line is proceeding. The work on Howard Park Ave., between Dundas St. and the loop at the park, is nearing completion. The loop at the Woodbine race course is completed, but the loops at Neville Park Boulevard and at the intersection of Victoria Park Ave. and Kingston Road have not been started. In addition to the different works detailed in last month's issue, the Commission has begun work on the following extensions: On Main St., in the eastern part of the city, between Gerrard St. East and Danforth Ave., 3,000 single track feet of new construction, which was commenced June 2; an extension which will run on Carlaw Ave. from Gerrard St. East to Riverdale Ave., thence east on Riverdale Ave. to Pape Ave., and north on Pape Ave. to Danforth Ave.; 9,300 single track feet of new construction involved. The work was commenced on June 12.

The following rehabilitation work has been undertaken by the Commission, in addition to the works specified in Canadian Railway and Marine World for June: Rehabilitation of track on Carlton St., between Sherbourne and Parliament Sts., 2,550 single track feet. The work was commenced June 5 and is well under way. Rehabilitation of track on Queen St., from Kingston Road to Woodbine Ave., 3,400 single track feet. Work was begun June 7 and is well under way. On McCaul St., between Elm and College Sts., 2,400 single track feet, begun June 8 and well under way. On Spadina Ave., from Spadina Crescent to Bloor St., east track only, 2,300 single track feet, begun May 26 and nearing completion. On Dundas St., from the railway bridge to Howard Park Ave., 1,650 single track feet; begun June 12. On Dufferin St., from Exhibition loop to Queen St., 5,280 single track feet, well under way. On Dupont St., from Kendal Ave. to near Avenue Road, 6,120 single track feet, completed.

Extensions additional to those already stated are planned for this year as follows: On Dovercourt Road line, from Van

Horne St., to North on Oakwood Ave. to St. Clair Ave., 6,000 single track feet; on Yonge St., from Woodlawn Ave. north to Deloraine Ave., at the northern city limits, 37,100 single track feet.

Rehabilitation work additional to that already started is planned for this year as follows: On Gerrard St., from River St. to Broadview Ave., 3,850 single track feet (held up pending construction of a new bridge); on Bloor St., between Yonge and Church Sts., 1,750 single track feet; on Keesee Ave., between Queen and Dundas Sts., 9,850 single track feet; on Mac St., from Scarboro Beach Park to MacLean Ave., 1,830 single track feet.

The rehabilitation work specified in our June issue included 82,154 single track feet of track; the additional work of rehabilitation since started, as detailed above, includes 23,700 single track feet, and that planned for later in the season, 17,280 single track feet, or total rehabilitation for the season of 123,134 feet. The extensions mentioned in our June number totalled 31,332 single track feet of new track; additional extensions started, as noted above, total 12,300 single track feet, and extensions planned for later in the season total 43,100 feet, making the total new construction for the season, 86,732 single track feet. The grand total is thus 209,866 single track feet equivalent to 39.75 miles of single track. While the greater part of this is rehabilitation, it means a complete renewal of the track structure from subgrade to top of rail, from which it is evident that the Commission's track repair and extension programme for 1922 is a very extensive one. While in the foregoing description of the work all measurements have been given in single track feet, all measurements of double track except where specifically noted.

The work on Yonge St. will be by far the largest individual job that the Commission has undertaken, and while all is in readiness for a start to be made on it, operations have been held up pending the consummation of the "clean-up" deal, in which are concerned the city, the Hydro-Electric Power Commission of Ontario, and the Toronto Ry. Co. and various subsidiaries, and under which the city will come into ownership of certain railway and electrical utilities now operated by private interests. Yonge St., between Woodlawn Ave. and the northern city limits, is now operated by the Toronto & York Radial Ry.'s Metropolitan Division, single track line, and it is the intention to replace this by a double track line to the city limits, which will be operated by the Transportation Commission. A loop will be installed some distance north of the present Y at Woodlawn Ave. for turning some of the cars operating on Yonge St., so that when the new track-age is built, operation may be carried on without the necessity of ruining all the Yonge St. cars to the northern city limits. As stated above, the Yonge St. work will involve the construction of a double track line containing 37,100 feet of single track, and on account of dense traffic and unfavorable physical conditions, the work will be necessarily carried on under great difficulties, but the Commission anticipates bending every energy toward rushing the work through to completion as soon as the consummation of the "clean up" deal makes a start possible.

Car Houses.—Mention was made in a previous issue of the Commission having acquired an area of land on north Yonge St. for the erection of car houses. This construction, like the track construction on north Yonge St., is dependent on the "clean up" agreement being definitely settled, and has not been started.

Cars.—No decision has been arrived at in connection with the acquisition of additional new cars, and there are no new developments to report beyond the information published in our June number, viz., that in all probability the Commission will acquire, during the year, about 150 of the modern double track cars similar to those got in 1921.

Overcoats.—The Commission called recently for tenders for the supply of trainmen's uniform overcoats, about 1,200 being required. Overcoats are furnished the conductors and motormen every second year, the employee paying the full price for the first coat furnished, half the price of the second, and nothing thereafter.

Offices.—The Commission's staff is now established in the new offices in the Public Utilities Building, at the corner of Front and Yonge Sts., the repairs and alterations to the building being nearly completed.

Purchases.—The Commission made the following purchases during May: 5,500 tons grooved girder rail; special layout for inspection St. Lawrence Road, Harbord St. and Spadina Ave., King and Yonge Sts., King and Bay Sts., Dundas and Church Sts., King St. and Spadina Ave., Queen St. and Neville Park Boulevard; 2 right hand crossovers; 75,000 tie plates; 7,000 rail bonds; 3,900 pairs welding plates; 5 tons track bolts; 4,000 lb. welding rod; 68,000 lin. ft. 6 in. field tie; 1,000 ft. 6 in. sewer pipe; 70,000 lb. cadmium copper trolley wire; 40,000 lb. and 24,000 ft. bare copper cable; 65,000 lb. weatherproof cable; 1 ton no. 9 magnet wire; 1 cable winch; 300 trolley frogs; 400 type A crossarms; 200 type B crossarms; 1 reciprocating track grinder; 1 Seymour rail grinder; 12 rotating rock drills; 12 tie tampers; 1 little giant track drill; 3 electric hand grinders; 5 Barber-Greene bucket loaders; 1 boiler for Thew shovel; 1 hoist for lifting class shell bucket; 1 cutting torch; 150 drills; 50 batch boxes; 5 5-ton National truck chassis; 1 5-ton Gary truck chassis; 3 Ford touring cars; 2 C. H. & E. gasoline tractors.

The 50 motor cars, which were ordered from the Canadian Brill Co., have all been delivered.

Manitoba Public Utilities Commission.—The Manitoba Attorney General is reported to have made a statement on May 30, with regard to the Public Utilities Commission. The act under which the Commission was appointed remains in effect, but as the Legislative Assembly did not vote a supply, the Commissioner, P. A. Macdonald, and the staff could not be paid, and had been advised that salaries would not be paid after May 31. The order in council appointing them had not been rescinded; they had not been dismissed, neither had they resigned office. The Legislative Assembly, after defeating the Government by a vote of censure respecting its action in regard to the Commission, failed to enact legislation providing for the Commission's abolition. All rulings made by the Commissioner would remain in full force and effect.

Electric Railway Wages, Working Conditions, Etc.

London St. Ry.—On Dec. 30, 1921, the company under its agreement with its employees, gave 60 days notice of an intention to reduce wages of conductors and motormen to 40c, 43c and 45c an hour for first, second and third year men respectively, a reduction of 3c an hour. These rates were put into effect March 1. In the meantime negotiations took place between the company and the employees, but without result. The men asked for a maximum rate of 50c, and appealed to the Ontario Railway and Municipal Board, which decided it had no jurisdiction in the matter. The men then applied to the Dominion Labor Department for a board of conciliation, but before this was granted, they offered to accept a maximum rate of 48c an hour, as under the old agreement. The board of conciliation having been authorized, the company nominated F. H. McGuigan, Toronto, as its representative, and the men nominated F. H. McKay. These two failing to agree upon a chairman, the Minister of Labor named J. M. McEvoy, London. Considerable difficulty was experienced in fixing times for meeting suitable to all parties, and finally the board sat on June 9, 10 and 12. The company and the men had held various conferences, at one of which, on June 9, the company offered an advance of 1c an hour on the rates which went into effect March 1, for motormen and conductors, with certain adjustments of wages of some shops, line and track men. The hearing was continued before the board on June 10, when the men presented their case, and in the evening the men held a mass meeting to consider the company's offer, the vote at which was favorable to its acceptance, with the result that the board met on June 12, merely for the purpose of working out its report for the Department.

The compromise rates of 41c, 44c and 46c became effective June 16. All other terms of the old agreement are continued, the new agreement being merely an amendment of the old one as to rates of wages.

On June 13, the three members of the board of conciliation signed a report dealing with the facts of the settlement as above stated, and attaching a copy of the agreement as to wages, etc., and said that "it was a wise and reasonable solution of the dispute."

Niagara, St. Catharines & Toronto Ry.—We are officially advised that a new wage agreement between the company and certain of its employees, was signed June 1, to be effective Dec. 1, and thereafter, subject to 30 days' notice by either party of a desire to open the agreement for revision. The rates of wages per hour for passenger motormen and conductors are, 1st year, 40c; 2nd year, 43c; 3rd year, 45c; 4th year and after, 48c; freight motormen and conductors, 1st year, 40c; 2nd year, 41c; 3rd year, 42c; 4th year and after, 43c; trainmen 1st year, 40c; 2nd year, 41c; 3rd year, 42c; 4th year and after, 43c. Time and a half will be paid for over 10 hours a day to passenger conductors and motormen, and 15c an hour for over 10 hours, and time and a half for over 11 hours a day to freight train men. Motormen and conductors will be paid 25c a day, or part of a day, extra, when engaged in training students. The agreement also fixes general working conditions.

Ontario Hydro Electric Ry.—Essex Division.—The Hydro Electric Power Commission of Ontario is reported to have notified the employees of the Ontario Hydro Electric Ry., Essex Division, formerly the Sandwich, Windsor and Amherstburg Ry. that it is proposed to reduce wages by 5c an hour on July 1. The present rate for motormen and conductors, 45c for new men, rising to 53c was made early in 1920. In June 1921, the men asked for an increase of 3c, but after considerable negotiations the old agreement was continued. The day platform men at a meeting June 16, decided not to accept the proposed reductions, and the night men were expected to join in the refusal. It is probable that the men will apply to the Labor Department for the appointment of a board of conciliation.

The Ottawa Electric Ry. announced on Feb. 27 that the then existing rates of wages would not be continued after May 1, on which date the agreement with the employees would expire. This announcement was made by bulletin and a copy, with a letter was forwarded to the secretary of the local union. No notice was taken of this until March 23, when the union acknowledged receipt of the company's communication and submitted a draft of a new agreement calling for an 8-hour day and the following wages per hour for conductors and motormen: 1st year, 55c; 2nd year, 60c; 3rd year and after, 65c, with corresponding increases in other departments, which would make an all round increase of about 18%. A conference followed at which the union committee was informed that the company would not consider an 8-hour day or any increase in wages, but on the contrary could not continue the then existing scale of wages after May 1, as that was the cost of living had dropped approximately 20%, since the rate was fixed in May, 1920, the company proposed to reduce wages in proportion to that drop, as shown by the Labor Department's figures for April. The employees who are members of the union applied to the Labor Department for the appointment of a board of conciliation under the Industrial Disputes Act, giving the matter in dispute: "Demand made by Ottawa Electric Ry. on employees for increase in hourly rates of wages and in reduction in hours of daily labor." The company, before nominating its representative to the board, protested to the Labor Department that the primary matter in dispute was a reduction in wages which it had announced, Feb. 27, and not the increase demanded by the men three weeks later. On the assurance by the Minister of Labor that the board would have power to consider the whole question of wages, up or down, hours of labor and working conditions, a board was formed, consisting of G. D. Kelley, K.C., nominated by the company; E. J. Tully, nominated by the employees, and Alex. Smith, harrister, appointed as chairman by the Minister, in the absence of a nomination by the other two representatives.

The first matter brought before the board was the reason for its formation, and after some discussion, the chairman referred the matter to the Labor Department, and a letter was received from the Minister definitely broadening the board's functions so as to include all matters connected with wages and working

conditions. The last public meeting of the board was held early in May and subsequent private meetings were held to consider the evidence, and a report was prepared, dated May 18, and signed by the chairman and G. D. Kelley, representing the company; the men's representative disagreeing and subsequently drawing up a minority report. The majority report, and an annexed draft agreement provided for the following wages per hour for conductors and motormen: 1st year, 43c; 2nd year, 45c; 3rd year, 46c; 4th year and after, 48c. The working day should be considered to be 9 hours, to be completed within 10 consecutive hours, and time and a half is to be paid for overtime. A number of other alterations are recommended in the working conditions. The wages fixed in the recommended agreement represent a reduction of 12½% in the wages paid prior to May 1, while the company proposed a 20% cut. Mr. Tully in the minority report, advocated an 8-hour day, and a 48c hour rate, and gave reasons for dissenting from the majority report, as to the wages.

We are advised that the company has accepted the terms of the majority award, and is prepared to sign the agreement attached thereto. The men refused to accept this agreement. As the company had notified the men that a reduced rate of wages would be put into effect May 1, and as the first pay period ended May 15, a bulletin was issued that a payroll would be prepared for May 19, and that each man would receive a lump sum as an advance on account of wages for May. This step was taken by the company because the Industrial Disputes Act provides that no change should be made in wages or conditions of work while an award of a board is pending. The union officers protested to the Labor Department against it. The company, which is not legally required to pay its men twice a month, simply made a payment to keep the men until the wage matter is definitely settled, when any differences in amounts will be adjusted.

Electrification of Granville Island Lines, Vancouver Harbor.

The Vancouver, B.C., Harbor Commissioners have given a contract to W. W. Fraser & Co., Vancouver, to electrify the railway lines on Vancouver Island, 2.8 miles, the cost being reported as about \$12,000. The work covers the supply and erection of pole lines, trolley, feeders, guy wires, etc., and also rail bonding. Granville Island is a small island of 35 acres, in False Creek, opposite the end of Granville St., at the end of the C.P.R. terminal yards. There are about 40 industrial concerns on the island, which are provided with transportation facilities by the railway. The cars on the island tracks are now moved by a small locomotive owned by the Vancouver Harbour Commissioners, being received from and delivered to the B.C. Electric Ry. at the southern end of the island. This arrangement has been in effect since the tracks were laid.

An arrangement has, we are officially advised, been made with the B.C.E. Ry. Co., under which it will operate the lines on the island as soon as the electrification is completed.

Electric Railway Projects, Construction, Betterments, Etc.

The British Columbia Electric Ry. started work on June 6 in Vancouver on an extension of its Broadway West line from Trafalgar St. to Alma Road a distance of one mile. The new line will be double track and of permanent construction. A Y will be installed at the Alma Road end, connecting with the Sasamat line at that point. It is proposed to run Sasamat and Dunbar cars to the city by Broadway West, instead of by Fourth Ave. which has extremely heavy traffic. The line will cost \$75,000 and will be laid with 7-ft. rail, set in concrete on a crushed rock foundation. The city will pave the surface permanently. The extension is the result of negotiations with the city for the continuance of present rates of fare until a permanent franchise is agreed on or failing that until the B.C. Government appoints a board of arbitration or arbitrates the commission. The fare permission is to go on until Dec. 15 when the permanent arrangement is to be settled one way or another. Part of the consideration for the extended fares was the building of the Broadway West extension.

Grand River Ry.—Lake Erie & Northern Ry.—A press report states that plans prepared in the C.P.R. Chief Engineer's office in Montreal have been received in Ont., for the station building proposed to be built on Main St., there, for the two railways (May, pg. 258).

Hamilton Radial Ry.—The Strauss trunnion bascule bridge, over the canal at Burlington Beach, Ont., which was opened for traffic recently, has already been described in Canadian Railway and Marine World. The bridge carries one railway track, used by the Hamilton Radial Ry., for its Hamilton-Oakville line.

Hull Electric Co.—We are advised that the protection directed to be provided by the Board of Railway Commissioners, referred to in our last issue, was installed last autumn. It consists of derail switches in the electric railway tracks, operated by lever controlled by the switchman, who also operates the gates at the crossing. The switches were made by the Canadian Steel Foundries, and installed by the company's track department (June, pg. 15).

Montreal & Southern Counties Ry.—We are officially advised that the company has under construction an automatic substation at Brookline, Que., and a car shed at Marieville, Que.

Montreal Tramways Co.—Construction work was started June 1, on Wellington St. and the Center St. cars were diverted via Notre Dame and McDord Sts. The work, which consists of the laying of a double track line from McGill St. to the Lachine Canal at Wellington St. bridge, was authorized by the Montreal Tramways Commission in May. (June, pg. 315.)

Ottawa Hydro Electric Ry.—Essex Division.—We are officially advised that the reconstruction of the single track on Sandwich St., Windsor, Ont., between Sandwick Ave. and Ferry St., was started on June 12, and it was expected to have it completed in about a week. The approval of the municipalities interested has been asked for the following betterments: Reconstruction of single track on Ouellette Ave., between Pine St. and Sheppard Ave., Windsor; reconstruction of single track on Sandwick St., east from Goyeau St., Windsor to Victoria Road, Walkerville, together with the re-

moval of the most southerly track on this street, the proposal being to operate this as a single track line with a passing track in the vicinity of the waterworks plant, and singling the existing double track on Victoria Road, near Sandwick St., thereby providing passing accommodation at this point, and eliminating one track on the turnout from Sandwick St. to Victoria Road. It was expected to have the work on Ouellette St. in hand before June 30, and to start the Sandwick St. work in July. The Commission also has in contemplation the construction of a single track on Sandwick St. west, between Ouellette Ave. and Ferry St., Windsor. (June, pg. 315.)

Ottawa Electric Ry.—A letter from Major F. D. Burpee, Manager, Ottawa Electric Ry. Co., was received by the Hull, Que., City Council, June 5, intimating that the company would like to purchase a franchise from the city during the year. The company proposes to lay a loop at the terminus in Hull, which would enable larger cars to be used and a better service to be given. In this connection the council was asked to join with the company in applying to the Board of Railway Commissioners for permission to cross the Hull Electric Co.'s tracks at Bridge St.

Windsor, Essex & Lake Shore Rapid Ry.—We are officially advised that the company proposes to build a siding of about 800 ft. into its terminal at Leamington, Ont.; and to lay about 4,750 ft. of paving in Kingsville, Ont. It is in the market for 3,000 no. 1 white oak ties and 100 tons of 85 lb. rails, C.P.R. section.

Winnipeg Electric Ry.—An extension of the Academy Road line from Ash St. to west of Lindsay St., about half a mile, is under construction. The cost is estimated at \$75,000, and the following supplies were bought for the work: 3,000 barrels of cement, 2,500 yards of crushed stone, 1,000 yards of sand, 5,400 ft. of drain tile, 2,600 ties, 2,500 tie plates, 21,200 lin. ft. of stone sets, 4,000 sq. yds. of asphalt, 180 pairs of joint plates, 125 tons of 80 lb. rails, and 60 kegs of spikes. We are officially advised that the company has bought 150 tons of steel rails, partly 60 lb. and partly 85 lb. The 60 lb. ones were bought in the United States, and the 85 lb. ones from the Algoma Steel Corporation. The company has under construction a small oxygen hydrogen plant. (Mar. pg. 259.)

Ottawa Electric Railway Franchise Negotiations.

In connection with the negotiations in progress between the Ottawa Electric Ry. Co. and the Ottawa City Council for an extension of the company's franchise, the company was reported, on June 20, to have submitted a proposition in response to the City Council's special committee's suggestion. The report states that the company desires to have a 30-year franchise, the elimination of all limited fares, and the right to charge a straight 5c. fare so long as it will give a reasonable return and permit of a satisfactory service. This increase of fare would, it is said, permit the company to make some extensions of its lines, and to maintain a good service. The report also states that considerable progress has been made, but that the members of the committee will not discuss the matter outside the committee room.

Levis County Railway and the Municipalities.

The Quebec Public Service Commission gave judgment June 19, on the matters which recently came before it with respect to the Levis County Ry., and the municipalities served thereby. A press report summarizes the judgment as follows:—The company is authorized to charge 10c. for each passenger and for each zone. The company must sell 25 tickets for \$1.25 for children under 16 years of age who are attending school.

The company may from time to time modify the zones but the Commission may be appealed to in such case. The maintenance of the sections between the tracks and outside up to the end of the ties must be taken care of by the municipalities. If in paving work the municipalities cause any damage they will be responsible to the company. The snow removal will be carried out in St. Romuald as in the past. In Levis, Bienville and Lauzon, the cost of removing the snow will be paid by the municipalities. The total expense of such removal not to be more than \$16,000. The surplus, if any, will be paid by the Levis County Ry. The proportion in which the municipalities will be responsible is as follows: 11-16 for Levis, 4-16 for Lauzon, 1-16 for Bienville. The municipalities are requested to discourage autobuses and encourage the street car service. The disposition of this judgment will come into force as soon as the company will give a service in accordance with its franchise. At the end of 13 months after this ruling the company must submit a report of its operation. The cost of stenographic notes and transcription is charged to the company.

Sunday Street Cars in London.—The London St. Ry. Co. was granted a franchise for the operation of its cars on Sundays on May 3, 1920, and it was stated at a meeting of the London City Council's finance committee, on June 14, that this franchise had expired May 2, 1921, and had not been rescinded. The company had, however, continued the Sunday operation. Mr. Wilkinson advocated the cancellation of the franchise, but the majority of the aldermen favored its continuance in the interests of the working men. The Ontario act authorizing cities of less than 50,000 and more than 15,000 of population to authorize the operation of street cars went into effect on June 4, 1920.

Electric Railway Passenger Fares.

Brandon Municipal Ry.—The Brandon, Man., Sun. of June 6, stated: "Arriving at the conclusion that the 5c fare was a costly experiment for the street railway during the three months that it was tried, the city council has ordered the return of the 5c, or 4 tickets for 25c. The order went into effect this morning, and the higher fares established last year, but suspended in February to give the cheaper fare a trial, were re-established. The 5c fare cost the city approximately \$1,700 according to figures submitted by the chairman of the street railway committee. The experiment was put into effect about March 1, and was in operation only three months. During that short period the railway revenue decreased \$1,636.60, compared with 1921. Actual figures submitted showed that while the passenger revenue for March, April and May of 1921, was \$10,943.15, the revenue for the same period this year was \$9,306.55. It is a singular fact, however, that there were more passengers carried during the time that the cheap fare was in effect, the report showing 176,562 persons carried in three months, in 1921, and 177,123 carried in March, April and May this year. When confronted with the report that showed nearly \$1,700 loss in three months in revenue, the city council did not hesitate to state that the experiment inaugurated in March was a very costly one. Nor did they hesitate to reinstate the old fares, even the chairman of the street railway, who brought in the lower fare recommendation previously, voting in favor of the recommendation made in committee. Many requests were made to the chairman of the street railway early in the year asking that a cheaper fare be put into effect on the railway. The street railway superintendent at that time was opposed to the decrease in fares, declaring the scheme had been tried before and had proved a failure. However, the council agreed to give the cheap fares a three months trial, and at the end of that time decide whether it should be continued. The report submitted showed a loss, and the council did not hesitate to order the return of the 7c fare."

British Columbia Electric Ry.—Following the withdrawal of the Vancouver Fraser Valley and Southern Ry. Co.'s application to the Dominion Parliament for an extension of powers, the Vancouver City Council on May 22 expressed its willingness to extend the operation of the 6c fare from June 30, to the day before the sitting of a tribunal which would be authorized by the B.C. Legislature to fix the fares to be charged on the British Columbia Electric Ry. lines. This expression of opinion was formulated in a resolution on May 26, which was carried by the Mayor's casting vote. The city's council was authorized to prepare a bylaw to extend the present agreement as to the 6c fare. The company agrees to extend its line on Broadway West to Alma Road by Sept. 1, and to retain the present wages scale during the currency of the agreement. The new bylaw was finally approved by the Council May 31, by 5 votes to 3.

London St. Ry.—The Ontario Legislature, at its recent session, passed a bill authorizing the company, notwithstanding its franchise provisions, to charge 5c. for adults, 2c. for children between 5 and 12 years of age, children under 5, in charge of adults, to be carried free. The Ontario Railway and Municipal

Board on the application of the London City Council, or of the company, may decrease or increase the fares fixed. Except as amended by this Act, no other part of the agreement between the city and the company as confirmed by 59 Victoria, chap. 105, is affected. The management put the newly authorized fares in effect on June 14. The cash fare is 5c., and 5 unlimited tickets are sold for 25c., available at all times. Limited or workmen's tickets have been discontinued. Children's fares and tickets remain as heretofore:—Cash fare 3c., or 2 tickets for 5c.

The Toronto Transportation Commission has announced that commencing July 1 tickets for children not over 51 in. high will be sold at 10 instead of 7 for 25c., which latter rate has been in effect since the road was taken over by the city on Sept. 1, 1921. The Toronto Ry. Co. up to the time of the transfer of the property sold 10 tickets for 25c. for children not over 9 years.

Electric Railway Notes.

The Winnipeg Electric Ry. Old-Timers' Association held its 13th annual reunion June 7, and elected officers.

Hamilton Radial Ry. started a half-hourly service between Hamilton and the beaches on June 18, for the summer. Cars leave Hamilton terminal station at 10 minutes past the hour and 20 minutes to.

The Montreal & Southern Counties Ry. is in the market for 2 motor and 2 trailer passenger cars, one 50-ton electric locomotive and a motor generator for automatic substation at Brookline, Que.

The Calgary Municipal Ry. management is reported to have under consideration plans for the adoption of the pay-as-you-leave type of cars, by transforming the present one-man pay-as-you-enter cars.

The Hydro Electric Power Commission of Ontario has received one safety car out of an order of 25, from Canadian Brill Co., for operation on the Hydro Electric Radial Rys., Essex Division, at Windsor, Ont.

Members of the Montreal Chamber of Commerce, on the invitation of the Montreal Tramways Co., made a trip over the company's line, and inspected the entire line, including the new power plant on Cote St., on June 6.

Hamilton and Dundas Electric Ry. started a half hourly service between Hamilton and Dundas, Ont., June 18, which it is said may be a permanent all the year round, one. Cars leave Hamilton terminal station at 15 minutes past the hour and at 15 minutes to.

The Port Arthur Public Utilities Commission has given instructions that, if the Board of Railway Commissioners gives permission for the operation of one-man cars over the Canadian National Rys. crossing, the necessary number of cars to be converted for one-man operation.

The Ottawa City Assessment Department assessed the Ottawa Electric Ry. Co. for business tax in the roll, which was confirmed by the Court of Revision. The company appealed to the County Court, and Judge Mulligan, after hearing arguments on June 20 reserved judgment.

The Ottawa Electric Ry. Co., beginning July 1, will relieve conductors and

motormen only at the different starting places, located at Sussex, Bank, and Elgin streets and Holland Ave. For years past crews have been relieved at Bank and Sparks Streets, and Albert and Bank streets. The change it is stated, being made in the interests of economy.

The Mayor of London, Ont., is reported to have stated June 14, that he expected to name within a short time the members of a commission to investigate the city's transportation problems and to devise means for their solution, the commission to consist of the mayor, two members of the city council, and two other citizens. It is expected that Sir Adam Beck will be one of the latter. The committee will be instructed to consider especially the status of the London St. Ry., and whether the city should buy it at the expiration of the franchise, and if so, on what terms.

Edmonton Radial Railway's Improved Position.

City Commissioner Yorath, of Edmonton, Alta., is reported to have said, in address to the Board of Trade there recently: "I want to specially refer to recent remarks by a few prominent citizens in regard to the street railway. What was the position 12 months ago? The railway had carried forward from 1920 a deficit of \$198,000 and had accumulated a deficit of \$8,980 by the end of Mar., 1921. The cars were in a very unsatisfactory condition, the schedule could not be relied upon, and the citizens generally had lost confidence in their railway and were prepared almost to give it away. This year up to the end of April the railway has made a profit of \$10,134 after having placed in reserve \$10,000 for repair of tracks, trolley wire, etc., a provision which has not been previously made. A good schedule is being run on all routes, and there are more cars fit for service than for a number of years in the past. Today 68 cars are fit to put upon the road, compared with 48 at the same time last year."

St. John's, Nfld., Electric Ry.—A letter in the St. John's, Nfld., News of June 15, states that negotiations are in progress between the Reid Newfoundland Co., and a Canadian syndicate relative to the sale by the former of the St. John's Electric Ry. and its other electric interests. A press report states that the Government will introduce a bill in the Legislature to give the Light and Power Co. what is described as "an outright and complete franchise."

Fort William and Port Arthur Electric Railways.—At joint meeting of the Fort Arthur Public Utilities Commission and the Fort William Public Utilities Committee, June 6, a resolution was adopted providing that the matter of the extra mileage run by Fort William cars in Port Arthur compared with the mileage run by Port Arthur cars in Fort William, be referred to the Ontario Railway and Municipal Board, to determine the cost, if any, of such extra mileage of operation, the Board's decision to be final and binding on both parties. The Board has requested the parties to send in any documentary evidence they have and any arguments they may choose to make in their own interests, and if it finds it can give a decision on these, will not be necessary to have a hearing, but if a hearing should be considered advisable, due notice will be given.

Marine Department

Canadian Government Merchant Marine Ltd., Annual Report

The directors' third annual report, for the calendar year 1921, has been issued over the signature of D. B. Hannah, President, addressed to the shareholders—the Dominion of Canada—as follows:

Ships in Operation.—During 1921 eighteen additional ships were completed and turned over to the company for operation. These, added to the 47 in operation at the end of 1920, brought the fleet total up to 65. The last remaining ship under construction was completed in Jan., 1922. By the loss of the Canadian Exporter, wrecked on the Pacific Coast off Willapa River, the actual number of ships in operation at the end of the year, was reduced to 64. The Canadian Recruit, which was stranded in the St. Lawrence as a result of being rammed while at anchor in a fog, may also prove to be a total loss.

Results of Operation.—The accounts for the year, as certified by the auditors, show the following results:—

Gross revenue from closed voyages.....	\$10,768,828.52
Operating expenses, closed voyages.....	12,979,553.07
Deficit from operation.....	\$2,210,724.55
Interest accrued on notes to Government for year.....	\$3,851,500.14
Reserve for depreciation 2,374,410.37	
Reserve for outstanding liabilities.....	50,000.00
Reserve for doubtful debts and claims.....	60,000.00
Incorporation expenses.....	1,000.00
	5,836,910.51
Deficit after all charges, including depreciation and interest.....	\$8,047,635.06

In announcing a loss in operation it is only fair to state that conditions existing in the steamship business throughout the world made such a result inevitable. Admittedly, from an economic standpoint, 1921 was the worst year in recent shipping experience. In addition to a general falling off in tonnage, ocean rates were reduced in some cases as much as 50%. Steamship rates that would bring in a proper return did not exist, and the best rates would only pay operating expenses. While tonnage outward was fairly well maintained, the inward business, especially from the United Kingdom, continental ports and South America, fell away to such an extent that homebound cargo was practically impossible to obtain. On this account many voyages resulted in losses. The total loss has been substantially increased by charging depreciation at 4% and interest at 5½% per annum on the original cost of the vessels. The difficulties of the situation were further increased by the addition of 18 new ships to the company's fleet during a most severe business depression.

While the operations of the company have resulted in a loss for the year, the advantage which the company's fleet has been to the Canadian National Ry., and to Canadian trade generally should be considered. Large shipments which have been handled by the Merchant Marine at the low rates prevailing have provided tariff return to the National Railways. Much business of this character would have been handled through foreign ports, and by other or foreign railways if the company's vessels had not been available. Boards of Trade throughout Canada, and exporters of many products, have placed

on record their appreciation of the assistance the Merchant Marine has rendered to them, without which they claim a large amount of export business secured would have been lost to other countries.

West Indian Passenger Service.—Inasmuch as the operations of the Canadian Fisher and Canadian Forester, providing a combined passenger and freight steamship service every three weeks to the Bahamas, Jamaica, and British Honduras, have from the outset, been unprofitable, from a revenue standpoint, your directors took early opportunity of advising the Government that they were forced to regard this service as apart from the company's regular commercial operation and that the service would

Dominion Marine Association.

Honorary President, A. A. Wright, President, Tidewater Shipbuilders, and Vice President and Managing Director, Davie Shipbuilding & Repairing Co., Montreal.

President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal.

First Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Second Vice President, G. J. Madden, George Hall Coal Co. of Canada, Ogdensburg, N.Y.

Executive Committee. The President, First and Second Vice Presidents, and W. E. Burke, Canada Steamship Lines, Montreal; W. J. Dwyer, Sincennes-McNash Line, Montreal; M. J. Haney, Canada Steamship Lines, Toronto; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormick, Algoma Central Steamship Co., Sault Ste. Marie, Ont.; Col. G. F. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Keystone Transports, Montreal; Honorary members, L. L. Henderson and A. A. Wright, Montreal.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine Review, Toronto.

only be continued on the assurance that it was to be maintained on account of the Government. The service is, therefore, being maintained on this basis. The loss in operation on this account for 1921 was \$310,989.54, and, including depreciation on the ships, was \$416,184.28. This loss forms part of the total deficit shown in the income account. The service, as stated in the previous year's report, was inaugurated at the request of the Government as the result of the Canada-West Indies trade agreement. As against the loss chargeable to the Government may be applied any subsidy collectible by it from the West Indies Governments as provided for in the agreement.

Trade Routes.—In addition to the services inaugurated during 1919 and 1920, new services have also been provided during the past year as follows: From Atlantic ports to Australia; from Pacific ports to China, Japan, and to India; and the Pacific coastal service to California. In the latter two cases the Government movement and to provide lake port storage, eight of the smaller ships were

moved to the Great Lakes. They loaded full cargoes of grain at the head of the lakes and carried them down to Georgian Bay ports, where they were tied up for winter storage. Operating conditions grew steadily worse towards the end of the year, and when homebound cargoes could no longer be secured, and rates prevailing for outbound cargo would not pay the cost of operation, a number of services were curtailed, and at the end of the year, eight ships, in addition to those already mentioned, were taken out of service and laid up at Halifax. The directors are glad to report that Canadian manufacturers, acting in co-operation with the Canadian Government Merchant Marine, arranged for a party of representative merchants, manufacturers and others interested in export trade, to visit the West Indies. The party sailed from Halifax on the Canadian Fisher on Feb. 15, 1922, and the itinerary included the most important trading points in the West Indies.

Offices and Agencies Established.—The company has offices in Toronto, Montreal, Vancouver, St. John, N.B., Halifax, N. S., St. John's, Nfld., New Zealand, Australia, British West Indies, London, England. Agencies have been appointed which give the C.G.M.M. representation in all principal parts, as follows: Panama Canal Zone, South America (including Buenos Aires, Montevideo and Santos); Cuba, British West Indies, Ceylon, Fiji Islands, Hawaiian Islands, China, Japan, India, Malta, Gibraltar, South Africa, Algeria, Portugal, Spain, Italy, Sicily, Greece, Syrian Coast, Egypt, Persian Gulf, Borneo, Straits Settlements, Java, France, Belgium.

The disposition of the company's fleet at Dec. 31, 1921, was as follows, as to trade routes and number of ships: United Kingdom and continent, 13; Australia, 10; Russia (special), 5; Orient, 3; West Indies and Cuba, 5; India, 1; Newfoundland, 1; South America, 2; Vancouver—California, 3; Great Lakes, 8; in port at St. John, N.B., 2; at Halifax, 8; at Vancouver, 2; lost at sea, 1; stranded, 1; total, 65.

Voyages.—During 1921 235 voyages were made, as follows: Atlantic Services: United Kingdom and continent, 93; West Indies, 23; South America, 9; Newfoundland, 2; Nassau and Kingston, 16; Cuba, 10; East Indies, 3; Australasia and New Zealand, 9; Russia, 5; Coastwise, 6. Total, 196. Pacific Services: Australasia and New Zealand, 9; India, 2; Orient, 6; California, 20; Egypt, 2. Total 39. Grand total, 235.

Canadian Officers and Crews.—The policy of giving all possible preference to Canadians in filling positions in the service has been continued. Of a total of 2,341 officers and men employed, over 75% are Canadians, and of the balance practically all are British.

Ship Losses.—During the year the fleet was reduced by the loss of the Canadian Exporter, which on July 31, ran aground off the Willapa River. She was abandoned to the underwriters and the full insurance carried has been received. In August the Canadian Importer, en route to Australia, sprang a leak which resulted in the engine room

being flooded. She listed badly and it was only after considerable hardship that she was taken into Victoria, where repairs were made. The directors desire to record that the officers and crews concerned in the handling of the ship and sister ships which conducted a search for the Importer, lived up to the best traditions of gallant conduct associated with merchant marine service. The Canadian Recruit, while lying at anchor in the St. Lawrence, near the South Traverse in a fog, was rammed by the s.s. Maskinonge on Aug. 18. Salvaging operations which were carried on during the autumn were completed without success on account of winter, but will be resumed, if possible, in the spring. As far as the company is concerned, the vessel is abandoned to the underwriters. Any loss sustained is covered by insurance.

Insurance.—Tenders were called for renewal of insurance on the fleet, and Willis, Faber & Co. of London, Eng., who submitted the most favorable proposal, received the contract for 1922. The premium has been considerably reduced in line with reduction in replacement values in Canada.

Recommendations.—The experience of the last three years leads your directors to make certain definite recommendations, as follows:—

1. That practically all the small type ships be disposed of, thus reducing the fleet to 37 vessels. The ships recommended to be sold, and then respective approximate d.w. tonnages are as follows, each having the prefix Canadian in its name: Warrior, 3,995; Recruit, 3,964; Trader, 3,341; Sailor, 3,357; Signaller, 3,975; Adventurer, 3,408; Gunner, 3,978; Aviator, 5,166; Sower, 3,406; Settler, 4,918; Raider, 5,181; Farmer, 3,964; Miner, 2,778; Beaver, 3,973; Sealer, 2,777; Observer, 3,982; Trapper, 5,054; Hunter, 4,892; Hunter, 5,028; The Rover, 3,920; Coaster, 3,939; Harvester, 4,000; Pathfinder, 3,640; Engineer, 3,679; Logger, 3,839; also without the prefix Canadian: Thos. J. Drummond, 3,501; Sheba, 3,400; J. A. McKee, 3,575.

2. That the capital cost of the ships be reduced to what may be considered present replacement value. Enquiries made in Canada and Great Britain indicate that present construction costs of ships of the types which make up your fleet range from \$63 to \$110 per d.w. ton, so that a value of \$75 a ton would appear to be a fair replacement value.

3. That interest due the Government be payable for each year only if earned, after allowing for depreciation. Such remission of interest to be applicable for five years.

With reference to the first recommendation, it may be said that the fact that the operation of many small units would prove to be unprofitable has previously been pointed out to the Government. While no doubt exists as to the material value to the Government's railways of co-operative merchant marine service, yet it is considered that the most helpful routes can be maintained with the fleet reduced, and, as the larger ships have a better operating ratio, losses during present conditions would be less, and under improving conditions net profits would earlier be obtained.

In connection with the second recommendation, it should be remembered that the contracts for these ships were placed at a time when the cost of construction, in fact, when prices generally, were abnormal, and that the average price of the fleet per deadweight ton is approximate-

ly \$191. This situation no longer continues, and it is considered desirable that the capital cost be reduced to the present value. Great Britain, the United States and other countries, which undertook the replacement of tonnage lost during the war, have had to undergo the same depreciation in the value of tonnage.

With respect to the third recommendation as to payment of interest, it is submitted in view of the company establishing new trade routes to provide facilities for Canada's export trade—services which in the early stages may prove unprofitable—that the Government should agree that interest on the capital cost of vessels should be payable for each year only if earned, after allowing for depreciation. In this connection it should be remembered that the company is still in the development stage, having in the past year, during a time of depression, taken over from the builders and placed in service 18 additional ships. In the first two years surpluses from operation were made but owing to the majority of the ships being completed during a period of business depression following the war, this company, unlike older established steamship companies, was unable to build up a reserve which would enable interest to be paid during times of depression.

Believing that the carrying out of the first recommendation is in line with what proper business management would dictate, your directors have had prepared a programme of operation for the year which contemplates the removing from service of a number of smaller type vessels, reducing the company's operating fleet to 37.

Management.—Your directors wish to express their appreciation of the faithful and efficient work of the officers, employees and crews, during the year.

Consolidated Balance Sheet, Dec. 31, 1921.

ASSETS	
Fixed assets	\$50,005,892.71
Dec. 31, 1920.....	22,386,459.56

Deficit, Dec. 31, 1921	\$9,116,144.28

S. W. Jacobs, George Etienne Cartier, Montreal, stated in the House of Commons on June 17 that there was a well-founded rumor in London that the Canadian Government Merchant Marine ships had been offered for sale, on the London market, to British interest; that he hoped the good news was true, and asked if the Government could give any information. Prime Minister King said he imagined that it was a newspaper report, to which Mr. Jacobs replied that sometimes newspaper reports are correct. Mr. Meighen, opposition leader, said he had no doubt it would be good news to many private interests.

Flag for Seaplane Stations.—A distinguishing flag is to be flown at all seaplane stations in Canadian waters, as follows: Light blue, in the dexter canton the Union, and in the center of the fly, on a red shield edged with white, an albatross, with wings extended over three maple leaves on one stem, proper.

Canada Steamship Lines' Appointments.

Particulars of changes in the Canada Steamship Lines' directorate, and in the Presidency, were given in Canadian Railway and Marine World for June, pg. 319. We have since been advised of the following changes in appointments:—

F. S. Isard, heretofore Managing Director, has been appointed Manager. He issued a circular, May 31, announcing the traffic and operating officers. Following are particulars of their previous and present positions:—

Traffic Department: W. E. Burke, heretofore Director in Charge of Transportation Department, appointed General Traffic Manager. L. A. W. Doherty, heretofore General Traffic Manager, appointed Freight Traffic Manager. J. F. Pierce, Passenger Traffic Manager, continued in that position.

Operating Department: T. R. Enderby, Operating Manager, continued in that position. W. J. King, heretofore General Freight Agent, appointed Assistant Operating Manager.

All the officials mentioned above are located in Montreal.

Percy Grant is continued as Resident Manager at Toronto.

J. W. Canvin has been appointed District Passenger Agent, at 1341 Walnut St., Philadelphia, Pa.

Drydock Construction at St. John, N.B.

As mentioned in Canadian Railway and Marine World for June, dredging is proceeding on the drydock site in Courtney Bay by the St. John Drydock and Shipbuilding Co. We are officially advised that a ladder dredge started work in the outer channel in April, and about the middle of May the hydraulic dredge Tornado was placed in operation there, and also in the entrance channel, and both the dredges will be continued in operation until late in the autumn. The dredge Tornado has been converted to burn oil as fuel.

On the concrete work, active operations were commenced about the middle of May, on the outer half of the drydock, and it is the intention to complete

the outer 600 ft. dock, including the dock entrance, this year. The contract for the construction of the floating caisson has been let to the Dominion Bridge Co., and work on its erection is expected to commence about Aug. 1, and to be completed by the autumn. Contracts have also been let for the supply of granite, sluice gate equipment, and pumping machinery. The contracts for granite and sluice gate equipment will be completed this year, but that for pumping equipment, which has been let to the Goldie and McCulloch Co., Galt, Ont., will not be completed until next year, as the erection of a pumping station is included in this year's building operations, and it will not be ready to receive the machinery until next spring. The St. John Drydock and Shipbuilding Co. is the general contractor for the construction of the drydock and E. G. Cameron is Chief Engineer.

Steamships Launched for Ontario Paper Co.

Canadian Railway and Marine World for February contained particulars of two steamships ordered by the Ontario Paper Co., of Thorold, Ont., which is controlled by Robt. McCormick of the Chicago Tribune, from Swan, Hunter, & Wigham Richardson, Ltd., one to be built by it at Wallsend-on-Tyne, Eng., and the other by its subsidiary, the North of Ireland Shipbuilding Co., at Londonderry. The one being built at Londonderry was launched May 24, and christened New York News; and the one being built at Wallsend-on-Tyne was launched on May 30 and was christened Chicago Tribune. Their principal dimensions are:—length b.p. 250 ft., breadth moulded 43 ft., depth moulded 19 ft. 4 in., with a topgallant forecastle 39½ ft. long. They are being built to the British Corporation's requirements. Water ballast will be carried in the fore peak and in the double bottom fore and aft. There will be 6 cargo hatches, and the ships will be equipped with electric lighting and steam heating. The engineers and fireman will be accommodated in a steel deck house aft, on either side of the engine and boiler space. The master's, officers' and seamen's quarters will be arranged in the

fore end, and in the forward deck house there will be an owner's suite. The propelling machinery, built for the New York News, by J. G. Kincaid, Ltd., Greenock, Scotland, and for the Chicago Tribune, by the North Eastern Marine Engineering Co., Wallsend-on-Tyne, Eng., will be placed aft, and will be of the triple expansion type, driving a single propeller. Steam will be supplied by two single-ended, multitubular boilers, at 180 lb. The building of the hulls and machinery is superintended by H. M. Rogers, of Harris & Dixon, Ltd., London, Eng., and the owner is represented by Major H. Maitland Kersey, D.S.O., formerly Managing Director of Canadian Pacific Ocean Services, London, Eng. The ships will be operated between lower St. Lawrence ports and Thorold in the Ontario Paper Co.'s pulp service, for which they have been specially designed.

We have been officially advised that the s.s. New York News was expected to sail from Londonderry, for Montreal, about June 15.

Vancouver Shipping Statistics.

The growth of shipping through the port of Vancouver, B.C., during the past 10 years, is shown by figures quoted by the President of the Vancouver Merchants' Exchange recently for 1912 and 1921, as follows:—

	1912	1921	increase
Ships inward	9,382	11,874	27
Gross tonnage	4,438,000	9,916,000	128
Lumber shipped, ft. 25,000,000	149,000,000	590	
Grain shipped, bush	Nil	6,830,000	
Regular lines	12	44	360

Marine Public Works Contracts.—The Dominion Public Works Department has awarded contracts as follows.—Installation of disinfector retorts at quarantine station, Partridge Island, St. John, N.B., May 27, to J. E. Kane and J. S. Parker, St. John, N.B., for \$4,400; dredging at Squamish, B.C., May 29, to Vancouver Dredging and Salvage Co., Vancouver, B.C., class A \$6 a cub. yd., and class B 28½¢ a cub. yd.

The name of the steam tug Eureka, bought in the U.S. recently, by T. J. Scott, Sault Ste. Marie, Ont., has been changed to T. J. Scott.

Ships Registered in Canada During March, 1922.

In compiling the following lists of ships registered, steamboats and motorboats operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

STEAM.

General Shipbuilding Matters Throughout Canada.

Marine Department Dredge.—Tenders will be received by the Marine Department, Ottawa, to July 5, for furnishing materials and labor of all kinds necessary for the construction, completion and delivery at Quebec, Que., of a steel, single screw hopper barge, of the following dimensions,—length b.p. 210 ft., breadth moulded 35 ft., depth moulded 19 ft.; hopper capacity 950 cub. yds., i.h.p. 1,250.

British American Shipbuilding Co., Ltd., Welland Ont., has assigned to H. Vigeon, Toronto, authorized trustee.

Collingwood Shipbuilding Co., Collingwood, Ont.—The launching of the s.s. Charles Dick on May 27 for National Sand and Material Co., Welland, Ont., was mentioned in our last issue. She is built for carrying sand and gravel, and is equipped with special loading and unloading pumps and machinery. She was christened by Charles Dick, son of D. Dick, Jr., President of the owning company, who was accompanied by H. B. Smith and J. S. Leitch, President, and Managing Director, respectively, of the building company. The ship has the following dimensions: Length over all, 258 ft.; breadth, 43 ft.; depth, 20 ft., with a d.w. carrying capacity of about 3,000 tons. She will be classed BS' under British Corporation. The machinery and boilers will be placed aft. The hold is divided into 2 large hoppers, each 60 ft. long, with capacity of approximately 2,000 cub. yd., of sand and gravel. Between the hoppers is a large engine room 10 ft. long, which will contain the unloading machinery. The pump room is placed forward of the forward hopper to accommodate two 18 in. centrifugal pumps, direct connected to the compound condensing engines, which have cylinders 13 and 26 in. diam. by 14 in. stroke. The 18 in. suction from each of these pumps is direct connected to the shell 5 ft. above the keel. A special feature of the ship is the recessing of the shell plating accommodating guides down which the outboard suction pipe flange will slide. The suction pipes will be portable and will be removed when the cargo has been loaded. The pumps will discharge into troughs running over the top of the hoppers, and the excess water will be discharged through specially designed spillways at the end of each hopper. A special unloading device, erected on A frames, will run the full length of the hopper, and accommodate large clamshell buckets. These will remove the material from the hold and discharge into a special hopper amidships, the material falling on an elevator arrangement which will pass it up to a conveyor, which in turn will discharge it on the deck. The space between the main hoppers and the ship's side is divided into several compartments, and there are trimming and fore peak tanks forward, with a dry tank under the boilers and water ballast tank under the engine room. The captain and crew will be accommodated forward, and the deck house aft will contain the dining room, mess room, galley, engineers' quarters, etc. She will be a single screw driven, and is equipped with all necessary auxiliary machinery, including refrigerator and electric light plant, special windlass, winches, etc. The main propelling machinery will consist of triple expansion surface condensing engines, with cylinders 19, 32 and 56 in. diam. by 36 in. stroke, supplied with steam by 2 boilers, each 14 ft. 7 in. diam. by 10

ft. 8 in. long, at 180 lb., under natural draught, 400 i.h.p. When completed she will be operated in the rivers. She is specially built to supply material for large contracts, and is stated to be the first of her kind to be built in Canada.

The Collingwood Shipbuilding Co.'s annual meeting was held at Collingwood, Ont., June 7. A quarterly dividend of 14% was declared, payable June 15 to shareholders of record June 7. The directors for the current year are: H. B. Smith, President; R. V. M. Wolvin, Vice President; J. S. Leitch, Vice President, and Managing Director; S. H. Lindsay, Secretary; and S. Dymont, J. F. M. Stewart and W. H. Smith, J. M. McPherson is Treasurer.

Dobson Shipyard, Midland, Ont., is building a steam tug for Spanish River Pulp and Paper Co. The propelling machinery will be transferred from the steam tug Clipper.

Prince Rupert Drydock and Shipyard, Prince Rupert, B.C.—The following overhaul and repair work has been completed recently: *Samaritan*, Canadian Pacific, Foster and Kelly docked, painted and overhauled; Dominion Government snag boat *Cygnet*, docked and painted; *Granby* scow No. 8, docked, painted and hull repairs; *Coastwise Steamship & Barge Co's* barge *Griff*, docked, painted and general repairs; *Grand Trunk Pacific Coast Steamship Co's* steamships *Prince George* and *Prince Rupert*, docked, painted and generally overhauled. In addition to these, 37 fishing boats of different classes were docked, cleaned, painted and repaired. J. H. Pillsbury is Manager.

Turpel's Marine Railway Co., Victoria, B.C., has, we are advised, acquired the site formerly occupied by the Turpel Shipbuilding Yard & Marine Railway at Victoria, and, during the war, by the Foundation Co. of British Columbia, and is putting in a new marine railway, with capacity of 1,000 tons, which will be 185 ft. long, 40 ft. wide, and will take ships with a draft of 20 ft. In addition to repair work, the company will build ships. The plant will be operated by a 75 h.p. motor, and will be equipped with modern machinery.

Yarrows Ltd., Victoria, B.C. did the following repair and overhaul work during May:—*C.R. British Columbia* service,—s.s. *Princess Alice*, 3,099 tons, docked, cleaned and painted, and repairs to steam heater; s.s. *Princess Charlotte*, 3,844 tons, docked, cleaned and painted, rudder repairs and straightening 2 propeller blades; s.s. *Princess Louise*, 4,032 tons, docked, cleaned and painted; *Canadian Government Merchant Marine s.s. Canadian Highlander*, 5,500 tons, docked, cleaned and painted; *Union Steamship Co. of British Columbia, s.s. Cheakamus*, 689 tons, manganese bronze propeller blades; s.s. *Chasina*, 259 tons, making a manganese bronze propeller; *Pacific Construction Co., steam tug, Burrard Chief*, docked in the Burrard channel; *British Columbia Cement Co., s.s. Matsqui*, 150 tons, docked, cleaned and painted; *Bowring and Co., s.s. El Lobo*, 4,800 tons, docked, cleaned and painted, and deck, hull, tank and engine room repairs; *Vancouver Steamships' s.s. City of Vancouver*, 5,697 tons, docked, cleaned and painted, and minor under water repairs. Three

manganese bronze propeller blades were supplied for the *Grand Trunk Pacific Coast Steamship Co's* s.s. *Prince Rupert*, and several small ships were hauled out on the marine railway for cleaning, painting and repairs.

Welland Ship Canal Contract Awarded.

The contract for the completion of the work on sections 3 and 4 combined of the Welland Ship Canal, has been awarded by the Railways and Canals Department to P. Lyall and Sons' Construction Co., Montreal. Sec. 3 extends from station 380 to station 490, about 2 miles and the original contract was let to O'Brien & Doherty and Quinlan & Robertson in the autumn of 1913. Work was carried on until the end of 1916, when, owing to war conditions, the contract was cancelled. Following the conclusion of the war, and as a part of the re-establishment work decided on by the Government, the construction was carried on further, from 1919, on a cost plus 8% basis by O'Brien, Quinlan and Robertson. Under these contracts the bulk of the earth and rock excavation was done, but only a comparatively small amount of the large quantity of concrete required for the important structures was placed.

Sec. 4 extends from station 490 to station 597, about 2 miles, and crosses the present canal below lock 25. For economic reasons it was decided to complete the work on these two sections under one contract, on account of the interlocking of the different items of work. The principal items involved are,—rock excavation, 1,659,000 cub. yd.; earth excavation, 5,074,000 cub. yd.; watertight embankment, 446,000 cub. yd.; mass concrete, 1,300,000 cub. yd.; other concrete, 100,000 cub. yd.; steel bars for concrete reinforcement, 7,400,000 lb. The principal structures are,—twin locks 4, 5 and 6 in flight, single lock 7 and the guard gate, together with their entrance piers and other retaining walls, safety regulating and waste weirs, bridge substructures, concrete bridges, two large syphon culverts and two docks.

The Royal Mail Steamship Packet Co.'s contract with the Dominion Government for steamship service between Canada and the West Indies, as authorized by order in council, Feb. 1, which was published in *Canadian Railway and Marine World* for March, pg. 151, has been signed and is effective as from Apr. 1. The contract is on the same basis as the previous one, but instead of binding the company to run its steamships at a speed of 11 knots an hour, of which they are not always capable, they are to be operated at their best speed. The provision in the old contract obliging the company to use its best endeavors to arrange through rates for freight to and from inland points in Canada, has been extended to cover passengers in the present contract.

Ice Breaking Steamship J. D. Hazen.—We were officially advised by the Marine Department, on June 12, that the purchase of this ship had not been concluded, and that consequently it was impossible to make any statement as to when she might reach Canada.

Canadian Pacific Railway Ocean Steamship Services.

The s.s. Montezuma, which sailed from Montreal on her first trip to the West Indies, at the end of May, inaugurated the C.P.R. new cargo steamship service to Bermuda, Barbados, Trinidad and Demerara. The s.s. Holbrook, which has been operated for some time in the trans-Atlantic service, has been diverted to the West Indies service, and sailed from Montreal on her first trip, June 22.

The s.s. Empress of Canada arrived at Hong Kong, China, May 31, on her maiden trip from Great Britain, via the Suez Canal. She sailed from Hong Kong June 7, for Vancouver, and sailed again from Vancouver for the Orient, June 29. With the Empress of Australia she will maintain the trans-Pacific link of the Europe-Orient service, via Canada, the trans-Atlantic service being maintained by the Empress of Scotland and Empress of France.

Canadian Pacific Steamships Ltd., as traffic agent for the Norwegian-American line, has arranged a direct steamship service between Montreal and the principal Norwegian ports. The steamships Kiefford and Topdalsfjord are being used in the service. The latter ship arrived at Montreal, early in June, and sailed again for Bergen, Christiania, Trondheim and Stavanger. These ships were built by Canadian Vickers, Ltd., at the close of the war, and are of the two deck, poop, bridge and forecastle type, with straight stem and elliptical stern. Their dimensions are: Lenth, h.p., 3600 ft.; breadth, 49½ ft.; depth moulded, 29 ft.; draft, 24 ft. 1 in.; d.w.t. tonnage, 6,400, with a sea speed of 11½ knots an hour.

The s.s. Empress of Japan sailed from Vancouver, June 1, for the Orient, on her last outward trans-Pacific voyage for the company, and is expected to return about July 19, when she will have completed her 158th trans-Pacific trip, and covered approximately 2,500,000 miles in C.P.R. service, in addition to her war record. She is reported to have been sold to an Indian Prince for use as a yacht.

The steamships Mattawa and Methven arrived on the Atlantic coast during June, from Hong Kong, China, via the Suez Canal. Both of them were utilized in the Pacific service through the war to handle the unusual amount of cargo and general supplies. They have now been transferred to the Atlantic service between Canada and British ports.

The s.s. Montcalm which sailed from Montreal on June 2, at 10 a.m., for Liverpool, Eng., grounded about 7 hours later at Point Bigot in the St. Lawrence River, about a mile below Champlain. G. M. Bosworth, Chairman, Canadian Pacific Steamships Ltd., stated at Montreal, June 5, that the grounding was due to the jamming of the steering apparatus. She was released about 5 a.m., June 4, with the aid of 5 tugs, and proceeded to Quebec, under her own steam, arriving at 11 a.m. the same day, where her passengers were transferred to the C.P.R. steamships Metagama and Minnetonka. The White Star-Dominion Line s.s. Canada, and the Donaldson Line s.s. Cassandra. The general cargo was unloaded, and she proceeded to Levis with 38,000 bush. of grain on board, where she was drydocked for complete survey, and repairs, which were completed June 24, and she was expected to sail on her regular schedule, June 30. Among the passengers were the members of H.M. Scots Guards Band, returning to England.

Inspector of Dredges' Appointments.

The Civil Service Commission has invited applications for the position of an inspector of dredges, Public Works Department, for the Maritime Provinces, at an initial salary of \$800 a year, which will be increased upon recommendation for efficient service at the rate of \$120 a year, until a maximum of \$2,280 has been reached. This initial salary will be supplemented by whatever bonus may be provided by law. Duties.—Under direction of a district superintendent of dredges, to direct repairs to, and operations of dredging and other floating equipment in an assigned district; to inspect equipment of floating plant, to determine the necessity for, cost of, and best method of making repairs and alterations; to inspect work done by private contractors; to instruct officers and crews in the proper performance of their duties; and to perform other related work as required. Qualifications.—Education equivalent to high school graduation; four years of experience in the construction, repair, and operation of dredges and other floating equipment; rating as a journeyman machinist; tact, good judgment, and ability to manage men; good physical condition. While a definite age limit has not been fixed for this competition, age may be a determining factor when making a selection. Examination.—A rating on education and experience will be given from the sworn statements submitted by applicants on their application forms. To those who qualify, an oral examination will be given if necessary. Preference will be given to residents of the Maritime Provinces.

The Civil Service Commission has also invited applications for the position of a senior inspector of dredges for the Maritime Department's River St. Lawrence Ship Canal Branch at Sorel, Que., at an initial salary of \$2,100 a year, which will be increased upon recommendation for efficient service at the rate of \$120 a year, until a maximum of \$2,580 has been reached. This initial salary will be supplemented by whatever bonus is provided by law. Duties.—Under the direction of the Superintendent engineer, St. Lawrence Ship Canal, to be responsible for the maintenance and repair of general dredging and other floating equipment; and to perform other related work as required. Examples.—Making inspections of and ordering the placing of ships on the ways for hull inspection and repairs; inspecting and passing on the necessity for overhauling boilers, engines, pumps, condensers, generators, dredging apparatus, and other power and machinery equipment on dredges, and making estimates as to cost of such repairs; ensuring that ships are given proper care and kept in a shipshape and seaworthy condition by the officers in charge; directing, advising and instructing masters, mates and engineers, in the performance of their duties, aside from their duties pertaining to the navigation of vessels; and to instruct the officers in the methods to be used in the safe and economic operation of the equipment in their charge. Qualifications.—Education equivalent to high school graduation; five years of experience in the construction, operation, and repair of dredges and other floating equipment; two years of which shall have been in a position of responsibility; rating as a journeyman machinist; tact,

good judgment and ability to manage men; good physical condition. While a definite age limit has not been fixed for this competition, age may be a determining factor when a selection is being made. A rating on education and experience will be made from the sworn statements of applicants on their application forms. To those qualified an oral interview may be given if necessary. An eligible list from which future appointments can be made may be established, but there is only one position in the Maritime Department classified as Senior Inspector of Dredges. Preference will be given to residents of the Province of Quebec.

Water Transportation in Northern Alberta and the Northwest Territories.

Canadian Railway and Marine World for May contained interesting details of some of the water transportation routes in Northern Alberta and the Northwest Territories. Some additional information has been received concerning the Northern Trading Co.'s service between Waterways, Alta., the terminus of the Alberta and Great Waterways Ry., and Seneb, in the Mackenzie River delta, about 50 miles from the Arctic coast.

The s.s. Northland Echo, during the present navigation season, will make a trip every 10 days, starting from McMurray, Alta. The first through trip to Norman left McMurray June 10, and connected with the s.s. Northland Trader for Norman.

The s.s. Northland Trader was expected to leave Fort Smith for Norman, as soon as the ice is cleared from Great Slave Lake, between June 20 and July 1, the trip from Fort Smith to Norman and return taking about 12 days.

The s.s. Northland Pioneer, which was specially built to handle heavy machinery and drilling rigs for oil companies, burns crude oil and has twin engines of 150 h.p. She has a speed of 16 miles an hour, and runs between Fort Smith and the Norman oil wells.

The passenger fare from Waterways to Norman oil wells and return, including meals and berth, is \$300. Between Waterways and Seneb, calls are made at McKay, Jackfish River, Chipewyan, Fitzgerald, Fort Smith, Redoubt, Hay River, Providence, Simpson, Wrigley, Norman oil wells, Good Hope, Arctic Red River and McPherson. In addition to the steamboats mentioned above, the company operates the gasoline boats Notrac and Speed, the Northland Echo and Notrac operate between Waterways and Fitzgerald, and the Northland Trader, Northland Pioneer, and Speed operate from Fort Smith to Seneb, including Great Slave Lake points.

Fuel for Lighthouse Boats.—C. A. Gauvreau, Temiscouata, Que., asked the following questions in the House of Commons recently:—"After trials made by the Marine Department in regard to wood and coal fuel for the use of lighthouse boats of Ile Rouge, Ile Blanche and Princess Shoal, is it the Government's intention to return to the old method of supplying the boats with cordwood instead of coal, if it is found less costly?" The Minister of Marine answered "Yes."

Canadian Government Merchant Marine Operation, Etc.

Officers of Steamships.—The following changes in masters and chief engineers have been made in addition to those mentioned in previous issues:—Canadian Explorer, Capt. P. J. Murphy, from s.s. Canadian Hunter; vice Capt. W. Wyman, on leave; Canadian Hunter, Capt. J. Slater, from s.s. Canadian Logger, vice Capt. P. J. Murphy, transferred to Canadian Explorer; Canadian Inventor, Capt. R. P. Roberts, formerly chief officer, s.s. Canadian Britisher, temporarily, during the absence of Capt. Dudley on sick leave; Canadian Logger, Capt. R. Forbes, formerly chief officer, same ship, vice Capt. J. Slater, transferred to s.s. Canadian Hunter; Canadian Planter, chief engineer, J. A. Phrysz; Canadian Rancher, chief engineer, P. C. Bennett; Canadian Ranger, chief engineer, J. Still; Canadian Volunteer, chief engineer, G. V. Brown.

The s.s. Canadian Coaster sailed from Charlottetown, P.E.I., for Havana, Cuba, recently with 60,000 bush of potatoes, stated to be the largest single cargo of potatoes shipped from the island.

The s.s. Canadian Recruit is still lying submerged between the Traverse and the Pillars, near bell buoy 65, in the St. Lawrence River, where she was sunk, while at anchor, by the Dominion Coal Co.'s s.s. Maskinonge, during a fog, Aug. 18, 1921. The salvaging contract was let to Lachance Ltd., Quebec, and two attempts were made to float her, without success. Severe weather intervened at a time when full success was expected, and the work was abandoned by the contractors, Nov. 16, 1921, and has not been resumed. We were advised June 17, that there was nothing to report on the situation.

The s.s. Canadian Squatter, while on her way up the Miramichi River, N.B., June 4, collided with and damaged the drawbridge.

Montreal Sailings.

Liverpool Service.—Canadian Explorer, July 14; Canadian Ranger, July 28. London Service.—Canadian Mariner, July 13; Canadian Cruiser, July 27.

Glasgow Service.—Canadian Volunteer, July 14; Canadian Squatter, July 28.

Cardiff and Swansea Service.—Canadian Otter, July 13; Canadian Runner, Aug. 21.

Australia and New Zealand Service.—Canadian Spinner, July 26.

Barbados, Trinidad & Demerara Service.—Canadian Coaster, July 5; Canadian Logger, July 19.

Hamilton, Bermuda, Nassau, Kingston & Belize Service.—Canadian Forester, July 13; Canadian Fisher, Aug. 3.

Newfoundland Service.—Canadian Sapper, July 3 and 18; Aug. 3 and 19.

Vancouver Sailings.
Australia and New Zealand Service.—Canadian Skuasier, July 5; Canadian Traveller, July 20; Canadian Scottish, Aug. 30.

Oriental Service.—Canadian Prospector, July 20.

Pacific Ocean Services.—A Victoria, B.C., press report states that four additional steamships are to be placed in the Pacific service shortly, by transfer from the Atlantic services, where the business offering is comparatively light. It is stated that three of them will be used in off shore service, and one for the California coast trade, for which, it is said, the Grand Trunk Pacific Coast Steamship

Co's s.s. Prince Albert has had to be utilized. We have been officially advised that the report is incorrect, and that no such changes are contemplated. The s.s. Canadian Highlander sailed from Victoria early in June with 200,000 ft. of lumber for Australia.

Bermuda Service.—In connection with the service to the West Indies, it has been decided to make Bermuda a port of call, with the steamships Canadian Fisher and Canadian Forester. This call is made as a part of the Nassau, Kingston and Belize service, and provides a direct connection between Nassau and Bermuda. The additional service was inaugurated June 22, with the sailing of the s.s. Canadian Fisher from Montreal, the two ships sailing alternately on a three weekly schedule. The ships are both of 5,100 d.w. tons, and contain 10 state-rooms and 2 suites, with accommodation for 28 first class passengers. The passenger rates are \$300 for a suite with private bath, \$80 a berth for stateroom with private bath, \$70 a berth for special stateroom, \$50 a berth for stateroom without private bath, and \$35 a berth for third class steerage. The general cargo rate is 32c. a cub. ft. or 60c. per 100 lb. The service is to be continued through the winter, the Canadian port being Halifax, N.S.

Liability of State Owned Ships.—In connection with statements which have appeared in a number of newspapers recently with respect to immunity of state owned ships from liability to legal action for recovery of claims for salvage, damage to cargo, or to other ships, and claims of any other nature, publicity has been given to a letter signed jointly by Wm. Phillips, European Manager, Canadian Government Merchant Marine, and H. Larkin, General Manager, Australian Commonwealth Line of Steamships, London, Eng., stating that both of these lines voluntarily and unreservedly submit to the ordinary jurisdiction of any court, and agree to be held, subject to the ordinary system of writ and arrest in precisely the same manner as any private owner, and that this has been their definitely stated policy since their inception.

The Commercial Cable Co's cable repairing s.s. Marie Louise Mackay, which was launched at Newcastle-on-Tyne, Eng., May 11, is a smaller ship than the s.s. John W. Mackay, built for the same company in Nov., 1921, her dimensions being, length 246 ft., breadth 34 ft., depth 24 ft. 4 in., driven by twin screws. She will have two masts, the usual overhanging bow for cable sheaves, and will be arranged to carry water ballast in the fore and aft peaks and double bottom oil fuel being carried in a cross bunker. Provision is made in a hold forward, for cable stores, etc., and a refrigerator is provided aft with ample storeroom capacity. Cable will be carried in 3 tanks forward of the propelling machinery with a total coiling capacity of 18,000 cub. ft. The machinery for working the cable will include picking up and paying out gears, dynamometers, sounding machines, etc., and the operation of the captain will be arranged on the navigating bridge and rooms for the other officers will be on the awning and main decks amidships, the petty officers, cablemen and seamen being accommodated on the main deck aft. The propelling machinery will consist of twin screw triple expansion engines.

Welland Canal Lock Gate Accident.

While passing through the Welland Canal, June 16, Canada Steamship Lines' wooden s.s. India down bound with a cargo of wheat, struck the lower gates of lock 16, about 6.05 p.m., plunging through them, and making a descent of 14 ft. into the reach below. The water released from the level above the lock also carried out the upper tow path gate. The rear slopes of the canal banks were washed out in spots, to a small extent. After the accident the ship lay sunken below lock 16, close to the easterly bank, in such a position as not to block traffic through the canal. It is believed that her entire wheat cargo is damaged by water. It is stated that the cause of the accident was the ship's engines going ahead instead of reversing when entering the lock. Two wire cables were cut, but they either parted or rendered around the ship's timber heads. Three spare lock gates were placed in position, and navigation was resumed by noon the following day, several up and down bound ships being somewhat delayed. The estimated cost of repairs to Government property is \$12,000. The Reid Towing and Wrecking Co's s.s. Manistique lightened the grain and floated the ship.

Quebec Harbor Commissioners Abolish Dues.

The Quebec Harbor Commissioners sent the following cablegram to Donaldson Bros., London, Eng., recently: "To place Quebec on better footing than competitive St. Lawrence ports, we have decided to waive tonnage dues 7c, net register ton, also side moorage 60c hundred tons net register on steamships loading full grain cargoes at Quebec. Steamships should save about 2 days steaming time, pilotage, about \$200 stopping Quebec instead of proceeding up channel. Kindly give this greatest publicity possible. Might advise Baltic and London Corn Exchange, also as many owners and interested parties quickly. Can run grain Quebec 60,000 bushels per hour, abundant water, loading berths up to 33 ft. Our opinion steamships could accept three pence quarter less at Quebec than other ports. There is half-cent bushel more rail freight to Quebec than Montreal, but time and money saved more than offset this. Loading can be done as cheaply as at Montreal, and shifting boards and bags are cheaper here."

Heretofore the tonnage duty at Quebec has been 7c. for every ton on the registered tonnage of ships loading or unloading full cargoes, and the moorage rate 60c. per 100 tons register, these charges having existed there from the early days of the old Trinity House control. The commissioners have waived these charges on ships loading full cargoes of grain at Quebec, to comply with a long standing pressure by the shipping interests, and to put, as far as possible, the port on the same footing as other grain shipping ports.

Aube Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital, and office at Montreal, to own and operate ships, and carry on a general steamship agency and forwarding and carrying business. The provisional directors are: F. H. Markey, G. G. Hyde, J. G. Ahern, R. C. Grant, and R. J. Forster.

Atlantic and Pacific Oceans.

The name of the s.s. Bilbster, owned by Canada Steamship Lines, has been changed to Essex County.

The s.s. Salina, stated to be an Italian ship bound from Barry, Wales, for Montreal, was reported ashore at Fox Bay, Anticosti Island, June 9.

The Norwegian s.s. Gangstad, which grounded on Sea Island, near Cape Sable, June 6, and released herself the same day, arrived at Halifax, June 8, leaking. The cargo of sugar was discharged and she was drydocked for examination.

The Leyland Line s.s. Winifred arrived at St. John's, Nfld., at the end of May, with the same company's s.s. Oxonian in tow, the latter having lost her rudder. The tow was for about 450 miles, on account of heavy weather, took about 10 days.

The Red Cross Line s.s. Silvia, which has been undergoing overhaul and repair at Glasgow, Scotland, was expected to leave Glasgow about June 20, for St. John's, Nfld., to take up her service on the Halifax-St. John's-New York route, in conjunction with the s.s. Rosalind.

Maritime Provinces and Newfoundland.

About 50,000 tons of Cape Breton coal was shipped from Sydney, N.S., to Boston, Mass., recently, for the New York, New Haven & Hartford Rd.

The s.s. Seneca was libelled at Newcastle, N.B., recently, on a claim for \$10,000 by the Canadian Salvage Co., for services rendered when she was in trouble in ice off Halifax, during last winter.

The schooner Eva Blanche, bound to Bay Roberts, Nfld., with coal from Sydney, N.S., ran ashore near Cape Pine, Nfld., June 4, during a dense fog, and became a total loss. The crew left the ship in boats, and rowed to Trepassay, landing there the following morning.

The Bras d'Or Steamboat Co., Sydney, N.S., has not, as recently reported, bought the s.s. Princess, or any other steamboat this year. The service given by the company between Sydney, Baddeck, and Whycomagh will probably be continued this year by the s.s. Marion.

Sydney, N.S., pilotage district has been placed directly under the Minister of Marine and Fisheries' authority. In future, the only pilotage station for this district, which includes North Sydney, Sydney, and International Pier, will be on Cranberry Head, on the north side of the entrance to Sydney harbor, and pilots will be obtained from the pilot boat off that station.

It is announced that Halifax, N.S., has been chosen as the site of a national monument to Canadians lost at sea, through the hazard of war. This monument, which will be erected by the War Graves Commission, will be of the type of the Bloomfield Cross of Sacrifice, as erected in the British military cemeteries in Belgium and France, and will be placed in Point Pleasant Park, on an elevation facing the open sea.

An order in council has been passed dismissing J. P. Pilot, pilotage commissioner, Caraquet Pilotage District, N.B., and appointing J. L. Blanchard, T. Le Bouthiller, M. Aziz and A. D. Glisson, as pilotage commissioners for that district, on the Minister of Marine's report that the Commission had not made any

returns for a number of years, as required by sec. 441 of the Canadian Shipping Act. J. P. Pilot was the only surviving commissioner for the district.

F. R. Reed, owner of the s.s. Pawnee, who offered her to the Newfoundland Government, for mail carrying purposes, during the recent difficulty with the Reid Newfoundland Co., is reported to have decided to operate her in the passenger service in Conception Bay, Nfld. It is stated that she is being painted and overhauled to suit her for such service, and that her name will be changed to Ruby S. Burton. She was formerly owned by G. Dexter, Boston, Mass., and during the war was used as a scout patrol, and for icebreaking purposes at Cape Cod. Her dimensions are, length 115 ft., beam 15 ft., draft 8 ft., and she is equipped with triple expansion engines of 400 h.p., for a speed of about 15 knots an hour.

In connection with the sinking of the Eastern & Have Transportation Co's schooner Con Rein, by a U.S. submarine, near Black Rock, R.I., Aug. 29, 1921, E. M. Macdonald, Pictou, N.S., moved in the House of Commons, recently, for copies of all documents in connection with the company's petition to the Secretary of State for External Affairs, and communications and replies from the U.S. Government in the same connection. The object is to call attention to the anomalous position of a Canadian company in a case of this kind, as it cannot proceed direct against the U.S. Government, but has to apply through the Canadian Government, which in turn must deal with the British Embassy at Washington, D.C., which takes up the matter with the U.S. Government.

Province of Quebec.

A conciliation board has been appointed to deal with a dispute between Shipping Federation of Canada member companies and S.K. Trotter will, in the port of Montreal. The representatives, and J. T. Foster the men. Thos. Robt. Manager, Shipping Federation of Canada, is reported to have stated that the Federation is taking no part in the matter, as it has nothing to arbitrate, and intends to ignore it.

The Clarke Steamship Co. is reported

to have bought the s.s. Gaspesian, in England, for service between Montreal, Quebec, Gaspe Coast, and Prince Edward Island ports. The Gaspesian was built at Wallsend-upon-Tyne, Eng., in 1874, and has an iron hull of the following dimensions,—length 160.8 ft., breadth 27.1 ft., depth 11.3 ft., tonnage 598 gross, 319 net, and she is screw driven by engine of 70 h.p. She was originally named Warkworth and later Theodore Conseil, and was for several years operated by the Gaspe and Baie des Chaleurs Steamship Co., on the Gaspe coast. She was later owned by the Canadian Maritime Co., Montreal, and was sent to Europe in 1917 for operation during the war. She has accommodation for about 100 passengers, and has a dining room, smoke room, and other conveniences. Before returning to Canada she was thoroughly overhauled and refitted.

Ontario and the Great Lakes.

The Northern Navigation Co's ferry service between Sarnia and Port Huron, was commenced May 29, with the s.s. Louis Philippe.

The steam tug McNaughton, owned by C. S. Boone Dredging and Construction Co., Toronto, had her name changed to John J. Manley.

The name of the s.s. B. F. Berry, bought from U.S. owners recently, by Mathews Steamship Co., Toronto, has been changed to Berrinton.

A regular passenger service will, it is reported, be established between Port Stanley and Cleveland, with the s.s. Colonial, making two trips a week.

The Port Huron ship channel, in the St. Clair River, was closed during the greater part of June, during dredging operations, and all ships used the Canadian channel.

Canada Steamships Lines s.s. City of Ottawa, which arrived at Toronto, June 10, was the first steamship to dock at the new harbor wharves at the foot of York St.

Imperial Oil s.s. Imperial left Sarnia, June 9, for Ico, near Vancouver, B.C., via the Welland Canal, St. Lawrence River, and the Atlantic Ocean to New York, thence through the Panama Canal and up the Pacific coast.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during May, 1922:

Articles		Eastbound	M. ft. R. M.	Canadian		
				Canal	U.S. Canal	Total
Lumber	8	20,314	20,322
Flour	507,880	647,300	1,155,180
Wheat	1,088,920	23,573,476	24,662,396
Grain other than wheat	2,369,333	24,366,439	26,734,772

			676,002

An order in council has been passed confirming the license granted to A. Laflamme for the operation of a ferry across the Ottawa River, between Buckingham, Que., and Cumberland, Ont., at an annual rental of \$5, and providing regulations therefor.

The s.s. Rapids King, owned by Canada Steamship Lines, was placed in service by the Northern Navigation Co. June 24, between Wallaceburg, Ont., and Detroit, Mich., making three trips a week. The same company is also operating the s.s. Thousand Islander, between Chatham, Ont., and Detroit.

Arrangements are reported to have been made for the raising of the s.s. J. H. Jones, which was lost with all hands at Cove Cork, near Lionshead, Nov. 22, 1906. It is stated that she is lying on a good bottom, and the only thing that might prevent the raising will be the depth of water.

The Kingston Navigation Co. is operating its ships in conjunction with those of the Canada Steamship Lines, picking up freight at Bay of Quinte ports, and transshipping to C.S.L. ships at Kingston. It will also take all freight discharged at Kingston by C.S.L. for B. of Q. ports, and will deliver it.

The Maple Leaf Milling Co. which bought the s.s. S.N.A. in Europe recently, is transferring her to the Canadian register, and will probably rename her Hedley Shaw. She is being operated between Port Colborne and Montreal, by the Port Colborne and St. Lawrence Navigation Co., a Maple Leaf Milling Co. subsidiary.

Canada Steamship Lines s.s. Kenora, which ran aground June 6, at Morgan's Point, was refloated undamaged by John E. Russell, wrecking contractor, Toronto, June 8. After being released, a portion of the cargo, which had been lightered, was reloaded and she resumed her voyage to Montreal.

The U.S. Lake Survey reports the mean stages of the Great Lakes for May, in feet, above mean sea level, as follows: Superior, 601.94; Michigan and Huron, 580.40; St. Clair, 575.25; Erie, 572.74; Ontario, 246.55. Compared with the average mean levels for the past 10 years, Superior was 0.20 ft. below; Michigan and Huron, 0.29 ft. below; Erie, 0.08 ft. below, and Ontario, 0.17 ft. below.

The U.S. Naval Communication Service has announced the establishment of radio compass stations at points in Lake Superior and St. Mary River, as follows: Detour Point, Grand Marais and Whitefish Point. The stations operate on a wave length of 800 metres and are free of charge for the service. Grand Marais and Whitefish Point are connected by a land line, and operate as a group.

The s.s. Conestoga, owned by the Crossby Transportation Co., Milwaukee, Wis., was damaged by fire in the Cardinal Canal, towards the end of May, with a cargo of 40,000 bush. of wheat consigned to Montreal. She was built at Cleveland, Ohio, in 1878, and has an oak hull of the following dimensions: Length, 252 ft.; breadth, 36 ft.; depth 26 ft. 3 in. She was originally named Susquehanna.

The s.s. Aragon, which ran ashore at Salmon Point, near Kingston, Nov. 17, 1921, and which was abandoned to the underwriters, was released during May by John E. Russell, Toronto, and taken to the drydock at Kingston. The salvage work was of the ordinary kind, but was interfered with, to some extent, by bad

weather. It is stated that the ship will be offered for sale by the underwriters.

Livingstone Channel light 3B has been established in the Detroit River, on the dike along the western side of the channel, in lieu of the temporary gas buoy 3B, which has been discontinued, and the channel buoys 23 and 25 have been moved 50 yds. westward to the new west bank of the widened channel. Channel light 5 has been established in lieu of temporary gas buoy 5, which has been discontinued.

The dredging of the St. Mary River at Sault Ste. Marie, by the Dominion Public Works Department during 1921, has resulted in a material widening of the deep water approach to the lower end of the U.S. canal. Two red and white spars, one on the east and one on the west, have been placed to mark the northerly limits of the dredging. These spar buoys may safely be ignored by ships loaded to pass through the Canadian canal.

A ferry steamship, which was launched at Toledo, Ohio, May 29, for the Detroit & Windsor Ferry Co., is said to be the largest boat of its kind for operation as a fresh water ferry. It is expected to be ready for operation between Detroit and Windsor, about July 1. The dimensions are: Length, 170 ft.; breadth, 66 ft. She has two decks, the lower of which will accommodate 75 automobiles, the upper, or cabin deck having capacity for about 2,000 passengers.

The Dominion Public Works Department has dredged the middle ground in front of the Government wharf at Belleville to a depth of 12 ft. at low water, which is 245 ft. above mean sea level at New York. A basin at the east side of the wharf, and the entrance thereto, 100 ft. wide, were also dredged to a depth of 12 ft. below low water for 300 ft. shoreward. An obstruction, consisting of loose stone located in the south channel of the swing span of the Prince Edward County bridge, west of Belleville, has been removed to a depth of 14 ft. below low water.

The s.s. Joyland, which was wrecked at Little Round Island, near Brockville, and abandoned by Canada Steamship Lines to the underwriters, has been sold to John E. Russell, harbor contractor, Toronto. She was built at Detroit, Mich., in 1884, and was originally named William A. Haskell. Her dimensions are: Length, 250.5 ft.; breadth, 37 ft.; depth, 14.3 ft.; tonnage, 1,845 gross, 1,070 net, and she is screw driven by engine of 88 h.p. She was formerly owned by Montreal Transportation Co., and was taken over by Canada Steamship Lines on the acquisition of that company's property. She was taken to Kingston for overhaul and later to Port Dalhousie for repairs, and is expected to be offered for service shortly.

British Columbia and Pacific Coast.

The White Pass and Yukon Route s.s. Whitehorse was the first steamboat to arrive at Dawson, Yukon, this season, tying up there, June 9.

The Dominion Public Works Department Superintendent of Dredges, at Vancouver, received tenders to June 14, for repairs and general overhaul to dredges 303, Fruhling; and 305, King Edward. The small steamboat Klondike, built at Dawson, Yukon, in 1921, was sunk in an ice jam, off Mayo, at the end of May. She was lying in shallow water and may be raised.

The Howe Sound Navigation Co.'s s.s.

Lady Evelyn, which was taken to Vancouver recently from the Atlantic coast, has been completely renovated and placed in the excursion service out of that port.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince George is now calling at Powell River, northbound, as well as southbound, and the calls at Swanson Bay have been cancelled.

An octagonal reinforced concrete lighthouse is being built at Carmanah light station, in the Juan de Fuca Strait, by the Marine Department. The site is immediately behind the existing lighthouse. While the existing lighting apparatus is being moved to the new structure, about July 15, a fixed white light of low power will be shown from the top of the old building.

The C.P.R.'s s.s. Princess Royal was placed in service, June 14, in conjunction with the s.s. Princess Adelaide, between Vancouver and Victoria, replacing the s.s. Princess Alice, which has been transferred to the Alaska service, after having been overhauled. The s.s. Princess Maquinna made a special cruise via the west coast to Rivers Inlet, in the latter part of June.

The steamships Sylvia Victoria and Willdomino, formerly named War Cavalry and War Convey, were to be offered for sale in London, Eng., recently. They were built by J. Coughlan & Sons, Vancouver, B.C., in 1919, for the British Government, under orders from the Imperial Munitions Board, and on delivery, were allocated by the British Ministry of Shipping, to private firms for operation. The s.s. Sylvia Victoria has the following dimensions: Length, 410 ft. 7 in.; breadth, 54 ft. 1 in.; draft, 24 ft. 2½ in.; depth moulded, 29½ ft.; tonnage, 5,757 gross, 4,199 net, 8,750 d.w. capacity, 479,652 cu. ft. grain capacity. She is equipped with two steam turbines geared to one screw shaft, 2,500 shaft h.p., 3 single-ended boilers, 14 ft. 9½ in. x 11 ft. 3½ in., 190 lb. working pressure, forced draft, 9½ knots an hour at 42 tons Welsh coal and 10 knots on 36 to 40 tons Pocahontas coal, electric light and wireless. The s.s. Willdomino has the following dimensions: Length, 410½ ft.; breadth, 54 ft. 1 in.; depth moulded 29½ ft.; draft, 27 ft. 5 in.; tonnage, 5,755 gross, 4,173 net; 8,750 d.w. capacity, 479,652 cu. ft. grain capacity. She is equipped with two steam turbines geared to one shaft, 2,500 shaft h.p., 3 single-ended boilers, 14 ft. 10 in. x 11 ft. 3 in., 190 lb. working pressure, forced draft; speed, 10 knots on 40 tons Welsh coal, telemotor steering gear, electric light and wireless. The first-named is at London, Eng., and the latter at Glasgow, Scotland.

Lake Temiskaming Boat Co., Ltd. has been incorporated under the Ontario Companies Act, with \$40,000 authorized capital, and office at Haileybury, Ont., to own and operate steamships and boats on Lake Temiskaming, and other waters in Ontario, and to carry passengers and freight. The provisional directors are: A. L. Herbert, W. Shortt, G. Poppleton, E. Bucknall and A. Herbert.

Revillon Freres Trading Co., Montreal, has bought the s.s. Maxwell III, built by Thomas Rawling, Liverpool, N.S., for use, with its other ships, purely for its own business, in the transportation of supplies to various trading stations. The name of the ship has been changed to Captain Albert Revillon, and she has been equipped with a Densil semi-Diesel engine.

United States Merchant Marine Affairs.

The recent delivery of the s.s. Western World to the Emergency Fleet Corporation completed its wartime ship-building programme.

The Board reports that the cabin bookings on its ships for May, June and July totalled 2,384 first class passengers, 1,193 second class, and 3,335 third class.

The U.S. Shipping Board has sold 202 unassigned 1,400 h.p. triple expansion marine engines, located in various parts of the U.S., by auction, realizing \$225,860. They were sold in lots where they were located, the highest individual price received being \$1,260, the lowest \$805, and the general average \$1,103.

In April, the total expenses incurred in excess of income from ship operations, including overhead, repairs, insurance and lay-up expenses, were \$2,977,246.72. This is the most favorable result yet attained. The excess of expenses over income for March was \$3,704,155.22. The total voyages reported were 185 for April, and 188 for March.

The Emergency Fleet Corporation's Controller Department has advised that the 23 steamships formerly known as the "State" ships, the names of which have been changed to those of different U.S. Presidents, were built at a total cost of \$130,554,297.28. Seven of these are 502 ft. long and the balance 518 ft. long. The tonnage is not given.

The Board has authorized the settlement of 286 claims of the shipbuilding contractors, totalling \$19,919,660.34, but after deducting offsets by contractors the amount payable from the treasury is \$448,320.42. The cash amounts actually allowed and accepted were about \$2,150,000, against which contractors admitted owing the shipping board nearly \$2,000,000 in excess of their claims.

United States foreign and waterborne trade for March showed an increase of 20% over February for dry cargoes, and 31% in tank ship movements, the gross increase being 25%. The Shipping Board states that despite this increase in total trade, the percentage carried in U.S. bottoms was far below what it should be, being approximately 35% of both import and export trade in dry cargo, and 89% inward and 38% outward of the tanker trade.

R. B. Maucham, Manager, Kiangnon Dock and Engineering Works, Shanghai, China, who arrived in England recently, on a business trip, is reported to have stated that his company had turned out four of the largest steamships ever built in a Chinese yard—viz., 14,750 tons displacement. They were built for the U.S. Shipping Board, at \$195 a d.w. ton, and had been sold to the Canadian Robert Dollar Co., at \$6 10s. a d.w. ton, showing a loss on the building cost of approximately \$135 a d.w. ton.

The Shipping Board during 1920 sold to the Lloyd Belge, 22 ships, totalling about 56,000 tons gross, for approximately \$16,500,000, on the understanding that certain adjustments would be made as to the deadweight and condition. Negotiations for settlement of this question have been proceeding during the past year, and an agreement has been reached, by which the Board receives slightly over \$12,000,000, of which about \$10,500,000 has been paid in cash, the balance to be paid in 5 equal annual instalments.

Washington, D.C. reports indicate that

there is considerable opposition to the amendments to the Merchant Shipping Act, which provide subsidies for the operation of U.S. steamships in foreign trade. It is stated that organized labor, seamen, and the agricultural interests are against the proposals. The bill providing for the exemption of U.S. ships from Panama Canal tolls remains in statu quo. It is stated that it is not favored by the Administration, and that there are strong prospects of indefinite delay, some regarding the bill as dead.

A service of four ships a month has been placed on the route between North Atlantic and Brazilian ports, two fast passenger ships and two freight ships. The Brazilian ports used are, Santos, Rio and Victoria, and for the present, only New York and Boston in the North Atlantic, but should business develop, Baltimore and Newport News and other ports will be included. The service is being given by the Munson Line and the International Freighting Corporation. A service between Gulf of Mexico and Brazilian ports is also being operated by the Mississippi Shipping Co.

In giving evidence before the joint congressional committee, on the merchant marine, recently, D. H. Cox, naval architect, New York, stated that an investment of \$400,000,000 would be necessary to overcome the present deficiencies, and to afford a well balanced fleet capable of carrying half of the foreign trade. He stated that ships of the following types were lacking,—passenger and mail ships of 15,000 gross tons, with speeds of 18 knots and cargo ships of 10,000 to 15,000 gross tons, with speeds of 14 to 16 knots; fast cargo ships of 9,000 d.w. tons and up, with speeds of 12 knots and over; refrigerating ships of 8,000 to 12,000 gross tons, with speed of 14 to 15 knots, and ships equipped with Diesel engines or Diesel-electric drive.

New rates were put into effect recently on the passenger ships operated out of New York, by Lamport & Holt, to South American ports. The fares from New York to Rio de Janeiro were reduced from \$415 to \$315, Montevideo from \$475 to \$360, to Buenos Aires from \$490 to \$370, and northbound rates were reduced in proportion. Two lines run on this route, viz.: the U.S. Shipping Board's ships operated by the Munson Line, and those operated by Lamport & Holt, the latter ships being British. The Shipping Board takes the view that this is a declaration of a rate war between the two lines, stating that while it was about to adjust the rates between these

ports, the new rates announced do not constitute merely an adjustment, but have been made in a way as to attempt to discourage the Board's operations. It is stated that Lamport & Holt intended withdrawing their four ships on this route during June, and placing them in the trans-Atlantic service.

The following details of operation for February and March have been issued by the U.S. Shipping Board:

	February	March
Excess of expenses over income	\$3,089,459.41	\$3,704,155.22
Round trip voyages	155	158
Excess of expenses on voyages	\$593,290.80	\$1,019,860.00
Excess income on tanker voyages	\$534,481.45	\$290,569.16
Charter hire receipts	\$65,411.50	\$8,139.03
Repairs	\$1,005,000.00	\$1,315,299.88
Insurance premiums	\$320,355.53	\$391,565.84
Lay up expenses	\$413,076.60	\$381,038.27
Salaries and wages	\$477,546.93	\$477,410.58
General expenses	\$300,601.05	\$210,120.83

Overhead, repairs, insurance and lay up expenses are included in the above figures, but no account is taken of capital charges, and several forms of insurance which the Board carries itself. The omission of these figures is stated to be in line with established government practice. The Board feels that the inability to include proper proportions for capital charges in the monthly statements, does not give a true picture of the losses, such as all commercial statements should reflect.

Ship Plate Contract Settled.—The Dominion Iron and Steel Co's claim for \$10,964,000 under a contract made with the Dominion Government in 1919, for 250,000 tons of steel plates for shipbuilding, has been settled for \$4,500,000. Under the contract, the company was required to erect and equip a modern ship plate mill and accessories, the cost of which is stated to have been \$5,500,000. After about 50,000 tons of the plates had been rolled, the Government cancelled the contract, but acknowledged its obligation to pay the loss actually incurred. The matter was referred by the Minister of Justice to the Exchequer Court, and the Government paid \$3,000,000 on account of the loss. An order in council was passed May 20, authorizing the payment of a further \$1,500,000 in settlement of the claim, the settlement being confirmed by the Exchequer Court.

Bernard Tug Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$25,000 authorized capital, and office at Vancouver, to carry on a general tug, towing and steamboat business, and to own and operate ships.

Ships Added to and Deducted From the Canadian Register During March, 1922.

Dominion Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held, and judgments delivered in connection with the following casualties:—

Stranding of the s.s. Canadian.

An investigation was held at Collingwood, Ont., May 5, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. R. Basset and P. G. Moles, as nautical assessors, into the stranding of the Canadian Steamship Lines s.s. Canadian, on Minos Bank, Georgian Bay, April 17. The master, Capt. H. A. Patterson, testified that his information was, that all lights were in operation, and relying on this, he proceeded on his course, with the Midland range astern, and verified his compass course. Not seeing the Brebeure range lights, he altered his course north-east, and shortly after checked his speed, and simultaneously gave an order full speed astern, and the ship struck. Soundings were taken, lifeboats placed in readiness, and the engines run full speed astern. Shortly after, a storm sprang up from the southwest, which prevented the adoption of any methods to clear the ship, and caused extensive damage to 54 plates. Had the Brebeure range lights been in operation, the accident would have been taken place, and he considered them of great importance. He stated he had taken bearings of Giant's Tomb light, with the help of some contrivance attached to the binnacle. This statement was not, however, confirmed by the wheelman, who did not appear to have noticed such action.

The court found that the master was not justified in proceeding at full speed, especially when he noticed that no range lights were visible. He had no knowledge of the exact speed of his ship, except from hearsay, and had no instruments to register the speed. It was therefore most necessary to navigate carefully. While his compasses appeared to be correct on the range course, he had no proof that they would prove accurate on other points, hence, if he did take a bearing of Giant's Tomb lights, he could not rely on it implicitly. There were ships ahead of him, and there is no information that any of them came to grief, and while recognizing the importance of the Brebeure range lights, their nonvisibility does not seem to have affected the navigation of the four or five ships which were ahead. It should be understood by all navigators, that aids to navigation are only to help in negotiating dangerous narrow stretches, and cannot be implicitly relied on, and the navigator has at times to resort to other means to bring his ship safely to its destination. The master is a young man and apparently has not had the opportunity to use his resourcefulness, and was partly led astray by the information that all lights were in operation, and when he realized the absence of the aid he expected, combined with the little stretch he was unable to take lay before him, he was unable to take action. The court felt that in this instance, leniency was justified, and though it found the master to blame for the grounding of the ship, took into account the failure of the range lights, but did not deal with his certificate, but reprimanded him most severely for lack of judgment and resourcefulness, and warned him to be more careful in future. It also decided to draw the

attention of the Marine Department to the failure of the lights.

Stranding of s.s. Mapledawn.

Held at Montreal, May 23, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and A. Lefebvre, as nautical assessors, into the stranding of the Canada Steamship Lines s.s. Mapledawn, near Isle aux Vaches, River St. Lawrence, Apr. 24, when bound from Halifax, N.S., to Montreal, with sugar. The ship was well equipped and manned, and had two compasses, both of which had been adjusted this spring and were almost correct magnetic. The master stated that he was on the bridge until 10.30 p.m., when he went to his room, under the bridge, and was asleep when the ship stranded at 11.15 p.m. On being called, he went on to the bridge immediately and tried to free the ship by various movements of the engine, while soundings were being taken in the tanks and outside. The ship was refloated at 7 a.m., the following day, with the help of three tugs. The pilot, G. Arcand, stated that he had had three previous accidents. The night was clear, though there was some mirage and smoke, and high water had partially submerged some of the islands, and he attributed the accident to these causes, and also to the fact that the buoys had not then been placed in that locality. He had not used the glasses to look for the spar buoy, nor at any time prior to the accident. All the leading lights were plainly visible and in operation, and were not obscured by smoke. The wheelman stated that there was no smoke, the weather being perfectly clear and all lights plainly visible, and that half a minute before the ship grounded, the pilot ordered the wheel astern.

In summarizing the evidence the court noted the discrepancy between the evidence of the pilot and the wheelman in respect of smoke, but as it agreed regarding the visibility of the lights, the conclusion was drawn that smoke was not a cause of the casualty. The pilot knew, when leaving Quebec, that the water was high, and with his long experience he must have known that some of the islands would be submerged, and he also knew, or should have known, that the gas buoys in that neighborhood were not then in position. While of the opinion that it is difficult to observe spars at night, yet knowing the spar's position with respect to the opposite light, below Isle aux Vaches, the court stated that if the glasses had been used, it is possible that it could have been discerned. Having mentioned mirage, smoke and high water as cause of the accident, the pilot should have used greater vigilance and prudence. On this point, Marsden says: "Where, to keep a good lookout, glasses are necessary, it would probably be held negligent not to use them. In an American case the use of night glasses on board a steamship coming into harbor was held to be necessary." The pilot would have shown prudence if he had reduced the speed of the ship. The court therefore found that he did not exercise proper vigilance, the omission of the use of the marine glasses being recognized by high authorities as an indifferent lookout, and also erred in maintaining full speed when, to his mind, the objects did not appear as he expected. Owing to the fact that the buoying of the narrow stretch had not been completed,

his license was not dealt with, but he was fined \$100, to be paid by June 30. The master, Capt. J. P. Dufoir, was exonerated from any blame for the casualty, but the court looked with disfavor on his absence from the bridge, and therefore reprimanded him, questioning whether, as pilotage is not compulsory, it is advisable for the master to retire to his room when his ship is being navigated in narrow stretches.

Grounding of s.s. Senator Derbyshire.

Held at Montreal, June 6, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and A. Lefebvre, as nautical assessors, into the grounding of the George Hall Coal Co's s.s. Senator Derbyshire, April 28, at Isle aux Vaches, in the St. Lawrence River, when bound from Salmon Bay, Saguenay River, to Ogdensburg, N.Y., with pulpwood. The evidence showed that at the time of the grounding, the weather was clear, there was no wind, and all lights were plainly visible, and the master was below, away from the pilot house, the second officer being on duty. The pilot, S. Perron, stated that he had had some previous accidents, and that this grounding occurred through misjudging his distance from land, owing to high water, and when he found his mistake, he ordered the helm to starboard, but gave no order to the engine room. The second officer stated that when the master came on deck, the engines were put full speed astern, and when the ship refloated she was found to be leaking.

The court, while admitting the possibility of error in judgment which renders some mishaps excusable, considered that in this case, as in the case of the s.s. Mapledawn, the pilot, and not the state of the water, and that he could expect some of the bordering the channel to be submerged, and should therefore have given greater attention. Whether water is low or high, there is but one course to follow, and guiding objects, aids to navigation, etc., are placed at various distances, to help in directing ships, and as the pilot has frequently taken ships with greater draft up and down the river safely, under less favorable conditions, this grounding cannot be attributed to an error in judgment, but if so, it is of a culpable nature. The light draft of the ship, her slow speed, and the height of water, no doubt attributed to the lack of vigilance, which brought about the grounding, and which, while not of a serious nature in respect of damage and delay, is nevertheless detrimental to the reputation of the St. Lawrence for safety of navigation. As there was no attempt on the part of the pilot to make any false representation, the court imposed the minimum fine of \$50, to be paid by June 30. The master, Capt. J. B. Gamache, was reprimanded for being away from his post, the court considering that the slight regard he showed of his responsibility, was aggravated by the fact that it was his watch on deck.

Trevisa-Ilocma Collision.

Held at Montreal, June 5, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and A. Lefebvre, into the cause of the collision between the s.s. Trevisa, owned by Export Steamships, Ltd., Montreal, and the s.s. Ilocma, owned by Imperial Oil, Ltd., Toronto, in the Welland Canal, May 4. The evidence was contradictory

as to the speed of both ships, and also as to how and where the actual collision occurred, and the court, omitting the contradictory evidence, found that on the admission of the s.s. Iocoma's master and mate, their ship swerved to port, when they were expecting the reverse effect through the movement full speed astern, and that in view of the manner in which the impact took place, and the damage inflicted, the Iocoma was responsible, but attributed no culpability to the master or other officer, and exonerated them from blame. Whether the swerving was due to an error in judgment in approaching too near the bank, or to the current which caught the starboard bow, was not determined, but probably the latter was the cause.

A Proposal to Secure Canadian Government Merchant Marine Steamships.

T. M. Kirkwood, President Kirkwood Steamship Co., Montreal, wrote the Minister of Marine and Fisheries on June 7 from England, as follows:—"As a member of the Quebec Board of Trade for some years, I am aware that the Government Merchant Marine steamers and the Transcontinental Railway are losing millions each year, and I also am aware that 80% of the Canadian western grain is shipped for export via the American ports, instead of via Quebec, and it is no secret that the port of Quebec has not shipped any grain for export for some years, unless it was the overflow of grain that Montreal could not handle. I am a shipbuilder and vessel owner. I built ships at Three Rivers for the Imperial Government, and I have operated, and am yet operating, vessels between Quebec and Montreal for some years. I bought a steamer here last April for the Quebec and Montreal route, and have returned for another one.

I have talked with a strong group of financiers here with reference to taking over and operating all your Government Merchant Marine steamers, and they are inclined to form a large company to take over and operate the vessels and to build elevators in Quebec, Halifax, England, France and Italy, and a large flour mill at Quebec, providing you can induce your Government of Quebec or Ottawa to guarantee their interest on their issue of bonds, and will sell the vessels at a fair price, and that your Ottawa Government will lower the rate on grain from Winnipeg to Quebec to 12c. a bushel, and from Winnipeg to Halifax to 18c. a bushel, and your Government to hold first mortgage and insurance on the vessels.

They propose to sell the bonds to the actual buyers of wheat and flour in England, France and Italy, so that the buyers will have their own line of steamers. This will, of course, send to Quebec the 80% tonnage that is now going via American ports for export to England, France and Italy. You can readily understand your port of Quebec will be the headquarters for the large fleet of steamers and will get the 80% export tonnage, because the grain will have to be shipped over the Transcontinental Railway and the steamers at Quebec, because the bondholders will be the buyers of the wheat, and will order it shipped to Quebec for export, or to be made into flour in their own mill at Quebec. You can understand that if a large flour mill is built at Quebec your Quebec farmers will get

cheap bran and shorts for their cattle; this will enrich your province. Kindly cable me what you think of the project, at London and Northwestern Hotel, Liverpool."

Mainly About Marine People.

John Allsop, General Agent for Canada, Royal Mail Steam Packet Co., Halifax, N.S., was entertained at dinner there by a number of friends, June 6, prior to leaving for England, to take up a new position in the company's head office.

C. S. Boone, President, C. S. Boone Dredging and Construction Co., Toronto, who died there, Apr. 11, left an estate of \$530,133.

W. E. Burke, who has been appointed General Traffic Manager, Canada Steamship Lines, Montreal, was born at Belleville, Ont., Sept. 23, 1881, and entered steamship service May 1, 1905, since when he has been, to Dec. 1, 1905, purser, s.s. Picton, Richelieu and Ontario Navigation Co., Montreal to Toronto; Dec. 1, 1905 to Dec. 31, 1906, Seafaring Freight Agent, same company, Toronto; Dec. 31, 1906 to Dec. 31, 1907, Traveling Freight Agent, same company, Toronto; Dec. 31, 1907 to Apr. 10, 1909, Travelling Freight Agent, Mutual Steamship Co., Toronto; Apr. 10, 1909 to Apr. 1, 1910, General Freight Agent, Merchants Mutual Line, Toronto; Apr. 1, 1910 to Jan. 1, 1914, Traffic Manager, same company, Toronto; Jan. 1, 1914 to March 1919, Assistant Manager, Canada Steamship Lines, Montreal; March 1919 to May 31, 1922, Director in Charge Transportation Department, same company, Montreal.

L. A. W. Doherty, who has been appointed Freight Traffic Manager, Canada Steamship Lines, Montreal, was born at Toronto, April 10, 1878, and entered transportation service in July, 1896, since when he has been, to 1887, clerk to Assistant Freight Traffic Manager, C.P.R., Toronto; 1887 to 1906, chief clerk to General Freight Agent, C.P.R., Toronto; 1907 to 1908, chief clerk to Assistant Freight Traffic Manager, C.P.R., Toronto; 1908 to 1910, Assistant Manager, Inland Navigation Co., Hamilton, Ont.; 1911 to Feb. 27, 1913, Traffic Manager, Inland Lines Ltd., Hamilton, Ont.; Feb. 27, 1913 to Jan. 1914, Freight Traffic Manager, Richmond and Ontario Navigation Co., Toronto; Jan. 1914 to Apr. 23, 1917, Freight Traffic Manager, Canada Steamship Lines, Toronto; Apr. 23, 1917 to May 31, 1922, General Traffic Manager, same company, Montreal.

Frederick S. Isard, who has been appointed Manager, Canada Steamship Lines, Montreal, was born at Hamilton, Ont., Aug. 4, 1888, and educated there. He commenced his business career with the International Harvester Co. at Hamilton. He entered transportation service in 1911, and has been to 1913, Comptroller, Canadian Interlake Line, Toronto; 1913 to 1919, Comptroller, Canada Steamship Lines, Montreal; 1919 to May 1921, Director of Finance, Canada Steamship Lines, Montreal; May 1921 to May 31, 1922, Managing Director, same company, Montreal.

J. F. M. Stewart, Toronto, who has been appointed director of the Home Bank of Canada, is President of the West Coast Towing & Salvage Co., Vancouver, B.C., and of the Gidley Boat Co., Pennington, Ont. He is also a director of Colingwood Shipbuilding Co., and Halifax

Shipyards Ltd., and a member of the Dominion Marine Association's executive committee.

Discrimination in International Shipping.

At the United Kingdom Chamber of Shipping's recent annual meeting in London, the following resolution was discussed: "That His Majesty's Government be urged to direct the attention of the foreign governments which have recently adopted or threatened measures of flag discrimination, to the prejudicial reaction of such measures on the trade of the world, and to the unreasonableness of expecting a continuance of the free navigation and equal trading rights hitherto accorded by the British Empire in the face of measures hurtful to its shipping." During the discussion the various measures being adopted, or considered, by different nations, were dealt with, including the U.S. Merchant Marine Act. Specific mention was made of the U.S. proposal to include the Philippine Islands within the terms of its coasting laws, and it was understood that the British Foreign Office had the matter in hand, with the view of showing that such an act would be contrary to international law.

Sir Kenneth Anderson, who moved it, said, in part:—"It is imperative that we should with all possible emphasis, enter our protest and reaffirm our conviction that, not only in the interests of British shipowners, but in the interests of all shipowners, and also in the interests of the whole worldwide community, irrespective of nationality, trade or occupation, such a policy must prove ultimately injurious. Now more perhaps than ever before, it is the first essential of the world's well doing that its various ports should enjoy absolute freedom in the exchange of those goods and services which each part can most advantageously and, therefore, most abundantly produce. You cannot have cheapness without freedom, and without cheapness you cannot have either abundance or the demand which springs from it. Discrimination in the treatment of shipping must increase the cost of ocean transport, for a vast proportion of the world's trade is the sole means of exchange, and by increasing the cost of transport you increase the cost and reduce the supply of the commodities transported. It may be true, on a narrow view, that discrimination, if effective—and all discrimination however small and insidious in its beginnings, tends to become absolute prohibition—would constitute for the national tonnage thus favored in their home ports a solid advantage, but this on the assumption that they will continue as before to enjoy freedom of trade in the ports of other countries. That is a very large assumption, for it is plainly inconceivable that other countries should maintain an attitude of passive and philosophical acquiescence in the face of treatment which could not be considered as otherwise than unfriendly. Discrimination is not only impotent to achieve its object, but, since it is avowedly designed to injure other countries, it must inevitably give rise to protest and resentment. This resentment will grow with the growth of restrictions, and we deprecate them, not only because they will impoverish the world, but because they will embitter national friendship."

Canadian Notices to Mariners.

The Marine Department has issued the following:—

11. March 23.—23, Ontario, Lake Huron, Goderich harbor, new edition of chart. 24, Ontario, Lake Huron, Georgian Bay, Parry Sound and approaches, new edition of chart. 25, Ontario, Lake Superior, Shaganash, lighthouse destroyed, temporary light. 26, United States, Lake St. Clair, Lake St. Clair lightship, characteristic of light to be changed. 27, United States, St. Clair River, Lake Huron, U. S. ship channel, intended change in aids.

12. April 4.—28, British Columbia, Canadian list of lights and fog signals, new edition. 29, British Columbia, Burrard Inlet, entrance to Port Moody, off Carraholly Point, beacon erected.

13. April 10.—30, Ontario, Canadian list of lights and fog signals, new edition. 31, Ontario, Lake Erie, Port Stanley, character of breakwater light. 32, Ontario, Lake Huron, Georgian Bay, Notawassa River, range lights discontinued. 33, United States, Lake St. Clair ship channel, intended change in buoyage. 34, United States, Lake St. Clair, St. Clair Flats canal, buoy to be discontinued. 35, United States, St. Mary River, Round Island light, characteristic to be changed. 36, United States, Upper St. Mary River, Cross Channel buoy to be moved. 37, United States, Lake Superior, Whitefish Bay, Point Iroquois light, characteristic to be changed.

14. April 24.—38, British Columbia, Vancouver Island, Baynes Sound, Courtney River, channel cleared of obstructions. 39, British Columbia, Queen Charlotte Islands, Hecate Strait, Cumshewa Inlet, Kingui Island, light established.

15. April 24.—40, Nova Scotia, Bay of Fundy, Minas Basin, Minasville, light to be discontinued. 41, Nova Scotia, Bay of Fundy, Port Maitland, color of light to be changed. 42, Nova Scotia, south coast, Lahave River, character of buoys to be changed, buoys to be established.

16. April 26, 43, Nova Scotia, Bay of Fundy, Grand Passage, character of buoy to be changed. 44, New Brunswick, Gulf of St. Lawrence, Chaleur Bay, Miscou harbor, range lights established, change in position of buoy, Harper Point light discontinued.

17. May 2.—45, Nova Scotia, Halifax harbor entrance, Sambro outer bank light ship replaced by gas and whistling buoy. 46, New Brunswick, north coast, Miramichi Bay, Horseshoe Bar, rearrangement of buoys. 47, Quebec, Gulf of St. Lawrence, off Heath Point, light ship to be placed. 48, Quebec, St. Lawrence River, between Quebec and Montreal, Contrecoeur course, change in position of front range light.

18. May 2.—49, Ontario, Lake Ontario, same directions for Canadian shores published. 50, Ontario, Lake Ontario, Toronto harbor, improvements in progress, caution. 51, Ontario, Lake Superior, Oiseau Bay to Copper Island, new edition of chart.

19. May 9.—52, Canada, seaplane stations, description of distinguishing flag. 53, Ontario, Lake Huron, Manitoulin Island, south shore, Providence Bay, change in character of buoy. 54, Ontario, St. Mary River, Sault Ste. Marie, dredging, buoys established.

20. May 9.—55, Canada, seaplane stations, description of distinguishing flag.

56, British Columbia, Juan de Fuca Strait, Swiftsure Bank lightship vessels, characteristic of submarine bell to be changed. 57, British Columbia, Juan de Fuca Islands, Masset Sound and Inlet, new edition of chart. 58, United States, west coast, Umattila reef lightship, characteristic of submarine bell to be changed.

21. May 19.—59, Canada, seaplane stations, description of distinguishing flag. 60, New Brunswick, Bay of Fundy, Petitcodiac River, wreck, buoy established.

Transportation Conventions in 1922.

Aug. 15 to 17.—International Railroad Master Association, Chicago, Ill.: W. J. Mayer, 15 Hotel Sherman, Chicago, Ill.

Aug. 23 to 25.—American Association of Railroad Superintendents, Kansas City, Mo.: J. Rothchild, 40 Union Station, Kansas City, Mo.

Sept. 12 to 15.—Traveling Engineers Association, Chicago, Ill.: W. O. Thompson, 1177 East 88th St., Cleveland, Ohio.

Sept. 19 to 21.—Roadmasters and Maintenance of Way Association, Cleveland, Ohio: P. J. McAndrew, Chicago and Northwestern Ry., Chicago, Ill.

Sept. 20 to 22.—American Railway Association, Telephone and Telegraph Section, Colorado Springs, Colo.: W. A. Fairbanks, 75 Church St., New York.

Oct. 2 to 6.—American Electric Railway Association, Chicago, Ill.: J. W. Welsh, 8 West 40th St., New York.

Oct. 10, 11.—American Association of Passenger Traffic Officers, Louisville, Ky.: W. C. Hoge, Central Rd. of New Jersey, 143 Liberty St., New York.

Oct. 17 to 19.—American Railway Bridge and Building Association, Cincinnati, Ohio: C. A. Lichty, 219 North Waller Ave., Chicago, Ill.

Oct. 17 to 20.—American Association of Dining Car Superintendents, San Francisco, Cal.: L. A. Stone, Chicago and Eastern Illinois Ry., Chicago, Ill.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:—American Association of Port Authorities—Canadian Council, 401 St. James Street, Montreal. Canadian Bar, Demurrage Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—D. N. Gill, Controller, Ottawa Electric Ry., Ottawa, Ont.

Canadian Freight Association (Eastern line)—G. C. Ransom, Chairman, 909 Shaughnessy Bldg., Montreal.

Canadian Freight Association (Western line)—801 Bayview Bldg., Winnipeg.

Canadian Passenger Association—Eastern Lines, G. H. Webster, 54 Beaver Hall Hill, Montreal; Western Lines, E. J. Stone, 506 Union Station, Winnipeg.

Canadian Railway Board of Adjustment No. 1—R. Chapple, 401 St. James Street, Montreal.

Canadian Railway Club—W. A. Booth, 53 Rushbrooke St., Montreal. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Canadian Travel League—R. J. Fitzgerald, 93 Wright Ave., Toronto.

Dominion Marine Association—F. King, K.C., Counsel, Kingston, Ont.

Engineers' Club of Montreal—C. M. Stranage, 9 Beaver Hall Square, Montreal.

Engineering Club of Toronto—R. B. Wolsey, 84 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 11 Niagara Street, Montreal.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—A. E. Storey, 310 G.T.R. General Office, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, Des Moines, Iowa.

Niagara Frontier Summer Rate Committee—James Morrison, Canadian National Ry., Montreal.

Quebec Transportation Club—A. P. Dion, Harbor Commissioner's Office, Quebec, Que.

Railway Association of Canada—C. P. Riddell, General Secretary, 263 St. James Street, Montreal.

Western Operating Committee—E. J. Stone, 506 Union Station, Winnipeg.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.

Transportation Club of Toronto—W. J. Hottum, 595 Runnymede Road, Toronto.

Transit Association of Vancouver—C. A. Dorriller, 450 Hastings St. West, Vancouver, B.C.

Winnipeg Traffic Club—A. J. Barber, 114 Cadmon Bldg., Winnipeg, Man.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Canadian Car and Foundry Co., Montreal, has issued Bulletin F7, Steel Pits and Depressed Center Flats, 150,000 lb. capacity, and P.4, Steel Combination Mill and Baggage Cars built for C.P.R.

Canadian Ingersoll-Rand Co., Sherbrooke, Que., has issued a booklet, "The lubrication of air compressors," containing the practice recommended by the Compressed Air Society. It has also issued circulars of air receivers, pressure tanks, moisture traps and aftercoolers; deep-hole and submarine drills, and air tools.

Canadian Steel Foundries, Montreal, has issued bulletin TW.1, Street Railway Track Work.

The Ohio Brass Co., Mansfield, Ohio, has developed two new rail bonds, for arc weld application, viz., type AW-7, for base of rail application and type AW-8, for ball of rail application. The AW-8 bond consists of 2 copper strands formed into a U, and welded into steel terminals which, in turn, are welded to the rail. The AW-7 bond is the same in principle, but of a single strand, and of any desired length, welded into suitable steel terminals. It is stated that steel to steel is the easiest kind of electric welding and that the new bonds conform to this principle. The steel terminals are slightly rounded and provide a wide angle or scarf in which to build the weld. The steel is heavy and will not be burned through by the arc. A copper sleeve, which surrounds the strands at the terminal, shields the wires and absorbs vibration.

Orton and Steinbrenner Co., Chicago, manufacturers of locomotive cranes, grab buckets and coal crushers, have moved their offices from the 11th to the 19th floor of the Transportation Building, 608 South Dearborn St., in order to secure large space.

Stafford Roller Bearing Car Truck Corporation, Lawton, Mich., has issued a folder containing a report by J. T. Downs, Superintendent of Rolling Stock, Michigan Central Rd., on the performance and service of Stafford roller bearings under test on three M.C.R. cars, between Dec. 15, 1920, and March 31, 1922, in which he says, in part: "These bearings have given no trouble whatever, no hot boxes have developed and no repairs have been found necessary, either on the bearings or the journal boxes."

Vapor Car Heating Co. of Canada, Montreal—A. D. Bruce has been elected a Vice President, succeeding J. A. Smith resigned. S. P. Harriman, Assistant Treasurer, having resigned to engage in other business, L. Gerard Smith, who has been with the Safety Car Heating & Light Co., for several years, has been appointed to succeed him.

Canadian National Railways Annual Report, for year ended Dec. 31, 1921.

Object and Scope of Report: This report of the operations of the Canadian National Railways for the calendar year 1921 has been prepared by order of the Board of Directors. It is presented in convenient form the combined operating results of the three groups of lines which have been placed in the Dominion Government in the hands of the Board for administration.

While this is the first report of the System as a whole, it covers what may be regarded as the third year in the life of the National System. Reports have been submitted on behalf of this Board covering the operations of the Canadian Northern Railway System since its acquisition by the Dominion Government, and the usual reports have been compiled under the Board's direction for the Canadian Government Railways since the operation of these lines was placed in the hands of this Board. These reports, together with the returns of the Grand Trunk Pacific Railway since the date that the latter railway was placed in the hands of the Minister of Railways and Canals as Receiver, have formed part of the Minister's Annual Statement as to the operation of Government railways, and have been included in the Dominion Government's Annual Blue Book of Railway Statistics. In view of the unified operation of the three groups of railways it is considered proper that the results of the system as a whole should be reviewed. In order that the record for the first two years may be available in this form the statistical comparison covers the three year period 1919-1921 and the year ending affecting the first two years' operations are also referred to briefly.

The Canadian Northern Railway purchase was as from 30th September, 1917, and although the Government had representatives on the Board of Directors through the previous year, no certain amount of Capital Stock, actual control of the Company was not taken by the Government until the completion of the arbitration proceedings in September, 1918, when the new Board of Directors was appointed.

On 20th November, 1918, the jurisdiction of the Board was extended over the Canadian Government Railways.

From 1st September, 1920, the management of the Grand Trunk Pacific Railway had which Company the Minister of Railways had in March, 1919, been appointed Receiver, was placed in the hands of the Board under the control of the 12th July, 1920. Under this arrangement the Board acts as Manager for the Receiver.

Mileage: The operated mileage as at 31st December, 1921, was made up as follows:

Canadian Northern Railway Sys.....	Miles 3,773.70
Canadian Government Railways	
Intercolonial Railway and	
Colonial Line.....	1,459.95
National Transcontinental	
Railway.....	4,509.95
St. John & Quebec Railway.....	172.00
Grand Trunk Pacific Railway.....	4,682.02
Total Railway—Steam Operated.....	17,212.10
Canadian Northern Railway System	
Electric Lines.....	126.20

Total Mileage Operated.....17,338.30

Operating Results: The results of operation for the year are as follows:

	1921
Gross Earnings.....	\$126,691,456.72
Operating Expenses.....	\$124,764,357.48
Loss in Operation.....	\$16,692,901.76
The figures for the previous year were:	
	1920
Gross Earnings.....	\$125,641,752.81
Operating Expenses.....	\$102,484,722.48
Loss in Operation.....	\$36,842,970.17

It will be seen from the above that the loss in operation in 1921 compared with 1920 was cut down by \$20,698,681.41.

Gross Earnings: The increase in gross earnings in 1921 over 1920 of \$1,049,703.41 is remarkable for the reason that in relation to the increase in gross the National Railway System stands alone as the only railway on the continent of anything like trans-continental character. The increase in revenue in 1921 than in the preceding year. While all lines had the benefit of increases in freight and passenger rates, yet in nearly every instance additional earnings from this source were more than offset by the drop in the volume of traffic handled.

The Directors consider that the improvement in the relative position of the National Railway System as a carrier of Canadian business, which the above and other figures indicate, is due to the improved condition of the Railways' property as a whole, and to the better services which this condition has permitted, as well as the maintenance by the public generally of the definite place which the National System has secured in the economic life of the country.

Passenger traffic receipts decreased by 10½%, and freight revenue increased by 3.12%.

Reduced Expenses and Improved Net Situation: The operating expenses for 1921, which commenced after the middle of April, 1921, and as the business depression showed signs of continuing for some time, the management took action to reduce expenses as far as this could be done without impairing the physical condition of the Railways' lines, structures and equipment. A policy of rigid economy was continued throughout the year with the result that Operating Expenses were reduced as compared with 1920 by \$19,709,935, a reduction of 12.17%. This reduction in expenses together with the increase in Gross Earnings already referred to of \$1,049,703.41 makes up the improvement in the net situation of \$20,750,068.41 as compared with the previous year.

A wage adjustment became effective from 16th July, 1921, and was therefore in effect for 6½ months of the year; it was spoken of as a 12½% reduction but has worked out at about 9½%.

Earnings and Expenses: A distribution of the earnings and expenses for the three years is as follows:

	1921	1920	1919
Gross Earnings	\$ 69,088,474.16	\$66,695,398.80	\$53,562,177.57
Canadian Northern Railway.....	40,964,303.82	44,537,803.85	40,170,390.98
Canadian Government Railways.....	16,338,671.47	14,408,549.86	11,204,917.97
Grand Trunk Pacific Railway.....	11,785,498.87	11,749,045.09	12,186,868.62
Total.....	\$78,091,465.72	\$72,564,378.81	\$56,008,176.57
Operating Expenses			
Canadian Northern Railway.....	\$25,614,353.30	\$23,953,952.60	\$60,034,023.92
Canadian Government Railways.....	46,561,669.57	46,987,689.23	47,728,205.73
Grand Trunk Pacific Railway.....	20,665,367.61	24,543,063.66	17,287,367.37
Total.....	\$142,784,357.48	\$162,484,722.48	\$125,349,709.02
Operating Deficit			
Canadian Northern Railway.....	\$8,475,911.48	\$16,258,579.80	\$6,471,846.35
Canadian Government Railways.....	5,587,298.75	10,489,876.48	7,548,824.80
Grand Trunk Pacific Railway.....	4,029,691.75	10,134,513.94	6,292,949.56
Total.....	\$16,092,901.76	\$36,842,970.17	\$20,315,620.85

General Conditions Since the Board's Appointment: In order that the variation in the above figures may be understood it is necessary to give a brief outline of the conditions affecting railways in Canada in the last three years. It is stated that when the Board was appointed in September, 1918, the resources of the country were severely taxed to maintain the nation's participation in the Great War. A survey of the wartime requirements of the railway system was made, and the Board found that the Government on all the problems of reconstruction. The McAdoo Award, which Canadian railways under arrangement of the Dominion Government had adopted generally from 1st August, 1918 (although earlier in the case of some branches of the service) was just beginning to show a serious effect on operating results. It was known before the close of that year that the freight rate increases that were granted with the object of offsetting these McAdoo wage increases and other rises in operating expenses were absolutely inadequate for the purpose. When the U. S. Government decided to treat the railways' losses under Federal control as war expenditure it was official recognition in that country of the disproportion between Expenses and Earnings. As freight rate adjustments had generally, at least in recent years, been made in the two countries practically simultaneously, many of the losses incurred by the Canadian railways were dependent on joint action, and as there had existed for years a general level between freight rates in Canada and those in the United States, the international body, to have attempted to disturb all this by raising rates and fares in Canada without an adjustment in United States would have been a step which might have very serious consequences. At all events no further increase was granted to offset the exceptional increase in operating expenses, and in the United States railways were handed back to their owners. In the meantime Canadian railways had to operate at a loss, which it was beyond the power of the managements to control, revenue and expenses both being fixed, and the two factors bearing the loss was the U. S. Government.

The U. S. railways were turned back to their owners on 1st March, 1920, but the Government continued their guarantee till 1st September of that year. Rate adjustments designed to give the railroads a return on the property investment of from 5½% to 7½% were made effective in United States from 26th August, 1920. These freight rate and passenger fare adjustments were substantial, and followed the Canadian rates in September, 1920. Shortly afterward the post-war boom burst, and in the face of falling traffic the rate adjustments on the U. S. railways failed to meet the expenses they were designed to more than offset. The rate adjustments made no adequate provision for the taking care of the cost of back time wages involved in the adoption of the so-called Chicago Award. Under all these circumstances the Canadian railways generally show a high operating ratio for the year. The railways in United States earned in 1920 100% of the cost of their property investment. It is worthy of note that old established systems such as the Pennsylvania Railroad experienced a similar situation.

1921: The business depression which began to make itself felt early in 1921 seriously affected the operations of the National System in comparison with the previous year. It was in that month an upward tendency commenced that continued through to the end of the year due to the usual seasonal revival in business, but was substantially heavier than that of the previous year.

Labour forces, as already referred to, were reduced as traffic fell away and a reduction in wages was effected from 16th July. Labour was also more efficient. There were reductions in cost of materials and supplies. The many improvements made to the Railways' property continued to be favourably reflected in the operating statement, particularly where the movement of grain was under way. While maintenance forces were reduced, this was possible without impairment to the property because most

policy of building up of the various lines owned by the Government a National Railway System in all respects equal to the Canadian Pacific Railway in its ability to carry out a wide variety of railway service, it followed that as the lines were brought up to proper standard and as suitable equipment could be provided that improved train service were established with a view to securing for the National System a greater participation in the movement of competitive traffic. During this year a number of wage increases were granted, and yet no relief was afforded the railways in the way of freight or passenger rate increases.

1920: In this year the operating difficulties of the railways became still more acute. The railway entered the year with a heavy accumulated burden of the McAdoo Award and all its oppressive supplements. The cost of materials continued to rise. In July the United States Railroad Labor Board announced a general wage increase which the Canadian railways were in September forced to adopt, and that involved the payment of five months' back time which for the Canadian Northern and Canadian Government Railways amounted to approximately \$6,000,000.

When the after war boom was at its height the car traffic in the United States was at a large number of Canadian railways' cars being held across the line, causing a loss of traffic to Canadian railways in which the Canadian National Railways were affected with other lines. The cost of living was high; the supply of labour was not adequate, and the cost of labour was intractable and therefore inefficient. Material was difficult to obtain at any price. Such conditions as these, together with the work with which the management had to proceed in taking up deferred maintenance. The expenditure for improvement and maintenance were also made higher. This year saw the peak costs for both labour and material.

The U. S. railways were turned back to their owners on 1st March, 1920, but the Government continued their guarantee till 1st September of that year. Rate adjustments designed to give the railroads a return on the property investment of from 5½% to 7½% were made effective in United States from 26th August, 1920. These freight rate and passenger fare adjustments were substantial, and followed the Canadian rates in September, 1920. Shortly afterward the post-war boom burst, and in the face of falling traffic the rate adjustments on the U. S. railways failed to meet the expenses they were designed to more than offset. The rate adjustments made no adequate provision for the taking care of the cost of back time wages involved in the adoption of the so-called Chicago Award. Under all these circumstances the Canadian railways generally show a high operating ratio for the year. The railways in United States earned in 1920 100% of the cost of their property investment. It is worthy of note that old established systems such as the Pennsylvania Railroad experienced a similar situation.

1921: The business depression which began to make itself felt early in 1921 seriously affected the operations of the National System in comparison with the previous year. It was in that month an upward tendency commenced that continued through to the end of the year due to the usual seasonal revival in business, but was substantially heavier than that of the previous year.

Labour forces, as already referred to, were reduced as traffic fell away and a reduction in wages was effected from 16th July. Labour was also more efficient. There were reductions in cost of materials and supplies. The many improvements made to the Railways' property continued to be favourably reflected in the operating statement, particularly where the movement of grain was under way. While maintenance forces were reduced, this was possible without impairment to the property because most

of the deferred maintenance had been taken up in 1919 and 1920. The maintenance forces employed in 1921 were able to fully maintain the physical condition of the property and in fact at the end of the three year period the System is in a better condition than ever before.

Finance: During the year ending 31st December, 1921, advances were made by the Dominion Government to the Railways in the National System, as follows:

Canadian Government Railways	\$ 5,792,896.48
Canadian Northern Ry.	\$64,619,246.24
Less repaid from proceeds of Securities	27,927,119.40
	\$6,722,125.84
Grand Trunk Pacific Ry.	9,270,500.33
Total	\$51,755,526.55

The advances for the year were applied on Construction, Equipment, Emergency, and repayment of Loans (Including Equipment Trust Obligations) Operating Deficit and Fixed Charges. The total advance to Canadian Northern Railway Company and Grand Trunk Pacific Railway Company to 31st December, 1921, are as follows:—

Canadian Northern Railway Company	
Grand Trunk Pacific Railway Company	

Attention is directed to the fact that the advances were made largely for the purpose of Capital, Betterments, Improvements of Property, New Equipment and Refunding of Loans, and as providing for Deficits and Fixed Charges. The total Net Advances to Canadian Northern Railway have been distributed as follows:

Refunding of loans, including principal of equipment securities	\$ 32,396,462.49
New Construction	19,624,573.62
Betterments	21,962,955.31
Railway Equipment	42,339,483.81
Rails, Accessories and Other Materials	19,212,656.94
Capital Contracts Payable	1,973,820.00
Fixed Charges and Operating	
Deficits	103,487,706.71
Total	\$251,088,248.88

The equipment included advanced to Canadian Northern Railway covered equipment for the National System.

The above figures represent cash advances only and do not include accrued interest. For accrued interest it would be necessary to add \$35,191,210.81 on advances to Canadian Northern Railway and \$14,723,250.00 on advances to Grand Trunk Pacific Railway.

It is submitted, inasmuch as large sections of the System's main lines are in the hands of the Country and that assist in their development, and furthermore, as a considerable portion of the advances made by the Dominion Government are for maintaining the property and carrying it over what might be called the pioneer stage, that it would be in order for the Dominion Government to refrain from charging the Railways with interest on such advances for a certain definite period. It is further submitted that the Fixed Charges be limited to interest payable to the Public.

During the year an issue of \$250,000,000 Canadian Northern Railway 6½% twenty-five year Sinking Fund Bonds guaranteed by the Dominion of Canada was sold in New York, the proceeds being paid to the Receiver General in repayment of advances by the Dominion Government. There were also retired during the year \$2,000,000 five per cent. Duluth, Rainy Lake & Winnipeg Railway Bonds guaranteed by the Canadian Northern Railway Company and \$3,650,000 Canadian Northern Railway 5½% guaranteed Notes. These were repaid for out of an issue of Canadian Northern Railway 7½% twenty year Bonds, sold in the New York market in December, 1920. As advantage was taken of the low price of Sterling a very large saving in exchange was made in connection with the refunding of these Sterling loans.

Betterments: It is not possible in a report of this size to deal in detail with the improvements made to the physical properties of the National System in the last three years. The programme of improvement included the replacement of Heavy rail has been provided for trunk lines; ballasting on an extensive scale has been undertaken on the lines previously used for branch lines; terminals have been enlarged; yards have been improved and extended, sidings have been lengthened in sections where double track has been provided. New buildings of all kinds have been erected to meet traffic requirements and to provide accommodation for employees. Extensive improvements have been undertaken to provide adequate supply of water for locomotive. Shops have been equipped and much labour saving machinery has been installed. Many temporary structures have been replaced with permanent work. Some line revisions have been undertaken between local branch lines and main lines, crossings, etc. Telegraph communication has been improved and some additional telephone lines out-reaching results have been attained. It may be said in general that the work undertaken

as the above will indicate has affected all branches of operation, and all parts of the System. The carrying out of the improvement programme proposed expenditures are submitted to an investment examination to see whether the work under consideration will return not only interest on the money to be expended in the way of reduced operating or maintenance expenses, but that it will also be sufficient return to be a source of profit. This policy with respect to improvements was faithfully followed for the three years, and in the Autumn of 1921 the accumulative effect of many improvements began to show little favourably in the operating results. As traffic increases and reaches a volume more nearly equal to that which the main lines were designed to handle, greater benefit will come from the improvements made in carrying out the Betterment Programme.

Rolling Stock and Motive Power: During 1919 and 1920 extensive additions were made to the System's equipment. The work done in this office that the rolling stock and motive power were insufficient to meet traffic requirements and that due to war conditions repairs to equipment were in arrears. The improved services which it was found proper to operate required new rolling

Total Advances to	Total Advances	Total Advances
Dec. 31, 1920	During Year 1921	Dec. 31, 1921

------------	-------

Construction: Prior to the war a number of Branch Lines were under construction in Western Canada. During the war work on these lines was discontinued due to the diversion of spending capital money, and on account of the scarcity of labour and material. After the Armistice urgent requests for railway facilities were renewed by settlers along the uncompleted lines and it was considered that the situation warranted the adoption of a programme providing for the completion of certain partly constructed lines and for some extensions of branch lines. This policy was followed by the Dominion Government had preceded the railways and where the settlers were suffering most through lack of service.

The present position with reference to lines under construction is that there still remain 584 miles of grade and 12 miles of track.

Branch Lines Acquired: During the three year period the Management at the request of the Dominion Government has taken over as additions to the National System a number of small lines, and of these the following particulars are given as a matter of record:—

Name of Railway	
Quebec & Saguenay Railway	
Lotbinière & Mégantic Railway	
Cornwall & Gaspé Railway	
Cape Breton Railway	

From Government Blue Book.

In addition to these lines the Hudson Bay Railway and the Council turned over to the Board for operation.

Co-ordination: The first step that may be placed under this head was the re-organization which took place in 1919. The investigation for operating purposes of the Canadian Government Railways and Canadian Northern Railway System in 1919 was made in 1919. These two groups were each constructed with an entirely different object in view, and in some particulars with the same object in view. The re-organization, The situation from an administrative point of view required a re-arrangement of jurisdictional territories and a general review of all of the plans with a view to providing a management adequate for the requirements of such a large system as was constituted by the combination of these two groups.

Recognized principles of railway organization were followed and the consolidation of official personnel was satisfactorily arranged.

The second step came in September 1920, when, following Government authorization of 12th July of the same year which appointed the Board of Directors Managers of the Grand Trunk Pacific Railway acting on behalf of the Receiver, an amalgamation of staff took place and the various Grand Trunk Pacific lines were placed under territorial units of the Canadian National Railways.

This co-ordination affected only Western Lines, yet on account of the fact that the lines being amalgamated served much common territory the consolidation of staff was a large step towards general re-arrangement of train service to secure the shortest and most suitable routes. Arrangements were also made for the joint use of stations, freight sheds and roundhouses have been closed. A number of rail connections were required and have been put in; others have yet to be constructed. The carrying out of this co-ordination programme has resulted in considerable substantial savings in operating expenses. The changes made have also enabled passenger train services to be improved, reduced short routing of freight trains and in general have resulted in giving the National System a greater capacity to handle business and serve the public. The public and the full programme is completed further advantages of this kind will be secured.

In the case of both the staff amalgamations special effort was made to give fair representation to the officers of the groups of lines being brought together, and the best proof that this object was attained is found in the general good feeling and prevailing in all departments and the loyal co-operation which one department receives from another. Our Vice-Presidents are unanimous in reporting that a spirit of rivalry exists as to the competition with the large privately owned system, that as much enthusiasm exists among the officers and employees as on any privately owned railway, and that there is no evidence of slackness in the service rendered to the public and on the other hand, a determination to secure results by close attention to the wants of patrons.

Grand Trunk Railway Co-ordination: On 8th March, 1920, an agreement was reached between the Dominion Government and the Grand Trunk Railway in respect to the acquisition of that Company's lines and equipment. This was a joint committee a certain measure of co-ordination has been arranged between the Grand Trunk and the National System. The arrangement was with a view to securing improvement in service and reduction in cost of operation. Duplicate lines and services have been eliminated, certain track connections and other facilities. The co-ordination has been generally helpful from both traffic and financial points of view, through it the position of the Nationally owned lines including the Grand Trunk Railway has been materially strengthened.

Train Service: Undoubtedly one of the greater handicaps placed on the National System is the necessity of operating—and consequently maintaining—double track lines. This is generally may be said to have been designed as competing routes. In all there are 8,000 miles of main line in the National System, and 1,000 miles are recognized as trunk lines. This main line mileage is 47% of the total, whereas the single main line mileage is 53%. The importance of the National System forms but 27% of the total mileage. This situation, with the low traffic density existing in many parts of the country and the general demand made by all communities for service has made it a matter of great concern to the Director of Transportation as to what he can do to meet the conditions in the way of train service. The problem is not confined

General Location	Mileage	Capital Expenditures to March 31, 1921
Quebec	67.61	\$ 77,708,325.24
Quebec	29.59	346,715.00
New Brunswick	30.61	103,753.42
Nova Scotia	30.61	103,753.42

to main lines, but is one that comes up in connection with every locality served in every direction. Under the circumstances existing it is considered that the results of operation in the latter months of 1921, when the business then being handled more than carried the service. It indicated that the relationship between service and expenditure was not much out of line. Although freight and passenger rates have since been reduced it is considered that the better price conditions now prevailing and wage adjustments are reasonable and that the service will be under normal traffic conditions enable an even better showing to be made provided that the railway revenues are not depleted by further rate reductions.

It will be noted from the Train Mile Statistics that the average train service performed was less than in either of the two preceding years. For all trains the average was just over 2½ trains each way per day for each mile of line operated.

Freight Train Loading and Density of Traffic: Notwithstanding the drop in density of traffic the freight train loading was improved. The following figures show a steady improvement with respect to this important feature of operation:

Freight Train Loading	1919	1920	1921
Average number of tons of revenue freight per train mile	359	377	409
Freight Density			
Trains per mile of line	478,523	632,959	530,839

When the relatively light traffic movement is considered, the average freight train load of the National System may be considered satisfactory. In fact there is no comparable case on record where a train load as heavy as shown above has been obtained with such a relatively light traffic movement. The freight train service on the National System in 1921 averaged one and a half freight trains each way per day for every mile of operated line, so that it is difficult to see how heavier train loading could be obtained under present traffic conditions as the situation could hardly be met with less frequent service.

Rates and Fares: Through a decision in the recently Western Rates case announced 6th April, 1921, which effected 1st September, 1921, Canadian Railways may be said to have entered the war period with a reduced scale of freight rates. The rates cannot be regarded as a mere temporary adjustment, as it was an adjustment based on peace conditions. This adjustment established a new structural basis which until 1917 and may be regarded as the pre-war level. Rating this level as 100% the freight rate levels which have since been reached may be compared with this base as follows:

Freight Rates Applicable to	Index
1. Pre-war level, 1914-1917.....	100.00
2. March, 15, 1918.....	115.00
3. Aug. 12, 1918.....	129.96
4. Sept. 13, 1920.....	174.61
5. Jan. 1, 1921.....	168.28
6. Dec. 1, 1921.....	156.08

Passenger Fares Applicable to Canadian National Railways: Passenger fares have been subject to certain adjustments as shown below. In this case the pre-war level is also shown as 100% and the effect of the adjustments on the percentage of the pre-war level is shown for information:

Index	Index
Pre-war level, 1914-1917.....	100%
March, 15, 1918.....	115
Sept. 13, 1920.....	133.4
Jan. 1, 1921.....	126.5
July 1, 1921.....	115.0

From the above it may be noted that the highest level attained by freight rates was 74% above the pre-war level, and the highest level by passenger fares 33%. During 1920 when the sale prices—as an index of the cost of material and supplies used by the railways—were up as high as 164% the freight rates of the Canadian Railway employees were by the 1920 scale placed 13% above the 1914 scale. No better evidence can be produced of the disparity between rates and operating costs with which the Railways have recently had to contend.

Wages: References have been made to the fact that the Canadian Railway employees' rates were established, and it is perhaps desirable to show the general relationship which wages have borne to gross revenue.

Year	Gross Revenue
1919	\$105,036,176.37
1920	125,641,752.81
1921	126,991,455.72

Telegraphs: The Canadian National Telegraph system covers 23,169 miles of pole line and 109,672 miles of wire, and is the medium through which all the National Railways' telegraph lines are connected and maintained. The telegraph business is operated over practically all the National Lines including the Grand Trunk Railway System in Canada, also the Michigan General Railway (Canadian Division), the Great Northern Railway, (in Manitoba), the Central Vermont Railway (in Canada) and other smaller railways, as well as over certain mileage of lines on highways.

The Canadian National Telegraph System embraces the lines of the Great North Western Telegraph Company, the Canadian Northern Telegraph Company and Grand Trunk Pacific Telegraph Company. On the latter, the Grand Trunk Pacific System has exclusive connections with the Western Union Telegraph Company.

Express business is operated by the Canadian National Express Company (owned by the Canadian Northern Railway Company) and the Canadian Express Company (owned by the Grand Trunk Railway Company) were co-ordinated and one organization was formed from the staffs of the two companies, which now provides the express service over the Canadian National Railways and also over the lines of the Grand Trunk Railway System, operating as the Canadian National Express Company. The net earnings of the Company after allowing to the railways their contract divisions for train and other privileges, from an item of interest of the Grand Trunk Railway and the Grand Trunk Railway on an agreed basis. The results for the four months ending December 31st indicate the favorable effect of co-ordination, the figures being as follows:—

Express Coy's Results	1921	1920
.....	\$4,890,734.31	\$4,475,061.51
Less Express Privileges.....	1,924,247.41	1,980,830.69
Operating Revenue.....	2,966,546.82	2,494,230.82
Operating Expenses.....	2,199,732.10	2,424,258.96
Net Operating Revenue.....	256,814.72	69,972.76
Increase.....		*186,841.96

Steamers: G. T. Pacific passenger and freight steamers are operated between Seattle, Victoria, Vancouver and Prince Rupert. Car ferries are also operated between Victoria and Vancouver, between Seattle and Tacoma, and between P.E.I. and between Mulgrave, N.S., and Pt. Tupper, C.B.

Land Sales for the years ending 31st December, 1919, 1920 and 1921 were as shown in the following table. This table also shows the increase in land sales had by the National Railways which were by mutual arrangement cancelled

Canadian National Railways.	1919	1920	1921
.....	15% case.	Decision, etc.	
.....	25% case designed to offset McAdoo Award practically absorbing 15% increase.		
.....	Increasing of 40% East and 35% West with exceptions.		
.....	Reduced increases in item 4 to 35% East and 30% West.		
.....	Reducing increases in item 4 to 25% East and 20% West.		

during corresponding periods.

Year	Actual Sales	Revenue	Average

Balance of increase of 18th Sept., 1920, removed.

Year	Cancellations	Revenue	Average
1919	32,103,239 acres	\$467,370.15	\$14.42
1920	31,188.75 "	412,457.19	13.22
1921	19,727,720 "	373,720.00	19.07

It will be seen that the actual sales for 1919 and 1920 were greatly in excess of the sales for the year 1921 and at higher prices. This condition is accounted for by the fact that during the War period and also during the year 1920 and 1921 prices of stock, grain and all farm products were very high and land prices increased accordingly. During the year 1921, however, the conditions changed, prices of farm products fell and the land prices were reduced. It could be made were based on the lower prices of farm products.

As at December 31st, 1921, there remained un-

Operating Labor	% of Operating Labor to Gross Revenue
\$78,676,923.50	74.90
98,767,720.16	78.61
82,381,597.87	65.03

sold 719,406 acres. As it is important from a traffic standpoint that the Company's lands tributary to the Railway should be occupied, it is felt that the terms and conditions of sale should be modified and that such inducements will be offered to bona fide settlers.

Elevators: Terminal elevators with modern equipment are owned at Port Arthur and Fort William.

Canadian Northern Ry.....Port Arthur
Grand Trunk Pacific Ry.....Fort William

Drydock: A modern ship yard, and ship repair plant at Prince Rupert is owned by the Grand Trunk Pacific Development Co.

Conclusion: In submitting this report the members of the Board desire to give direct expression to the modern character and general excellence of the physical property of the National System. The Main Lines of the Canadian National Railways were constructed to standards generally superior to those adopted by railways built in earlier years. Consequently, the matter of grades and curves there are no other transcontinental lines built throughout their length to the standards adopted for the Main Lines of the Canadian National Railways.

The Improvement and Betterment Programme followed a long and arduous process which has been developed with a view to bringing up to standard any facilities or sections of line which by experience were found to be limiting factors from an economic point of view.

While the amount of money advanced by the Government in the last three or four years is of itself a large sum, it represents a small percentage of the capital investment of the

1921	1920	Dec. or Incr.
\$4,890,734.31	\$4,475,061.51	\$424,672.80
1,924,247.41	1,980,830.69	56,583.20
2,966,546.82	2,494,230.82	\$7,684.00
2,199,732.10	2,424,258.96	224,525.96
256,814.72	69,972.76	*186,841.96

National System, nor is the sum expended out of line with the expenditures made by other great railway systems during the period of their physical improvement. In considering this feature it should be remembered that the amount of expenditure has been considerably augmented by the exceptionally high levels reached by material and labour costs. The purchase of material and labour work has had to be done on the Canadian National Railways. These same conditions have made the purchase of material and labour and motive power run into very high figures.

In regarding the annual expenditures the magnitude of the National System should be kept in mind. It may be seen from the Balance Sheets included in this report that the physical assets of the National System total \$1,280,000,000.00. The importance of maintaining the property in first class condition for the traffic movement which may reasonably be expected to be handled. As a means of indicating this, it may be pointed out that if this great investment were permitted to deteriorate to the extent of 5% it would involve a shrinkage in value of \$63,750,000.00, or approximately four times the loss in actual operation sustained in 1921.

The third year period during which the present Board has administered the Canadian National Railways has been full of operating difficulties. Under direst economic conditions. In this period three separate groups of railways have been organized into one smooth working system. The physical property of the railways which, due to the War, was in an exhausted condition has been improved, many facilities have been added, stock and rolling stock and equipment have been provided. The relation of the various lines to the main service under the co-ordination programme has been improved.

The system must be regarded as still in its probationary period. The main lines of the Canadian National System should be regarded as the Grand Trunk Pacific Railways were not completed until 1915 and over 35% of the System's mileage has been taken over for operation since the outbreak of the War. Since 1915 there has been practically no immigration and there has been little industrial or other commercial development. Under these circumstances conditions of performance in 1921, when rates were admittedly low measured from a cost of service point of view, and when expenditures were exceptionally high, may be regarded as creditable. The Directors knowing the general excellence of the territory served by the lines, and the fact that the System's mileage, and with the knowledge that in many respects the System's lines are in premier position to meet the future needs of the Dominion, are confident that sufficient traffic to sustain the National System can be developed within a reasonable period of normal conditions.

In the meantime the System has a carrying capacity considerably beyond the present volume of traffic. Improvement of the System's relative position may be expected when the completion of the co-ordination programme provides short line con-

nections that will expedite the movement of business and reduce operating costs. As the System develops its services and facilities, a larger proportion of the better grade commodities will be routed by its lines with a consequent improvement in the average ton mile rate. It may be expected that the Government will at an early date formulate a plan for the encouragement of proper immigrants to the country, in which

no doubt the Canadian National Railways will be asked to co-operate. From this much benefit may be expected.

The Directors wish to record their appreciation of the loyal and efficient services rendered by officers and employees. There is every reason to believe that the employees fully participate in the spirit that dominates the entire personnel in all departments and that the entire organization is

a unit in its endeavour to secure a fair share of the Country's transportation business for the National Lines. Loyal support to the consolidated management has been given and the best possible relationship exists with all classes of employees.

For the Directors,
D. E. HANNA,
Toronto, April, 1922. President.

For Sale and Classified Advertising

Under this heading Canadian Railway and Marine World will place advertisements for Positions Wanted, Positions Vacant, Equipment for Sale, Tenders Wanted, Dividend, Annual Meetings, Legal Notices, etc.

DEPARTMENT OF MARINE AND FISHERIES.

Ottawa, June 2, 1922.

Sealed proposals will be received at this office until 12 o'clock noon, on Wednesday, the 5th day of July, 1922, for furnishing the materials and labour of all kinds necessary for the construction, completion and delivery at the Port of Quebec, in the Province of Quebec, of one Steel Single Screw Hopper Barge of the following leading particulars:—

Length B.P., 210 feet 0 inch.
Breadth Mid., 35 feet 0 inch.
Depth Mid., 19 feet 0 inch.
Hopper Capacity, 950 cubic yards.
Indicated Horse Power, 1,250.

The Department reserves the right to accept or to reject any one or all of the bids received and to waive all defects.

Forms of proposals, plans and specifications, showing what is required, can be had or seen by applying to the Department of Marine and Fisheries, Ottawa.

Any further information desired may be obtained by addressing

THE DEPUTY MINISTER,

Department of Marine and Fisheries,
Ottawa, Ontario.

Whither Are We Drifting?—An Analysis of Wage Schedules.

By O. E. Fisher, Comptroller, Kettle Valley Railway, Penticton, B.C.

The underlying basis of wage schedules, salary, rates of pay, and, at the present time, so called "working conditions," or whatever term we may apply, is, however it may be camouflaged by ambiguous terminology, a fair and reasonable remuneration for an honest day's work. To this principle both employer and employee can subscribe without reservation, but an examination of present day schedules, particularly as applying to train and locomotive men, shows that we have wandered far afield from the controlling factors mentioned. The same situation is also true to a considerable degree with wages of shopmen and station service employees.

The basic principle of payment for services rendered is, that for a certain specific unit of labor a certain amount stated equally specific shall be paid as remuneration, but to illustrate how far we have drifted from this principle I shall take the actual figures for the year 1921 for passenger locomotive men on one road, which are fairly representative of other classes of train service employees and are also very close to the average for all roads for the year. On the road in question the rates in effect were \$6.12, \$6.20, \$6.28, \$6.60, \$6.68, \$6.76, \$7, \$7.08, \$7.16, \$7.48, \$7.56, and \$7.64 a day, or per 100 miles, an average of about \$6.88, but to show how misleading and meaningless the schedule rates quoted are, the actual rates paid during the year was \$1.36 an hour worked and \$9.14 per 100 miles run. Taking the average figures for all roads in Canada for 1920 (the latest complete year available) we find that the actual rate paid passenger locomotive men was \$1.24 an hour and \$7.83 per hundred miles run, notwithstanding the schedule rates naming amounts about 40% less than these figures, and also that for every hour passenger locomotive men were paid a passenger locomotive was moved a fraction less than 16 miles.

In wage negotiations, public statements by organizations, etc., we hear the oft repeated statement, that \$6.20 a day, or whatever the schedule rate may be, is not unreasonably high rate for a passenger locomotive man. This is granted, but the statement is only a half truth, as in the case cited under the average schedule rate of \$6.88, the actual rate paid, after dealing with ramifications, interpretations, conditions, additions and variations to the rate, was \$9.14 per 100 miles. The absurdity of the situation becomes apparent when we note that there is no possible condition of actual practice where a locomotive man could receive only the rate quoted in existing schedules for a day's work, although he might work only 4 hours or less, as there is a multitude of additions to the day's pay, such as preparatory time, terminal detention, switching, etc., all of which is added to the day's pay, although the trip may have been completed in much less than 4 hours. The day's pay, at schedule rate, is frequently paid for 8 hours' work, and it is quite possible to draw 3 days' pay for one trip or working day.

The question then is, what is the reason for this chaotic condition and what is the remedy? The reason, perhaps, is that present schedules are the result of a process of evolution under which, little by little, various clauses and conditions have been added, each in itself seeming insignificant, and added as a compromise after a long and tiresome deliberation, until from their aggregate is evolved the present impossible situation. Like Topsy, they "just grewed," and we have perhaps, by slow stages, become accustomed to the vagaries of the schedules until their inconsistencies are not so apparent as they otherwise would be.

Assuming the dozen or so rates quoted were bona fide units of the measure of remuneration, it should not require any elaborate schedule to quote or set forth such rates of pay, yet I find it requires a book of 23 pages of closely printed matter to quote the "Rates of pay and rules governing service of locomotive engineers, firemen and hostlers." Taking one page at random, in the schedule referred to, I find, under alleged "conditions," four separate clauses whose only purpose is to add to the amount of pay and which have not the remotest connection with conditions, and this is true all through the long and ambiguous document. To properly check time slips requires an expert, and the time of 40 men is about the maximum that can be handled by one timekeeper. A time ticket may contain five different computations and rates of pay for the same day's work, and have to be split up into preparatory time, switching, road mileage, road hours, junction switching, terminal detention and so on ad infinitum.

It is possible for two crews to handle trains between the same terminals, in approximately the same number of hours, and with the same tonnage, and yet owing to a manipulation of conditions, such as unloading way freight, switching, etc., one crew may receive a considerably greater amount of pay than the other.

To appreciate fully the present situation let us imagine a superintendent's schedule of rates and pay and "working conditions" constructed along the same lines, it would read about as follows: Superintendents will be paid \$300 a month in valley territory and \$375 in mountain territory. If their duties comprise service in both mountain and valley territory they will be paid pro rata, according to the service performed in each. These rates apply for working at a standard desk, 36 x 57 in., and for any work performed at a larger desk an arbitrary of \$5.37 a month will be added for each 12 sq. in. of desk surface added, to be computed on minute basis for time worked at different size desks. Superintendents will be allowed 45 minutes preparatory time, before going to work in the morning, to open their personal mail, sharpen their pencils and discuss schedules with other superintendents. If a superintendent shall finish a particular piece of work, such as meeting grievance committees, checking car loading per-

formance on the division, etc., before 2 p.m. and start a new job, a new day will commence. If a superintendent is interrupted, while dictating letters, more than five times, by answering telephone, or three times by callers, or a combination of four times by both, he will be paid an arbitrary of \$6c for the entire day. If necessary to stop more than one hour at any station to settle claims, address public bodies, or inspect stations or facilities, detention time will be allowed in addition to the day's pay. Superintendents will not be required to meet the public at stations where regular agents are employed, all matters will be handled at such stations by the agent's staff. If, however, a superintendent is detained at a station, while an agent is handling negotiations on any question, he will be paid time for detention, in addition to the regular day's pay; and twenty or thirty similar "conditions." The foregoing is not irony, but is quite as consistent as the average train service schedule in existence today.

Almost everyone is fundamentally honest, and under ordinary conditions would remain so, but given a condition where the amount of their remuneration can be largely influenced from day to day by adapting performance to schedule provisions, I have no doubt that even the superintendent, under a similar schedule as outlined, would eventually add a few arbitraries, or a little unnecessary detention, etc., until the habit became so fixed that a large part of his time and energy would be devoted to originating new and devious confusions to the schedule.

What then, is the remedy, for the time must surely come when rates of pay will be clearly stated, and mean exactly what they purport to mean, and I am convinced that such a schedule can be applied that will be equitable to both employee and employer, and with a little education, be quite as acceptable to the train service men as the present ones? I have discussed this question with many trainmen, and practically all of them would prefer to have the schedules simplified, but, of course, without reducing the amount of pay received at present.

I have before me a payroll covering a full normal month's work for a passenger locomotive man, the amount being \$281.12; 20 days' work being required on this run during the month. Four different rates were used, ranging from \$6.20 to \$7.18 a day or 100 miles, yet the actual rate paid was \$1.35 an hour and \$8.52 per 100 miles. The schedule provides that 100 miles or less, 5 hours or less, in valley territory, or 6 hours and 40 minutes in mountain territory, shall constitute a day; the average being about 6 hours, which works out to practically the same relative basis as the rate actually received in the case in point, i.e., 6 hours at the actual rate of \$1.35 would be \$8.10.

We may assume that the total amount of compensation paid under the present schedule is reasonable, and, for the main, as it is the result of negotiation and agreements between employees and

railways. This being so, it must follow that the actual rates paid of \$1.35 an hour, or \$8.52 per 100 miles, are fair and reasonable, and this being the case, why not so state the rates instead of making them \$6.20 to \$7.18, with "57 varieties" of additions? Or make a schedule reading substantially as follows: Locomotive men will be paid the following rates: Passenger, \$8.52; freight, work, switching, mixed, whatever the actual rate is at present, per 100 miles, or per day of 6 hours, in passenger service, or 8 hours

in freight and other service. Time, or miles run, whichever is greater, to be computed from the time on duty at beginning of work until tied up. This to be the complete and entire provisions relative to rates of pay or amount of pay received, and whatever "conditions" it might be found necessary to establish be conditions only and in no way relate to pay.

Monthly guarantees could be provided, with the provision that full service with any different class of train, if necessary,

would be required. No reasonable man could object to this. This would provide the same amount of compensation as under the present planless arrangement. It would save a large amount of clerical work, and eliminate a world of misunderstanding, and vastly greater harmony and co-operation between the management and employees would be promoted, as the main source of contention would be removed. There would be nothing left to argue about, in so far as rates of pay and "conditions" are concerned.

Changes in Districts, Divisions, and Subdivisions, Canadian National Railways' Western Lines.

Changes made by the Canadian National Rys. management in the names and composition of the Maritime and Quebec districts, divisions and subdivisions on the Eastern Lines, were given in Canadian Railway and Marine World for Nov., 1921, pg. 594. A number of changes have been made recently on the Western lines, as follows:

Manitoba District.—The name of the Central District has been changed to Manitoba District. It extends from Armstrong and Port Arthur, Ont., on the east, to Brandon, Man., Melville, Watrous and Canora, Sask., on the west, with branches; the total mileage being 2,962.3. A. Wilcox is General Superintendent, at Winnipeg.

Fort William Division.—R. S. Richardson, Fort William, Ont., Superintendent; Rainy River Division, W. T. Moodie, Port Arthur, Ont., Superintendent; Winnipeg Terminal Division, M. B. Murray, Winnipeg, Superintendent, and Melville Division, I. A. McPherson, Superintendent, Melville, Sask., retain the same names. Manitoba Division, W. I. Munro, Fort Rouge, Man., Superintendent, has been changed to Portage Division.

Changes in subdivision names have been made as follows: Fort William Division, Armstrong Subdivision, from Armstrong to Sioux Lookout, Ont., 139 miles, changed to Buckle Subdivision. Lake Superior Subdivision, from Mission to Superior Jct., Ont., 189.4 miles, changed to Graham Subdivision. Sioux Lookout Subdivision, from Sioux Lookout to Redditt, Ont., 123.2 miles, changed to Quibell Subdivision. Redditt Subdivision, from Redditt, Ont., to Transcona yards, Man., 121.8 miles, changed to Minaki Subdivision. On the Rainy River and the Winnipeg Terminal Divisions there have been no changes. Portage Division, Emerson Subdivision, from Emerson to Portage Jct., Man., 63.4 miles, changed to Morris Subdivision. Neepawa Subdivision, from Muir to Neepawa, Man., 33.1 miles, changed to Halibro Subdivision. Yorkton Subdivision, from Wroxton to Willowbrook, Sask., 41 miles, changed to Tonkin Subdivision. Melville Division, Canora Subdivision, from Melville to Canora, Sask., 56.4 miles, changed to Yorkton Subdivision.

Saskatchewan District.—The name of the Prairie District has been changed to Saskatchewan District. It extends from Brandon, Man., Melville, Watrous and Canora, Sask., on the east to Kindersley, Biggar, and North Battleford, Sask., on the west, with branches, the total mileage being 3,450.1. B. T. Chappell is General Superintendent, at Saskatoon.

Brandon Division, G. A. Cunliffe, Brandon, Man., Superintendent; Dauphin Division, T. J. Brown, Dauphin, Man., Superintendent; Regina Division, M. D. Thompson, Regina, Sask., Superintendent;

ent, and Saskatoon Division, A. E. MacDonald, Saskatoon, Sask., retain the same names.

Changes in subdivision names have been made as follows: Brandon Division, Kipling Subdivision, from Brandon, Man., to Kipling, Sask., 127.7 miles, changed to Marydill Subdivision. Radville Subdivision, from Carlyle to Radville, Sask., 102.7 miles, changed to Lampman Subdivision. Regina Division, Moose Jaw Subdivision, from Bengough Jct., to a junction with the Riverhurst Subdivision near Moose Jaw, Sask., 87.3 miles, changed to Avonlea Subdivision. Dauphin Division, Kamsack Subdivision, from Dauphin, Man., to Kamsack, Sask., 100.9 miles, changed to Togo Subdivision. Humbolt Subdivision, from Kamsack to Humbolt, Sask., 146.4 miles, changed to Margo Subdivision. Swan River Subdivision, from North Jct. to Swan River, 98.4 miles, changed to Cowan Subdivision. Hudson Bay Subdivision, from Hudson Bay Jct., Sask., to Pas, Man., 87.5 miles, changed to Turnberry Subdivision. Saskatoon Division, Prince Albert Subdivision, from Hudson Bay Jct. to Prince Albert, Sask., 180.4 miles, changed to Melfort Subdivision. Battleford Subdivision, from Humbolt to North Battleford, Sask., 147.6 miles, changed to Langham Subdivision. Kindersley Subdivision, from Yorath to Kindersley, Sask., 122.3 miles, changed to Rose town Subdivision. Delisle Subdivision, from Delisle to Beechy, Sask., 93.8 miles, has been changed to Conquest Subdivision. Brooksby Subdivision, from a junction with the Melfort Subdivision to Ridgedale, Sask., 22.8 miles, has been added to the Saskatoon Division.

Alberta District.—The name of the Western District has been changed to Alberta District. It extends from Kindersley, Biggar and North Battleford, Sask., on the east, to Edmonton and Calgary, Alta., on the west, with branches, the total mileage being 2,158.7. W. A. Brown is General Superintendent, at Edmonton.

Edmonton Division, J. E. Nelson, Edmonton, Alta., Superintendent; Biggar Division, J. Irwin, Edmonton, Alta., Superintendent; and Calgary Division, R. King, Calgary, Alta., Superintendent, retain the same names.

Changes in subdivision names have been made as follows: Edmonton Division, Vermilion Subdivision, from Vermilion, Alta., to North Battleford, Sask., 124.5 miles, changed to Blackfoot Subdivision. One-way Subdivision, from Peace River Jct. to Whitecourt, Alta., 72.2 miles, changed to Sangudo Subdivision. Turtleford Subdivision, formerly from North Battleford to Turtleford, 55.7 miles, has been extended from Turtleford to St. Walburg, 21.6 miles, making a total of 77.3 miles, and retains the same name. Red Deer Subdivision, from Red Deer to Red Deer

Jct., Alta., 6.1 miles, has been added to Edmonton Division. Biggar Division, no changes in the names of subdivisions have been made. Calgary Division, Big Valley Subdivision, from Big Valley to Munson Jct., Alta., 36 miles, has been changed to Bowley Subdivision. Hanna Subdivision, from Kindersley to Hanna, 136.4 miles, has been changed to York Subdivision. Sherness Subdivision, formerly from Medicine Hat Jct. to Cessford, 46.4 miles, has been extended from Cessford to Steepleville, 12.5 miles, a total of 58.9 miles, and retains the same name.

British Columbia District.—The Mountain District, which included the Edson and Smithers Districts, and the Pacific District, which included Kamloops Division and Vancouver Island lines, have been combined into the British Columbia District, which extends from Edmonton, Alta., on the east to Vancouver and Price Rupert, B.C., on the west, with branches, and includes the Vancouver Island lines, the total mileage being 1,623.1. There have been no changes in the names of divisions. J. R. Cameron is Assistant General Manager at Vancouver, and N. B. Walton is Assistant General Superintendent, Edson and Smithers Divisions, at Prince Rupert. D. W. Stuber, Edson, Alta., is Superintendent. Edson Division, and L. F. Muncey, Kamloops Jct., B.C., is Superintendent, Kamloops Division. W. S. R. Cameron is General Agent, Vancouver Island lines.

Changes in subdivision names have been made as follows: Edson Division, Lucerne Subdivision, from Jasper, Alta., to McBride, B.C., 107.9 miles, changed to Tete Jaune Subdivision. Luscar Subdivision, from Leduc to a junction with the Mountain Park Subdivision, to the end of steel, 5.4 miles, has been added to Edson Division. Smithers Division, no changes in subdivision names. Kamloops Division, Blue River Subdivision, from Redpass Jct., to Blue River, 88.7 miles, changed to Albreda Subdivision. Boston Bar Subdivision, from Kamloops Jct. to Boston Bar, 125.6 miles, changed to Cisco Subdivision. Port Mann Subdivision, from Boston Bar to Vancouver, 131.8 miles, changed to Yale Subdivision. The Vancouver Island lines consist of the Patricia Bay Subdivision, from Patricia Bay to junction with Cowichan Subdivision, 16.9 miles, and the Cowichan Subdivision from Victoria to Cowichan Lake, 73 miles, under construction.

Duluth, Winnipeg and Pacific Ry., from Fort Frances, Ont., to Duluth, Minn., 108 miles.

Rainy Lake Subdivision, from Fort Frances to Virginia, Minn., 94 miles, changed to Cusson Subdivision. Silver Lake Subdivision, from Virginia to Duluth, Minn., 74 miles, changed to Taft Subdivision. A. Wilcox, Winnipeg, Man., is General Superintendent, and J. H. McKinnon, Virginia, Minn., is Superintendent.

Board of Railway Commissioners' Judgment and Order Reducing Freight Rates, Etc.

The Board of Railway Commissioners issued the following judgment, June 30, "By the Board," over the signature of A. D. Cartwright, Secretary, it being concurred in by Hon. F. B. Carroll, Chief Commissioner; S. J. MacLean, Assistant Chief Commissioner; A. C. Boyce, J. G. Rutherford, and C. Lawrence, commissioners:—

Shortly after the promulgation of the Board's general order, being the order providing for the general rate increases known as the Thirty-five and Forty Per Cent. Case, effective Sept. 13, 1920, various bodies, among them the Province of Manitoba, appealed to the Privy Council asking that the order be rescinded for various reasons set forth. The matter was heard by the Privy Council, and, on Oct. 6, 1920, by order in council 2,434, the Governor in council dismissed the appeal, but, in doing so, stated as follows: "What constitutes a fair and reasonable rate should now be arrived at without reference to the requirements of the Canadian National System and your committee recommends that the order in this case be referred back to the Board, to be corrected in its findings in such manner as to determine what are fair and reasonable rates, without taking into account at all, for the time the order shall be in effect, the Canadian National System's requirements." Very strong representations were made at the argument on appeal, to the effect that the order continued, and indeed intensified, an unjust discrimination in rates, it being claimed that higher freight rates prevail generally in Western Canada, i.e., west of Fort William, than prevail in Eastern Canada, i.e., east of Fort William. It was strongly urged that the reasons, whatever they may have been, for this differential no longer exist, and that as a matter of public policy, the principle of equalization of rates east and west should now be recognized. On the other hand, it was urged that the competition arising out of lake and river transportation, as well as out of lower competitive rates on eastern United States lines compelled a somewhat lower scale in Eastern Canada than in Western Canada. Whether or not these reasons now obtain in any substantial degree is a question which requires minute and expert investigation—such as can be best conducted by the Railway Commission itself and not by your Excellency's advisers, but the committee is strongly impressed with the very great desirability of bringing about, with the least possible delay, equalization of Eastern and Western rates. The committee of the Privy Council therefore further recommends that, as conditions have probably changed materially in recent years, tending more and more to make equalization practicable, an enquiry by the Board be directed to be held at the earliest date, with a view to the establishment of rates meeting to the utmost extent possible the above requirement as to equalization.

The Board thereupon started an investigation, primarily to ascertain whether or not conditions had changed as suggested by the order in council and as to whether the difference in rates, if any, thus existing in a general way between Eastern Canada and Western Canada amounted to undue discrimination against Western Canada. The first finding was held at Ottawa on Nov. 22, 1920, when it

was arranged that the Board would hold sittings in Western Canada in the early spring, and, in pursuance thereof, sittings were held in all the principal cities of Western Canada in April, 1921, again in Oct. and Nov., 1921, and the final argument took place in Ottawa in Feb. and March last.

Very shortly after arrangements were made for such hearings, application was made by representatives of the provinces of New Brunswick, Nova Scotia, and Prince Edward Island, alleging that they were unfairly treated in that the arbitraries over Montreal, which they had enjoyed for many years prior to 1916, had been either abolished, or materially increased, and asked that the old arbitraries be re-established. Then the Province of British Columbia applied for the elimination of the mountain scale of rates, as applied to that province, asking that the prairie scale be extended through to the Pacific coast. At a later date application was made to the Lumber Association of Canada and allied interests for a general reduction in the rates upon lumber commodities.

There have also been applications before the Board the Sault Ste. Marie Board of Trade and other business interests there, for the extension of Schedule A rates from Sudbury to Sault Ste. Marie, and, finally, an application by the Commercial Travellers' Association of Canada, alleging that the 20% increase upon excess baggage provided for by general order 308 should have been eliminated when passenger rates went back to normal on July 1, 1921, claiming that the excess baggage rate is based upon passenger rates, and, therefore, when passenger rates were reduced, the same principle should be applied to excess baggage. In addition to this, we have scores of applications from individuals, corporations, and municipalities, asking for a reduction of rates, either generally, or upon the traffic in which they were respectively interested.

No reference is made herein to the application of the Nova Scotia fruit growers and the Maritime Provinces potato growers, for a reduction in the export rate on their commodities, as these rates were increased, not by general order 308, but by general order 303, effective Aug. 26, 1920, and we understand the railway companies have already filed tariffs, effective July 1, reducing these rates by 10%, in accordance with the like reductions in the United States under the Interstate Commerce Commission's recent general order.

By the terms of general order 308, all increases therein provided for cease to exist on July 1, 1922, because of the fact that the amendment to the Railway Act, 1919, sec. 325, which had the effect of postponing the coming into effect of the Crownsnest Pass legislation for three years, expires on July 6, next. Shortly after Parliament opened in March last, the question of the further extension of the coming into operation of the Crownsnest Pass legislation was referred to a special committee of the House, which has reported, and legislation based thereon has been enacted, which, in effect, provides for the suspension of the operation of the Crownsnest Pass legislation for a further period of one year, upon all rates and schedules mentioned therein, with the exception of grain and flour, the

rates upon which latter products, on and after July 6, 1922, shall be those provided for in the original legislation, Statutes of 1897, chap. 5, and also providing that the Governor in council may extend the provisions of that act for an additional term of one year, if, in their judgment, it is considered advisable to do so.

Comparison of Canadian and United States Freight Rates.—It is considered advisable at this stage to give a comparison of the general rate structures of Canada at present, as compared with the rate structures of the U.S. as they will be on and after July 1, 1922, because, on account of the great similarity between railway operations and business conditions in the two countries, as well as the very large volume of international traffic, it is well to know as nearly as possible the exact relationships of the rate structures of both countries. Two or three years ago, and before the general increase in rates in the U.S., authorized by the Interstate Commerce Commission under ex parte 74, effective Aug. 26, 1920, a careful comparison was made between the general level of freight rates in Canada and the U.S., which showed, having regard to all the controlling conditions, that the general level was slightly in favor of the Canadian shipper.

Freight rates in Canada were not increased during the first four years of the war, but in 1918 and 1920 it was necessary, not only in Canada, but in other countries as well, to materially increase freight rates, so as to enable the privately owned railways, but not in full measure, to meet their advancing operating costs, which had increased by leaps and bounds, and, in some instances, entirely without precedent or parallel. The wage increases in 1918 and 1920, coupled with the increased cost of coal and other materials and supplies, resulted in such increases in railway operating costs that a substantial increase in freight rates was inevitable. Notwithstanding that the employees of Canadian railways were granted increases in wages equal to those in the U.S., and that increased costs and war conditions bore even more heavily upon railway conditions in Canada than in the United States, the increase in rates as authorized by this Board did not bear as heavily on the Canadian public as the increase authorized in the U.S. by the Interstate Commerce Commission, as will be clearly evident by the following. These general increases, commonly known as the forty per cent. increases, although in fact they averaged appreciably under that figure, became effective in the U.S. on Aug. 26, 1920, and in Canada on Sept. 13, 1920. There has been no general decrease in freight rates authorized in the U.S. since Aug. 26, 1920, although there will be a general decrease of 10% effective July 1, 1922. On the other hand, the increased rates effective Sept. 13, 1920, in Canada, were subject to a general decrease of 5% Jan. 1, 1921, and a further general decrease of 10% Dec. 1, 1921. The situation is illustrated below, taking in each case, for simplicity of illustration, a rate of \$1 per 100 lbs.:—

Canada.	East.	West.
Rate prior to Sept. 13, 1920.	\$1.00	\$1.00
Sept. 13, 1920, increased to.	1.40	1.40
Jan. 1, 1921, decreased to.	1.35	1.35
Dec. 1, 1921, decreased to.	1.26	1.20

Interterritorial traffic—Percentage of increases in rates within territories east and west of Port Arthur applied to east and west factors thereof respectively.

United States	Rate prior to Aug. 26, 1920	Aug. 26, 1920, rate increased to	July 1, 1922, rate decreased to
Eastern Group	1.00	1.35	1.21 1/2
Western Group	1.00	1.23 1/2	1.12 1/2
Southern and Mountain Pacific Groups	1.00	1.33 1/3	1.20
Interterritorial traffic			

Further, under this Board's general order 308, Sept. 9, 1920, the railways were prohibited from increasing rates on crushed stone, sand, and gravel; minimum class rate scale; minimum charge per shipment; switching, interswitching, milling-in-transit, diversion, reconsignment, stop-overs, demurrage, weighing, etc. The increases allowed in rates on cordwood, slabs, edgings and mill refuse for use as fuel was limited to 10%. The increase in coal rates was limited as follows: in rates 0 to 80c a ton; 10c; in rates 80 to 150c a ton; 15c; in rates over 150c a ton; 20c. In the U.S., under ex parte 74, July 29, 1920, there was no similar limitation with respect to rates on crushed stone, sand, gravel, and coal and they were subject to the same percentage increases as authorized for other traffic; further, the percentage increase applicable in the group where the service is performed was made in the charges for switching, transit arrangements, weighing, diversion, reconsignment, lighterage, floatage, storage (not including track storage), and transfer, while no increases for those services were allowed in Canada.

The coal traffic is, of course, a very large and important movement, and the following illustrations show what the limitation in Canada meant as compared with the percentage increase in the U.S. The increases allowed were—

In Canada Sept. 13, 1920	0 to 80c ton	10c a ton	15c a ton	20c a ton
In rates over 80 to 150c ton				
In rates over 150				

To illustrate:—

	East	West	In United States South & Mountains Pacific	In Canada
A rate of 80c a ton became	112c	108c	100c	90c
A rate of 150c a ton became	210c	203c	188c	165c
A rate of 300c a ton became	420c	405c	375c	330c

Under the reduction in rates in the U.S. to become effective July 1, 1922, the situation will be—

Where rate prior to 1920 increase was	101c	97c	90c	100c	150c	300c
80c a ton now becomes	189c	182c	169c	165c	150c	300c
150c a ton now becomes	378c	365c	338c	320c	300c	
300c a ton now becomes						

Subsequent to the general increase in 1920, there have been a large number of substantial reductions in Canada, between various points, on different commodities. In Canada, among the more important reductions made by the railways, were the grain rates from Fort William and other lake ports to the Atlantic seaboard and Eastern Canada; on livestock, on which a reduction of approximately 25% was made in July, 1921, from the rates effective Sept., 1920; on hay in Eastern Canada; on lumber from the Pacific coast to eastern points; on wool and hides from western to eastern points; etc.

In the U.S. a reduction in carload rates on grain, grain products, and hay, in the western and mountain Pacific groups became effective in Jan., 1922; rates on livestock in the same groups in excess of 50c per 100 lb. were reduced 20%, but not below 50c in Oct., 1921; and carload rates upon products of the farm,

garden, orchard, and ranch were reduced 10% in Jan. 1922. These are the only three instances where reductions were made covering the entire country, or the

whole of any one or more groups, since the increases of 1920 became effective. These rates are not being further reduced in the U.S. on July 1, 1922.

Comparison between Canadian and U.S. Passenger Fares.—Immediately prior to Aug. 26, 1920, the standard passenger fare in the U.S. was 3c a mile. On Aug. 26, 1920, the Interstate Commerce Commission authorized an increase of 20% in all passenger fares, with a standard of 3.6c a mile. An increase, or surcharge, of 50% was allowed in sleeping and parlor car fares, an increase of 20% in excess baggage rates, and 20% increase in rates for carriage of milk in baggage cars, all effective on the same date.

In Canada, prior to Sept. 13, 1920, the standard passenger fare, east of and including Macleod, Calgary, and (Wolf Creek) Thornton, Alta., was 3.45c a mile; west of these points, 4c a mile. By general order 308, the passenger fares were increased by 20%, subject to a maximum of 4c a mile. The order did not, therefore, increase passenger fares in British Columbia. An increase of 50% was also allowed in parlor and sleeping car fares, and 20% in excess baggage charge, but no increase was allowed in rates for carriage of milk in baggage cars. On Jan. 1, by the same order, the standard passenger rate east of Macleod, Calgary, and Thornton was

In U.S. Aug. 26, 1920	Eastern Group	Western Group	Southern and Mountain Pacific Group
46%	35%	35%	25%
"	"	"	"
"	"	"	"

In Canada, the situation will be—

Aug. 1, 1922	Aug. 1, 1922	Aug. 1, 1922
on anthracite	on all other coal	on all other coal
90c	150c	300c
100c	165c	330c
188c	203c	405c
375c	420c	840c

reduced to 3.795c a mile, and on July 1, 1921, the standard passenger rate was reduced to 3.45c a mile. On Dec. 1, 1921, the increase or surcharge in parlor and sleeping car fares was reduced to 25% over those in effect prior to Sept. 13, 1920. Comparison of passenger fares in Canada and in the U.S. at present is as follows:

United States: all territory, 3.6c. Canada: east of Macleod, Calgary and Thornton, 3.45c; west of above territory, 4c. Sleeping and parlor car fares. United States: surcharge of 50%; Canada: surcharge of 25%. Excess baggage charge. United States: 20% increase; Canada: 20% increase. Milk in baggage cars. United States: 20% increase; Canada: No increase.

Basic Commodity Reductions.—At the hearings by the House of Commons special committee referred to both the C.P.R. and the Canadian National Rys. proposed that, outside of the question of the rates on grain from the Prairie Provinces to the head of the Great Lakes, and decreases in freight

rates in Canada should be confined to what they called "basic commodities," and E. W. Beatty, President C. P. R. stated as follows:—"It was apparent, however, that in 1921 certain industries felt the depression much more severely than others, and it was the opinion of the railway executives both in Canada and the U.S., an opinion which, I think, is shared by the U.S. Government, as expressed by the testimony of Secretary of Commerce Hoover, before the Interstate Commerce Commission, that inasmuch as the reductions were a matter of relief they should be first extended to those industries which most needed it. It was felt that more effective relief would be accorded in this way, and that it would bear less heavily on the companies' revenues, because of the exclusion from the reductions of numerous commodities in which the railway rate played a very small part. If the matter were one depending on the railways' judgment, this method would be followed, if the Railway Commission approved." Mr. Beatty furnished the following list of basic commodities on which he thought reductions should be made.—Grain and grain products, forest products, coal, building material, brick, cement, lime, plaster, potatoes, fertilizer, ores, wire rods and scrap iron, to which, later on, were added pig iron, blooms, and billets. The same list was afterwards approved by the Canadian National Rys.

In the special committee's report to the House, it was stated as follows:—"basic commodities which may be afforded reductions should have the earliest possible consideration by the Board of Railway Commissioners." While the recommendation of the committee is to be treated with respect, it is not binding in law upon this Board, and, accordingly, that, in revising rates, the logical method to pursue is to redress antecedent necessary percentage increases by subsequent percentage decreases, thus minimizing the inequalities which the percentage increases had accentuated. As a matter of emergency action, however, revisions may be made on basic commodities in so far as is possible, consistently with other conditions now existing.

At a later sitting of the special committee, both the C.P.R. and the Canadian National Rys suggested that, in lieu of the coming into effect of the Crownsnest Pass agreement, the following percentage reductions from present rates should be made upon these basic commodities, viz.:—Grain and grain products west of Fort William 20%; forest products 20% east, and 16.66% west.

Coal, exclusive of anthracite coal, and coal from Fort William. Specific reductions. Rates 0 to 80c a ton, reductions 10c a ton; over 80c to \$1.50 a ton, reductions 15c a ton; over \$1.50 a ton, reductions 20c a ton.

Building material, brick, cement, lime, and plaster; potatoes, fertilizers, other than chemicals; ores; pig iron; blooms; billets; wire rods; scrap iron; western lines 16.66%; eastern lines 20%. This proposal was not adopted by either the committee or the House, as proposed, but, as before stated, the rates on grain and flour from the western provinces to the head of the lakes were reduced to the original Crownsnest Pass basis, and the question now arises as to what percentage of reduction the Board can reasonably grant upon these specific commodities under the changed conditions

above referred to.

At a hearing by the special committee on June 20, W. B. Lanigan, Freight Traffic Manager, C.P.R., filed a statement showing what would be the reduction in the revenues of that company if the offer above referred to had been accepted, as follows:—

Grain and grain products	\$ 5,354,139
Forest products	1,765,147
Coal, exclusive of anthracite and coal from Fort William	476,619
Pottery	115,358
Building material, brick, lime, cement plaster	353,415
Fertilizer, other than chemicals	18,621
Pig iron, billets, blooms, wire rods and scrap iron	132,466
Ores	122,704
Total	\$ 8,338,469
International and interstate traffic 10%	2,230,000
Grand Total	\$10,568,469

This showed a total, not including reductions on international traffic, of \$8,338,469, and, of this amount, \$5,354,139 was the estimated reduction on grain. Taking this from the total reduction leaves a balance of \$2,984,330 to be distributed among the other commodities. By the legislation hereinbefore referred to, granting the Crownstent Pass rates on grain as therein provided, according to Mr. Beatty's evidence, assuming the C. P.R.'s grain traffic to be the same as in 1921, the adoption of the Crownstent rates would reduce its revenue by \$7,159,537, which, taken from \$8,338,469, would leave \$1,178,932 still available for reduction in rates on the above list of basic commodities, and the Board, after very careful investigation, has concluded that this would be represented by a reduction of 7½% on the rates now in existence on those basic commodities, less than the increases authorized by general order 308, not, however, including herein any reductions heretofore made upon any of the said commodities upon domestic rates in Canada. This would leave increases on these commodities above the basis of Sept., 1920, at 12½% in Western Canada and 17½% in Eastern Canada. This reduction of 7½%, however, should not apply to coal other than anthracite, which was not increased on a percentage basis, but by flat rates as hereinbefore particularly described, and, therefore, it is felt that all the increases on coal other than anthracite, granted by the Board by general order 308 should cease and the rates go back to those immediately preceding Sept. 13, 1920. This reduction, however, not to apply to coal from head of lakes ports westbound.

These reductions in the C.P.R. revenues, together with reductions in international rates, and those hereinbefore provided, for will amount to more than \$11,000,000 a year, and, considering that the net revenue for that company for the first five months of 1922 shows a falling off of \$2,393,000, compared with the same months for 1921, the Board does not feel justified in going further in the direction of rate reductions. The C.P.R. figures are given above, as that company is taken as the standard in rate discussions. An examination, however, of Canadian National figures, while showing some improvements over 1921, shows a deficit in operating alone for the first four months of 1922 of \$6,945,000, the only bright spot in the whole situation being the G.T.R., which shows a gain of \$2,557,000 for the first five months of 1922, compared with the like period of 1921.

Maritime Provinces.—With regard to rates between Maritime Province points and stations west of Montreal, the ear-

liest record is from a tariff published by the G.T.R. in 1874, naming rates from territory west of Montreal to St. John, N.B., and Halifax, N.S., which applied only via Portland, Me., and steamship, and were exclusive of marine insurance. From Toronto, the rates in this tariff were in cents per 100 lb., S. being for summer and W. for winter:—

	To St. John	To Halifax
Class 1, S.	100	100
" 1, W.	106	110
" 2, S.	84	84
" 2, W.	89	93
" 3, S.	67	67
" 3, W.	71	74
" 4, S.	50	50
" 4, W.	51	56

These rates are simply given as a matter of historical information, and, of course, play no part in the question, as at that time the all-rail route via Rivière-Loup was not in existence. Following the opening of the all-rail route, the rates between Maritime Province points and territory west of Montreal were constructed by the addition to the Montreal rate of a scale of arbitrariness. The earliest record is a tariff of 1891-1894, showing the following rates:—

	Classes	Arbitrary over Montreal
	1	5
Toronto to Montreal 50c	25c	30c
" " St. John 80c	40c	36c
" " " Halifax 86c	43c	36c
" " " 15c	15c	18c

The record is not clear between 1894 and 1900, because the organization of this Board was only completed in 1904, and all tariffs then in effect were filed by the railways in that year. However, from 1900 to 1916, the arbitrariness over Montreal were:—

	To St. John	To Halifax
Classes 1	20c	19c
Classes 5	22c	11c

These arbitrariness were, of course, advanced along with all other rates, and were proportional, under the various subsequent rate changes, and the situation is shown in the following table of arbitrariness over Montreal:—

	St. John Classes	Halifax Classes
	1	5
1891-1894	30 15	36 18
1900-1916	20 10	22 11
Dec. 1, 1916	24 12	24 13
March 15, 1918	27½ 14	30 16
Aug. 12, 1918	34 17½	37½ 19
Sept. 13, 1920	47½ 24½	62½ 27
Jan. 1, 1921	45½ 23½	60½ 25½
Dec. 1, 1921	42½ 21½	47 23½

The Toronto-St. John rate provides the key to the entire situation, so far as relates to the freight rate structure between Maritime Province points and Ontario territory, as the rates to and from the other Ontario groups are related to the Toronto rate, as fixed by the Board in the International Rates Order, and at the other end St. John is the pivotal point, the other groups bearing a fixed relation thereto. This system of rate-making between the territories in question was in effect long before the Board's creation and has since been carefully considered, particularly in the Eastern Rates Case in 1916, more extended reference to which is contained in the judgment in that case; it is an integral part of the whole class rate structure in Eastern Canada and could not be changed without involving disturbance of the entire rate fabric in this territory. As the class rate structure in Eastern Canada is not being disturbed at this time no change should be made in these arbitrariness.

With reference to rates between Eastern Canada and points west of Fort William, a different situation is found to exist. Instead of territorial groupings

in Ontario, as in the case of the rates between Ontario and the Maritime Provinces, the rates are blanketed to and from the whole territory, Montreal to Windsor and Sarnia, inclusive, Sudbury to Niagara Falls, all intermediate points and all lateral lines. The reason is apparent, the water lines operate from Montreal, calling at intermediate points to Sarnia, at a common rate to the head of the Great Lakes, while the westernmost points, such as Sarnia and Windsor, can reach St. Paul and thence Western Canadian points with a short mileage via Chicago. From and to points east of Montreal it has been the practice to add an arbitrary to the Montreal rate. Montreal, through its geographical situation at the head of ocean navigation and as the terminal of the western river and lake routes, is a natural breaking point. This group, with its blanket rate, takes in a large area—Montreal to Windsor, 555 miles; Montreal to Sudbury, 444 miles; Niagara Falls to Sudbury, 337 miles; Windsor to Sudbury, 480 miles. The distance from Montreal, the most easterly point, to Fort William, the head of lake navigation, and the rate breaking terminal between Eastern and Western Canada, is 997 miles. From Windsor, the most westerly point, the distance is 1,032 miles. While, of course, the blanket rate covering this territory is justified by the governing conditions outlined, points east of Montreal are put to an undue disadvantage in comparison, by the addition to the Montreal rate of a scale of arbitrariness that does not indicate an equitable continuation of a long haul rate.

Take, for instance, St. John, N.B., to Toronto, 810 miles, split up St. John, N.B., to Montreal, 466 miles, and Montreal to Toronto (C.P.R.), 334 miles, rate St. John to Toronto, \$1.25½ first class, Montreal to Toronto, 83c, difference east of Montreal, 42c, per 100 lb. Rate Montreal to Winnipeg, 1.417 miles, \$2.67½ first class, rate St. John to Winnipeg, 1.885 miles, \$3.08½, difference east of Montreal, 41c. In other words, the difference over Montreal for the long haul to Winnipeg is practically the same for a haul of 1,885 miles as for 810 miles. This does not indicate the tapering of a through rate that a long haul justifies, and is due to the application of a system of rate arbitrariness. The rate from Montreal to Winnipeg is made up on an arbitrary from Montreal to Fort William of \$1.39½, first class, plus the regular first class rate from Fort William to Winnipeg of \$1.28. The regular first class rate Montreal to Fort William is \$1.99½. This shows that effect has been given to the tapering process on a long haul, but the addition of a reduced rate arbitrary east of Fort William to the full rate beyond. This process should not stop at Montreal. The first class arbitrary Montreal to Fort William of \$1.39½ for 997 miles is represented on the Eastern Schedule A Mileage Scale by a distance 450 to 475 miles, \$1.40, first class, or, in other words, by a constructive mileage, roughly equivalent to one-half the actual distance. The differences over Montreal should be blanketed by natural divisions, i.e., on group Montreal to Megantic, Que.; a second, Megantic to St. John, N.B., and the difference should not exceed those that would exist under Schedule A were the actual mileage east and south of Montreal treated in the same manner, as that between Montreal and Fort William. Thus the Megantic group would be 12c per 100 lb., first class, and 6c fifth class, over the Montreal arbitrary of \$1.39½.

while St. John would be 24c, first class, and 12c, fifth class, and Halifax 28c, first class, and 14c, fifth class, and other Maritime groupings proportionately.

While this Board has no jurisdiction over the Intercolonial and Transcontinental Railways, yet, if this principle were adopted on those roads, then, as Quebec, a distance of 1,352 miles from Winnipeg via the Transcontinental Railway, takes the Montreal rate of \$2.07 1/2, first class, Montreal would naturally take the same arbitrary (as it is today) over Quebec rates as St. John, N.B., takes over Montreal rates. The St. John gateway provides via C.P.R. the short mileage to Montreal; from Halifax and other points this route and gateway should be maintained to shippers (with the option of Ste. Rosalie), so that the advantage of the short constructive mileage of the C. P.R. will continue to function as a rate factor. These arbitrary rates of Montreal, first class, should be scaled down on the usual relation between classes 1 to 10, and where commodity rates are published will apply as maxima over Montreal at the class of the commodity so treated.

Sault Ste. Marie Board of Trade's Application.—Schedule A was established as a result of the International Rate Case. Application was made at the recent hearings, on behalf of the S. S. M. Board of Trade, asking that the north-western boundary of the territory in the Schedule A applied should be extended to include the C.P.R. Sault Ste. Marie branch to the city of Sault Ste. Marie. The Board of Trade representative stated that he understood that the limits were Parry Sound and North Bay. In the discussion which took place, it was understood that while North Bay had been provided for in the original order, the territory had been extended to over Sudbury. It appeared from checking the rates that an error occurred, and that Sudbury is not enjoying the full advantage of the Schedule A rates, which equalized certain conditions of water competition and U.S. rail competition. Sault Ste. Marie is a water competitive point. It appears from checking the rates that both Sudbury and S. S. Marie have to a modified extent been given the advantage of the Schedule A rates. What has been done has been to give the advantage of the Schedule A rates to North Bay. This is something available under the tariff. Then for the mileage beyond North Bay to Sudbury and to S. S. Marie there has been given an arbitrary rate for the additional mileage, which is less than the full Schedule A rates would be for the same mileage; that is to say, what is done is not to give Schedule A rates on the through mileage, but Schedule A rates on the mileage to North Bay, and less than Schedule A rates on the mileage beyond. As already stated, the reduction is arbitrary. The tariffs do not disclose any exact percentage reduction. On consideration of the evidence submitted by the applicant and in view of the fact that the Schedule A territory has been extended to cover S. S. Marie in the way above indicated, it would appear to be justifiable to make provision for Schedule A rates applying as requested, but basing this on the through mileage. A similar adjustment should be made to Sudbury. Such additional mileage on the Schedule A scale as is necessary to cover the extension should be provided for.

Mountain Rates.—British Columbia.—The judgment in the Western Rate Case set out that initial construction and railway operation through the mountains

were much more expensive than operation on the prairies. It was stated that "some difference in rates at the present time are not only justifiable, but necessary." It is not contended, on behalf of British Columbia, that operation through the Mountains is not much more expensive. The judgment held that these higher costs could not be "smothered" over the system, so that B.C. would have the same rates as those applying to the Prairie Provinces. In the present application, various additional contentions were advanced. Emphasis was laid upon the implications alleged to arise from the steps culminating in Confederation. What is involved in this is somewhat analogous to what was involved in Attorney General for British Columbia vs. C.P.R., 246, in which it was held that under the terms of the contract with the Dominion Government for the construction of the C.P.R., dated Oct. 21, 1880, 44 Vict., chap. 1, schedule, the only party who could make any complaint as to their non-observance was the Dominion Government. Reference was also made to the alleged better climatic conditions existing in B.C. as affects operating; and there was also set out the conditions which were contended should be considered as a result of the construction of the Canadian Northern Pacific Ry.

It does not appear necessary to develop the question as to what implications, if any, are to be deduced from the finding regarding the Canadian National, as set out in the Privy Council order following the appeal from the Board's decision in the Forty Per Cent. Case. It would appear that the opinion of the late Chief Commissioner Mabey, which was quoted with approval in the Western Rate Case, by the then chief commissioner, Sir Henry Drayton, is applicable here. That opinion says: "The question for us to decide is what rates are fair, irrespective of how much any company is worth or is not worth." In view of what is said herein as to the controlling effect of water and U.S. rail competition in the portion of Canada east of the Great Lakes, the rates there existing cannot be taken as the necessary proper measure of what the British Columbia rates should be.

Under the Western Rate Case, a basis of 1 1/2% for 1% was adopted on the Pacific standard tariff. This, with the appropriate mileage grouping in the tariffs applicable, worked out on the average 30% over the prairie standard. From 80 to 85% of the B.C. traffic is carried on commodity rates. In so far as these commodity rates are based on percentages of the standard rates, the effects of the standard rate adjustments are carried down, although in much less degree. In the movement on commodity rates of B.C. staples, the effect of the mountain scale is in many cases not apparent. It is admitted by counsel for the Province of B.C. that the costs are still higher on the B.C. division than on the prairie divisions. He refers, however, to costs east of the Great Lakes as supporting his contentions. As set out herein, it does not appear that deductions from the experience of other sections, whose rates are dominated by water and U.S. railway competition, can be controlling here.

Following the reasoning of the Western Rate Case, a revision in the mountain scale, as provided for in the Pacific standard, is justifiable. On careful consideration, the reduction hereinafter provided for should be made; the Board does not

feel justified in going any further. The rates of the new Pacific standard mileage tariff are to be constructed by applying to the prairie standard tariff for distances up to and including 750 miles (the approximate maximum haul in B.C.), 1 1/4 miles for 1 mile, and to the rates so produced the 25-mile difference of the prairie standard mileage to be added for each 25 miles over 750, so as to produce standard through rates for part mountain and part prairie hauls. The distributing rates from recognized mainland distributing centers in B.C., other than Vancouver and New Westminster, as well as the tariff between Vancouver and New Westminster and points east thereof, will be constructed from the new standard tariff, in the same manner as at present, as prescribed in general order 125, May 30, 1914, and order 31,648 of Oct. 11, 1921, respectively. All commodity mileage rates applying locally between stations in Pacific territory, also on interchange traffic between Pacific and prairie territory, to be reduced so as to preserve the same relationship to the new standard mileage scale as they now bear to the present scale, such rates, of course, to be made subject to special commodity rates specifically published. Rates on grain and grain products from prairie points to stations in B.C., for domestic consumption, where now based on prairie mileage scale, but using constructive mileage of 1 1/4 miles for 1 mile for the mountain haul, to be reduced by figuring on 1 1/4 miles for 1 mile for the mountain haul.

Lumber Rates.—As the rates on lumber and forest products, including pulpwood, logs, poles, posts, etc., are to be reduced, as hereinbefore described, it will be unnecessary to further consider the Canadian Lumbermen's Association's application.

Excess Baggage.—By general order 308, passenger fares were increased by 20% up to and including Dec. 31, 1920, and by 10% from that date until July 1, 1921, when the passenger rates reverted to the standard of 3.45c a mile, and, by the same order, the rates on excess baggage were increased by 20%. As the rates on excess baggage are built upon a percentage of the passenger fares, it is only logical that, when the passenger fares are reduced, excess baggage should bear the same reduction, and, therefore, it is considered that the rates on excess baggage should go back to the basis prior to Sept. 13, 1920.

Equalization between the Prairie Provinces and Eastern Canada.—In the reference to the Board by the Governor in council, in the appeal in the Forty Per Cent. Case, the Board's attention was directed to the advisability of conducting an investigation to see to what extent existing disparities of rates between different rate sections could be redressed. The reference was not based on the idea that the disparities were wrong per se. Under the Railway Act, not all discriminations or preferences are forbidden. As was developed with a plentitude of example, in the Western Rate Case, what is forbidden are the discrimination sections or preferences which are undue, or discriminations which are unjust. The burden, therefore, was on the Board, in the investigations made, to ascertain whether under existing conditions the discriminations in rates existing were discriminations which fell under the inhibitions of the Railway Act. Counsel for Manitoba and Saskatchewan very frankly and fairly stated, "I have never

at any time said otherwise than that I did not think that of necessity the rate for the same distance for the same commodity should necessarily be the same east as west as well as west. In my opinion, the equal treatment of unequal things is just as bad as the unequal treatment of equal things. I have never advanced, either in argument before this Board, or before any other tribunal, or by evidence adduced, anything which would lend itself to the suggestion that I have advocated that any particular rate of necessity be the same for any particular distance east as west. There are many other factors besides mere distance." Counsel continued that longer hauls were important in the west; shorter hauls in the east. Counsel in thus defining the issue emphasized that conditions peculiar to each of the rate areas compared must be given weight in determining whether the low rate existing for a given distance in one section is to be taken as the criterion of discrimination in another. In so presenting the matter, he was but following the position so clearly laid down by the late Chief Commissioner Killam in the Board's early decisions, viz.: that mere mileage comparisons do not afford criteria of discrimination, but that all facts material must be given weight. In other words, under the body of regulation which is developed under the Railway Act, mileage is not a rigid yardstick of discrimination; discrimination, in the sense in which it is forbidden by the Railway Act, is a matter of fact to be determined by the Board.

In the course of argument, counsel for Manitoba and Saskatchewan emphasized the position that under his view of existing conditions there should be a reduction in grain rates and, thereafter, there should be reduction on basic commodities, i.e., cattle, lumber, coal and the instruments of production, such as agricultural implements. A further submission was made that articles in classes 5 to 10, not now covered by commodity rates, should be afforded a reduction. This practically means narrowing down to classes 5 and 7, as class 9, which is connected with cattle, is unimportant from a rate standpoint, cattle moving on a commodity rate. Coal, lumber, and grain also move on commodity rates. As already pointed out, a reduction, under statute, has been made in the rates on grain and flour. Through the Board's instrumentality, a reduction on cattle was made. Lumber and coal are dealt with specifically in the present judgment.

Reference has been made to the greater earning power of western lines, it being contended there is greater earning power both gross and net. At the same time, the larger mileage in the west, specific reference being made to the C. P.R. mileage, may be noted. The fundamental matter, however, in the present application, so far as the position of Manitoba and Saskatchewan is concerned, is in terms of the reference made by the Governor in council, to ascertain whether there is an unjustifiable discrimination existing as between the rates applicable in Manitoba and Saskatchewan and the rates applicable east of the Lakes. Alberta was not represented by counsel; but what may be found in regard to the justification or otherwise of the difference between rates in Manitoba and Saskatchewan as compared with the section east of the lakes will have application to the situation in Alberta as well. While it is set out, as above, that Alberta was not represented by counsel, it may be said that counsel for British

Columbia dealt with certain phases of the situation concerned in his application, as if the interests of Alberta and British Columbia were more or less identical. At the same time, it is not set out in this record by any submission from the Province of Alberta that counsel for British Columbia was representing Alberta.

In dealing with the situation as between Manitoba and Saskatchewan on the one hand, and the section east of the lakes on the other, the very fair and candid statement made by counsel for Manitoba and Saskatchewan, which was in substance that mileage is not the fundamental criterion of discrimination, must be given weight. It is necessary to look to the particular facts affecting the rate adjustments in the particular sections. The Western Rates Judgment, in dealing with the establishment of special class rates from Lake Superior and Pacific Coast termini, stated inter alia, that as to lake termini between Port Arthur, Fort William and Westfort, and points west thereof, there should apply to and from points east of Winnipeg, the prairie territory town tariff basis, subject to the rates to Winnipeg and St. Boniface as maximum; that to and from Winnipeg and St. Boniface the rates should be no greater than those of the prairie standard and tariff for 290 miles; that to and from points beyond Winnipeg, the prairie territory the maximum first class rates were to be those of the prairie standard tariff for the through mileage, made up of actual distance beyond Winnipeg, added to the above mentioned assumed mileage of 290 miles east of Winnipeg. The judgment in the Western Rates Case sets out how this constructive mileage of 290 miles east of Winnipeg on the movement from the lake termini was arrived at. The essential of the arrangement is that the mileage from the lake to Winnipeg being 424 miles, there is a concession of 134 miles on the movement concerned. This was built up on rate conditions which had developed in the west. There is not the same arrangement existing on a movement from the east to Fort William. Here, again, the particular facts of the situation in which the rate adjustment is made must be considered, and it does not follow that the arrangement herein referred to would be a criterion of discrimination in connection with a complaint as to a different rate adjustment east of the lakes.

Having in mind the special conditions of the territory west of the lakes, a special rate adjustment has been made on the very important commodity of agricultural implements. In the shippers rates from these points in Eastern Canada, i.e., Hamilton to Montreal, inclusive, the rate to western points is on the Chicago basis, that is, the rate from Chicago to said points applies. In view of the system whereby the rates east of Montreal are built up on differences over that point, the effect of this rate reduction is carried further east, so far as originating points shipping to the prairie provinces are concerned. This, again, is based upon special traffic conditions, and would not necessarily afford a criterion of unjust discrimination in respect of a different treatment in the east in regard to similar mileages concerned.

In the presentation of counsel for Manitoba and Saskatchewan, reference was made to the difference in classification basis. In the east, the 5th class rate is one-half of 1st. In the west, the 4th class rate is one-half of 1st. Reference was made to this as showing, inter alia, a considerable difference as affecting the

important 5th class; and since the distributing rates are built up by taking a percentage off, it was contended that this difference was carried down into the distributing rates. In general, the apparent conclusion counsel had in mind was that the Board should construct a basis of its own. As special reference was made to the 5th class, some comments in this connection are necessary. In Eastern Canada, the 5th class is 50% below the 1st; in Western Canada it is 55%. It may be remarked in passing that in Eastern Canada the 4th class is 37½% below the 1st class rate, while in Western Canada it is 50% below the 1st class rate. Putting it in another way, if the 5th class rate is taken, and scaling is made up to the 1st, then in Eastern Canada the 4th class rate is 25% above the 5th class rate, while in Western Canada it is 10% above the 5th class rate.

It was suggested by counsel that the Board should construct a standard of its own, taking the foundation of the western scale as the basis of classification. The western scale was constructed with the relationship between the classes in conformity with the eastern scale, starting with the 1st class rating in the western scale and scaling down the other classes under the eastern plan, this would result in a large increase in the rates for all classes below the 1st. If one-half of the 1st class in the west were taken and put in the position of one-half of the 1st class in the east, this would mean taking the present western 4th class, which is one-half of 1st, and putting it in the position of the eastern 5th class, which is one-half of 1st, and then scaling the other classes on the eastern plan, the result of this would be to produce the same result as the other method just mentioned.

The question of the standardization of the western rate scales is dealt with in the judgment of the Western Rates case, in sec. 19, under the heading "Standardization." Reference may be made to this as bearing on the history of the development. The citation set out in the judgment, in the report of the Board's Chief Traffic Officer, the late James Hardwell, emphasizes the advances which would take place if the western rate scale were standardized on the Eastern Canada basis. Bound up to the difference in classification basis is the difference in one of the fundamental rules of the classification, viz.: that concerned with the mixing privilege. As a result of a compromise arising out of the strong position taken by the western jobbers, the more liberal mixing rule of the east is not applicable west of Fort William, where it is limited by the trade list principle, and, in general, favor is shown, by Board resolutions filed with this Board by representative trade bodies in the Prairie Provinces, to limiting the mixing rule to articles normally moving in carload quantities. This, again, emphasizes a difference in traffic conditions as between the east and the west.

At a meeting held in Winnipeg on April 26, 1921, at which there were present representatives of the Boards of Trade of Brandon, Calgary, Edmonton, Lethbridge, Montreal, Moose Jaw, Regina, Toronto, Vancouver, and Winnipeg and the Saskatoon Chamber of Commerce, as well as representatives of the Canadian Manufacturers' Association, there was under discussion the question of a change from the trade list principle in the classification; and the following resolution was passed: "That the best interests of both Eastern and Western Canada rule 2 and the trade lists of

the present classification should be continued and substituted for proposed rule 10 of Canadian Freight Classification 17. 2. That a classification committee representing western boards of trade or other business organizations and railways be named to consult with the present eastern classification committee in connection with the provisions of the new classification. 3. It was the opinion of the meeting that there should be no disturbance at the present time in the present class rate relationships now existing in Eastern and Western Canada, as a result of the finding of the Board of Railway Commissioners in the enquiries conducted in the Eastern and Western Rate Cases and orders issued in relation thereto, and subsequent orders." It may be noted that the Saskatchewan Chamber of Commerce dissented from paragraph 3, and the Vancouver Board of Trade's representative stated he could not vote in favor of the resolution, but would submit it to his board.

It thus appears on the records before the Board, that in regard to classification arrangements there are differences of traffic interest between the Prairie Provinces and the territory east of the Great Lakes. It appears that commercial conditions in the west emphasize a preponderating movement of traffic in carlots, and, consequently, any standardization which would effect an increase on the distinctly carload classes would bring about a serious dislocation of business. Here, again, the situation is that differing conditions have brought about different practices and rules, and the rule or practice existing in one section and giving a different treatment is not a necessary measure of discrimination in another section. Counsel for Manitoba and Saskatchewan stated that there was a difference in average hauls east and west, and while stating that in various cases the shorter hauls were at much lower rates in the west than in the east, he contended that the important factor in the west was the longer haul. It is a legitimate deduction from this to say that the level of the rate in the east being, according to counsel's submission, concerned with an average short haul, affords no necessary criterion of what the rate should be on longer haul traffic in the west. It was testified by the C.P.R. Co. that its rates on building materials in the prairies were lower than in Eastern Canada, there having been taken into consideration the necessities in connection with supplying shelter. The examples given are illustrative of the fact that differing commercial conditions have brought about differing traffic rates and arrangements, and simply attract attention to the position that it is not in the abstract rates, but in the concrete conditions, that the measure of determining whether the rate structure is discriminatory or otherwise must be found.

In the Western Rate Judgment, after a very careful analysis of the Board's rulings in the matter of discrimination and searching analysis of traffic conditions, the Board found that water competition, generally speaking, was effective in the east. It found that, in the main, the rate structure of Eastern Canada was justified on the basis of water and rail competition; and the following language was used: "For the reasons stated, I am of the opinion that while discrimination exists between the rates charged east and west of Port Arthur, the discrimination is justified under the Railway Act and the decisions of the Board already

referred to. It is neither undue nor unjust."

In the hearings before the Board in the present case, considerable attention was devoted to the matter of water competition in its bearing upon rates in Eastern Canada. Counsel for Manitoba and Saskatchewan was disposed to minimize the importance of this water competition. It is true that on account of tonnage readjustments arising out of the war, and the incidents thereof, there have been fluctuations in the waterborne tonnage, yet this does not detract from the fact that, from the ocean well into the middle of the continent, there is a water highway on which ships are free to go and come, not tied down to any particular route, and not involving the large fixed investments which are essential to railway transportation. It is also true that adjacent to this section of Canada are the U.S. rail lines which are equally subject to the effect of this waterborne traffic; and it does not appear that any vital change in this respect has taken place. The decision in the Western Rate Case. While, as a consequence, naturally to be expected, from difference of conditions, many prairie rates have a spread over the eastern rates, the course of the Board's decisions, including the present one, has been to narrow this spread wherever possible.

The matter has been put in a succinct way in the evidence before the special committee appointed to consider railway transportation costs. Counsel who appeared before the Board for Manitoba and Saskatchewan, represented these Provinces, as well as Alberta, before the committee. In dealing with the different scales, he said: "First, there is the eastern scale, which, I will develop later, is held down by maximums created by water competition, potential and otherwise, and by U.S. rail competition." Again, in summarizing the provisions of the Railway Act in regard to discrimination, he said: "The railways, when we replied that we were discriminated against in respect of eastern rates, answered and the Board has held it to be a good answer. True, there is a disparity, a discrimination, and I propose to give you the four or five decisions in all the rate cases to that effect, that there is discrimination, a disparity against us, but the railways have satisfied the onus of showing that it is not just not done because railway rates in the east are held down by water competition and U.S. rail competition, something they cannot control, and therefore that excuses discrimination." The Board holds that the differences in rates as between the Prairie Provinces and Eastern Canada as referred to do not constitute an unjust discrimination or undue preference.

Conclusions.—All steam railways in Canada under the Board's jurisdiction shall file tariffs, effective Aug. 1, 1922, providing for the following reductions, viz.:

(a) On the articles, other than grain and flour, hereinbefore referred to as basic commodities, viz., forest products, building material, brick, cement, lime, and plaster, potatoes, fertilizers (other than chemicals), ores, pig iron, blooms, billets, wire rods, and scrap iron, a decrease of 7½% from the increase given by general order 308 and any other orders affecting the said commodities issued since that date, which will hereafter leave the increase granted by general order 308, in Western Canada, at 12½%, and, in Eastern Canada, at 17½%; the

term "forest products" as set out in such list to be defined as follows: In the territory east of Port Arthur, Ont., in accordance with the list of commodities shown in C.P.R. Tariff C.R.C. no. E-3-818, as taking rate basis A; in the tariffs from British Columbia to prairie points on the commodities taking group A and group B rates, as shown in C.P.R. Tariff C.R.C. no. W-2,573; and from stations in Alberta and British Columbia to stations in Eastern Canada, in accordance with Canadian Freight Association Tariff C.R.C. no. 30; also on pulpwood west of Port Arthur, Ont. In cases where reductions heretofore granted or ordered upon these commodities have not amounted to 7½%, as above described, they shall be reduced to that point, and, where they exceed 7½%, they will remain as at present. These reductions are made upon the same basis in both Eastern and Western Canada, with the object of preserving the same spread between these territories as was provided by general order 308.

(b) On coal, other than anthracite and coal from the head of the lakes westward, all increases provided for by general order 308 to be rescinded.

(c) On commodities moving under class and commodity rates between points east of Montreal and points west of Port Arthur and Fort William, the establishment of arbitraries as provided for herein.

(d) On the territory between North Bay and Sault Ste. Marie, Schedule A rates to be applied.

(e) Mountain rates to be reduced to the basis provided for herein; and

(f) The increase in excess baggage rates, as provided for in general order 308, to be eliminated.

With the above exceptions, all tariffs now in effect, either under the provisions of general order 308, as amended, by general order 350, or as the result of voluntary action by the carriers, shall remain in force.

The Board passed general order 366, June 30, requiring all railway companies operating steam railways, and subject to its jurisdiction, to forthwith file tariffs giving effect to the rates prescribed and authorized by the judgment given above, which was made part of the order; the rates to be effective Aug. 1, 1922.

The St. John, N.B., nail industry, and the Western Ontario beet root industry are reported to have applied to the Board to have their commodities put on the list of basic commodities on which reductions were granted by the order passed recently and given above.

Control of U.S. Railways.—W. Jett Lanck, on behalf of railway labor unions, stated recently before the U.S. Senate committee on interstate commerce that a group of New York bankers and financiers dominate the U.S. railways. The statement was directly denied by R. S. Lovett, Chairman of the Board, Union Pacific Rd.

Thefts by Railway Police.—Five members of the New York Central Rd's police department were convicted at Buffalo, N.Y., recently for stealing from freight cars. The judge said: "I believe the New York Central Rd. would suffer fewer losses if it would discharge its entire police department."

The South Eastern and Chatham Ry. of England has applied for governmental authority to electrify its lines in inner suburban areas, the electrification to cover 94 miles of route.

Railway Wages and Working Conditions in Canada and the United States.

Shopenmen.—As was pointed out in Canadian Railway and Marine World for July, pg. 361, the Railway Association of Canada notified the railway shop employees, members of American Federation of Labor Railway Employees' Department, Division No. 4, following in accordance with memorandum of agreement dated Jan. 13, 1922, notice is given of the Association's desire to revise the existing rates of pay of employees covered by wage agreement No. 4, by making the following reductions, effective 30 days from date: Machinists, boilermakers, blacksmiths, sheet metal workers, electrical workers (including linemen, groundmen, electric transfer table operators, coal pier elevator operators, and coal pier electric hoist operators), carmen (except freight carmen), moulders, including those with less than 4 years experience, all crafts, decrease of 7c an hour; freight carmen, decrease of 9c regular reductions, apprentices and helpers all classes, decrease of 7c; car cleaners, decrease of 5c. Kindly advise as early as possible upon what date your committee will be prepared to meet the Association's wage sub-committee, at Montreal, to discuss the foregoing.

The shopenmen's representatives began negotiations with the Railway Association's wage sub-committee in Montreal on July 5. The C.P.R. was represented on the wage sub-committee by Geo. Hodge, Asst. Gen. Mgr., Eastern Lines, and R. A. Pyne, Supt of Motive Power, Western Lines; the Canadian National Rys. by C. E. Brooks, Mechanical Assistant, Locomotive Department, to Vice President, Operation and Maintenance; and the G.T.R. by C. P. B. McKeena, Assistant to General Superintendent, Motive Power and Car Dept., and E. R. Battle, Superintendent of Motive Power, Eastern Lines. The shopenmen were represented by Dick J. Tallon, President, Division 4; Chas. Dickie, General Secretary; F. McKenna, Canadian Vice-President, Brotherhood of Railway Carmen; J. J. Rogers, Moncton, N.B., representing the machinists; J. Corbett, London, representing carmen; F. Harrison, Montreal, representing blacksmiths. At the start, the Railway Association's wage sub-committee proposed that the reduced rates of pay specified should be adopted without prejudice, pending further negotiations, and subject to further negotiation on 30 days notice from either party to the other. This proposition was not acceptable to the employees' representatives. Negotiations continued between the two bodies till July 10, on which date the wage sub-committee submitted another proposition to the employees' representatives, substantially as follows: With every desire to make it possible to mutually agree with respect to the application of the decreases which the railways find it necessary to put into effect, pursuant to their notice, it is further proposed that if revision of rates of pay should be made effective on the date mentioned, and that promptly upon notice from one party to the other, the representatives of both will confer further; and also that, except as may be otherwise mutually agreed, any rates of pay finally agreed upon will be effective as from July 16, 1922, and that adjustments will be made accordingly. Such an arrangement as that now proposed would have the effect of fully protecting the interests of both the employees and the railways pending the opportunity for further consideration of the railways'

proposals, and it is hoped that upon further reflection your committee will recognize its fairness to all interests affected, and decide to enter into an agreement which would have the effect of preserving the present relations.

This proposition was also unacceptable to the employees, and in reply was stated that nothing would be acceptable but a declaration from the Railway Association that the wage decreases would be postponed. If such postponement could not be made, the shopenmen told the Association's wage sub-committee, on July 11, a board of conciliation would be applied for. On receiving this answer, the sub-committee, on July 12, told the shopenmen that it had no authority to go beyond the proposal made, and would therefore submit the facts to the Association's operating committee. Upon being informed of developments, the operating committee, on July 13, addressed a communication to the shopenmen's representatives, in which it was pointed out that the last proposition submitted by the wage sub-committee would merely have the effect of withholding, under the terms stated, payments of the sums caused by the difference in the old and new rates of pay, pending negotiations which would probably make it possible for the shopenmen's and railways' representatives to reach a mutually satisfactory agreement. It was also stated that the operating committee was advising the railways affected of the situation, in order that each of them would be in a position to make effective the changes in rates of pay, in accordance with the notice of July 14, and the proposal of July 10. Negotiations between the shopenmen's representatives and the Association's wage sub-committee terminated on July 13.

While the negotiations were in progress, on July 8, a deputation representing the shopenmen waited on Minister of Labor Murdock, in Ottawa, and informed him of the railways' intention in connection with wage reductions, and also discussed the possibility of securing a board of arbitration under the Industrial Disputes Investigation Act. On July 14 the shopenmen asked for a board of arbitration. Coincident with the application to the Labor Department, a protest was issued against the action which the railways proposed to take. The shopenmen contended that if the reduced rates of pay were put into effect on July 16, the railways would be violating the Industrial Disputes Investigation Act, clause 57, which states that no wage change shall be made till a dispute has been dealt with by a board. The railways, in answer to this, claimed that their action in enforcing the cut would amount only to a temporary withholding of a portion of employees' wages subject to further negotiation, that is, if further negotiation should show the cut to be unjustified, the employees could collect their back pay. The railways further pointed out that if the employees were their action in enforcing the cut would amount only to a temporary withholding of a portion of employees' wages subject to further negotiation, that is, if further negotiation should show the cut to be unjustified, the employees could collect their back pay.

On July 14, the railways posted notices of the intended cuts in all shops. The notices contained a repetition of the notice given by the operating committee on June 14, and a review of the negotiations which terminated on July 13. In addition, each notice said: "This company is in receipt of advice that the proposition submitted through the Railway Association of Canada on its behalf has not been

accepted by the employees' representatives. The railway is in fairness entitled to protect the effective date of any revision of rates of pay downward to be agreed upon or determined in the same way as employees have repeatedly been protected as to the effective date of revisions upward. Therefore, the company cannot consistently delay the application, on the basis stated, of the specified reductions in rates of pay, and they will be put into effect on the pay rolls commencing with the second half of July, with the understanding that adjustments as may be necessary will later be made as from July 16, in accordance with the proposals of the Associations' sub-committee as contained in their letter of July 10."

On July 15 the shopenmen notified the Labor Department that their representative on the board of conciliation, if granted, would be Fred Bancroft, Oakville, Ont. On the same date a deputation from the shopenmen's committee interviewed Minister of Labor Murdock at Ottawa, and a letter was sent to the Railway Association by the Deputy Minister of Labor, informing it that the shopenmen had asked for a board, and requesting the Association to appoint a representative on it. On July 19, the Railway Association replied that, as had been previously pointed out, the Association does not represent member lines individually, or collectively, for the purposes of the Industrial Disputes Investigation Act, is not an employer within the meaning of the act, and could not be a party to proceedings under it. The railways indicated in the Association's reply, however, that they would be willing, in this instance, to join in the selection of an arbitrator to hear the dispute if they were served with individual notices to the effect that a board was desired. On receipt of this reply, the Deputy Minister withdrew the individual railways requesting them to join in the selection of an arbitrator, and we are informed at the time of writing, July 22, that the railways will likely do this. The withholding of a portion of the shopenmen's pay will be commenced with the distribution of pay for the period beginning July 16.

On July 17 a meeting attended by C.P.R. shopenmen was held in Toronto, at which the railways' action in enforcing the wage cut was spoken of as illegal. Strike ballots were distributed among shopenmen on all Canadian lines, all ballots returnable to Division 4's executive committee by July 22. A meeting of the executive was called for July 24 in Montreal. At the time of writing (July 22) no clear expression of opinion as to what the employees are going to do about the railways withholding a part of their wages pending a determination of the dispute is obtainable.

On July 19, J. J. Tallon, President of Division 4 shopenmen, and F. McKenna, Vice President, Division 4, and Vice President in Canada of the carmen's organization, waited on Premier King at Ottawa, and appealed to him against the railways' action in withholding pay pending the result of the arbitration proceedings and against the threat that the railways' action had aroused great hostility among the men.

Grand Trunk Ry. U.S. Lines.—When the shopenmen's strike became effective in the U.S. on July 1, the shopenmen in G.T.R. shops at Port Huron, Mich., and Battle Creek, struck. About 700 left their

work at Port Huron. They were paid off on July 15, and before receiving their pay were required to turn in passes and all company property. The shops are operating with reduced forces. At Battle Creek, Circuit Judge North granted the company an order restraining picketing of shops by strikers.

Michigan Central and Pere Marquette.—When the shopmen struck in the U.S., the men in Pere Marquette and Michigan Central shops at St. Thomas, Ont., decided, at a meeting at St. Thomas, to join the strike, 1,500 men being affected. It is stated that the railways had posted notices in their shops to the effect that wage reductions would be effective on the Canadian divisions as well as the U.S. lines. Largely through the instrumentality of the Canadian Labor Department, the employees were shown that under the Canadian law it would be illegal for them to strike until their dispute with the companies had been heard by a board of arbitration, and on July 2, at a second meeting, it was decided not to go to court to demand that the railways postpone the wage reduction, and to ask for a board of arbitration. Application for a board was made by the M.C.R. shopmen on July 5, and by the Pere Marquette shopmen shortly after. The employees on both roads naming W. D. Robbins, Secretary, Street Railway Employees' Union, Toronto, as their representative. On July 10, the Michigan Central, through its General Manager, H. Shearer, nominated H. T. Malcomson, Superintendent, Toronto, Hamilton & Buffalo Ry., as its arbitrator. The Labor Department recommended that the dispute as between both companies and their shop employees be heard by one board, to which the employees agreed. On July 11, Messrs. Malcomson and Robbins met to select a chairman, but were unable to agree, so on July 14 the Minister of Labor appointed J. M. McAvoy, K.C., as chairman. An Ottawa press dispatch of July 14 stated that the Minister of Labor had been assured by Mr. Shearer that the Michigan Central would not place the wage reduction in effect on Canadian lines pending the result of the board's investigation. The M.C.R. board will sit at St. Thomas, and it is expected that it will start very soon. A St. Thomas press report states that the Pere Marquette Rd. has agreed to postpone the decreases, and that a board of conciliation has been formed, consisting of A. Leslie, Kingsville, Ont., representing the company; W. D. Robbins, Toronto, representing the employees, and W. T. R. Preston, of Port Hope, Ont., chairman.

New York Central Rd., Ottawa Division.—Consequent on the shopmen's strike in the U.S. on July 1, the shop employees on the New York Central Rd. line running into Ottawa found themselves in a position similar to that occupied by the Michigan Central and Pere Marquette Canadian Division shopmen. They asked for an arbitration board under the Industrial Disputes Investigation Act, which was granted by the Labor Department. The employees named J. Y. Foster, of Montreal, as their representative, and the New York Central named J. G. Gendrich as its representative. A meeting between the railway's and the men's representatives was in prospect at the time of writing (July 22), to appoint a chairman, and it is expected that the arbitration proceedings will start without delay.

Maintenance of Way Men.—The following notice was given maintenance of way employees by the Railway Association of Canada, on June 10:

"Pursuant to wage agreement made

between the Railway Association of Canada and the Brotherhood of Maintenance of Way Employees and Railway Shop Laborers representing respectively the railways specified in the agreement and the specified classes of employees, the required 30 days' notice for a revision of agreement was issued by the Association to the employees' representatives on June 10, 1922, as follows: 'In accordance with memorandum of agreement dated Nov. 26, 1921, notice is given of the Association's desire to revise the rates of pay of employees in the maintenance of way and bridge and building departments covered by the wage Agreement 5, by making the following reductions effective 30 days from date:

"Foremen of extra gangs, assistant foremen of extra gangs, bridge and building foremen, painter foremen, mason, concrete, bricklayer and plaster foremen, pile driver, ditching and hoist engineers, decrease of 40c a day.

"Foremen of signal and interlocking construction gangs, decrease of 40c a day.

"Section foremen and assistant section foremen, snow plow and flanger foremen, decrease of 24c a day.

"Pumpmen, decrease of \$10.20 a month.

"Signalmen at interlocked crossings, decrease of \$10.20 a month.

"Carpenters, bridgemen or rough carpenters, painters, plumbers, pipe fitters, tin-smiths, blacksmiths, pump repairers, masons, bricklayers and plasterers, decrease of 4c an hour.

"Bridge and building laborers (west of Port Arthur and Superior Jct., decrease of 5c an hour.

"Track and bridge watchmen, signalmen or watchmen at highway or railway (half-interlocked) crossings, signalmen at highway or railway (half-interlocked) crossings, bridge tenders, decrease of 5c an hour.

"Signal and interlocking maintainers and repairmen, decrease of 4c an hour.

"Helpers to all classes of mechanics, decrease of 1c an hour.

"Sectionmen, decrease of 5c an hour.

"Shop laborers, unclassified (common) laborers, decrease of 5c an hour.

"Classified laborers, including employees used in lighting up locomotives, assisting at turntables, cleaning locomotives, putting supplies on locomotives, and assisting hostlers, decrease of 5c an hour.

"Asphaltmen, decrease of 5c an hour.

"The amount of \$125.60 mentioned in clause (b) of article 22, Supplement A, will be reduced by \$10.20. Rates of pay as specified in clauses (c), (d) and (g) of article 22, Supplement A for certain classes under the conditions named will be reduced by the same amounts as provided herein for their respective classes. Rates of pay for electricians as specified in clause (n), article 22, Supplement A, will be reduced by 4c an hour. Minimum rate of pay for bridge tenders (mechanical operation) as specified in clause (o), article 22, Supplement A, will be reduced by 5c an hour.

"Kindly advise as early as possible upon what date your committee will be prepared to meet the Association's wage sub-committee at Montreal to discuss the foregoing."

Negotiations between a wage sub-committee of the Railway Association of Canada and the employees' representatives began in Montreal on July 7, and the sub-committee made a proposition similar to that made to the shopmen. This was not acceptable to the employees' representatives, who suggested that the

proposed wage cut be suspended for three months, pending further negotiations. On July 12 the railway wage sub-committee proposed that the wage cuts be put into force on July 16 and that if further negotiations proved them unjustified, the employees would be paid the wages thus held back. This also proved unacceptable to the employees, who claimed that the cuts should not go into effect as ordered. Thereupon the wage sub-committee informed the Association's operating committee of the failure to come to an agreement, the negotiations came to an end on July 13. Notices worded similarly to those notifying the shopmen of the reductions to be made were posted by all railways on July 14, notifying the maintenance of way men that the wage cuts would go into effect on July 16. On July 15, A. McAndrew, Chairman, International Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, central committee for Canada, and W. Aspinall, Secretary, applied for a board of arbitration, naming David Campbell, of Regina, as their representative. It was learned subsequently that Mr. Campbell would be unable to serve, and the employees, on July 18, announced that J. G. O'Donoghue, Toronto, would replace him. The Railway Association was informed of the step, and asked to name a representative for the railways, but stated in reply to the Labor Department that it had no authority to do so. At the time of writing (July 22) it is expected that the Labor Department will ask the railways to get together and appoint a man.

Clerks, Freight Handlers, etc.—On June 22, clerks, freight handlers, stationary employees, etc., employed on the Canadian National Rys. and G.T.R. were notified of a wage reduction of 30c from 30 days from that date, as follows: Chief clerks, foremen, sub-foremen, and other employees filling similar positions, decrease 3c an hour, or \$6.12 a month; clerks (including checkers), crew supervisors, assistant station masters, train announcers, gatemen, baggage and parcel room employees, 3c an hour, or \$6.12 a month; station, platform, warehouse transfer, dock, pier, store-room, and team track freight handlers, or truckers, and others similarly employed, 4c an hour, or \$8.16 a month (present differential for stowers, loaders and sealers to be maintained); janitors, elevator operators, station attendants, station porters and other employees similarly occupying station and warehouse watchmen, employees engaged in sorting waybills and tickets, operating appliances or machines for perforating, addressing envelopes, numbering claims and other papers, gathering and distributing mail, adjusting dictaphone cylinders, and similar work, 4c an hour, or \$8.16 a month; stationary engineers, firemen and oilers, 3c an hour; laborers employed in and around shops, and locomotive houses, such as cleaners, fire-builders, asphalt men, flue benders, coal passers and engine watchmen, 5c an hour. Common laborers in and around shops and roundhouses, 5c an hour; common hoppers, 5c an hour; and around stations, store-houses, warehouses and baggage rooms, 4c an hour.

On July 7 the railways received a letter from C. E. Cole, General Chairman, C.B.R.E., to the effect that the employees were unanimous in rejecting any further reductions. On July 18, at Toronto, the Canadian National Rys. Committee, on which were A. E. Riley, Assistant General Manager, Eastern Division, and Smart, Mechanical Assistant, Car Department, to Vice President, Maintenance

and Operation, and W. N. Rippey, Superintendent of Transportation, Maritime District, met the C.B.R.E. committee, on which were C. E. Cole, General Chairman, Moncton, N.E.; C. H. McInnis, Calgary, Alta.; R. Dykes, Winnipeg, P.; Larkin, Toronto, and W. A. Hardacre, Edson, Alta. The C.N.R. committee proposed to the men's committee that the wage reductions be put in force as per notice given, and that if, after further negotiations, it was found the decreases were unjustified, the employees would get the back pay lost. This proposition was not acceptable to the men, and the negotiations came to an end. The C.N.R. then posted a notice reviewing the negotiations and stating that the new rates of pay would be started on July 22, with the provision that if these were found too low by further negotiation the men would be refunded the difference. It is thought likely at the time of writing (July 22) that the employees will apply for a board of arbitration, as President Mosher of the C.B.R.E. had a conference with the Minister of Labor on July 18, at which, it is stated, that was discussed.

On July 17 negotiations were begun between a C.B.R.E. delegation, headed by J. McGuire, General Chairman for G.T.R. lines employees, and G.T.R. officials. The procedure and results were about the same as in the case of the C.N.R. employees. Clerks, freight handlers and similarly engaged employees on the C.P.R. and other Canadian roads have also been notified that wage reductions are to take effect with the cheques covering the last half of July.

Telegraphers.—The Canadian National Rys. management has been holding conferences with telegraphers in the railways' employ, in regard to a revision of working rules, but to July 22 nothing definite has been arrived at. The C.P.R. had been negotiating with its telegraphers on similar working conditions, but following a failure to reach an agreement, an application was made to the Minister of Labor by the C.P.R. telegraphers on July 6 for a board of arbitration, David Campbell, of Regina, being nominated by the employees. The application was granted and the C.P.R. nominated U. E. Gullen, General Manager, Toronto Terminal Ry., as its representative. We were informed by the Labor Department on July 17 that in the absence of a joint recommendation by Messrs. Campbell and Gullen, the Minister had appointed D'Arcy Scott, of Ottawa, as chairman of the Board. There is some talk, at the time of writing (July 22) of this board not coming into being, as the C.P.R. and the employees appear getting together to re-open negotiations, but definite information as to this is lacking.

General.—We have received reports of cases 124, 125 and 126 decided by Canadian Railway Board of Adjustment no. 1. The first involved a dispute between the C.P.R. and the Brotherhood of Railroad Trainmen in connection with men claiming run-arounds under conditions specified. The employees' contention was sustained. Case 125 involved a dispute between the C.P.R. Western Lines and the Brotherhood of Railroad Trainmen, in connection with the dismissal of an employee for violating rule G. The employees' trainmen in connection with men claiming a dispute between the Kettle Valley Ry. and the B. of L. E., B. of L. F. & E., and the B. of R. T., in connection with discipline given train crews for delaying a train. The decision was: "The Board is of the opinion that the serious delay resulting from the train in question was caused through certain members of the

crew failing to exercise a proper degree of interest in getting it over the road, and therefore decides that the employees' claim is not sustained. However, it appears to the Board that the discipline as applied in some of the cases, is excessive, and should be modified. The decisions were signed by Geo. Hodge, Chairman, and Ash Kennedy, Vice Chairman.

At the time of writing (July 22) no labor trouble has developed on Canadian railways, and prospects that all disputes will be amicably settled on a basis approximating that on which the disputes in the U.S. are finally settled, are good.

The United States Situation.

The hearing before the U.S. Railroad Labor Board, and the Board's decisions re wages for different classes of labor, were detailed in Canadian Railway and Marine World for July. The Board's wage reduction order affecting shopmen was one of the primary causes of the strike now raging on U.S. roads; the other causes being lack of advancing working conditions by shopmen, and the contracting of repairs by the railways. Before the strike began on July 1, B. M. Jewell, President, American Federation of Labor Railway Employees' Department, telegraphed T. De Witt Cuyler, Chairman, Association of Railway Executives, stating that unless the roads agreed to maintain wages at the level at which they were before the Board's order, restore the working rules to the loss of which the shopmen objected, and do away with the contracting of repairs, the shopmen would strike. The telegram tried to place the blame for a possible strike on the railways. Mr. Cuyler telegraphed in reply, indicating that a strike could be started if it were though advisable to do so, and said in part as follows: "You demand now that we accept your decision and reject that of the Board. You are clothed with none of the power or authority of organized government.

The Board is created by the U.S. statutes, is a part of the Government, to whom all good citizens hold loyalty and allegiance, and in what it has done in the matter of which you now complain, has been performing a function expressly delegated to it by Congress. To submit now to your demands and to reject the decision of the Board would be to recognize your power as greater than that of the Government."

On June 29 the Labor Board issued orders for an enquiry, ordering the heads of the organizations which seemed likely to strike, and the executives of class 1 roads, to appear before it. Mr. Jewell did not obey the summons to the meeting, but sent a letter reading in part: "If it is the Board's intention to direct the employees of the railroads to remain at work under non-acceptable wages and working conditions, such order is void, both because it is not within the Board's powers and because it is a violation of the U.S. constitution."

At the Board's meeting, several railway executives expressed themselves as willing to stop the contracting of equipment repairs, after receiving advice from the Board's members that this would be a desirable procedure. The Board members made it plain that they considered they had made no mistake in ordering the strike, and that they had, and had no intention of changing the rates for shopmen as set forth in their decision. E. F. Grable, President of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, attended the meeting, and was questioned as to the strike threats made by his

organization. He said that he and other executives of his organization had been subjected to a lot of criticism on account of the wage reductions, and that pressure was being brought to bear on him by many of his general chairmen to call a strike. Chairman Hooper, of the Board, told him that the Board was trying to do what was fair by the maintenance men, and that it was always ready to hear any complaints his organization had to make.

Because Mr. Jewell did not attend the meeting as ordered, Chairman Hooper said: "So far as Mr. Jewell is concerned, let his blood be on his head. The Board Jewell has flouted a Government tribunal, charged with the duty and responsibility to investigate this matter, not only in the interests of the public, but in the interests of his own organizations, and the interests of the carriers, the railway transportation systems of this country. He has shouldered the responsibility of his own action, and the Board desires to pursue the matter no further."

The shopmen's strike was ordered effective by the following telegraphic order: "In compliance with the strike vote, all shop craft employees below the rank of general foreman are hereby granted sanction to suspend work, July 1, at 10 a.m., on all railroads and Pullman shops in the U.S. The great majority of the shopmen employed on U.S. lines struck."

On July 3, the Labor Board passed a resolution calling for the formation of new labor organizations among shop employees, and for the protection of employees remaining on duty or hired to take the strikers' places.

On July 4, after Board members had conferred at length with Mr. Grable, the threatened maintenance of way employees' strike was called off.

On July 11, D. W. Helt, President, Brotherhood of Railway Signalmen of America, after conferences with Labor Board members, declared he would withhold the strike order for members of his organization, and advise them to continue work under the wages ordered, under protest, pending efforts to obtain a satisfactory adjustment, on condition that any revision in wages obtained would be retroactive to July 1. E. H. Fitzgerald, President, United Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express and Station Employees, refused to confer with the Board's members, when requested to do so, and issued orders to his general chairmen that wherever the constitutional majority of the employees on any road voted for a strike on account of the wage reductions ordered, he would sanction such a strike. On several roads, such individual strikes have taken place.

The stationary engineers, firemen and oilers employed on U.S. roads were called out on strike on July 17 by Timothy Healy, President of their organization.

During the progress of the strike, up to July 12, Chairman Hooper of the Labor Board had instituted conferences, first with the labor leaders and then with the railway executives, but on July 12 these came to nothing, when the railway executives refused to meet the labor leaders. The executives said: "The issue raised is not one for the consideration of the carriers and the representatives of the organized crafts, but a strike kept through further orderly procedure through the U.S. Labor Board."

After the shopmen walked out, the roads began to operate their shops with newly hired men, and considerable violence and disorder resulted. Federal interference was negligible during the

first two weeks, but on July 11, President Harding issued a proclamation, reading in part as follows: "Whereas, the maintained operation of the railways in interstate commerce and the transportation of the U.S. mails have necessitated the employment of men who choose to accept employment under the terms of the Labor Board's decision, and who have the same indisputable right to work, and others have to decline to work, and, whereas the peaceful settlement of controversies in accordance with law and due respect for the established agencies of such settlement are essential to the security and well being of our people, I hereby direct all persons to refrain from all interference with the lawful efforts to maintain interstate transportation and the carrying of the U.S. mails."

On July 13, B. M. Jewell and the presidents of the six shop crafts organizations telegraphed Mr. Harding in answer to his proclamation, alleging that the wages fixed by the Labor Board were in violation of the Transportation Act, and that the law had been violated by the

1914. Carmen, whose rate was reduced 9c from the former 72c rate, will have real earnings under the new decision 61% higher than in 1914, based on their average hourly earnings, and 33% based on their average weekly earnings. The difference is due to shorter hours now worked. Their average hourly wage of 64.1c under the new ruling is 150% greater than their average hourly wage of 25.6c in 1914. Clerical forces, under the Board's latest ruling, will have net purchasing power 13% greater than in 1914. The real earnings of unskilled labor, based on the average hourly earnings after the latest wage reduction, show an increase of 40% and real earnings based on average weekly earnings show an increase of 19%.

C.N.R. and G.T.R. Directors' Resignations.

Following a meeting of Canadian National Rys. directors in Toronto, July 20, the following statement was issued from

Railway Employees' Wage Trend, 1914-1921.

railways.

At the time of writing (July 22) the strike in the U.S. is still in progress, and all efforts to settle it have brought no result. Shops on most roads are operating with new men, under armed protection. Injunctions have been granted by Federal courts to many railways to restrain the strikers from interfering in any way with the conduct of transportation.

The accompanying chart was prepared by the U.S. Bureau of Railway Economics, Washington, D.C., and shows the relation between railway wages and the cost of living in the U.S. from 1914 to the end of 1921. The average annual compensation of \$810.52 for 1915, the average hourly compensation of 26.1c in 1915, and the index number of the cost of living as prepared by the U.S. Bureau of Labor statistics were taken as equal to 100, and the lines plotted in accordance with the increases to 1920 and the decline since then.

As regards developments in 1922, including the Labor Board's latest decisions, a study made by the National Industrial Conference Board, New York, shows the following: Taking into consideration both wage changes and cost of living changes, skilled mechanics who had their wages reduced from 77 to 70c an hour by the Board's order, still have a purchasing power 10% greater than in

the head office: "At a meeting of the board of directors of the Canadian National Rys., held today, the members of that board tendered their resignations to the Government. These resignations are preliminary to the appointment of the single board of directors which will succeed the separate boards of the Canadian National Rys. and the Grand Trunk Rys. This will afford the Government a free hand in the selection of the new directors. Such selection may not be completed immediately, but in the meantime the interests of the Government Railways will not suffer, as the present directors will continue to act until their resignations have been formally accepted."

The directors present at the meeting were: D. B. Hanna, President; A. J. Mitchell, Vice President; Major G. A. Bell, C.M.G., Deputy Minister of Railways & Canals; Sir Hormidas Laporte, Montreal; R. T. Riley, Winnipeg; and E. R. Wood, Toronto. The directors' action was taken in consequence of an intimation from the Minister of Railways & Canals to President Hanna, who conveyed it to his colleagues on the board. The other directors than those mentioned above, viz.: Robt. Hobson, of Hamilton, who was in Europe, and A. P. Barnhill, of St. John, N.B., were communicated with by the President by telegraph, and tendered their resignations in that way.

While the board is spoken of as the

Canadian National Rys. directors, they are really Canadian Northern Rys. Co. directors, having been appointed in Sept., 1918, when that company passed under the Government's control. Later on their jurisdiction was extended over the Canadian Government railways, including the Intercolonial, the Prince Edward Island and local railways which had been acquired in the Maritime Provinces, and also the National Transcontinental Rys. between Moncton and Winnipeg. F. P. Jones, of Montreal, and C. M. Hamilton, of Weyburn, Sask., who were original members of the board, resigned in 1919.

When the Grand Trunk Rys. passed under the Dominion Government's control in May, 1921, the Government appointed its directors as follows: Sir Joseph Flavelle, Chairman; H. G. Kelley, President; J. N. Dupuis, Montreal; A. J. Mitchell, Vice President, Canadian National Rys.; and E. L. Newcombe, K.C., Deputy Minister of Justice, Ottawa. It was then expected that they would only retain office for a few weeks, but after the month of June, until the G.T.R. would be merged with other lines owned by the Government. When the King Government was formed, Sir Joseph Flavelle tendered his resignation, and he is said to have pressed for its acceptance on several occasions. A similar intimation to that given Mr. Hanna was given Mr. Kelley recently, and as a result he and Messrs. Dupuis and Mitchell tendered their resignations a day or two after the Canadian National Rys. directors resigned. Mr. Newcombe has been in England in connection with the G.T.R. arbitration appeal, but will doubtless resign on his return, if he has not already done so.

It is expected that a new board of directors to manage the Canadian National Rys., into which the G.T.R. will be merged, will be appointed at an early date. No inkling even of its composition is obtainable at the time of writing (July 24), but it is believed that no members of the Canadian National or Grand Trunk boards, with the possible exception of Major Bell, will be on it. It is said that the Government has received a considerable number of applications from persons who would like to become directors.

The Bad Order Car Situation.

The Railway Association of Canada reports the total number of freight cars on Canadian lines for the 15 days ended July 1, as 202,232. The allowance for bad order cars on the A.R.A. basis, which assumes a total of 7% of the cars in bad order, would be 14,156. The number in bad order was 22,896, an excess of 8,740 on the 7% basis. The figure 22,896 represent 11.32% of the cars in bad order. There were 33,354 surplus cars in good order, making the total not in use 56,250, or a total of 42,094 idle cars, on the basis of 7% of the cars being normally in bad order.

The American Railway Association's Car Service Division reports that the total number of freight cars on line on class 1 roads in the U.S. was 2,275,596 on June 15. Of these, 332,681 were in bad order, this figure representing 14.6% compared with 15% on June 1. Out of 1,035,513 box cars, 158,592, or 15.3%, were in bad order; out of 57,598 refrigerator cars, 8,729, or 15.2%, were in bad order; out of 960,738 hopper cars, 139,273, or 14.5%, were in bad order; out of 81,753 stock cars, 10,803, or 13.2%, were in bad order, and out of 97,914 flat cars, 12,005 or 12.3% were in bad order.

Canadian National Railways Construction, Betterments, Etc.

Sackville Shipping Facilities.—Senator Dandurand, answering questions in the Senate, recently stated that the Government intends to restore wharf and shipping facilities on the Tantramar River, at Sackville, N.B., when available traffic would seem to warrant the expenditure which is estimated at \$17,000. The revenue from the old wharf during four years preceding 1917 was \$412.52. The new wharf on the river was built in 1910-11, and grading for a railway track from the Intercolonial Ry. to the wharf was completed, but track was not laid. During the war the tracks from the I.R.C. to this old wharf were taken up, with the result that there is now no railway connection between the I.R.C. and the waterfront at Sackville.

Quebec West End Station.—A recent Quebec press report stated that the erection of a station in the west end, probably at the extreme end of St. Valier St., was being discussed. This end of the city has developed rapidly, and a station there would be a great convenience.

Quebec District Bridge Construction.—We are officially advised that a contract has been let to Jackson Construction Co., Montreal, for concrete culverts, piers and abutments for bridge reconstruction as described below:—

Harvey Subdivision.—Flat top concrete culverts, 5 x 10 ft., at mile 26.5; 10 x 3 ft. at mile 31.96; and 12 x 4 ft. at mile 32.01.

Lachute Subdivision.—Flat top culvert, 10 x 4 ft., at mile 30.1.

Harvey Subdivision.—Mile 32.25, from Riviere a Pierre, crossing of Riviere des Envies. The existing structure is a 110-ft. deck plate truss, resting on crib piers, with timber trestle approaches, built in 1900. It is proposed to build 2 concrete abutments and pier to support the existing span in place of the cribwork abutments to make the existing truss span about 20 ft. to the west, and put on a 50-ft. deck plate girder span on the east end. The abutments will be about 36 ft. high, and the pier about 25 ft.

We are officially advised that orders passed recently by the Board of Railway Commissioners for the reconstruction of the following bridges, with one exception, refer to work already done.

Jonquiere Subdivision.—Mile 226 from Quebec, crossing Chicoutimi River. The bridge consists of one span of 159.7 ft. clear, and 167.4 face to face of ballast walls. The new bridge was completed in 1921, and replaced the old truss span with a new one of the above length, and 32 ft. high, a little higher than the old one. Mile 142.4 from Quebec, over Joseph Louis River. This work was completed in 1920, and consisted of the replacement of a deck plate girder span 33 ft. 5 in. over all, with a new and heavier span of the same type and length.

Lachute Subdivision.—Mile 5.17, west of Joliette, over the Blanche River. This consisted merely of the replacing of a 104-ft. deck plate girder span, with one of similar length and type, but of heavier construction, the work being completed in 1921.

Lachute Subdivision.—Mile 5.73, west of Joliette, crossing Rouge River. The original structure was a 70-ft. deck plate girder span on timber piers, with wooden trestle approaches, and was replaced by two 45-ft. over all deck plate

girder spans with a center 89 ft. 8 in. deck plate girder span. There are 2 concrete piers, each 32 ft. high, on pile foundations, and the shore ends of the approach spans rest on temporary timber abutments. The concrete work was done by W. M. Fletcher & Co., and the steel spans, which had been released from other structures, were erected by the Dominion Bridge Co.

Roberval Subdivision.—Mile 22.7 from Clarendon Jct., over the Iroquois River. The concrete piers for the bridge were erected in 1913, when a temporary trestle was built across the stream. Owing to the war the placing of the steel superstructure was postponed, and in 1921, a deck plate girder span 74½ ft. long, over all, was put in position and timber trestle approaches erected at each end. Mile 27.2 from Chambord Jct., over Riviere des 1000s. The history of this work is similar to the last mentioned bridge, the deck plate girder span being 105 ft. over all. Mile 30 from Chambord Jct., over Eusebe Boivin River. This consisted of the replacing of a timber trestle with a 49 ft. 11 in. over all deck plate girder span, in 1921, on concrete abutments, erected in 1913.

Batiscan Subdivision.—Mile 7 from Quebec, at Riviere des Meres. The original structure consisted of a deck plate girder span 50 ft. clear, erected in 1889 on masonry piers. The superstructure has been strengthened by moving the girders closer together, and erecting 2 additional girders outside them. Mile 60.2 from Quebec at Riviere a Pierre. The original structure consisted of a deck plate girder span, 33 ft. over all, erected in 1890. The 2 original girders have been moved closer together, and 2 new girders placed outside them, on the original abutments.

The work on the following bridge has not yet been done.—Mile 27.14 from Quebec, crossing Lake Sergeant. The present bridge is an old turntable, resting on 2 piers and 2 abutments, having a total length of 55 ft., and was built in 1910. The new structure will consist of two 15-ft. and one 24-ft. plate girder spans, with such small additions to piers and abutments as are required.

Ontario District Bridges.—We are officially advised that a contract has been let to Sherwood Construction Co., Toronto, for the concrete substructures of the following bridges, the reconstruction of which was authorized recently by the Board of Railway Commissioners:—

Pembroke Subdivision.—Mile 87.1 from Hurdman, crossing of the Muskrat River. The existing structure consists of 2 deck plate girder and one through plate girder spans, 40, 110 and 75 ft. long, respectively, with trestle approaches at each end, built in 1913. It is proposed to substitute for the trestle approach at the west end four 76-ft. deck plate girder spans resting on 3 new concrete piers and one new concrete abutment. The piers will be from 27 to 42 ft. high, and the abutment about 27 ft. The most westerly span will cross a highway. The east trestle approach will be left in place until the timber has had its life. Mile 106.5 from Hurdman, crossing the Indian River, south branch. The existing structure is a timber trestle 60 ft. high and 405 ft. long, with a 30-ft. steel span over the river, built in 1912, which it is proposed to replace by a steel viaduct consisting

of three 40-ft., one 55-ft., and three 60-ft. deck plate girder spans, resting on 5 abutments and 3 towers, the towers resting on 12 concrete pedestals. The abutments will be 26 and 36 ft. high, respectively, and the pedestals will be from 12 to 20 ft. high.

We are further officially advised that a contract has been let to the Dominion Construction Co., Toronto, for concrete culverts, and concrete piers and abutments, at the following bridges, the reconstruction of which was recently authorized by the Board of Railway Commissioners:—

Sudbury Subdivision.—Mile 67.9 from Parry Sound, crossing French River. The present structure consists of one 128-ft. deck truss, over the south channel, and two 110-ft. deck plate girders over the north channel, with 190 ft. of timber trestle approach. Originally there was a timber trestle approach at each end. At the south end most of this approach has been filled, and it is proposed to build a concrete abutment to retain the fill at this end. At the north end the existing timber trestle approach will be replaced by a concrete abutment and one 62-ft. deck plate girder span resting on this abutment and one of the existing piers. The original structure was built in 1908, but the trestle approaches have had numerous repairs and renewals since then.

Ruel Subdivision.—Mile 44.1, flat top concrete culvert, 5 x 10 ft., with an embankment to replace a timber trestle 32 ft. long and about 25 ft. high. Mile 78.95 from Capreol, crossing Muskegonia River. The present structure consists of 2 plate girder spans, 105 and 40 ft. long, respectively, with timber trestle approach at the east end, which was built in 1911. It is proposed to place an additional span of the deck plate girder type, 75 ft. long, one new concrete abutment, and fill the remaining 120 ft. of trestle. Mile 134 from Capreol, crossing Groundhog River. The existing structure consists of two 70-ft. deck plate girders and one 200-ft. deck truss with timber approach on the west end, all built in 1912. It is proposed to substitute for the trestle approach at the west end a 62-ft. deck plate girder, resting on a new concrete abutment, about 40 ft. high, at the west end and on one of the existing piers. Mile 140, Duck Lake outlet. Flat top concrete double culvert, 12 x 12 ft., with embankment, to replace a timber trestle about 500 ft. long and approximately 40 ft. high.

Oha Subdivision.—Mile 32, at Trout River. The existing structure is a pile trestle, from 12 to 36 ft. high, with the center part in 22 ft. of water. This will be replaced with a through truss span 229 ft. over all, resting on 2 concrete abutments, each about 30 ft. high, which will be built on pile foundations. Mile 97.6 from Foleyet, crossing Picheon River. The original structure was a pile trestle, 345 ft. long and about 35 ft. high, built in 1912. This is being replaced by a deck plate girder bridge consisting of 2 spans 57 and 112 ft. long, respectively, resting on 2 abutments, each about 40 ft. high, and one pier about 30 ft. high. Mile 36.9 from Hornepayne, crossing Osawin River. The existing structure, a trestle 285 ft. long and 40 ft. high, was built in 1912. It is proposed to replace this with 2 deck plate girders, 68 ft. over all, and one of 89 ft. over all long,

respectively, resting on 2 concrete abutments, 35 ft. high, and 2 concrete piers, each 40 ft. high, with embankment at each end.

Long Lake Subdivision.—Mile 46.5, at Little White Otter River. The present structure is a timber trestle about 50 ft. high, and 400 ft. long, which is to be replaced with an embankment and a double 10 x 15 ft. concrete flat top culvert.

It is expected that all of the above mentioned concrete and steel work will be done this year.

Washago Track Connection.—The Board of Railway Commissioners has authorized the opening for traffic of the connection between the Canadian Northern Ry. and the G.T.R. tracks at Washago, Ont.

Port Arthur, Duluth and Winnipeg Ry.—We are officially advised that the Palatine Mining Co., which had entered into an agreement with the Canadian National Ry. for the repair and operation of the old P. A., D. & W. Ry., west of North Lake, Ont. (see Canadian Railway and Marine World, June, 1921, pg. 308, and Oct., 1921, pg. 538), had, up to the end of Aug., 1921, practically completed the grading from North Lake to the mine, including the culverts. No rails had, however, been laid, and it was not the company's intention to start the bridge work until track was laid. Active operations ceased in Dec., 1921, and it is not known what the company's present intentions are as to further work. A recent press report stated that the Palatine Co.'s employees were about to take legal proceedings to recover wages.

Mount Vandy.—A new freight terminal is to be built near Mount, Ont., 3.8 miles west of Fort William and 5.1 miles east of Twin City Jct., on the Manitoba District, Rainy River Division, Kaskabowine Subdivision. The construction will include a large yard and a locomotive terminal, consisting of locomotive house and other facilities. S. B. Wass, Construction Engineer, heretofore at Moncton, N.B., will be in direct charge of the work. L. L. Currie, Assistant Engineer, and Gerald Allen, rodman, have also been transferred there from Moncton. We were advised, July 18, that the general plan had been filed with the Board of Railway Commissioners, and that the Board's approval of a slight diversion in the main line, which the construction of the new yard will necessitate, had been given. The railways' engineers are laying out the new yard and locomotive handling facilities, construction material is being gathered at Mount, and construction will be gone ahead with at once. All the work is to be done by the Railways' own forces.

Oakland Subdivision Fencing.—Tenders were received recently for the erection of approximately 50 miles of fencing along the subdivision.

Bird Tail Creek Bridge.—The Grand Trunk Pacific Ry. crosses the Bird Tail Creek Valley at mile 190 west of Winnipeg, over a trestle 2,400 ft. long, composed of 161 pile and frame bents, having a maximum height of 55 ft. This trestle was built in July, 1907, and its life is practically exhausted. It is intended to replace it by filling the valley completely, leaving an opening of about 70 ft. clear for a diversion of the creek. The fill will require about 330,000 cu. yd. of material. The permanent bridge will consist of a 79-ft. deck plate girder span, resting on 2 concrete abutments, each 56 ft. high. Timber trestle approaches

will be maintained until the fill on each side of the bridge has settled enough to carry small concrete abutments, to be erected at the time of completing the steel structure, which will be finally composed of three 80-ft. deck plate girders. The piers were completed April 1, and it is expected that the steel span will be put in place during August.

Western Lines Water Supplies.—Tenders were received recently for the construction of water supplies on Canadian Northern Ry., to be built as follows: Dam, excavation and laying of pipe line and excavation of a reservoir at Pope, Man.; Wiseton, Sask.; Rama, Sask.; Raymore, Sask.; Maryfield, Sask., and Meachache, Alta. Construction of dam and excavation of reservoir at Conquest and Tilney, Sask. Construction of 6-in. cast iron pipe line, 10,000 ft. long, at Lloydminster, Sask., all on Canadian Northern Ry. lines.

Saskatchewan Lines Construction.—Tenders were received recently for the construction of a revision of the Boundary Subdivision near Lampman, Sask., on the Canadian Northern Ry., and for the construction of a connection between the Craik and Riverhurst Subdivisions at Regina.

Alberta Lines Construction.—We are officially advised that contracts have been let for the construction of connections between the Canadian Northern Ry. and the Grand Trunk Pacific Ry. in Alberta as follows:—Near Magnolia, to J. Fitzgerald, Edmonton, the work to be completed by Sept. 1. This connection will be 0.83 mile long. It is situated in Sections 25 and 26, Tp. 53, Range 7, west of Fish Lake, Can. Connection between the T.P.R. and Bashaw Subdivision, and C.N.R., Battle River Subdivision, near Camrose, 3.47 miles, let to F. Mannix, Calgary. The grading and culvert work is to be completed by Oct. 1. A contract has been let to D. Fitzgerald, Carstairs, Alta., for the grading and construction of culverts on a revision of the G.T.P. main line in the vicinity of the Sundance River, between Aussell and Bickerdike, through Sections 2, 3, 4 and 5, Tp. 53, Range 18, West 5th Meridian, mile 60.71 to 64.46, Brule Subdivision, the work to be completed by Oct. 1. The proposed connection between the C.N.R. and the G.T.P.R. at Ryley, between the Viking and Battle Creek Subdivisions, will not be built this year.

Edmonton Vicinity Betterments.—A recent press report stated that considerable work is in progress in the Canadian Northern and the Grand Trunk Pacific lines near Edmonton, Alta. A steam shovel was said to be at work at Innisfree pit, taking out gravel for ballasting the line between Edmonton and Vermillion, on the Vegreville Subdivision; a second steam shovel was working east of Edmonton at the Kinsella pit, taking out gravel for ballasting on the Unity and Viking Subdivisions; and a third steam shovel was working at Burbank in the Brazeau Subdivision, taking out gravel for ballasting the extension of track made in 1921 into Red Deer. A ditching machine was working between Edmonton and Wainwright to improve the drainage.

The same report said it was expected to start work on the C.N. and G.T.P. lines at North Edmonton. The steel for the bridge carrying the tracks over the highway at North Trail was being delivered, and would be erected at an early date. The work there includes the alteration of gradients, which will facilitate the hand-

ling of freight into Calder, and will do away with the necessity of operating through freight trains in the center of the city.

The report also stated that a number of timber trestles on the Brazeau Subdivision are to be filled in, and that a steam shovel would shortly be started on this work.

United States Railways' Financial Results.

As stated in Canadian Railway and Marine World for July, pg. 348, U. S. railways in class 1 had net operating income for April of \$50,271,865, representative of an annual return on tentative valuation of 3.93%. In May the results were a little better, the net operating income being \$61,880,600, representative of an annual return of 4.36% on their tentative valuation. This was also much better than May, 1921, when the net operating income earned was at an annual rate of but 2.6%.

Operating revenues in May for class 1 roads were \$448,947,900, compared with \$416,688,620 in April, and operating expenses were \$365,588,800, compared with \$336,178,422 in April. Compared with May, 1921, operating revenues in May, 1922, decreased 1%, but operating expenses decrease more than 6%.

Class 1 railways in the Eastern District had net operating income in May of \$31,752,380, representative of an annual return of 4.57%. Those in the Southern District had net operating income of \$11,304,700, representative of an annual return of 6.63%, and the Western District had net operating income of \$18,923,500, representative of an annual return of 3.4%.

The improvement which has taken place in railway operating conditions in the U. S. in 1922, compared with 1921, is evident on an examination of the results for the first five months of each year. To the end of May, 1922, class 1 roads had net operating income of \$273,259,000, compared with \$244,179,007 for the same period of 1921. While operating revenues for the first five months of 1922 were 3½% less than for the first five months of 1921, operating expenses for that period in 1922 were 13½% smaller than in 1921.

While there has been a great falling off in coal loading on U.S. lines, because of the coal miners' strike, there has been a large and steady increase in the number of cars loaded with other commodities, and with a resumption of coal shipments it appears that the U.S. railways will next autumn be called upon to handle a heavier traffic than ever before.

Liability for Transfer Freight.—The Quebec Circuit Court, sitting at Thedford Mines, Que., recently heard an action by Ford & Pajour against the Quebec Central Ry. for damages to beer in transit. The shipment was made by C.P.R. from Montreal at Sherbrooke in a sealed car, and there transferred to the Q.C.R., which delivered it. It was alleged that the car was not properly heated. The Q. C. Ry. Co. denied responsibility, claiming it was only agent for the C.P.R., which was the principal carrier. Justice Proulx dismissed the action, holding that a railway company which accepts freight to be carried beyond its line by another company is responsible for damages in transit on the latter line unless it specifically limits its liability to its own railway.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John Overhead Crossing—The Board of Railway Commissioners has granted an extension of time for the construction of an overhead crossing of Douglas Ave., St. John, N.B., to Oct. 1, in consequence of the pending action of the New Brunswick Government against the C.P.R., and its subsidiary owning the railway, bridge across the St. John River at the Reversing Falls. This action was set down for hearing at the Chancery Court sittings for April 18, then adjourned to April 25, and again to the July sittings. According to the decision to be arrived at, the bridge across the river will either remain as it is, in which case the Douglas Avenue crossing order will be carried out in accordance with present plans, or if the bridge should have to be raised in the supposed interests of navigation, new plans for the Douglas Ave. crossing will have to be made.

Moosehead Subdivision Bridge—The Board of Railway Commissioners has authorized the rebuilding of bridge 117.02, Moosehead Subdivision N.B.

Ontario St., Montreal—The Board of Railway Commissioners has authorized the reconstruction of the bridge over the subway at Ontario St., Montreal.

Northern Colonization Ry.—The Dominion Parliament has granted an extension of time within which the company, a C.P.R. subsidiary, may extend its line westerly from the present terminus, to a point on Lake Timiskaming in Pontiac County, Que. It is held that this extension will connect with the Interprovincial and James Bay Ry., line now under construction to the Quinze River, at station 482, from which a branch of 8 miles is being built to Ville Marie on Lake Timiskaming.

Gatineau River Bridge—We are officially advised that a contract has been let to the Dominion Bridge Co., for four 200 ft., steel through truss spans to replace spans of similar dimensions of the Phoenix truss type, at bridge 115.9, Lachine Subdivision, over the Gatineau River. The spans are to be placed on the existing foundations, and the work is expected to be completed this year.

Branch from Adirondack Subdivision—The Board of Railway Commissioners has approved the company's application to build a branch line of about 4½ miles from mile 42.82 on its Adirondack Subdivision, Quebec District, between the St. Lawrence bridge and the Lachine Canal, southwesterly and easterly, to be used for passenger service.

Interprovincial and James Bay Ry.—The Dominion Parliament has granted an extension of time for the construction of the line from 10 miles out of Kipawa, Que., on the Des Quinze River, with a branch to Ville Marie, which is in progress.

Cobb's Creek Bridge—The Board of Railway Commissioners has authorized the rebuilding of bridge 58.5, over Cobb's Creek, Ottawa Subdivision, Montreal.

Kingston Freight Shed—The C.P.R. applied recently to the Board of Railway Commissioners for an order rescinding an order issued about two years ago, requiring the company to erect a new freight shed at Kingston, Ont. The time within which the order was to be complied with has been twice extended. In its recent application, the company contended that any freight congestion

there had been, which was the basis for making the order, had ceased when the Canadian National Rys., which had made use of the C.P.R. facilities, co-ordinated with the G.T.R., and used its freight sheds, etc. The Kingston Board of Trade is reported to have been advised that the company's application had been refused, and that an extension of time to July 31, 1923, has been granted for complying with the order.

Feldspar Mining Spur—We are officially advised, with reference to the construction of a spur line into the Feldspar mining area, near Kingston, Ont., that the work consists of the relocation of approximately the last mile at the extreme end of the Godfrey Spur, which leaves the Kingston Subdivision at mile 29.4 from Kingston, on the old Kingston and Pembroke Ry., easterly.

Kingston Diamond—A press report states that Kingston, Ont. City Council is considering a Board of Railway Commissioners' recent order, dealing with the doing away of the old diamond west of the city by the building of a loop. It is stated that the order gives the C.P.R. the right to close up three unopened streets in the city, as well as three roads in Kingston. If the city council is of opinion that it only consented to the crossing of the streets by the loop line, the township council is also objecting to the closing of the roads. Both authorities are protesting to the Board of Railway Commissioners. The company is reported to have started the construction of the loop.

Orangeville and Teeswater Subdivision Bridges—The Board of Railway Commissioners has authorized the rebuilding of bridge 6.8, Orangeville Subdivision, and bridge 8.6 Teeswater Subdivision.

Chalk River Subdivision Bridge—The Board of Railway Commissioners has authorized the rebuilding of bridge 41.8, near Arnprior, Ont., Chalk River Subdivision.

Bridge Reconstruction—We are officially advised that bridge reconstruction authorized recently by the Board of Railway Commissioners covers a number of small operations, consisting of the replacement in permanent form of a few abutments, and the installation of a few plate girder spans ranging from 28 ft. to 50 ft. long, as follows:

Moosehead Subdivision, New Brunswick District—Bridge 117.02, rebuilding small concrete abutment.

Montreal, Quebec District—Ontario St. Subway.—Reconstruction of structure, City of Montreal.

Montreal and Ottawa Subdivision, Quebec District—Two concrete abutments to replace old timber ones.

Orangeville Subdivision, Ontario District—Bridge 6.8: Building concrete abutments to replace timber ones.

Teeswater Subdivision, Ontario District—Bridge 8.6: Replacing pile trestle with concrete abutments and installing a 39-ft. deck plate girder.

Chalk River Subdivision, Quebec District—Bridge 41.8: Building concrete abutments to replace timber ones.

Boundary Subdivision, British Columbia District—Bridge 81: Replacing timber structure by 2 concrete abutments and 1 concrete pier, and installing a 28-ft. deck plate girder.

Sirdar Subdivision, British Columbia District—Bridge 62.8: Replacing timber

approach with 1 abutment and 1 pier, and installing two 50-ft. deck plate girder spans.

The Board of Railway Commissioners has also authorized the rebuilding of the following bridges:—

Tobique Subdivision, New Brunswick District—Bridge 8.1, over Quaker Brook, N.B.

Kipawa Subdivision, Quebec District—Bridge 5.5, over Long Lake, Ont.

Flora Subdivision, Ontario District—Bridge 3.4, near Elora, Ont.

Thompson Subdivision, British Columbia District—Bridges 53.2 and 104.5, B.C.

Western Line Betterments—We are officially advised that further betterments to be carried out on the western lines during this year are as follows:—The double track between Ignace and Kenora, Ont., 62.2 miles, will be relaid with new 100-lb. rails, replacing 85-lb. ones.

A considerable number of bridges will be replaced with structures adapted for heavier traffic. This work will consist mainly of replacing small wooden trestles with concrete culverts and fills. The bulk of the work of this character is to be done in Saskatchewan. Tenders were received to July 17, for the construction of the reinforced concrete culverts on the Saskatchewan District, Regina and Saskatoon Divisions.

New stations will be built at Napinka, Man., and Chaton, Alta. A new detention shed for immigrants will be built at Coutts, Alta. The freight shed at Indian Head, Sask., will be taken down and re-erected in a new site. The locomotive house at Medicine Hat and Calgary, Alta., will be enlarged. New 90-ft. turntables will be installed at Brandon, Man., and North Bend, B.C. A coaling plant will be built at Secrean, Sask. The following facilities will be improved: Winnipeg freight sheds; electrical plants at Fort William, Ont., at main repair shops at Weston, Man., and at Ord, Alta.; mechanical appliances and freight handling facilities at Vancouver; water supply facilities at Regina, Pilot Butte and Weyburn, Sask., and on the Lake Windermere Subdivision, B.C.

A transfer barge will be built on Kootenay Lake, B.C.; the wharves at Nelson, B.C., will be made permanent, and the wharves will be an extensive overhaul of the lake and river and B.C. coast service fleets.

Fort William Yard Office—A contract is reported to have been let to J. M. McDiarmid & Co., Winnipeg, for building a yard office at Fort William, Ont. The new structure is to be built on the basement of the old one, which was burned some time ago.

Russell Northerly—Grading was completed during 1920 on the first 6 miles of a projected branch from Russell, Man., northerly to the Shell River, approximately 12 miles. This 6-mile section, ending at Cracknell, was completed during 1921, and a train service put in operation. We are officially advised that this branch line is now about to be completed.

Lanigan Branch—We are officially advised that the first section of 50 miles of the branch northerly from Lanigan, Sask., is about to be fully equipped for traffic. It was graded in 1920, and track was laid in 1921.

Rosetown Southeasterly Branch—The Board of Railway Commissioners has approved of location plan of a portion of

the branch from Rosetown, southeasterly from mile 0 to 18.66 in Sec. 26, Tp. 27, Range 16, west of the 3rd Meridian, and authorized the building of the line across certain highways. Grading was reported completed at Dec. 31, 1920, on 25 miles from mile 20 to 45, and on a further distance of 20 miles to mile 65, during 1921.

Consul East Branch.—We are officially advised that it is proposed to complete the first 60 miles of the line from Consul, Alta., on the Weyburn-Lethbridge line, southerly and easterly. The grading on the first section of 30 miles of this branch was put under contract in 1920, and the Saskatchewan Minister of Railways reported to the Legislature in Dec., 1920, that the grading on it had been completed, and that 8% of the grading on a second 30-mile contract had been completed. In 1920 a mile and a half of track was laid from Consul easterly.

Moose Jaw Station, etc.—This recently-opened new station and office building, an illustration of which is given herewith, is located on the axis of Main St., between Manitoba St. and the old station building, the site of which has been used

District Superintendent, Paymaster, Sleeping and Dining Car Department, investigation and claims, and telegraph operating rooms. The exterior of the building is designed in a rather free type of Italian renaissance and is built of limestone and red brick, laid in a grey joint. The roofs are of copper. The public portions of the interior of the building are finished principally in ceramic materials. The entrance vestibule, waiting room and ticket alcove have heather brown floors, grey tile wainscoting, and grey brick walls, with moulded and ornamental members in polychrome terra cotta, and ceilings in Gustavino tile. The luncheon room is finished with heather brown floors and grey tile walls, the upper portion of the room in tinted enamel. The women's room has heather brown tile floor and wood panelling to the ceiling. The woodwork generally is birch stained walnut. The plans were prepared by Hugh G. Jones, architect, Montreal.

Coquitlam Bridge.—A recent press report stated that the substructure work on the new bridge over the Coquitlam River,

Week-end Excursion Rates Restored on Railways.

The Canadian Passenger Association, Eastern Lines, issued notice on June 27, that it had been decided to authorize some reduction in fares for week-end trips from the larger centers to nearby summer resorts and country places, also for organized society excursions, pilgrimages, celebrations and demonstrations, the reductions to become effective July 10.

We are officially advised that the reductions made are approximately on the following basis:—

Week-end fares, 2½¢ a mile, round trip mileage, with minimum fare of 50¢ adults, 25¢ children. Going Saturdays and Sundays, returning until following Monday.

Organized excursions and pilgrimages, under auspices of organized associations, such as athletic and other clubs, societies, churches, Sunday schools, fire brigades, and mercantile firms, and pilgrimages under diocesan authority, 100 or more

Station and Office Building, Canadian Pacific Railway, Moose Jaw, Sask.

for an extension of the station trackage. The entrance to the station is on the axis of Main St. and through the base of a clock tower approximately 90 ft. high, which has an 8-ft. dial on each face. The dials are flood lighted at night. At the right, after entering the station, are the public telephones, city ticket office, steamship office, baggage and parcel rooms and transfer office, arranged in the order mentioned, and all facing the west end of the waiting room. Directly opposite the entrance are the entrance and stair to a 20-ft. subway, passing under the tracks and having stairs at each side leading to the platforms. At each side of the waiting room are men's smoking room, women's room and luncheon room. The 4-story office building is built parallel with the west side of Main St. At the right of the entrance, on the ground floor, is the city telegraph office, at the left are the elevator and stairs to the upper stories, and the balance of the office building ground floor is given to the baggage room. On the upper floors are the offices of the Superintendent and

mile 112.8, Cascade Subdivision, B.S., was expected to be completed in July, and that the steel superstructure would be erected by September. This bridge was described in Canadian Railway and Marine World for June, pg. 288.

Vancouver Pier.—Tenders have been asked for the construction of the superstructure of the pier at the Vancouver waterfront, to be known as pier B.C. A contract was let to the Pacific Construction Co. for dredging and filling at the site and the work was started in March, 1920, and completed in 1921. The plans provide for a pier 800 ft. long and 333 ft. wide, provision being made for extending it to 1,200 ft. in length when conditions demand. There will be on the pier 2 sheds, each 100 ft. wide and extending for its whole length, with 4 railway tracks between the sheds, and 2 railway tracks on the outside. The estimated cost of the structure is reported to be about \$2,000,000, and it is expected to have it completed by Sept. 30, 1923. (June, pg. 288.)

adults, or equivalent guaranteed. Selling fares, lowest one-way 1st class fare and one-third for round trip. Minimum selling fare 50¢ for adults and 25¢ for children.

Celebrations, demonstrations, regattas and political meetings, lowest one-way 1st class fare and one-half for round trip. Minimum fare for adults or children, 25¢.

Round-trip party fares, ten or more adults or equivalent, lowest one-way 1st class fare and one-half for round trip. Minimum fare for adults or children, 25¢. Agricultural exhibitions, lowest one-way 1st class fare and one-third for round trip. Minimum fare for adults or children, 25¢.

The Canadian Passenger Agents' Association, Eastern Lines members, held their summer meeting at Riviere du Loup, Quebec, July 7 and 8. They were received by the Mayor at the City Hall, and following the business meeting, they were given a motor drive through the country, and in the evening were entertained at a dinner and band concert.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Abitibi Transportation & Navigation Co., Ltd.—Canadian Railway and Marine World for June states that it had been officially advised that the Abitibi Power & Paper Co., had let a contract to build, this year, a standard gauge logging railway from Iroquois Falls, Ont., to a junction with the National Transcontinental Ry. at Hughes, Ont., 16 miles, that Iroquois Falls is the terminus of the Timiskaming & Northern Ontario Ry.'s 7-mile branch from Porquiss Jct., Ont., 225.7 miles north of North Bay, and that Hughes is 29 miles east of Cochrane. This meagre information was only obtained after we had written two letters to the company. We then wrote again, asking the usual information to be obtained in regard to such matters, including the name and address of the contractor; what the contract included; section and weight of rails to be used; name of engineer who made the survey; a blue print showing the routes; who would be in charge of construction for the company, and what ruling stock it was intended to acquire. The company's Secretary replied, repeating that a contract for all the work had been let, and the equipment purchased, or under agreement to purchase, but declined to give any further information. We wrote him again, pointing out that such information is invariably furnished us in regard to railway contracts awarded and urged that it be supplied, but our request was ignored and our letter was not even acknowledged. In Canadian Railway and Marine World's 24 years history, its Editor cannot remember having been similarly treated before, railway officials and projectors being almost invariably willing to furnish full information. However, in spite of the company's refusal, we are able to give considerable information about the matter, and shall give more from time to time in our readers' interests.

The Abitibi Power & Paper Co. has a large pulp and paper plant at Iroquois Falls and extensive timber limits in the surrounding districts. Press reports state that the company wanted to build a railway from Iroquois Falls, via Hughes, to ultimately reach James Bay, or navigable waters flowing into it, and to do business thereon as common carriers. The question of the construction of such a line was considered by the Ontario Government in June, when a deputation from the company met on June 13, with Mr. McWherty, then acting Premier, and other members of the cabinet, the Chairman and other members of the Timiskaming & Northern Ontario Ry. Commission being present. The commissioners objected to the company's application, on the ground that the projected line would interfere with the T. & N. O. Ry.'s business, and that it would parallel the extension of that line now under construction from Cochrane northerly. As a result, it was decided that the company may build a railway from Iroquois Falls to Hughes, but that it shall be used for logging purposes only. The Ontario Government, on June 28, issued letters patent, in incorporation under the Ontario Companies Act, for the Abitibi Transportation & Navigation Co., Ltd., for the following purposes: To carry on a lumber, timber and pulpwood business; to construct, purchase or otherwise acquire, steamers, scows, tugs and boats or any other kind of craft or appliances for inland navigation and to employ and operate the same; to improve and develop rivers, streams and lakes and to construct and

maintain embankments, booms and other works and equipment of all kinds for the purpose of carrying on such business; and to construct and operate lumbering and logging railways or tramways as herein-after provided, sidings and appliances, provided, however, that any railway or tramways constructed or operated by the company shall be located from Iroquois Falls, not farther north than Hughes and, together with any siding or connection therewith, only on the present concession of Abitibi Power & Paper Co., Ltd., and only for lumbering and logging for the supply of pulpwood to that company, limited; and further provided, that this company shall not in the exercise of its powers accept from or deliver to any railway other than the Timiskaming & Northern Ontario Ry. any business or traffic other than pulpwood for the Abitibi Power & Paper Co. The authorized capital is \$2,000,000, in shares of \$100 each, and the head office is in Toronto. The provisional directors, of the usual dummy variety, are: Kilmer, H. H. Davies, J. D. Rumball, L. A. Landriau and A. L. Lewis, solicitors, Toronto.

The Ontario Companies Act provides for granting charters for any of the purposes to which the Legislature's authority extends, except those of railways, incline railways and street railway companies, etc. It is evident from the charter having been granted under this act that the line to be built by the company is not considered a railway in the ordinary sense, but merely a logging line.

We have ascertained that the contractor for the 16-mile line is the Grenville Crushed Rock Co., Ltd., of Montreal, and that its contract includes clearing right of way, grading, building up culverts and bridges, track laying and ballasting, and is being carried out under the direction of Andrew Wheaton, who is stationed at Iroquois Falls. Sub-contracts have been let as follows: Mile 1 and 2 to Stewart & McLean, Iroquois Falls, this is heavy shovel work and 2 steam shovels are being used; mile 5 and 7 to Deschamps & Deschamp, Iroquois Falls; mile 9 and 16 to McLean & Wheaton, Hughes; bridge across Abitibi River, and trestles and timber work, to John McPeake. At the time of writing, July 21, the right of way has been practically all cleared, and grading is being done over from 12 to 15 miles, the bridges and trestle work being also under way. It is reported that 80 lb. rails will be used on the main line, and that a number of spurs, to be built from the main line at various points to facilitate getting out logs, will be laid with 56 lb. rails.

A Montreal press dispatch says that the Abitibi Power & Paper Co., expects to save \$500,000, or \$2 a share on its common stock, in operating costs, by hauling logs on the railway (June, pg. 286).

Burrard Inlet Tunnel and Bridge Co.—The Dominion Parliament has extended the time within which the company may build a bridge and tunnel, or either of them, with connecting railways, at the second narrows of Burrard Inlet, Vancouver, B.C. The charter is held by the municipalities which the railway line, bridge and tunnel will connect with the steam railway lines. (Nov., 1921, pg. 583.)

Demicon Atlantic Ry.—We are officially advised that the following betterments are either in hand, or will be done this year: The construction of five industrial spur lines; the relaying with 85-

lb. rails of 10 miles of track, from mile 7 to 12, Windsor Branch; from mile 9 to 11, Kentville Subdivision; and from mile 62 to 65, Yarmouth Subdivision; the gravel ballasting of 10 miles as follows: Between mile 0 and 5, Windsor Branch, and between mile 62 and 72, Yarmouth Subdivision; the erection of a station, 18 x 46 ft., at Round Hill, N.S.; the erection of a 40,000-gal. tank at Grand Pre, N.S., and the installation of a wig-wag signal at Windsor, N.S. (June, pg. 286.)

Hudson Bay Ry.—In the discussion on the estimates, on an item of \$7,000,000 towards deficiency in revenues to meet working expenses on the Canadian Government Railways, in the House of Commons recently, A. Knox, Prince Albert, Sask., raised the question of the Hudson Bay Ry., and after reviewing the history of the project, asked the Government to give some assurance that it would be sympathetically considered and brought to completion at an early date. He also advocated investigation of the Churchill as a port before any further work be done at Nelson. A number of other Western members having spoken in favor of the completion of the line, the Minister of Railways stated that the railway had so far cost approximately \$20,000,000, and the estimates indicated that it would take a further sum of \$5,000,000 to complete it to Nelson, with an additional \$10,000,000 to complete terminal and port facilities. It had been suggested that notwithstanding the expenditure of \$6,000,000 on navigation facilities at Nelson, that the development there be abandoned in favor of Churchill. Under such circumstances the Government could not be expected to give an immediate answer to the question submitted. The Minister then appointed the Canadian National Ry. to investigate the matter will be brought to the attention, and he had no doubt they would, at the earliest possible date, give it the consideration it deserves. There was no tendency on the part of the Government to refrain from doing anything which was in the public interest, and this problem would be given due consideration. (June, pg. 236.)

Kettle Valley Ry.—The Dominion Parliament has extended the time within which the company may build the projected railway from Coalmount, B.C., to the joint section operated by the K.V.R. and the Victoria, Vancouver & Eastern Ry. and Navigation Co., generally southerly to the Granite Creek coal areas, about 12 miles.

A press report states that the construction on the extension of the Penticton-Dog Lake branch from the south end of the lake to Oliver, is progressing rapidly. The rock cut south of Okanagan Falls, and the bridge at the outlet of Vauseaux Lake are reported completed, and the only works now to be done to make the extension ready for track laying are two of the smaller bridges and some easy grading near Oliver. The car barge to be used for the traffic on Dog Lake, between the two sections of the branch, is reported completed. It will be used to convey rails and other material for the track laying and completion of the line. It is expected to have track laying finished about Aug. 15. We are officially advised that bridge 8.2 over Nicola River, on the Merritt Branch, which is to be reconstructed, was built in 1906, and consists of a Howe truss

span resting on concrete abutments, and being 163 ft. 10. in. long, between ballast walls of abutments. The new bridge will consist of two second hand steel spans using the same abutments and a new center pier. The latter has already been built. The new superstructure will consist of one deck truss span 105 ft. 2½ in. over all, and one deck plate girder span 50 ft. 4 in. over all. The height of the bridge from high water level to base of rail is 30 ft. The Board of Railway Commissioners has also authorized the rebuilding of bridges 14.5 and 18 on the Nicola Branch. (Feb., pp. 76.)

Lacombe & Northwestern Ry.—A press report states that a contract has been let by the Alberta Government to W. A. Dutton for preliminary construction on an extension of the Lacombe & Northwestern Ry., from near Rimbey, for 12 miles in the direction of Edmonton, Alta. The survey was made by H. G. Dimsdale, from the present end of track to the south boundary of Tp. 46, through a good farming country, in which there are several small settlements. The estimated cost of the extension is stated at \$250,000, provision for which was made in the estimates passed in April by the Legislature. Construction will be under the charge of Howard Tye, Superintendent and Engineer. (April, pp. 185.)

Lake Huron and Northern Ontario Ry.—Lt. Col. L. T. Martin, member of the Timiskaming and Northern Ontario Ry. Commission, is reported to have stated recently that the Ontario Government had had numerous requests from settlers, and business interests asking for an inspection of this railway, and its extension beyond Rock Lake. The T. & N. O. Ry. Commission had made certain investigations, had gone over the line and had made some representations to the Government.

A summary of the history of the railway and of the company's plans for its extension and development was given in Canadian Railway and Marine World for May, pp. 236, and in the June issue on pp. 286, reference was made to the Ontario Government having opposed the extension of the charter applied for by the company, and to the T. & N. O. Ry. Commission having been asked to report on the property, and the possibilities of the country through which the extension was projected. The Premier's statement as to this investigation was that if the Commission's report was favorable, the existing line would be taken over, and operated according to the district's needs, and that its extension would be considered.

The existing railway runs from the shore of Lake Huron, and Bruce Mines, to Rock Lake, 17 miles, crossing the C. P.R. Sudbury-Sault Ste. Marie line at Bruce. The results of operation for the calendar year, 1920, were as follows:—gross earnings, \$10,874; operating expenses, \$10,560; net operating earnings, \$314. It carried 6,832 tons of freight, of which 5,740 originated on the line. No passengers were carried. The company owns one locomotive and 8 flat cars. The fixed charges were \$24,750. (June pp. 256.)

Michigan Central Rd.—A press report states that the Michigan Central Rd. has under consideration tenders for the fabrication, delivery and erection of the structural steel, including castings, rollers, railings, etc., for the proposed new steel arch bridge across the Niagara River, between Niagara Falls, Ont., and Niagara Falls, N.Y. The steel arch over

the river it is said has a total length of 640 ft., and the weight of the steel in the whole structure is estimated at 7,500 tons. (See Michigan Central Rd., May, pp. 237.)

Newfoundland Ry.—A press report states that the new management has decided to take up the rails on the Fortune Bay branch and that the work will be put in hand at once. This branch line was one of those projected in 1910, and was to extend from Northern Bight to Fortune, 79 miles. About 30 miles of track has been laid, and R. C. Morgan, now General Manager, in his recent report to the Government, recommended that the rails be taken up, and used to replace worn track on the main line. The work was never completed on the mileage of track laid on the branch, and the rails and ties have been lying exposed to the weather since they were put in position in 1913-14.

Pacific Great Eastern Ry.—The Premier of British Columbia returned to Vancouver recently from Winnipeg, where he had a conference with J. G. Sullivan, consulting engineer, who recently made a trip of investigation over the P.G.E.R., with a view of advising the Government as to its present condition and future construction policy. In an interview, while admitting that Mr. Sullivan regarded the situation as serious, the Premier stated that until Mr. Sullivan's report was received by the Government, nothing could be said. He, however, stated that the press report that the Squamish-Clinton section of the railway was to be abandoned and a connection made with the Canadian National Ry., south of Clinton, was not in keeping with Mr. Sullivan's views.

Lt.-Col. J. S. Dennis, Chief Commissioner, Colonization and Development, C.P.R., was engaged recently by the B.C. Government to report on the resources of the country served by the railway, and its prospects. He started from Vancouver, and after spending nearly two weeks in the country, left the line at Clinton, proceeding to Ashcroft, where he took a C.P.R. train for Calgary. He will report in writing to the Government. (June, pp. 287.)

Pennfold to Blacks Harbor, N.B.—A press report states that A. E. Hanson, Fredericton, N.B., is making a survey for a line from Pennfold, on the C.P.R. Shore Line Division, to Blacks Harbor, Charlotte County, N.B.

Quebec & Chibougamou Ry.—H. L. R. Blake, mining engineer, is reported to have left Quebec, recently, in charge of the Quebec & Chibougamou Ry. to investigate the area's mining and other resources for a British syndicate which is interested in the projected railway. The party expects to stay in the field until October or November.

The Q. & C. R. Co. made some surveys for a railway at the north of Lake St. John, in 1920, and a subsidy contract was reported to have been arranged with the Q. Government for its construction, but nothing further has been heard of the matter. The company's railway project is for a line from Quebec to Chicoutimi, then round the northerly end of Lake St. John, and on to Lake Chibougamou, with branches. (April, pp. 185.)

Quebec Central Ry.—The Board of Railway Commissioners has authorized the Quebec Central Ry. to connect its line with the Canadian National Ry. in let 22 of the route to St. Jean Chrysostome Parish, Que. This is a connection between the line completed in 1921

from St. John's, and the Canadian National Ry., which was built in Oct., 1921, to enable the Q.C.R. to run its trains into Quebec. (Nov., 1921, pp. 583.)

Timiskaming & Northern Ontario Ry.—A recent press report stated that rails and other material were being delivered at Cochrane, Ont., for the extension to opposite New Post on the Abitibi River, and that it was expected to start track laying during July. (June, pp. 287.)

Vancouver Harbour Ry.—A press report states that work is expected to be started shortly on the section of the projected harbor terminal railway between the Great Northern Ry. interchange track near the Ballantyne pier, and the Government dock at Vancouver. Plans for the work have been sent to Ottawa for approval, and it is expected that when they are received the work will be put in hand. It will be a single track line.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues, total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry. System, Grand Trunk Pacific Ry., and Canadian Government Ry., the last including the International Prince Edward Island Ry. and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government.

	Revenue	Expenses	1922	1921	Net deficits
Jan.	\$2,210,401	\$2,043,554	\$2,229,163	\$2,863,058	
Feb.	7,550,743	10,026,572	2,375,829	2,986,998	
March	9,418,100	10,397,547	979,447	2,632,959	
April	7,894,222	11,533,736	1,161,514	2,836,639	
May	9,678,965	9,726,020	47,055	2,554,544	
	\$42,782,431	\$49,747,741	\$6,975,010	\$33,574,194	
Deer.	\$6,320,440	\$12,919,624	\$6,599,184		

Approximate gross earnings for June, \$7,595,758, and for two weeks ended July 14, \$4,711,815, against \$8,452,054 and \$4,213,965 for same period, 1921.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1922, compared with those for 1921. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimaux, Vancouver Ry. and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain items which are included in figures supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net	Decreases
Jan.	\$11,337,975	\$10,854,498	\$488,477	\$157,948
Feb.	11,303,693	10,649,265	654,428	158,904
March	13,847,627	11,427,120	2,420,507	30,462
April	12,831,371	10,782,598	2,048,773	1,097,359
May	13,664,246	11,319,732	2,344,514	949,038
	\$62,484,911	\$55,033,153	\$7,451,758	\$2,393,560
Deer.	\$7,109,118	\$4,715,468	\$2,393,650	

Approximate gross earnings for June, \$13,198,000, and for two weeks ended July 14, \$6,253,090, against \$13,859,000 and \$6,837,000 for same periods, 1921.

Grand Trunk Railway.

Following are total operating revenues, total operating expenses and net operating revenues, or deficits for 1922:—

	Gross	Expenses	1922	1921	Net revenue
Jan.	\$5,210,317	\$4,984,907	\$225,410	\$201,166	
Feb.	5,667,487	4,706,985	960,502	31,374	
March	6,116,814	5,153,028	963,786	577,880	
April	4,901,227	4,596,845	304,382	385,272	
	\$22,041,485	\$19,435,632	\$2,605,853	\$290,520	
Incr.			\$2,613,338		
Deer.	\$1,637,714	\$3,953,047			

"Deficit."
Approximate earnings for June, \$9,220,065, and for two weeks ended July 14, \$4,400,851, against \$8,506,543 and \$5,356,895 for same period, 1921.

Jasper National Park Tourist Facilities.—The Canadian National Ry. has a special representative at Jasper National Park, B.C., during this summer. D. S. Dewar, of the Passenger Traffic Department, Winnipeg, was there until July 6, when he was relieved by T. W. McDonald, Terminal Passenger Agent, Winnipeg.

Mainly About Railway People Throughout Canada.

William Askin, Accountant, Northern Navigation Co., Sarnia, Ont., died suddenly at his home at Port Huron, Mich., from heart disease, aged 65. He first entered transportation service, several years ago, with the C.P.R., and later entered the service of the Beatty Line, operating on the Upper Lakes, and owned by the late Henry Beatty, father of the present President of the C.P.R. He later entered Northern Navigation Co.'s service, and left in 1904 on his appointment as Agent, Montreal-Lake Superior Line, Montreal. In April, 1907, he was appointed Western Agent, Canadian Lake Line, Winnipeg. He, subsequently, went to live in Detroit, Mich., and in 1918 was appointed Accountant, Northern Navigation Co., Sarnia, Ont.

A. S. Baldwin, Vice President, Illinois Central Rd., Chicago, Ill., died suddenly on a train en route from New York to Chicago, via Windsor, Ont., June 27, while returning home from Europe after a three months visit.

E. W. Beatty, K.C., President, C.P.R., addressed the pupils of the training school at Shawbridge, Que., of which he is President, July 14.

Sir George McLaren Brown, European General Manager, C.P.R., London, Eng., has been re-elected President of the Canadian Chamber of Commerce there.

G. S. Donaldson, General Agent, Chicago & Northwestern Ry., Toronto, who was driving an automobile which was overturned, near Oakville, Ont., when a friend in the car was killed and he was seriously injured, towards the end of June, was committed for trial at Oakville, July 14, on a charge of manslaughter. He was released on \$10,000 bail.

Mrs. G. B. Edwards, wife of the General Agent, White Pass & Yukon Route, Dawson, Yukon, died there, July 13.

C. Price Green, Commissioner, Industrial & Resources Department, Canadian National Rys., Toronto, has been admitted to the Royal Geographic Society's fellowship.

John H. Green, Assistant Master Mechanic, Bridgewater Division, Maritime District, Canadian National Rys., Bridgewater, N.S., was killed by a yard locomotive there, July 6. In company with W. C. Hirtle, Car Foreman, he was overlooking some men repairing a passenger car on a siding, and crossed over to inspect a train which was drawing into the station. In crossing a siding he did not notice a yard locomotive approaching on the siding, on account of the noise made by the incoming train, and of heavy rain. The locomotive was only moving at about 5 miles an hour, but Mr. Hirtle's attempt to save Mr. Green was unsuccessful. The funeral took place at Bridgewater, July 9. He was born at Wyckham, N.B., Aug. 29, 1862, and entered railway service in April, 1892, since when he was, to March, 1896, Master Mechanic, Nova Scotia Central Ry., Bridgewater, N.S.; March, 1896, to 1903, Master Mechanic, Central Ry., Bridgewater, N.S.; 1903 to June, 1906, Shop Foreman, Halifax & Southwestern Ry., Bridgewater, N.S.; June, 1906, to April, 1908, Locomotive Foreman, same road, Yarmouth, N.S.; April, 1908, to Aug., 1910, Locomotive Foreman, same road, Bridgewater, N.S.; Aug., 1910, to June, 1915, acting Master Mechanic, same road, Bridgewater, N.S.; June, 1915, to Aug., 1918, Master Mechanic, same road, Bridgewater Division, Maritime District,

Canadian National Rys., Bridgewater, N.S.

Roland W. Greene, who has been ap-

Alfred Price.
General Manager, Eastern Lines, Canadian Pacific Railway, on extended leave of absence.

J. J. Scully.
General Manager, Eastern Lines, Canadian Pacific Railway.

pointed Assistant General Agent, Ocean Traffic, C.P.R., Calgary, Alta., entered transportation service in March, 1909, since when he has been, to Nov., 1911, clerk, Freight Department, Canadian Northern Ry., Saskatoon, Sask.; Nov.,

1911, to Feb., 1913, clerk, Freight Department, Grand Trunk Pacific Ry., Saskatoon, Sask.; Feb., 1913, to Aug., 1915, station ticket clerk, Canadian Northern Ry., Saskatoon, Sask.; Aug., 1915, to Feb., 1916, ticket clerk, same road, North Battleford, Sask.; March, 1916, to March, 1917, city ticket clerk, Grand Trunk Pacific Ry., Winnipeg; June, 1917, to March, 1919, assistant City Passenger and Ticket Agent, same road, Winnipeg; March, 1919, to July 1, 1922, Travelling Passenger Agent, Ocean Traffic, C.P.R., Winnipeg.

Grant Hall, Vice President, C.P.R., left Montreal, July 2, on a trip of inspection over the line as far as the Pacific coast. He was accompanied by Mrs. Hall and his son William. On arriving at Winnipeg, July 4, he was met by D. C. Coleman, Vice President, Western Lines, and a number of other local officials. Mr. Coleman accompanied him to Regina, and C. Murphy, General Manager, Western Lines, went through with him by the main transcontinental line to Vancouver, and thence to Victoria, the intention being to return over the Crownstest Pass line. District and other officials travelled with the party over their respective jurisdictions.

George William Holmes, who died at Hamilton, Ont., July 14, was born at Detroit, Mich., July 2, 1873, was educated in the public schools there, and at Ypsilanti, Mich., and was, for some time, engaged in the Stores Department, Michigan Central Rd., Detroit. He entered Toronto, Hamilton & Buffalo Ry. service Dec. 14, 1897, as Storekeeper at Hamilton, Ont., and was appointed Purchasing Agent, June 1, 1903. He resigned, Mar. 31, 1922, on account of ill health.

H. J. Humphrey, whose appointment as Assistant General Superintendent, Ontario District, C.P.R., Toronto, was announced in our last issue, was born at Berry's Mills, N.B., Jan. 26, 1879, and entered railway service in June, 1896, since when he has been, to Aug., 1897, telegraph operator at various points, Intercolonial Ry.; Aug., 1897, to Aug., 1901, telegraph operator, Boston & Maine Rd.; Aug., 1901, to April, 1902, telegraph operator, Intercolonial Ry.; May 9, 1902, to Sept. 6, 1903, telegraph operator, C.P.R., Calgary, Alta.; Sept. 6, 1903, to June 1, 1907, dispatcher, C.P.R., Calgary, Alta.; June 1, 1907, to Nov. 1, 1909, dispatcher, C.P.R., Medicine Hat, Alta.; Nov. 1, 1909, to April 10, 1911, dispatcher, C.P.R., Calgary, Alta.; April 10, 1911, to July 1, 1912, Chief Dispatcher, C.P.R., Macleod, Alta.; July 1, 1912, to Jan. 8, 1915, Car Service and Fuel Agent, Saskatchewan Division, C.P.R., Moose Jaw; Jan. 8, 1915, to Jan. 1, 1916, Superintendent of Car Service, Western Lines, C.P.R., Winnipeg, Jan. 1, to Nov. 6, 1916, Superintendent of Car Service, Eastern Lines, C.P.R., Montreal; Nov. 6, 1916, to Feb., 1917, Superintendent, Farnham Division, Quebec District, C.P.R., Farnham; Feb. to Apr. 2, 1917, Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal; Apr. 2, 1917, to Aug. 1, 1919, Superintendent, Brownville Division, New Brunswick District, C.P.R., Brownville Jet., Me.; Aug. 1, 1919, to July 4, 1922, Superintendent, Trenton Division, Ontario District, C.P.R., Toronto.

Hon. W. C. Kennedy, Minister of Railways and Canals, is reported to be the principally interested member of a sym-

dicate which has bought the London, Ont., Advertiser.

Sir Donald Mann, ex Vice President, Canadian Northern Ry., left Toronto early in July, to spend some weeks in Great Britain.

Alexander McKenzie, who died at St. Paul, Minn., recently, aged 41, was born at Barrie, Ont., and went to Dakota in 1867, at about 17 years of age, when he carried dispatches for the Government through hostile Indians, to Fort Burford. In 1872 he worked as a spiker on the Northern Pacific Ry., then under construction westerly, and in 1874 was elected Sheriff of Bismarck, then a rough settlement, which position he held for 12 years. He was subsequently a U.S. deputy marshal, and later entered politics, and was for 30 years the acknowledged head of the Republican party in Dakota. He later moved to St. Paul, Minn., promoted the Cook Construction Co., and carried out a large contract for the City of Montreal. His company lent its machinery and general aid at the time of the Halifax disaster during the war. Mrs. Foster, wife of C. B. Foster, Assistant Passenger Traffic Manager, C.P.R., Montreal, is a daughter.

Wm. Mitchell, who died in Toronto, June 28, aged 74, was the father of L. W. Mitchell, formerly Treasurer, Canadian Northern Ry., and now General Auditor, T. Eaton Co., Toronto. He lived for many years in Port Elgin, Ont., removing to Toronto in 1910.

William Merton Neal, whose appointment as General Superintendent, Algoma District, C.P.R., North Bay, Ont., was announced in our last issue, was born at Toronto, June 20, 1886, and entered C.P.R. service Jan. 25, 1902, since when he has been, to March, 1902, office boy, Superintendent's office; March, 1902, to April, 1903, stenographer, General Superintendent's office, Ontario Division; April to May, 1903, stenographer, Accounting Department; May, 1903, to March, 1904, stenographer and Superintendent's secretary; March to August, 1904, stenographer, Freight Traffic Department, all at Toronto; Aug., 1904, to March, 1907, secretary to Superintendent of Transportation; March to Sept., 1907, secretary to General Superintendent, Central Division; Sept. to Dec., 1907, travelling car checker; Dec., 1907, to Jan., 1908, secretary to General Superintendent, Central Division, all at Winnipeg; Jan. to April, 1908, chief clerk, Superintendent's office, Souris, Man.; April, 1908, to June, 1910, assistant chief clerk; General Superintendent's office, Winnipeg; June, 1910, to May, 1915, chief clerk, Car Service Department, Winnipeg, and at various times, acting car service agent, at Winnipeg, Moose Jaw, Sask., Calgary, Alta., and Vancouver, B.C.; May, 1915, to Jan., 1916, chief clerk to General Superintendent of Car Service, Montreal; Jan. to April, 1916, Car Service Agent, Montreal; April to June, 1916, acting Superintendent of Car Service, Eastern Lines, Montreal; June to Oct., 1916, Assistant Superintendent, Montreal Terminals; Oct., 1916, to Oct., 1917, acting Superintendent of Car Service, Eastern Lines, Montreal; from Oct., 1917, to Feb., 1920, he was General Secretary of the Canadian Railway War Board, later the Railway Association of Canada, Montreal; Feb. to April, 1920, Assistant General Superintendent, Quebec District, C.P.R., Montreal, and from April, 1920, to July 3, 1922, Assistant General Superintendent, Ontario District, C.P.R., Toronto.

Alfred Price, General Manager, Eastern Lines, C.P.R., Montreal, who has been granted extended leave of absence, on account of ill health, as mentioned in our last issues, was born at Toronto, Dec. 6, 1861, and started work in 1875, as

George Hodge,
Assistant General Manager, Eastern Lines, Canadian Pacific Railway.

W. M. Neal,
General Superintendent, Algoma District, Canadian Pacific Railway.

messenger, Montreal Telegraph Co., Toronto. He entered railway service in Sept., 1879, since when he has been, to 1881, operator and clerk, Credit Valley Ry.; 1881 to 1882, car accountant, same road, Toronto. He remained with the C.

P.R. when that company took over the Credit Valley Ry., and from 1882 to 1884 was operator and relief dispatcher, Toronto; 1884 to July, 1888, dispatcher, Toronto; July, 1888, to May, 1896, car distributor, Toronto; May, 1896, to Aug., 1898, car distributor and Chief Dispatcher, Toronto; Aug., 1898, to May, 1901, Superintendent, Toronto, May, 1901, to Sept., 1902, Superintendent, Districts 8 and 9, Toronto; Sept., 1902, to May, 1903, Superintendent, Districts 10 and 11, Toronto; May, 1903, to 1905, Superintendent, Fort William, Ont.; 1905 to Feb., 1907, Superintendent of Transportation, Western Lines, Winnipeg; Feb. to Dec., 1907, General Superintendent, Central Division, Winnipeg; Dec., 1907, to July, 1910, General Superintendent, Western Division, Calgary, Alta.; July, 1910, to July, 1914, General Superintendent, Alberta Division, Calgary, Alta.; July, 1913, to Oct. 15, 1918, Assistant General Manager, Eastern Lines, Montreal; and from Oct. 15, 1918, General Manager, Eastern Lines, Montreal. Mr. Price sailed from Montreal on the s.s. Montrose, July 14, with his 2 daughters, to go to Torquay, Devonshire, England, intending to rest there quietly for a few months.

Edward J. Richel, who has been appointed City Passenger Agent, C.P.R., Chicago, Ill., entered C.P.R. service, June 16, 1920, since when he has been, to Oct. 1, 1920, clerk, Passenger Department, Canadian Pacific Ocean Services, Ltd., Chicago; Oct. 1, 1920, to Jan. 21, 1921, chief clerk, same department, Chicago; Jan. 21 to June 1, 1921, Passenger Agent, Chicago; June 1, 1921, to June 1, 1922, Travelling Passenger Agent, Chicago.

L. J. Scully, whose appointment as General Manager, Eastern Lines, C.P.R., Montreal, was announced in our last issue, was born there, Feb. 3, 1872, and entered C.P.R. service, Jan. 14, 1887, since when he has been, to June 18, 1888, office boy, car accountant's office, Montreal; June 18 to Sept. 12, 1888, clerk, Assistant Superintendent's office, Farnham, Que.; Sept. 12, 1888, to Aug. 12, 1890, chief clerk, same office, Aug. 12, 1890, to April 1, 1891, clerk, Superintendent's office, Montreal; April 1, 1891, to March 1, 1893, chief clerk, Superintendent's office, Farnham, Que.; March 1, 1893, to Sept. 1, 1894, chief clerk, Mechanical & Car Departments, Farnham, Que.; Sept. 1, 1894, to March 1, 1898, chief clerk, Mechanical & Car Departments, Toronto Jct., Ont.; March 1, 1898, to Aug. 20, 1901, assistant to Master Mechanic, Ontario & Quebec District, Toronto Jct., Ont.; Aug. 20, 1901, to Aug. 1, 1902, assistant to Master Mechanic, Road Service, Western Division, Winnipeg; Aug. 1, 1902, to May 1, 1903, chief clerk to General Superintendent, Western Division, Winnipeg; May 1 to June 1, 1903, acting Superintendent, Regina, Sask.; June 1, 1903, to Jan. 1, 1904, chief clerk to Assistant General Manager, Winnipeg; Jan. 1 to April 15, 1904, chief clerk to second Vice President, Winnipeg; April 15 to Aug. 8, 1904, Assistant Superintendent, Brandon District, Brandon, Man.; Aug. 8, 1904, to Oct. 10, 1906, Superintendent, Brandon District, Western Division, Brandon, Man.; Oct. 10, 1906, to May 10, 1910, Superintendent, Kenora District, Lake Superior Division, and in charge jointly with W. A. James, now Assistant Chief Engineer, Western Lines, of building first double track in Western Canada (Port Arthur to Winnipeg), Kenora, Ont.; May 10 to July 1, 1910, Superintendent, Moose Jaw District, Western Division, Moose Jaw, Sask.; July 1, 1910, to April 20, 1912,

General Superintendent, Saskatchewan District, Moose Jaw, Sask.; April 20, 1912, to July 3, 1922, General Superintendent, Algoma District, North Bay, Ontario. Prior to leaving the Algoma District, Mr. Scully entertained the heads of the various departments of the District, at Sudbury, Ont., July 9, when they were introduced to his successor, W. M. Neal.

Andrew J. Smith, agent, C.P.R., Tweed, Ont., died July 19, aged 55.

Major General J. W. Stewart, C.B., C.M.G., returned to Vancouver in July 1916. He had been in the C.P.R. in connection with the contract which his firm, Stewart & Macdonnell, have for building a harbor, railway, etc., in the Gold Coast Colony, Africa.

W. N. Tilley, K.C., whose election as Director, C.P.R. Co., was announced in our last issue, was born at Bowmanville, Ont., in 1868. He was called to the Ontario Bar in 1894, and was made a K.C. in 1916. He has had a wide experience in railway cases and has been retained in the Canadian courts, and before the Imperial Privy Council, in a number of important cases during the past few years. Among these were the International Fisheries arbitration at the Hague, Holland, where he represented Canada and Newfoundland; the Canadian Northern Ry. arbitration and the G.T.R. arbitration, and recently on behalf of the Dominion Government in the G.T.R. shareholders' appeal before the Imperial Privy Council.

A. E. Wallace, who has been appointed General Manager, Minneapolis, St. Paul & Sault Ste. Marie Ry., Minneapolis, Minn., was born at Nashua, N.H., in 1879, and entered railway service in 1902, since when he has been, to 1904, clerk, Great Northern Ry., Larimore, N.D.; 1904 to 1907, yard clerk, timekeeper and chief clerk, Chicago, Rock Island & Pacific Ry.; 1907 to 1912, special inspector, assistant gang foreman, trainmaster, and assistant superintendent, Chicago, Burlington & Quincy Ry.; 1912 to 1918, Superintendent, Chicago, Rock Island & Pacific Ry.; 1918 to 1920, Assistant General Superintendent, Erie Rd.; 1920 to June, 1921, Manager, Chicago Region, same road.

James Webster, who died at Toronto, July 4, was born in 1844, and entered railway service in 1859, as office boy with the Great Western Ry., and G.T.R., Hamilton, Ont. He continued with the G.T.R. and from July 1, 1879, to Oct. 16, 1889, was Superintendent, Traffic Department, Northern & Northwestern Division, Toronto; Oct. 16, 1889, to Jan. 1, 1897, Assistant Superintendent, at Allandale, Ont. He later became President and General Manager, Gulf Shore & Caraquey Ry., at Bathurst, N.B., and retired from active service in 1914. A. F. Webster, general ticket agent, Toronto, is a brother.

Dolly Varden Mine and Railway.—G. Wingfield, a Reno banker, is reported to have obtained an order for foreclosure in the British Columbia courts on the Dolly Varden and other mining properties at Alice Arm, B.C., together with the railway and all equipment. The order was unopposed by the Taylor Engineering Co., the Dolly Varden Mining Co., the Taylor Mining Co., the trustees for the bondholders and the trustee for the creditors. It is reported that a private agreement has been made under which the Taylor Mining Co. has a right to redeem the property under certain conditions, others, which decision has been confirmed.

Prime Minister King Plays Politics with the Canadian National Railways.

At the recent Manitoba elections, two Canadian National Rys. employees were candidates, viz.—C. W. Foster, employed in the Transcona shops; and G. H. Palmer, a truck dispatcher at Dauphin. When they announced their candidatures, their services were dispensed with, under the order issued some time ago by President D. B. Hanna, forbidding officials or employees becoming parliamentary or legislative candidates. Both of them were defeated at the polls.

On July 19 W. D. Bayley, who was elected an Independent labor representative in Assiniboia, telegraphed Premier King, at Ottawa, in part as follows:—"In Nov. 1920, in reply to my letter of Oct. 30, 1920, you expressed your agreement with my opposition to the Hanna order dismissing mere wage-earners from service in the Canadian National Rys. for running as Parliamentary candidates. I wired you to give you the opportunity

H. J. Humphrey,
Assistant General Superintendent, Ontario District,
Canadian Pacific Railway.

of righting this outrage against Labor and democracy before appeal to public opinion. I trust you will immediately seize the opportunity to confirm your former attitude by having Palmer and Foster reinstated at the earliest possible moment."

The Premier telegraphed in reply on July 20, as follows:—"On May 29 last, in answer to a communication from the president of the Trades and Labor Congress of Canada, making enquiries as to the decision of the Government upon section (D) of the legislative programme of the Trades and Labor Congress of Canada, which is worded as follows: 'To restore the right of railroad workers to offer themselves for political office without forfeiting their positions or seniority on the national railroads and correct the injustice created by what has been known as the Hanna order.' I stated the Government's view of the matter as follows: 'The control of the Canadian National Rys. is vested in a board of directors which is held responsible by

the Government, as representing the people, for the management and operation of the roads. It is a fundamental principle of Government policy not to interfere, or to permit interference, with the board of directors in the discharge of its duties. The Government is therefore not in a position to say to the board of directors what, in this or in any other matter, should or should not be done.' On the other hand, the Government does not hesitate to make known the attitude which, in its opinion, should be adopted by the board of directors of the Government railways with respect to the right of railroad workers to offer themselves for political office. As regards workers on the Government railroads, the Government would hope and expect that the same attitude would be taken in the matter of their political rights as is taken towards their employees by the privately owned railroads and in particular by the C.P.R. Co. which operates the other important railway system in the Dominion, and is the only real competitor of the Canadian National Rys. I regret that the Minister of Railways is absent from Ottawa today, which deprives me of an opportunity of immediate conference with him. I am sending copies of your communication and this reply to the Deputy Minister of Railways with the request that its contents be communicated immediately to the Chairman of the Board of Directors of the Canadian National Rys."

While Mr. King said he was forwarding a copy of his telegram to the Deputy Minister of Railways for transmission to Mr. Hanna, he did not wait for it to reach the latter before making it public, but gave it to the press immediately, so that no doubt Mr. Hanna read it in the papers before it reached him officially. Mr. King's ideas of the amenities are certainly perverted and his whole course in the matter is hypocritical, as while he said that "it is a fundamental principle of Government policy not to interfere or to promote interference with the board of directors in the discharge of its duties" he went on to say that "the Government does not hesitate to make known the attitude which in its opinion should be adopted by the directors". In other words, he told the directors who were appointed by the Government, and hold office during its pleasure, what the Government thinks they should do. How long is the ridiculous pretence that there is no political interference with the Canadian National Rys. management to be kept up?

It is not likely that Foster and Palmer will be reinstated while the present C. N. R. directors are carrying on, and that the matter will be left to the new board to deal with.

The Act to amend the Railway Act, 1919, passed at the Dominion Parliament's recent session, provides as follows: The Railway Act, 1919, sec. 325, sub-sec. 5, shall, notwithstanding the proviso thereof, remain in effect until July 6, 1923, and may be continued in force for a further period of one year, by order of the Governor in council, published in the Canada Gazette, provided that notwithstanding anything in this act or in the Railway Act, 1919, sec. 325, sub-sec. 5, rates on grain and flour, shall, on and from July 3, 1922, be governed by the provisions of the agreement made pursuant to the statutes of 1897, chap. 5.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Freight Association.—Major W. M. Kirkpatrick, Assistant Freight Traffic Manager, C.P.R., and W. G. Manders, Assistant Freight Traffic Manager, Canadian National Rys.; the C.F.A., Western Lines, the executive committee, issued a circular, July 1, announcing that F. W. THOMPSON, heretofore the Association's Inspector, had been appointed acting Chairman at Winnipeg, vice W. E. Campbell, resigned, on appointment as Chief Traffic Officer, Board of Railway Commissioners.

Canadian National Rys.—G. L. BRYSON has been appointed Travelling Passenger Agent, Canadian National-Grand Trunk Rys., Cincinnati, Ohio, vice R. C. Kuhn, transferred to General Agent's Office at Detroit, Mich., as Chief Clerk. Office, 406, 407 Tracdon Bldg.

J. A. McMAHON, heretofore Roadmaster, Hornepayne, Ont., has been appointed Roadmaster, Ottawa, Ont., vice W. H. Henderson, who was appointed acting Roadmaster there, vice O. Ogden, deceased.

RIGBY'S LTD. have been appointed Passenger Agents for the north of Ireland for Canadian National-Grand Trunk Rys. Office, 74 High Street, Belfast. The arrangements with Stephens & Waddington, who were G.T.R. Freight and Passenger Agents at Belfast, have been cancelled.

W. TAYLOR, heretofore on the staff at Manchester, Eng., has been appointed Special Agent, Passenger Department, Canadian National-Grand Trunk Rys., Antwerp, Belgium. Office, 2 Quai Ortelius.

Canadian Pacific Rys.—W. I. BALKWILL has been appointed Travelling Passenger Agent, Chicago, Ill., vice E. J. Richel, appointed City Passenger Agent there.

R. W. GREENE, heretofore Travelling Passenger Agent, Ocean Traffic, Winnipeg, has been appointed Assistant General Agent, Ocean Traffic, Calgary, Alta., vice H. M. Tait, who was appointed as General Agent, Passenger Department, Rail and Ocean Traffic, Minneapolis, Minn., was announced in our last issue.

ALLAN CAMERON, Superintendent, Land Branch, Natural Resources Department, Calgary, Alta., is expected to be appointed Oriental Agent, C.P.R., Hong Kong, China, about Oct. 1.

ROSS OWEN is reported to have been appointed Agent at Moscow, Russia.

E. J. RICHEL, heretofore Travelling Passenger Agent, Chicago, Ill., has been appointed City Passenger Agent, there, vice A. B. Dean, resigned to engage in other business.

Reid Newfoundland Co.—H. D. Reid, President, issued a circular, June 23, announcing that RICHARD C. MORGAN, Superintendent, Winnipeg Terminals, C.P.R., who is on seven months leave of absence, has been appointed General Manager, Reid Newfoundland Co.'s Railway and steamships, of the Newfoundland Express Co., Office, St. John's, Nfld.

H. J. RUSSELL, Superintendent, Eastern Division, has also been appointed Assistant to the General Manager, R. C. Morgan.

Royal Mail Steam Packet Co.—A. G. ALBERTSEN, heretofore General Agent, Passenger Department, Rail and Ocean Traffic, C.P.R., Minneapolis, Minn., has

been appointed Manager R.M.S.P. Co., San Francisco, Cal., as announced in our last issue. He has jurisdiction over the States of California, Nevada, Arizona, and New Mexico. Office, 544 Market St.

Death of W. H. Biggar, K.C.

W. H. Biggar, K.C., Vice President and General Counsel, G.T.R., died suddenly at Montreal, July 7, from cerebral hemorrhage. He was taken ill on St. Catherine St., while proceeding home, and was removed to a private hospital, where he became unconscious and died during the evening. He was born at The Carrying Place, near Trenton, Ont., Sept. 19, 1852, and was educated at the Trenton Grammar School and Upper Canada College. He began to study law in 1875, after having for a short time engaged in commercial pursuits, and was called to the bar in 1880. He then became associated with John Bell, Q.C., then General Counsel, G.T.R., at Belleville, Ont., in general practice in 1881, was made a Q.C. in 1900,

W. H. Biggar, K.C., Vice President and General Counsel, Grand Trunk Railway, who died at Montreal, July 7.

and was appointed Assistant General Counsel, G.T.R., Montreal, Jan. 1903, and General Solicitor, Dec. 1904, and General Counsel, G.T.R. and Grand Trunk Pacific Rys., Montreal, in Jan., 1910. In October, 1914, he was also appointed Vice President, G.T.P.R. In Sept., 1917, he was appointed Vice President and General Counsel, G.T.R., Montreal. He was Mayor of Belleville, Ont., in 1887, and represented West Hastings in the Ontario Legislature from 1890 to 1897. During the recent G.T.R. arbitration proceeding, he was actively engaged on behalf of the company, and was also instrumental in the preparation of the case for the shareholders' appeal against the majority decision of the arbitration board. He was prominent in social circles in Montreal, and was a member of the Mount Royal, St. James and Royal Montreal Golf Clubs, Montreal, and Rideau Club, Ottawa.

The body was taken to Belleville, Ont., on a special train, July 11, for burial.

The pallbearers were: W. C. Chisholm, K.C., E. Donald, J. B. Pratt, C. A. Harwood, K.C., T. Waterson, and T. W. R. McKee, all of the G.T.R. Legal Department. Among others present at the funeral were: Sir Joseph Flavelle, H. G. Kelley, J. E. Dalrymple, Frank Scott, W. D. Robb, D. E. Galloway, G. T. Bell, H. C. Martin, Major F. L. C. Bond, Dr. J. A. Hutchison, W. F. Fitzsimmons, W. S. Cookson, H. B. Fish, H. Illiatt, J. J. Connolly, C. G. Bowker, G. C. Jones, J. R. Melville, L. L. Grabill, E. W. Smith, R. W. Long, D. F. McGraw, J. D. McDonald and I. W. Gannt, of the G.T.R.; John Pullen, W. C. Muir, Canadian National Express Co.; C. J. Smith, Montreal Warehousing Co.; W. H. Smith, Canada Atlantic Transit Co., and Ontario Car Ferry Co.; E. P. Flintoff, K.C., representing the C.P.R., and G. W. Yates, representing the Railways and Canals Department.

The Equipment Painting Section. American Railway Association, Division 5, Mechanical, will hold its second annual session at Cleveland, Ohio, Sept. 5, 6, and 7. Among the members of the various committees are the following:—On direction, and on protection of steel equipment, J. R. Ayres, General Master Painter, C.P.R., Montreal; on tests, Jas. McCarthy, Foreman Painter, G.T.R., Montreal; on safety and sanitation, Robt. Woods, Foreman Painter, G.T.R., Western Lines, Port Huron, Mich.; on classification of painting, repairs and shopping of equipment, Thos. Marshall, Foreman Painter, C.P.R., Montreal.

Locomotive Stokers for Canadian National Rys.—The C.N.R. management has ordered 25 duplex stokers from Locomotive Stoker Co., Pittsburg, Pa., for use on Mikado, Santa Fe and consolidation locomotives. Ten will be applied at the Moncton N.B. shops, to Santa Fe locomotives, and 15 will be applied at the Transcona, Man., shops, 10 to mikado locomotives and 5 to heavy consolidations. The stokers are being made up by Canadian Westinghouse Co. at Hamilton, Ont. At July 15, 4 had been delivered, 2 to Moncton and 2 to Transcona. It is expected that the remainder will be delivered by the end of August.

Hutchison Shield Competition.—The G.T.R. first-aid teams in Montreal competed recently for the shield, offered for competition by Col. J. Alex. Hutchison, C.B.E., M.D., Chief Medical Officer, for proficiency in first aid. It was won by the Point St. Charles shops' team, to which it was presented, July 14, by G. M. Wilson, Superintendent, Motive Power Shops.

The C.P.R. will entertain members of the Travelling Passenger Agents' Association from the United States at Victoria, B.C., Sept. 19. Two special trains will be placed at the disposal of the party, which is expected to number about 350.

Steel Rail Orders.—The C.P.R., late in June, ordered 48,000 tons 100-lb. C.P.R. section, open heart steel rails, from the Algoma Steel Corporation, to be delivered during July and August, to points in Western Canada.

Algoma Central & Hudson Bay Rys.—Gross earnings for April, 1921, \$105,169, against \$118,851 for April, 1921. Gross earnings for 10 months ended Apr. 30, \$1,044,437, against \$2,331,025, 1920-21.

Jasper Park Lodge is a new summer resort on the shores of Lake Beauvert, about three miles from Jasper Station, Alta., established by the Canadian National Rys. The lodge has accommodation for 60 guests in log cabins.

The Canadian National Railways' Results for 1921.

Canadian Railway and Marine World for July, contained on pgs. 289 to 292 the Canadian National Rys. report for the calendar year 1921, including the Canadian Northern, Canadian Govern-
ment and Grand Trunk Pacific Rys. Notwithstanding the operating losses recorded, and the magnitude of the fixed charges, which, combined with those operating losses to make up the total deficit, which must be met by taxation, direct and indirect, there are many things in the report which inevitably give rise to optimism and faith in the ultimate success of the Canadian National Rys. enterprise. In view of the financial results attending railway operation in North America and on other continents during the past five years, and of the operating difficulties and discouragingly low traffic density facing the C.N.R. management, it may be stated without reserve that the management in 1921 amply demonstrated its ability to convert the far ranging lines embraced in the C.N.R. system into an efficient and financially successful transportation machine, if it is but given the time and the opportunity.

We say advisedly, "If it is but given the time and the opportunity." It must be evident to all who have given any thought to the matter that it will take time to place the C.N.R. system on a basis where not only operating expenses, but also fixed charges, can be met. The position of the transportation which developed in the rail transportation industry in the latter years of the war, and in the two years immediately following, by reason of rapidly increasing operating costs not being compensated for by rates being increased to the same extent, cannot be corrected all at once. The process of restoration to normal began almost immediately after the last rate increase in 1920, and it has been going on ever since, but it still has a long way to go before the relationship as between railway operating costs and charges for transportation services are on the 1916 basis. And even with that restoration complete, the time would still not have arrived when the C.N.R. would be on a self supporting basis. The element of traffic density enters into the equation to further extend the time. More population, more industry, more production, more traffic, these are the things which are needed, and the acquisition of these things by Canada will take time. It is evident, therefore, that a coinciding period of time must elapse before the system can be financially self-supporting.

It can be as truthfully said that the management must be given opportunity, i.e., freedom from restrictive regulation and from political interference. Rates have been cut severely, so severely, indeed, that the restoration to normal in the railway business has been greatly impeded. It is held by probably a majority of the people that the lower rates will prove to be in the railways' interest, and in the national interest, by encouraging industry and creating greater traffic, but we are of the opinion that the rates have now been put so low as if not lower than they can be without regulation becoming restrictive and defeating its own purpose. We do not want to see restrictive regulation. So far as political interference is concerned, we imagine it will be kept to the irre-

ducible minimum so long as the present management is in control. It is to be hoped, therefore, that the opportunity mentioned above, will not be withheld. Is it necessary to add that the greater the opportunity, the shorter will be the time required to place the system on a proper basis, or, conversely, that the more limited the opportunity afforded the management, the longer will be that time?

The mere fact that the C.N.R. was the only transcontinental, or near-transcontinental carrier, on the North American continent to increase its gross earnings in 1921 over those of 1920 speaks volumes for the property's future. After all, the rate of progress is what counts. The fact that operating expenses were so appreciably reduced below those of 1920 speaks volumes for the efficiency of management and for the wisdom of the policy which placed the road in first class shape in 1919 and 1920 for the handling of future traffic. The fact that the property is in better physical condition today than it ever was, and is being maintained in that condition at a most reasonable maintenance cost, is highly gratifying.

Pessimism should not exist because the result of the system's operations in 1921 was a loss. Rather should the 1921 results be considered in relation to all prior conditions, and all influencing factors. When such has been done, optimism and confidence as to the future should prevail.

The foregoing article was written and put in type before the C.N.R. directors had been requested by the Government to resign, and before it was known that President Hanna would not be included in the new board to be appointed. In view of the excellent work he has done, in spite of great difficulties, his retirement is much to be regretted from the standpoint of the national interests. We believe that his fixed determination not to allow himself to be influenced by politicians, or to permit interference by them in regard to appointments, etc., is one of the principal reasons for not continuing him in office. It is to be hoped that his successor, whoever he may be, will be equally firm, otherwise the Canadian National Rys. cannot be successful.

C.P.R. Freight Tariff Suspended.—The Interstate Commerce Commission has suspended until September 13, 1922, the application of the C.P.R. Eastern Lines, tariff I.C.C. no. E. 2196, the schedules in which made certain increases in rates for interstate transportation of paper in carloads, individual and joint rates being affected. In its order, docket 1556, the Commission stated: "It is ordered that the rates and charges hereby sought to be changed shall not be increased, and the regulations and practices thereby sought to be altered shall not be changed by any subsequent tariff or schedule until this investigation and suspension proceeding has been disposed of, or until the period of suspension and any extension thereof has expired, unless authorized by special permission of the Commission." The C.P.R. roads participating in the joint rates are made respondents to the proceeding.

The Norfolk & Western Rd. has had in service for some months a 120-ton capacity gondola car, the performance of which has been so satisfactory that it is probable an order will be placed for a large number of them.

C.P.R. and G.T.R. Dispute re Toronto-Hamilton Joint Section.

The following question was submitted to arbitration some little time ago: "Whether the C.P.R. Co. has the right, under the agreement of May 13, 1896, with the G.T.R. Co., to take express traffic, from or to any station on the joint section between Toronto and Hamilton to or from any station on the lines of the C.P.R. or its connections, beyond the joint section." The arbitrators, F. H. Chrysler, K.C., Ottawa, representing the C.P.R.; S. F. Washington, K.C., Hamilton, Ont., representing the G.T.R., and F. H. Phippen, K.C., chairman; gave a unanimous decision on June 26, answering the question in the affirmative, and an award was made accordingly.

The circumstances which led up to the arbitration were as follows: On July 8, 1921, C.P.R. passenger train 792, due to leave Hamilton at 4:25 p.m. and arrive at Toronto at 5:38 p.m., and which was operated over the G.T.R. tracks between Hamilton Jct., mile 37.3 from Toronto and Bathurst St., Toronto, was delayed for about two hours at Burlington Jct., mile 31.72 from Toronto, owing to a dispute between C.P.R. and G.T.R. representatives concerning the C.P.R.'s right to pick up an express refrigerator car, which it had set off there previously, and which had been loaded with fruit and consigned via Dominion Express to Winnipeg. The dispute was caused by a difference as to the interpretation of a clause in the agreement under which the C.P.R. has running rights over the G.T.R. tracks, the G.T.R. agent claiming that the C.P.R. did not have the right to pick up the car, while R. W. Scott, Superintendent, Toronto Terminals Division, Ontario District, C.P.R., and members of his staff, claimed that it had. After considerable discussion, the car was finally picked up by train 792 and taken to Toronto.

The agreement between the G.T.R. and C.P.R. companies for the joint use of the G.T.R. tracks between Bathurst St., Toronto, and Hamilton Jct., about 36 miles, dated May 13, 1896, and which was ratified by the Dominion Parliament in the same year, and published as a schedule to the statutes, 60 Vic., chap. 6, contains the following as a part of sec. 16, the G.T.R. being referred to as the party of the first part, and the C.P.R. as the party of the second part:—"The party of the second part further agrees that it will take freight and passenger business over the said joint section as follows: Passenger and freight business between the City of Toronto and the City of Hamilton shall be considered through business, and the party of the second part shall have the right to handle it over the said joint section, in competition with the party of the first part and all others, but business between either Hamilton or Toronto and an intermediate station on the said joint section, or business between two intermediate stations on the said joint section, shall be considered local business of the party of the first part, which the party of the second part shall not be permitted to handle except as hereinafter provided. The party of the second part shall have the right to take passengers or freight from or to any station on the said joint section, originating at or destined to any point on its own lines or its connections, beyond the said joint section, in either direction, and it shall be the duty of the agents on the said joint section to waybill such freight

and ticket such passengers without discriminations or hindrance, and the party of the first part shall account to the party of the second part therefor, in the same manner as if such agents were the agents of the party of the second part."

The G.T.R. contention was, apparently, that as express business was not specifically mentioned in the agreement, the C.P.R. had not the right to pick up a car of express goods at a station on the joint section. The C.P.R. has, however, been handling express business over this section.

Another matter in dispute between the two companies, and which was to be arbitrated, was the agreement for its use of G.T.R. tracks between Toronto and Hamilton, to the use of the industrial tracks coming off what is known as the old belt line, on the joint section, and whether the Y at Burlington is part of the joint section. This has also been referred to arbitration. J. T. Arundel, formerly General Superintendent, Ontario District, C.P.R., represented the C.P.R.; F. H. McGuigan, formerly Fourth Vice President, G.T.R., represented the G.T.R. and McGregor Young, K.C., was the chairman. The majority award, signed by the chairman and Mr. Arundel, gives the C.P.R. the right to use both legs of the Y at Burlington and the tracks at Swansea, except the one serving the Brick Co's plant.

Canadian Ticket Agents Association's Annual Outing and Meeting.

Many of the C.T.A.A. members, dependent members of their families, and several guests, left Sarnia, Ont., July 3, on the Northern Navigation Co's s.s. Noronic for a complimentary trip to Duluth, Minn., and return, there being about 150 in the party, the majority of whom travelled by special steamboat express from Toronto to Sarnia, to which place they returned on July 17, after a most successful and enjoyable trip. The guests included G. W. Vaux, Union Pacific System, and Mrs. Vaux; F. V. Higginbottom, Lehigh Valley Rd., and H. E. Heal, of the Pennsylvania System, Toronto. W. Askin, Accountant, Northern Navigation Co., met the party at Sarnia on July 3, only a few days before his sudden death. W. Duperow, General Passenger Agent, Canadian National-Grand Trunk Ry., Winnipeg, met them at Port Arthur, and went with them to Duluth on the up trip, and from there to Sault Ste. Marie on the down trip. H. B. Smith, President, Northern Navigation Co., who was up the lakes on a fishing trip, went on board at Sault Ste. Marie and gave the party a hearty welcome.

The annual meeting was held on board on July 12, when a number of matters of interest were discussed, particularly in the scale of the commissions paid by ocean steamship companies, and the withholding of free transportation by railways from dependents of ticket agents not engaged in transportation business. The following officers were elected: J. A. McDonald, Valleyfield, Que., President, re-elected; C. L. Gordon, Guelph, Ont., First Vice President; S. Burrows, Belleville, Ont., Second Vice President; G. Sutherland, Ingersoll, Ont., Third Vice President; E. de la Hooke, London, Ont., Secretary-Treasurer; B. Caswell, Smiths Falls, Ont., Auditor; W. Jackson, Clinton, Ont.; A. M. Hare, Till-

sonburg, Ont.; C. J. James, Orillia, Ont.; W. J. C. Mackay, St. John, N.B.; and W. J. Moffatt, Toronto, executive committee. Presentations of silverware were made to Capt. Wright, of the Noronic, and F. D. Geoghegan, General Passenger Agent, Northern Navigation Co., who accompanied the party throughout the trip. The Secretary-Treasurer, E. de la Hooke, who reached his 80th birthday recently, was presented with a purse of \$225.

Railway Rolling Stock, Orders and Deliveries.

The Timiskaming & Northern Ontario Ry. is staked, in a press report, to be in the market for 75 steel wheel tenders, double sheathed box cars, 40 tons capacity. We think this must be a mistake, as we were officially advised, July 22, that it was not in the market for additional equipment.

The G.T.R. has received 1 switching locomotive from its Montreal shops, and has 9 more switching, and 6 transfer locomotives on order there. They were described in Canadian Railway and Marine World for May, pg. 230.

The C.P.R., between June 13 and July 12, ordered 3 single track snow ploughs and 1 steel underframe flanger, from its Angus shops, Montreal, and bought 1 working crane, 160 tons capacity, from Industrial Works, Bay City, Mich.

The C.P.R. has bought one of the two private cars, both of which were named Eaton, owned by the late Sir John Eaton. The one bought is a wooden one, the other being retained for Mrs. Timothy Eaton's use.

Canadian Secures Peruvian Railway Contract.

R. W. Dunsmyth, son of the late James Dunsmyth, the former head of the Esquimalt & Nanaimo Ry., and of the Dunsmyth collieries on Vancouver Island, is reported to have secured a contract from the Peruvian Government for building 2,400 miles of railway in that country. The report states that the government grant of 50,000,000 acres of land, the surface rights in perpetuity, and the oil and mineral rights for 33 years; will hand over the tobacco monopoly in the republic, and give 168 miles of railway lines completed or under construction. The Dunsmyth syndicate is to pay over to the government \$5,000,000 to the government for a first charge on the tobacco monopoly which will then be used as a security on which to borrow money to provide funds to operate the concession. The government reserves the right to cancel the contract if the railways are not built at the minimum rate of 93 miles a year, or if the whole are not completed within 12 years. The estimated cost of the railways to be built is stated at \$120,000,000 as a minimum. The report adds that arrangements are being made in New York for financing the project.

Signing of Letters by Railway Chief Clerks. F. F. Lovelace, Freight Agent, C. P. R., Edmonton, Alta., writes: "With further reference to H. A. Balkwill's article on the railway chief clerk, his problems, duties and required qualifications, published in Canadian Railway and Marine World for May, and to the Editor's note published in your July issue. I may say that in letters to all transportation men we have dropped 'Dear Sir' and 'Yours truly' for a very long while."

Self Propelled Cars on Steam Railways.

The Canadian National Railways' management has bought a gasoline railway passenger motor car for the Maritime District, very similar to the one bought by the Greater Winnipeg Water District Ry., which was described and illustrated in Canadian Railway and Marine World for May, pg. 231. An elevation and plan are given herewith. The car, which is mounted on two 4-wheel trucks, has a design embracing a radical departure from the automobile type of motor-driven vehicle, and is a typical rail transportation unit. The light weight per passenger is notable; the weight is about 13 tons complete, and as 46 passengers can be accommodated, the car weighs only 560 lb. per passenger. The general dimensions are: Length over all, 42 ft. 6 in.; width over all, 8 ft. 4 in.; height from rail to ventilators, 11 ft.; truck centers, 22 ft. 2 in.

The car frame is of steel construction throughout, and the body is of compo-

sition of the 3-speed, heavy duty type, is mounted in unit with the engine. A motor truck type propeller shaft connects the primary transmission to the secondary transmission, located in the cast steel swing bolster. From this auxiliary transmission the drive is transmitted through propeller shafts to each driving axle in the leading truck. The engine is a 4-cylinder, 4-cycle, valve-in-head, heavy duty type, with 4 $\frac{1}{2}$ -in. bore and 6-in. stroke. At 800 r.p.m. it develops 41.8 h.p.; at 1,000 r.p.m., 51.3 h.p.; at 1,200 r.p.m., 59.1 h.p.; at 1,400 r.p.m., 65.8 h.p., and at 1,500 r.p.m., 68 h.p. Ignition is furnished by an Eisemann high tension magneto, equipped with impulse coupling, and equipment includes a starting motor.

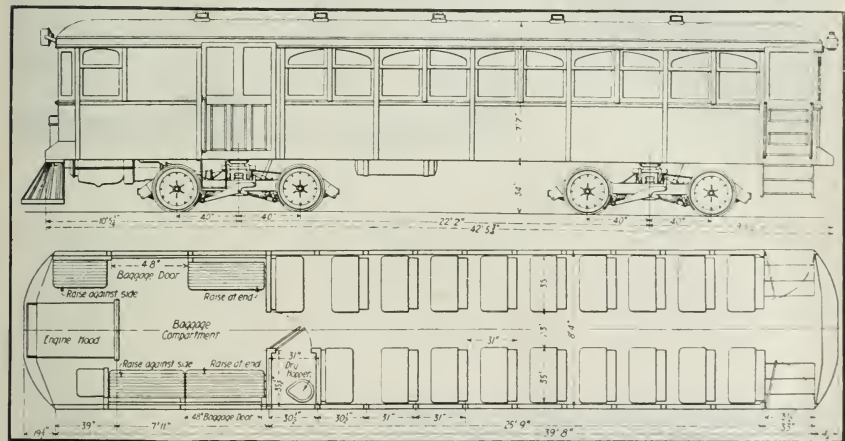

The primary transmission, in unit with the engine, has gears 1 $\frac{1}{4}$ to 1 $\frac{3}{4}$ in. wide, made from carbonized and oil-tempered nickel steel, and carried on nickel steel shafts and Timken taper roller adjust-

the bearings are of the Timken taper roller type. The wheels are held by taper and key.

The car is equipped with air brakes, all wheels being equipped with brake shoe, applied by inside hung linkage. The operator's brake valve is connected to a cord running the full length of the car. Hand brake staffs for emergency use are located at each end. Lighting is by a 12-volt, engine-driven electric generator of 300-watt capacity, fitted with automatic cutout and voltage control, and the car is also equipped with a 160 ampere hour storage battery.

The car, which was bought from the Service Motor Car Co., Wabash, Ind., will, when delivered, be put in operation on the Maritime District, Campbellton Division, Bathurst Subdivision, between Bathurst and Campbellton, N.B., 32.96 miles.

As stated in previous articles, the run between Bathurst and Campbellton

Elevation and Floor Plan, Canadian National Railways, Rail Motor Car, 15,814.

site construction. The underframe consists of four 6-in. channels, 8 lb. a foot, with cross members, gussets, etc. The car framing consists of 1 $\frac{1}{2}$ x 1 $\frac{1}{2}$ x 3/16 in. steel T sections, continuous, forming the carlines and posts. The car siding to the belt rail is of 3/32-in. steel plates; the belt rail is 2 $\frac{1}{2}$ x 3/4-in. steel bar with no. 16 pressed steel window sill capping. A description of the interior of the Greater Winnipeg Water District Ry's car, together with other details, was given in our May issue, and, as stated above, the two cars are practically identical. Some enlargement on the description of the driving mechanism, etc., given in the article referred to, seems desirable, however.

An interesting feature of the car's construction is that the drive is through the 4-wheel truck at the front, while the 4-wheel truck at the rear is an idler. The engine is mounted between the sills at the front of the car, so as to be removable as a unit. The primary transmis-

sion bearings. The ratios are as follows: 1st, 4 to 1; 2nd, 1.76 to 1; 3rd, 1 to 1. A multiple dry disc clutch is used. Between the primary transmission and the secondary transmission a propeller shaft, with 2 universal joints, is used. The secondary or auxiliary transmission is, as stated above, mounted in the bolster, and it transfers the drive through 2 propeller shafts, equipped with 2 universal joints each, to each driving axle. All gears and shafts are of carbonized and oil-tempered nickel steel. The secondary transmission is arranged to provide 2 ratios for forward operations (standard ratios 26 m.p.h. and 35 m.p.h.) and one ratio for reverse. This, taken in conjunction with the gear ratios for the primary transmission, as given above, makes a total of 6 possible speeds in forward gear and 3 in reverse. Each axle of the driving truck is provided with bevel gearing, driven through a pinion from the propeller shaft. The axles are heat-treated alloy steel, 3 in. diam., and

has been covered for some time by the storage battery car bought by the C.N.R. in 1921. We are advised that results secured with this car continue to be eminently satisfactory, as concerns operating and maintenance costs, and reliability. As there is a heavy steam train traffic on the Bathurst Subdivision, three men have been used in operating the car. Under summer conditions the current consumption has averaged 0.875 k. w.h. a car mile, and under unfavorable winter conditions it has been only on rare occasions that it has been more than 1.30 k.w.h. This car is to be transferred to a run between the Central station, Ottawa, and the Tunnel station, Montreal, 114 miles, on the Quebec District, Montreal Division, Grenville and Tunnel Terminal Subdivisions, as soon as the gasoline motor car bought recently and described above is ready for service between Bathurst and Campbellton, N.B.

The gasoline motor car built by Le-doux, Jennings, Ltd., Montreal, and which

was operated in 1921 between Brockville and Westport, 44.4 miles, on the Ontario District, Ottawa Division, Brockville Sub-division, has been transferred to the Maritime District, Edmundston Division, and is operating between Cross Creek and Stanley, N.B., on the Nashwaak and Stanley Subdivisions, 5.74 miles. This car was described in Canadian Railway and Marine World for Nov. and Dec., 1921.

The gasoline car equipped with a Winton chassis and 6-cylinder engine, described and illustrated in Canadian Rail-

and arrives at Elmira at 11.45 a.m.; leaves Elmira at 12.45 p.m., Harmony Jct. at 1.32 p.m., and arrives at Souris at 1.50 p.m. In addition to the motor car service a mixed train service is given between Souris and Elmira on Wednesday only. From Souris to Harmony Jct., the junction between the Souris and Elmira Subdivisions, is 4.8 miles, and from Harmony Jct. to Elmira is 9.85 miles, making the total distance from Souris to Elmira 14.65 miles. Harmony Jct. is 55.5 miles from Charlottetown. No meets having to be made on steam trains, the motor

Montreal under its own power and made the trip to Ottawa, 114 miles, in 4 hours, including all stops and meets. The builders state that between Montreal and Hurdman, 111.4 miles from the Montreal Tunnel station, 107 miles were run on a gasoline consumption of 9½ galls., with 5 passengers in the car. On arrival at Ottawa, the car was inspected by Board of Railway Commissioners' members and officials, after which it was driven to Trenton, making on part of the trip 20 miles in 30 minutes. The trial trip on the regular runs was made June

way and Marine World for Dec., 1921, and which ran formerly between Cross Creek and Stanley, N.B., has been converted to 3½-ft. gauge at the C.N.R. Moncton shops, and started on July 6 operating between Souris and Elmira, P.E.I., on the Maritime District, Island Division, Souris and Elmira Subdivisions. Trains 23 and 24, which operated between Souris and Elmira daily except Sunday, were cancelled on the date mentioned, and motor car service was installed on the following schedule: Daily

car is being operated by one man. This operation will be in effect for the summer only, the Elmira Subdivision being very difficult to operate in winter, on account of snow. The car hauls a small trailer, used chiefly for the transportation of cream.

The first of the two gasoline cars ordered recently by the C.N.R. management from Ledoux, Jennings, Ltd., Montreal, was, on June 28, as stated in our July issue, placed on the run between Picton and Trenton, 30.6 miles, on the

28, and with 21 passengers on board 32 miles were run in 55 minutes, including two stops. The builders further state that they have a report that on one day the car made 196 miles on 14 gals. of gasoline, or 14 miles to the gallon. To July 10 the mileage made was 5,000.

As stated in our July issue, the C.N.R. management intends to convert 2 passenger cars into self-propelled cars of the storage battery type at the Niagara, St. Catharines & Toronto Ry. shops at St. Catharines, Ont., for use on Ontario District lines. They will each be fitted with a set of storage batteries and 4 motors, and all other electrical and control equipment will be applied at St. Catharines. The type of battery to be used has not been decided.

The self-propelled cars in C.N.R. service have been renumbered recently. The gasoline electric car which has been operating for some time between Transcona and Winnipeg, Man., is now no. 15,800; the storage battery car operating between Bathurst and Campbellton is now no. 15,801; the 2 storage battery cars to be built at St. Catharines will be nos. 15,802 and 15,803; the gasoline car operating in Prince Edward Island has been numbered 15,810; the first car built by Ledoux, Jennings, Ltd., now operating between Cross Creek and Stanley, N.B., is no. 15,811; the 2 gasoline cars ordered recently from the same builders, are nos. 15,812 and 15,813, and the gasoline motor car to be operated between Bathurst and Campbellton is no. 15,814.

Greater Winnipeg Water District Ry.—The gasoline motor car bought for this line, which extends from St. Boniface, Man., to Waugh, Shoal Lake, adjoining Lake of the Woods, 91.9 miles, was delivered in Winnipeg, June 23, and was placed in service July 3. It leaves St. Boniface, 5.3 miles from Winnipeg, on

Gasoline Railway Motor Car, 15,812, Canadian National Railways.

except Sunday the car leaves Elmira at 6.20 a.m., Harmony Jct. at 7.03 a.m., and arrives at Souris at 7.30 a.m.; leaves Souris at 5.30 p.m. On Wednesday only Souris at 5.30 p.m., Harmony Jct. at 5.50 p.m., and arrives Elmira at 6.30. On Wednesday only the car leaves Souris at 1.15 p.m., arrives Harmony Jct. at 1.32 p.m., leaves Harmony Jct. at 1.45 p.m., and arrives at Souris at 2.05 p.m. Daily except Sunday and Wednesday the car leaves Souris at 10.45 a.m., Harmony Jct. at 11.05 a.m.,

Ontario District, Ottawa Division, Picton Subdivision, and between Trenton and Trenton Jct., 1.6 miles, on the Maynooth Subdivision, also, and between Trenton and Napanee, 34.6 miles, on the Rideau Subdivision. The car's schedule was given in our June issue on pg. 289. The car is giving very satisfactory service. It was described and a plan and elevation were given in our June issue, and herewith are shown illustrations of it and of its truck details.

When this car was delivered, it left

Tuesdays, Thursdays and Saturdays, at 1 p.m., and arrives at Wauch, at 5:35 p.m. On Mondays, Wednesdays and Fridays it leaves Wauch at 7 a.m. and arrives at St. Boniface at 11:35 a.m. When carload freight warrants the change, the car is supplanted by mixed train service.

The Quebec Central Ry. has been officially advised, ordered from Ledoux, Jennings, Ltd., Montreal, a gasoline railway motor car similar to those acquired by the Canadian National Rys., described in Railway and Marine World for June, pg. 289, and illustrated with this article.

The Quebec, Montreal and Southern Ry., a Delaware and Hudson Co.'s subsidiary has, we are officially advised, ordered a gasoline railway motor car from Ledoux, Jennings, Ltd., Montreal, similar to the two acquired recently by the Canadian National Rys., and which were described in Canadian Railway and Marine World for June. It is the intention, subject to approval by the Board of Railway Commissioners, to operate the car between St. Lambert and Sorel,

Que., 51 miles so as to give a morning service for the delivery of mail and newspapers out of Montreal.

Timiskaming and Northern Ontario Ry. Commission. A Cobalt press dispatch stated recently that G. W. Lee, Chairman, T. & N.O.R. Commission, in commenting on a proposal to run railway gasoline motor cars between Cobalt and Swastika, had stated that there is not sufficient traffic to justify such an innovation, and that steam trains and gasoline cars cannot be run safely on the same tracks. We are officially advised that the question of operating gasoline railway motor cars on the line has been before the Commission for some little time but that no definite decision has been reached. We cannot help thinking that the press report must have misrepresented Mr. Lee in regard to having stated that steam trains and gasoline railway motor cars cannot be run safely on the same tracks, as the contrary has been proved by the Canadian National Rys., which are operating both electric storage battery cars and gasoline motor

cars on lines where there is also steam train service.

Foreign. That self propelled cars for steam railway service are receiving attention in countries outside North America is evident from a description in the Railway Gazette of London, Eng. of three gasoline motor cars under construction for the Western Australian Government Rys. The chassis for these have been built in Bedford, England and the bodies are being built in Australia. The chief dimensions are as follows: Length, 24 ft. 4 in.; width, 8 ft.; height, 10½ ft.; wheelbase, 9 ft.; gauge 3½ ft.; weight, chassis, 7½ tons; weight car loaded, 13 tons. These cars will be driven by a 45 b.h.p. gasoline engine, with heavy fly-wheel and clutch direct coupled to a 2-speed both-direction gearbox, and will be equipped with electric lighting and engine starting equipment. The speed at which they are designed to run is 25 m.p.h. on level track and 10 m.p.h. on 2½% grades. On completion of the chassis construction at Bedford, official tests were made, and reported satisfactory.

Birthdays of Transportation Men in August.

Many happy returns of the day to,—
V. T. Bartram, ex-Purchasing Agent, Timiskaming & Northern Ontario Ry., now General Contractor, etc., Toronto, born at Ottawa, Aug. 2, 1880.

H. H. Beasley, Purchasing Agent, Toronto Transportation Commission, Toronto, born at St. Thomas, Ont., Aug. 1, 1867.

Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, Ottawa, Ont., born at Perth, Ont., Aug. 13, 1874.

C. B. Brown, Engineering Assistant to Vice President, Operation and Maintenance, Canadian National Rys., Toronto, born at Ithaca, N.Y., Aug. 27, 1879.

A. B. Calder, Assistant to Chief Commissioner of Colonization and Development, C.P.R., Montreal, born at London, Ont., Aug. 24, 1867.

J. S. Carter, District Passenger Agent, C.P.R., Nelson, B.C., born at Aurora, Ill., Aug. 14, 1864.

Hon. F. B. Carvell, K.C., Chief Commissioner, Board of Railway Commissioners, Ottawa, Ont., born at Bloomfield, N.B., Aug. 14, 1862.

A. E. H. Chesley, General Accountant, Dominion Atlantic Ry., Kentville, N.S., born near Annapolis Royal, N.S., Aug. 27, 1877.

A. B. Chown, Assistant General Western Passenger Agent, Canadian National Rys., and Assistant General Passenger Agent, Western Lines, G.T.R., Chicago, Ill., born at Belleville, Ont., Aug. 4, 1887.

Lieut.-Col. F. F. Clarke, D.S.O., Chief Land Surveyor, Canadian National Rys., Toronto, born at Hamilton, Ont., Aug. 22, 1878.

H. N. Connell, District Engineer, Ontario District, Canadian National Rys., Toronto, born at Woodstock, N.B., Aug. 26, 1876.

S. W. Crabbe, Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont., born at Teeswater, Ont., Aug. 9, 1885.

H. W. Crawford, ex-General Agent, Canada Steamship Lines, now of Toronto, born at Bowmanville, Ont., Aug. 24, 1887.

E. L. Desjardins, Superintendent, Levis Division, Quebec District, Canadian National Rys., Levis, Que., born at St. Jean Port Joli, Que., Aug. 1, 1859.

A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., born in Bosanquet Twp., Ont., Aug. 21, 1870.

J. V. Foy, General Passenger Agent, Canada Steamship Lines, Ltd., Toronto, born there Aug. 27, 1882.

Geo. H. Ham, Head Office Department, C.P.R., Montreal, born at Trenton, Ont., Aug. 23, 1847.

W. B. Harper, Resident Engineer, Laurentian Division, Quebec District, C.P.R., Montreal, born at Baie Verte, N.B., Aug. 15, 1882.

W. P. Hinton, ex-Consulting Officer to Receiver (Minister of Railways and Canals), Grand Trunk Pacific Ry., Winnipeg, born at Hintonburg, Ont., Aug. 30, 1871.

F. S. Isard, Manager, Canada Steamship Lines, Ltd., Montreal, born at Hamilton, Ont., Aug. 14, 1888.

H. L. Johnston, District Engineer, Vancouver Island Lines, Canadian National Rys., Victoria, B.C., born at Fredericton, N.B., Aug. 29, 1862.

Hon. W. C. Kennedy, M.P., Minister of Railways and Canals, Ottawa, Ont., born there Aug. 27, 1868.

W. A. Kirkpatrick, Superintendent of Transportation, Prairie District, Canadian National Rys., Saskatoon, Sask., born at West Lorne, Ont., Aug. 28, 1883.

P. M. Lamplough, Superintendent, Ottawa Division, G.T.R., Ottawa, born at Cambridge, Vt., Aug. 15, 1867.

J. D. McDonald, General Passenger Agent, Western Lines, Grand Trunk Ry., and General Western Passenger Agent, Canadian National Rys., Chicago, Ill., born at Toronto, Aug. 27, 1855.

M. K. McQuarrie, Engineer, Dominion Atlantic Ry., Kentville, N.S., born at Sault Ste. Marie, Ont., Aug. 1, 1884.

A. H. Mahon, Assistant Master Mechanic, Canadian National-Grand Trunk Pacific Rys., Edson, Alta., born near Ottawa, Ont., Aug. 27, 1874.

H. C. Meacham, ex-Import Freight Agent, Canadian National Rys., Montreal, now of Calgary, Alta., born at Brantford, Ont., Aug. 11, 1863.

C. Montgomery, Master Mechanic, Pere Marquette Rd., St. Thomas, Ont., born near London, Ont., Aug. 29, 1860.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Van-

couver, B.C., born at Greenwich, Eng., Aug. 27, 1875.

L. Palk, Assistant to General Manager and Assistant Secretary, Winnipeg Electric Ry., and Secretary, Winnipeg, Selkirk & Lake Winnipeg Ry., Winnipeg, born there, Aug. 14, 1885.

Capt. K. G. Polyblank, Division Engineer, Canadian National Rys., Hornepayne, Ont., born at Bristol, Eng., Aug. 17, 1884.

Lieut.-Col. Blair Ripley, C.B.E., D.S.O., District Engineer, Ontario District, C.P.R., Toronto, born at Oxford, N.S., Aug. 29, 1880.

J. M. Rosevear, Comptroller, G.T.R., Montreal, born at St. Lambert, Que., Aug. 9, 1869.

W. LeB. Ross, Local Treasurer, Canadian National-Grand Trunk Pacific Rys., Winnipeg, born at Ottawa, Ont., Aug. 9, 1868.

F. C. Salter, Manager, Foreign Department, Canadian National Express Co., Montreal, born at Sarnia, Ont., Aug. 31, 1863.

A. O. Seymour, General Tourist Agent, C.P.R., Montreal, born at Ogdensburg, N.Y., Aug. 14, 1887.

S. A. Simpson, Superintendent, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Winnipeg, born at Toronto, Aug. 22, 1880.

J. F. Sweeting, Industrial Agent, Natural Resources Department, C.P.R., Winnipeg, born at Worthing, Eng., Aug. 20, 1872.

W. J. Sturges, formerly of Fuel Department, Grand Trunk Pacific Ry., Winnipeg, now of Edmonton, Alta., born at Fairfield, Vt., Aug. 20, 1877.

L. Tait, Secretary-Treasurer, London St. Ry., London, Ont., born at Hamilton, Ont., Aug. 9, 1882.

W. D. Waddell, Chief Accountant, Canadian Northern Ry. System, Toronto, born at Waterford, Ireland, Aug. 7, 1877.

F. E. Warren, General Car Foreman, C.P.R., Winnipeg, born at Chelsea, Que., Aug. 29, 1872.

W. B. Way, Superintendent, Cochrane Division, Quebec District, Canadian National Rys., Cochrane, Ont., born at Bowmanville, Ont., Aug. 22, 1867.

H. E. Weyman, Manager, Levis County Ry., Levis, Que., born at Guildford, Eng., Aug. 27, 1882.

Steam Railway Operating Revenues, Expenses and Other Statistics for April.

The following comparative table for April, 1922 and 1921, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There is a slight increase in the number of roads included under this heading, so that the data for 1922 and 1921 is not directly comparable with previous reports.

As the Canadian Government, Canadian Northern and Grand Trunk Pacific Railways are under one management, and operated as one system, the monthly operating reports for 1922 contain a consolidated report for these railways, under the heading "Canadian National Rys.," which includes the old Canadian Government Rys., viz., Intercolonial, Prince Edward Island, National Trans-

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.; the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government; and the Grand Trunk Pacific Ry.

The column headed "Canadian Pacific" includes also the Montreal and Atlantic and Esquimalt and Nanaimo Rys.

The column headed "Grand Trunk" includes all the G.T.R. Co. of Canada lines, including 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Rys., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Provincial Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair rivers.

Items 1 to 6 in the table include rail

lines revenues only. Previous to this year they included water lines. Operating income items have been added. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. In former years the total of mixed train miles were added to both freight and passenger train miles when computing averages. Total train miles include freight, passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, excess baggage, parlor cars, etc., whereas previous reports gave an average per train mile of passenger receipts only. The number of employees is also a new feature of this year's reports.

The Railways' Operating Results for April.

Canadian railways experienced a large decrease in total operating revenues in April, the figures, \$29,316,549, showing a decrease from March of \$4,817,132. While this no doubt due in part to seasonal decline in freight traffic, the decrease as between the two months was greater in 1922 than in 1921 or 1920. In 1922 the decrease in freight revenue, as between March and April, was 21.5% and in revenue ton miles 29%; in 1921 the decrease in freight revenue was 8.7% and in revenue ton miles 17.1%; in 1920 the decrease in freight revenue was 6.1% and in revenue ton miles 3.8%. During 1920 and 1921 the decline in revenue ton miles continued through to June, when it began to increase and continued to increase till a peak was reached in October.

Compared with April, 1921, total revenue for all railways decreased 12.6%, although revenue ton mileage decreased only 1.7%. Passenger mileage and passenger revenue were both about 12% below last year, although some increase over those for March is shown.

Compared with April, 1921, operating expenses decreased 13%, the greatest decrease being evident in the transportation account, where it was 21.5%. Compared with March, operating expenses show a good decrease, but, on account of the large decrease in operating revenue, the April operating ratio was not so favorable as for March. For April the operating ratio was 95.51, compared with 89.54 in March. There was an improvement, however, in operating ratio over April, 1921, when it was 96.25.

A comparison of train and car loading figures shows that in the average number of tons of revenue freight per freight train mile, a substantial improvement in train loading was secured in April, 1922, compared with April, 1921. The figure of 453.6 tons for April does not compare well with that for March, however, when the average revenue train load was 489.7 tons. Better train loading is shown in April, 1922, than in April, 1921, as in April, 1922, the average train contained 22.1 loads and 9.6 empties, while in April, 1921, the average train contained 20.3 loads and 9.9 empties. This performance was better than that of March also. In car loading, however, the performance in April was not as good as in either March, 1922, or April, 1921. While the average number of tons per car was 22.6 in April, 1922, it was 25 in March, and 23.9 in April, 1921.

The effect of the wage reductions made in July, 1921, is evident on a comparison of the pay roll, and the railways' action in enforcing economy in every direction is reflected in the decrease in the number of employees. It will be observed that, despite the wage reduction of July, 1921, the ratio of payroll to operating revenues, and the ratio of payroll to operating expenses, was greater in April, 1922, than in April, 1921, which leads to the belief that other operating expenses have decreased in as great, or greater, proportion than wages.

The Canadian National Ry. total revenues decreased 11,491,092, or 16% in total revenues, compared with April, 1921, due to decreases in rates and also to decreases in freight and passenger traffic. The decrease in freight traffic from March was much greater this year than last, being 38% for 1922, against 22% for 1921. Expenses were reduced

\$2,778,215 or 23.3%, giving an operating loss of \$1,349,516, against \$2,636,639 for 1921, and an operating ratio of 117.29 against 123.37 for 1921. Train loading was increased an average of 45 tons a train, and with a decrease of 9.4% in ton miles, there was effected a decrease of 17.5% in freight train miles. The pay roll was reduced \$1,150,258, or 16.7%, with a reduction in the number of employees of 4,023 or 7.5%.

The C.P.R. revenues decreased 10.5% and operating expenses decreased 3.5%, which increased the operating ratio from 81.09 to 87.37 for April, 1922. Revenue ton miles increased 8.5%, but freight revenues decreased 8.5%, and transportation expenses were reduced 12.8%. Freight train miles showed practically no change, while passenger train miles decreased 2.3%, with a decrease of 4.2% in passengers carried and a decrease of 16.5% in passengers carried one mile; the average passenger journey showing a decrease of 12.9 miles. The pay roll was reduced \$241,285 or 3.7%, with an increase in the number of employees of 1,603 or 3%.

The G.T.R. passenger revenues increased over both April, 1921, and March, but freight revenues decreased, the decrease from April, 1921, being \$807,000 or 19.5%, with a decrease of 4.2% in revenue ton miles. Total revenues decreased \$774,971, or 13.6%, and expenses were reduced \$697,400 or 13.2%, giving an operating ratio of 93.78 compared with 93.27 for April, 1921. Maintenance of way and structures expense continued considerably below 1921, while for maintenance of equipment there was but little change. The pay roll was reduced \$498,457 or 13%, with 315 less employees.

It does not require more than a casual examination of the April figures to see that despite the large decrease in operating expenses, compared with April, 1921, the decrease in operating revenues has been just about as large. The freight and passenger traffic figures indicate that but little of this decrease in revenue is due to decreased traffic handled, which leads one to suppose that it must be ascribed to the rate decreases. A comparison of the average rate per revenue ton mile and per passenger mile will show this supposition to be correct. The position is, therefore, that while the railways to the end of April had been able to reduce their operating expenses upon the rate reductions imposed upon them, it has been such as to prohibit any substantial improvement in their operating position. It does not require a very vivid imagination to picture what will happen to the railways' operating ratios when the rate reductions recently ordered come into effect, if operating reductions to counterbalance these rate reductions do not begin to operate simultaneously.

It must be plain to anyone who has spent any time in studying Canadian railway statistics that the railways are in no position to be able to make the rate reductions ordered unless expenses are reduced materially. We have taken the position that the C.P.R. should have an operating ratio of 70, or very little greater than 70, if the country's interests are to be best served, and if adequate provision is to be made for the creation of new transportation facilities as and when they are needed. Instead of 70, there are monthly operating ratios of between

80 and 90. Even with reductions in expenses to offset the rate reductions, any improvement secured would have to come solely from increased traffic. If through any cause reductions in expenses to offset the rate reductions cannot be accomplished by the time the rate reductions take effect, the principle of confiscatory railway regulation is about to obtain a foothold in this country. With the object lesson furnished by the economic calamity of Federal control in the U.S., resulting purely and simply from confiscatory railway regulation, presented such a short time ago, it is, we may at least hope, surely impossible that such a mistaken and short-sighted policy could be put into operation in Canada. Decreases in railway operating expenses, at least sufficient to offset the rate reductions, should be applicable to Canadian railway traffic without delay.

Freight Car Location on Canadian Railways.

The Railway Association of Canada has issued a report showing the location of freight cars on July 1, based on returns from the following railways:—Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Central Vermont; Canadian Northern; British Columbia; Edmonton, Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Michigan Central, in Canada; Napierville Jct.; Pere Marquette, in Canada; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton and Buffalo; Wabash, in Canada, as follows: Cars owned by reporting railways, 221,976; home cars on Canadian foreign lines, 15,115; home cars on U.S. lines, 35,668; home cars on home road, 171,193; Canadian owned foreign cars on home lines, 12,649; U.S. owned foreign cars on home lines, 18,390; total cars on lines, 202,232; per cent on line to total owned, 91.1; deficiency on line to total owned, 19,744; home cars in bad order, 22,560; foreign cars in bad order, 336; total cars in bad order, 22,896; per cent in bad order, 11.3; privately owned U.S. cars on line, 2,128; privately owned Canadian cars on line, 1,151.

Railways and Road Transportation in Great Britain.—The Northwestern and Midland Ry. group withdrew the application to the British Parliament for authority to carry on a motor freight business in connection with their railways wherever it was to their advantage to do so, when it came up for consideration before the select committee of the House of Commons recently. The bill had previously been opposed by the Federation of British Industries and the motor truck owners, but the coup de grace was given by the Minister of Transport, whom the railways concerned were unable to satisfy regarding the fixing of a satisfactory basis of charges. A subsequent cable stated that it was said that the railways will form a subsidiary company under the Joint Stock Companies Act, to carry on a motor haulage business. It is stated that the motor haulage concerns have cut into the railway haulage business so much that the railways can no longer stand aside and see the more profitable end of their business go elsewhere.

Driving Wheel Lathe Tests, G.T.R., Stratford Shops.

The accompanying table gives the results of tests of a 90-in. heavy driving wheel lathe at the Grand Trunk shops at Stratford, Ont. In turning 8 pairs of driving wheel tires, of the diameters shown, the total time for the work from floor to floor was 3 hr. 58 min., the average time for each pair of wheels being 29.7 min. The total turning time was 203½ min. for the 8 pairs, and the average turning time for each pair was 25.4 min.

ped with semi-automatic drivers, which engage the tires directly and hold the wheels rigid under the heaviest cuts. The faceplates are recessed, for the reception of crankpins, enabling wheels to be chucked close to the faceplate, thus ensuring the rigidity of the drive. The main spindles are provided with heavy bushings, which can be readily replaced when worn without disturbing the alignment of the bearing in the head.

feed ratchets are of the enclosed type, and provided against accidents to operator, and also arranged to keep out chips. They are made to operate in either direction.

The lathe is arranged to handle wheels having either inside or outside journals, the design being such that when outside journals are to be handled, the centers can be run back. Special provision is made for turning trailer wheels with

The machine, shown in the accompanying illustration, will take wheels on tread up to 84 in. diam., and has a maximum distance between faceplates of 9 ft. 2 in. and a minimum distance of 6 ft. 8 in. It is designed for heavy duty, with modern high speed tool steel, and consists of two massive heads mounted on a heavy bed, the left hand head being stationary. The driving gears are fully enclosed in a box with doors in front, which allows the operator to conveniently inspect the driving mechanism when necessary. The right hand head is movable along the bed by power, the drive being of the friction

The faceplates are driven by internal gears securely bolted to the faceplates. The driving pinions are located at 45 deg. from the vertical line on the front side, bringing the drive of the faceplate near the point of cutting. The driving pinions are of forged steel, and are mounted on an auxiliary shaft, by which the ratio of the driving shaft to the faceplate is multiplied very materially, reducing the torsional strain. The internal gear drive of the faceplate gives greater contact for the pinion teeth, ensuring less wear, and protecting them from injury by falling chips.

long outside journals, by simply removing the bushings that support the sliding spindle when it is extended. A caliper attachment is provided, which enables the operator to measure the diameter of the wheels without leaving the position at the tool rests. All exposed gears are covered with guards and the main driving shaft is protected by a sheet metal guard. The equipment includes caliper attachment, pneumatic tool clamps, power traverse for tailstock, pneumatic clamp for tailstock, and a set of 4 drivers for each faceplate.

The machine is arranged with d.c. motor drive, the motor being used at Stratford is Canadian Westinghouse 50 h.p. type S.K., 230 volts, 500-1,500 r.p.m. The machine is supplied with magnetic push button control, for starting, stopping, and slowing down the speed of the motor. This control is located within easy reach of the operator, and is especially useful when hard spots are encountered in the turning of tires.

We are indebted to J. C. Garden, General Superintendent Motive Power and Car Department, G.T.R., for information concerning the time required for the turning of the 8 pairs of driving wheels referred to. The machine was manufactured by the John Bertram & Sons Co., Dundas, Ont.

Driving Wheel Lathe, G.T.R. Shops, Stratford, Ont.

type, thus eliminating the possibility of accident by the faceplates being brought up too forcibly against the wheels. The controlling lever for moving the head is conveniently located, so that the operator does not have to leave his position at the tool posts. The head is adjustable to a sliding fit, and is clamped at both sides of the bed simultaneously, by a pneumatic cylinder. Each head is equipped with a heavy faceplate, carried on an extra large spindle. The faceplates are provided with T slots and each is equip-

Tools rests are of massive construction, arranged to swivel, and have sufficient adjustment on the bed to turn wheels from 40 in. up to the capacity of the machine. They are provided with improved pneumatic tool clamps, enabling the operator to change and clamp the tools in a few seconds time and without the use of a wrench.

The drive is positive in action, and has a range per revolution of faceplate from 1/10 to 7/10 in. obtained by 9 vibrations, giving practically a continuous feed. The

The Ottawa Street Incline Ry. Co. of Hamilton, Ont., has been incorporated by the Ontario Legislature to build an incline railway from the southerly end of Ottawa St., Hamilton, to the summit of the escarpment in Barton Tp., subject to agreements with the municipalities. The authorized capital is \$500,000, and the company may issue bonds. The work is to be started within four months and completed within 18 months of the signing of the agreements with the municipalities. The provisional directors are: T. H. Simpson, R. H. Baxter, F. H. McCallum, Hamilton, Ont., J. R. Simpson, Toronto, and W. B. C. Bradley, New York, N.Y.

The Railway Supply Manufacturers' Association, which arranges the exhibits for the railway mechanical conventions at Atlantic City, has added an 18th district to its organization, including all Canada, and has elected Arthur Allen, Vice President, The Holden Co., Montreal, as Canadian representative for three years.

Canadian Pacific and Canadian National Railways' May Earnings and Expenses.

The C.P.R. in May had gross earnings of \$13,664,245, a decrease of \$227,799 from May 1921. Operating expenses were \$11,319,732, an increase of \$721,239 over May 1921. Net earnings were \$2,344,513, a decrease of \$949,038 from May 1921. With this decline in gross earnings and with operating expenses increased over those of the corresponding month last year for the first time this year, the decline in net earnings was large. In April there was a decline in net earnings as compared with April 1921 of \$1,097,359, so that for the two months the company had a decrease in net of \$2,046,397. While net earnings for May were the second largest of any month this year, those for March being slightly larger, they were the smallest for any month of May in over 10 years. The operating ratio for the month was 82.84.

The Canadian National Ry., in marked contrast to the C.P.R., had a better month in May than for some time past, as operating expenses were nearly earned. Gross earnings were \$9,678,965, an increase of \$1,344,991 over May 1921, operating expenses were \$9,726,020, a decrease of \$1,162,495, from May 1921. The operating deficit was but \$47,055, an improvement of \$2,507,485 over May 1921.

It is evident from the results of C.P.R. operation for May that the decreases which have taken place in rates during the year from May 1921 to May 1922 have more than wiped out any benefits accruing from reductions in unit operating expenses. While it may seem strange when the wage reduction of July 16, 1921, and lower material prices, are taken into consideration, that C.P.R. operating expenses were larger in May 1922 than in May 1921, yet, on consideration of the fact that there was a 10% reduction in passenger fares on July 1, 1921, a 10% decrease in freight rates on Dec. 1, 1921, and a whole multitude of individual rate reductions, it will be evident that the company had to handle much more traffic in May 1922 than in May 1921 to derive the gross earnings it did. The handling of traffic means the furnishing of train service, and notwithstanding the fact that the unit costs of operation were lower this year, the total operating expenses were increased in May because of the additional train service rendered.

The results for the first five months of the year on the C.P.R. have not been particularly encouraging. Gross earnings were \$62,484,911 as compared with \$69,594,029 for the same period in 1921. Operating expenses have not decreased in 1922, as compared with the first five months of this year they were \$55,033,153, a decrease of \$4,715,468. As a consequence, net earnings for the first five months this year have been but \$7,451,758, a decrease of \$2,393,650 from 1921. As in May, so in the first five months of the year, the relationship as between rates and unit operating costs has not been as favorable as in the corresponding months of last year.

While the Canadian National Ry. has experienced the same changes in rates and in unit operating costs as the C.P.R., the former road has had an opportunity to improve its operating condition during the past two years by placing its road and equipment in a condition coinciding with C.P.R. standards, and it

is evident, from the greatly improved results being secured, that the Canadian National management was fully justified in spending the money to enable it to take advantage of the opportunity. Acquisitions which the Canadian National Ry. has made in the way of new equipment, and the changes which have been made to eradicate costly operating conditions have been detailed in Canadian Railway and Marine World from time to time. A reduction in operating expenses is the logical result of the improvements made. During the first five months of 1922 operating expenses decreased \$13,000,000 as compared with the corresponding months of 1921, a reduction of 20%. Although it may be expected that it will be some time before the National system has an operating ratio approaching that of the C.P.R., this is not due to operating conditions of a limiting nature, such as light power, inferior track, lack of terminal facilities—these conditions have been largely rectified where they existed—but solely to the fact that the Canadian National Ry. traffic density is still low and that its growth must necessarily be a more or less gradual process. The work which has been done on the Canadian National Ry. in the way of removing unfavorable operating conditions has enabled the property to improve its operating position to a great degree in a relatively short time, but these unfavorable conditions having now been removed and the property placed in good physical condition, it can be anticipated that further improvement will not be so rapid, for the reason, as just stated, that it must depend on an increase in traffic density. While not anticipating such a rapid improvement in operating conditions in the future as in the past year or two, it may, however, be hoped that the country's commerce and industry will experience a sound and steady growth, and that the increasing traffic offering will make the improvement in railway operating conditions stable and permanent.

The Board of Railway Commissioners' Chairman's Position.

Mr. Meighen, leader of the opposition, said in the House of Commons on June 24: "On June 10, attention being called by the member for Macleod, Alta., to certain commitments of the present Minister of Agriculture (Mr. Motherwell) as regards the removal of the Chairman of the Board of Railway Commissioners, the Prime Minister stated, as reported in the unreviſed Hansard, that the Minister of Agriculture had made certain representations to the Government as regards such removal; that the same had been considered, but that no definite conclusion had been reached. May I ask if a definite decision has been reached, and if so, what is it?"

Prime Minister King replied: "No conclusion has been reached; the matter is still under consideration."

Always on Time.—Commercial traveler (to newsboy at a Scottish railway station)—I say, when does the next train go? Boy (after scratching his head for an instant)—A wee whiley after she whistles.

Grand Trunk Railway Construction, Betterments, Etc.

Dixie Station.—The Board of Railway Commissioners and the Montreal City Council approved recently, plans for the erection of a new station at Dixie, Que., which has been built immediately adjacent to the old structure, which had outlived its usefulness. The new building is larger and more in accord with the needs of the growing locality. The work was done by the company's own forces.

Tiny Tp. Bridge.—The Board of Railway Commissioners has authorized the rebuilding of bridge 328, at mile 100.69 from Toronto, on Lot 115, Con. 2, west of Penetanguishene road, Tiny Tp., Ont.

London Division Improvements.—Work is expected to be started almost immediately on the relaying of about 85 miles of track on the London Division with new rails. Ties and rails have been delivered at several points where work is to be done. A press report states that a new floor is to be laid in the London freight sheds at an estimated cost of \$5,000.

Detroit Grade Separation.—A press report states recently that it had been decided to begin work upon the separation of grades in Detroit, Mich., in connection with a movement to bring a large area of industrial territory within the company's influence. The plans, it was stated, called for the building of a second track from Detroit to Pontiac, 26 miles; the depression of 5 miles of track within the city limits, and the improvement of the terminal and ferry facilities, so as to permit of the running of the Montreal-Chicago trains via Detroit, instead of via Sarnia and Port Huron. The estimated cost of the entire work was stated as \$20,000,000. We are officially advised that negotiations are in progress with Detroit City Council relative to grade separation between Jefferson Ave. and Hale St., approximately 1.5 miles, but that nothing definite has been settled as to what will be done. (June, pg. 285.)

Transfer Company's Liability for Lost Baggage.—The Quebec Court of Appeal gave judgment recently on the Canadian Transfer Co.'s appeal against a Superior Court judgment awarding Mrs. E. S. Chambers, \$1,745 for loss of baggage. When on her way from Ottawa to New York, she engaged the Transfer Co. to take her baggage from Bonaventure station to the Windsor St. station, Montreal. The baggage did not arrive at its destination and suit was entered. The transfer company disclaimed liability beyond \$50 as stated on the back of the receipt check. Justice Dulos, in the Superior Court, held this did not constitute a contract and gave a verdict for Mrs. Chambers.

Railway Accidents Throughout Canada.—The number of accidents throughout the Dominion, reported to the Board of Railway Commissioners, for June, was 198, in which 6 employes and 22 others were killed, and 14 passengers, 152 employes and 34 others were injured. Among the casualties included 13 persons killed, and 25 injured in 24 highway accidents. In these latter accidents, the highways were unprotected in 20 cases, and in the other 4 they were protected by bells. Automobiles and motor trucks were concerned in 14 of the accidents, a motor cycle in 1, a bicycle in 1, other vehicles in 6 and a pedestrian in 2.

Grand Trunk Railway Shareholders' Appeal to the Privy Council.

The G.T.R. shareholders' appeal against the award of the board of arbitration, which found that the company's preference and common stocks had no value, upon the property being taken over by the Dominion Government, was opened before the Judicial Committee of the Imperial Privy Council, in London, Eng., July 10, the arguments were concluded July 13, and judgment was reserved. The appeal was heard by Lord Chancellor Birkenhead, Viscount Haldane, Lord Cave, Lord Parmoor, Lord Shaw and Lord Carson. The Dominion Government was represented by A. C. Clanson, K.C., of the English Bar, E. L. Newcombe, K.C., Deputy Minister of Justice, Ottawa, and W. N. Tilley, K.C., Toronto, the latter of whom was the Government's chief counsel in the arbitration proceedings; Sir John Simon, K.C., led for the shareholders. Lord Carson, at the outset of the proceedings intimated that he held an interest in the company's stock, but the Government's counsel insisted that all possible objection to his participation in the case would be withdrawn.

Sir John Simon presented the shareholders' case in an argument starting on July 10, and concluding on July 11. He pointed out that about 1,700 miles of the G.T.R. lines, from which 67% of the company's revenues are derived, are in the United States. He contended that the majority of the arbitration board were wrong in holding evidence respecting replacement value to be inadmissible, and submitted that there was a minimum value below which it was not possible to go. It was fundamentally wrong to assert that shares, even in a concern with no prospect of making a profit, were worth nothing, for the company's assets, nevertheless, might be exceedingly valuable.

A. C. Clanson, who opened the case for the Government on July 11, continuing on July 12, contended that the majority of the arbitrators were willing to treat evidence as to the selling value of any portion of the lines, provided it was shown that it would be to the advantage of the shareholders to sell; but such evidence was not tendered. The evidence which was tendered and rejected was for the purpose of showing what it would cost to build the G.T.R. lines new, as if they had never existed.

W. N. Tilley, K.C., on July 13, supported the arbitrators' finding, and after a short reply by Sir John Simon, and some discussion between the members of the court, and the counsel, the Lord Chancellor announced that the court would take time to consider its finding.

London press cables express the opinion that the court will probably grant the appeal on the ground that the Sir Walter Cassells' judgment included matter from the Drayton-Acworth report, and that evidence as to the reproduction value of the railway was rejected.

Memorial to David Thompson.—The C.P.R. is co-operating with the Hudson Bay Co. in erecting a memorial at Lake Windermere, B.C., in memory of David Thompson, who was engaged in exploring that region between 1784 and 1826. The memorial is a reproduction of the trading post, named Kooknai House, established there by the explorer in 1807. The building is to be opened Aug. 30.

Among the Express Companies.

The Canadian National Ex. Co. has opened offices at Norway Bay and Perce, Que., and Vilna, Alta.

The Dominion Ex. Co. shipped two wallabies recently from the London, Eng., Zoological Gardens, to Toronto, by the S.S. Batsford, in exchange for some beavers sent to London from Toronto just before the war.

W. O. Clark, General Agent, Dominion Ex. Co., Montreal, was presented with a gold headed cane, by the local employees, July 3, on the completion of his 50 years of express service, 40 of which have been with the Dominion Ex. Co. It was stated that he is the first of the company's officials who has had 50 years of express service.

The Board of Railway Commissioners passed general order 367, June 29, ordering that all international express commodity tariffs, now in effect, be amended so as to include a rule to the effect that rates named therein, unless specifically indicated as being competitive, will apply to or from intermediate points in Canada not enumerated in said tariffs, and that a similar rule be published in international commodity tariffs as issued by the Canadian Ex. Co. applied to a court at Winnipeg, July 7, for an order to compel the Canadian Credit Men's Christie-Grant Co., to list the company Trust Association, official assignee of the as a preferred creditor in the liquidation proceedings. The Canadian Ex. Co. supplied the firm with blank money order books, and at the time of the assignment, orders totalling \$1,845 had been issued and honored. The company objected to judgment as an ordinary creditor.

An action against the Canadian Ex. Co. for damages, on the ground that it had refused to accept a shipment of fish at La Tuque, Que., was dismissed by the Quebec Board of Appeal, recently. The claimant argued that the company being a public utility, had to accept parcels of merchandise at any time, but the company denied this, and claimed it was governed by certain rules. The judgment upheld the company's contention, stating that express companies were governed by regulations approved by the Board of Railway Commissioners.

Telegraph, Telephone and Cable Matters.

The C.P.R. section of the Order of Railroad Telegraphers has applied to the Labor Department for the appointment of a board of conciliation on the matters in dispute with the company, following a rupture of negotiations with the Railway Association of Canada. The men have named D. Campbell, Winnipeg, as their representative, and it is stated that U. E. Gillen, General Manager, Toronto Terminals Ry. Co., will act for the company.

The Imperial Cable Co. has taken over the Direct United States cable from Balinskelligs, Ireland, to Harbor Grace, Nfld., and Halifax, N.S. This cable was bought by the British Government in Nov., 1920, for £750,000, and has since been operated by the Western Union Telegraph Co., under lease. A section of the cable from Halifax to Rye Beach, Mass., remains with the Western Union Telegraph Co. The cable was laid in 1874, and was the first trans-Atlantic cable to use the Muirhead duplex system.

It was landed originally, on the Canadian side, at Tor Bay, N.S., and moved to Halifax in 1887. The control passed from the Direct United States Cable Co., to the Western Union Telegraph Co., in 1912.

The British Postmaster General announced in the British House of Commons, July 13, that in connection with the proposed chain of wireless telegraph stations throughout the British Empire, the Government had decided to erect a station of the ultimate power to be completed by the experts in England, providing specially for direct commercial communication with India, South Africa and Australia. A similar station will be built in India, and on account of this decision, the erection of a second station in Egypt and a station in East Africa, will be deferred, and the building of stations at Singapore and Hong Kong reconsidered. It was anticipated that a Canadian representative would be in England shortly to discuss the Dominion's participation in the scheme.

The Newfoundland Legislature has confirmed an agreement with the Commercial Cable Co., concerning the transfer and operation of the Government owned submarine cable between Port aux Basques, Nfld., and Canso, N.S., to and by the company. The amount to be paid by the company for the cable, \$60,000. The cable is admitted to be in an imperfect condition and incapable of transmitting messages. The company agrees to repair the cable and to maintain it in efficient condition, and obtains the exclusive use of a wire on the Government land lines between Port aux Basques and St. John's, which is to be maintained by the Government. The Government agrees to pay the company \$4,000 a year, and to hand over to it all telegraph traffic destined to points outside Newfoundland, coming within the Government's control, and all telegraph traffic destined to points within Newfoundland, except Port aux Basques or St. John's, coming within the company's control. Government messages to Great Britain, or Ireland, on official business, will be paid for at half the published rates.

FOR SALE Air Compressor Plants

The Commission offer for sale the following plants:—

- 4 Air Compressors, 112 cubic feet displacement, 2 stage, straight line, 300-lb. pressure, 12" x 12" x 5½"; also necessary reservoirs, shafting, pulleys, valves, etc.
- 4 Westinghouse 50 h.p. Shunt-wound motors, D.C., 550 volts; complete with starting apparatus.

The above plants may be seen by appointment with the Office of the Superintendent of Rolling Stock, foot of Sherbourne Street.

Tenders addressed to the Chairman, sealed and endorsed "Tenders for Air Compressor Plants," to be delivered at the Commission's office, Public Utilities Building, corner Front and Yonge Streets, on or before noon, August 26th, 1922.

The highest or any tender will not necessarily be accepted.

**TORONTO TRANSPORTATION
COMMISSION.**

Electric Railway Department

Toronto Transportation Commission's Works, Etc.

The Toronto Transportation Commission has been making good progress with its track rehabilitation and extension work during the past two months, and at the time of writing, July 18, the majority of the shorter sections are completed. Of the undertakings mentioned in Canadian Railway and Marine World of July, pp. 375, as under way, the following have been completed: 1. Rehabilitation, King St., Church St. to Sherbourne St.; York St., Wellington St. to Adelaide St.; Dovercourt Road, College St. to Bloor St.; Howard Park Ave., Dundas St. to loop at High Park; Carlton St., Sherbourne St. to Parliament St.; Dundas St., from railway bridge to Howard Park Ave.; Spadina Ave., Spadina Crescent to Bloor St.; East track, McCaul St., Elm St. to College St.; Queen St., Kingston Road to Woodbine Ave. 2. Extensions, loop and tail track at Neville Park Boulevard; Main St., Gerrard St. East to Danforth Ave.

The following are nearing completion: 1. Rehabilitation, Church St., Queen St. to Bloor St.; Dufferin St., exhibition loop to Queen St.; Roncesvalles Ave., Queen St. to Dundas St.; Spadina Ave., Spadina Crescent to Bloor St., West track. 2. Extensions, from Gerrard St. along Carlaw north to Riverdale, thence east on Riverdale to Pape Ave., and north on Pape Ave. to Danforth Ave.; Dovercourt line extension.

Work has not been started on the following: Rehabilitation of Bloor St., from Spadina Ave. to Avenue Road, or from Yonge St. to Church St., on account of there being a possibility of the street being widened. On Gerrard St., between River St. and Broadview Ave., pending the building of a new bridge. On Queen St., between Scarboro Beach Park and McLean St. On the extension on Kingston Road, from Queen St. to the city limits. On Yonge St., from Woodlawn Ave. to the northern city limits, although an extension on the northbound track at Woodlawn Ave. has been made. The work on Yonge St., which will include 37,100 single track ft. of new track, will constitute the Commission's largest single job, but commencement is delayed pending the signing of the clean-up agreement.

Yonge St. Rehabilitation.—Yonge St., between Deloraine Ave. at the northern city limits, and Woodlawn Ave., the present northern terminus of the Commission's Yonge St. line, is occupied by the Toronto & York Radial Ry's Metropolitan Division single track line, on the west side of the street. The intention is to widen the street to 86 ft., which will allow for a 54-ft. roadway, with car tracks in the center, and an 8-ft. walk and sodded space at each side. The pole line at the west side of the street has been moved back 20 ft. to allow for the widening, and the intention is to grade the space and lay a temporary track to handle traffic during the reconstruction. This temporary track will be laid in sections, as sections of the T. & Y. Radial Ry. track are taken up, the temporary track being swung in to connect with the remaining portion of the T. & Y. Radial Ry. track from time to time as the work progresses.

Cars.—No decision has been arrived at by the Commission in connection with the purchase of additional equipment. As stated in previous issues, the intention at the beginning of the year was to add about 150 double truck cars, similar to those got last year, and although that intention still exists, no orders have been placed.

Yonge St. and Eglinton Ave. Carhouse.—The Commission has made public the plans for the carhouse proposed to be built on the land acquired recently, bounded on the east by Yonge St., on

Canadian Electric Railway Association.

Honorary President, E. A. Robert, President, Montreal Tramways Co., and Quebec Ry., Light, Heat & Power Co.

Honorary Vice President, Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co.

Honorary Council, Thos. Ahearn, President, Ottawa Electric Ry.; Acton Burrows, Proprietor, Canadian Railway and Marine World; Geo. Kidd, General Manager, British Columbia Electric Ry.; Lt.-Col. J. E. Hutcheon, General Manager, Montreal Tramways Co., and director, Quebec Ry., Light, Heat & Power Co.

President, Major F. D. Burpee, Manager and director, Ottawa Electric Ry.

Vice President, H. H. Cozens, General Manager, Toronto Transportation Commission.

Executive Committee, The President, the Vice President, the immediate past President (G. Gordon Gale, Vice President and General Manager, Hull Electric Co.) and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; J. H. McLeod, Superintendent, Regina Municipal Ry.; A. W. McLeod, Vice President and General Manager, Winnipeg Electric Ry.; R. Mayne-Reads, Superintendent, Quebec Railway, Light & Power Co.; W. R. Robertson, General Superintendent, Ontario Hydro-Electric Power Commission of Ontario; W. L. Weston, Manager, Nova Scotia Tramways & Power Co.; H. E. Weyman, Manager, Lewis County Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Treasurer, W. S. Hart, Managing Director, Three Rivers Traction Co.

Auditor, Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Ry.

Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry., Ottawa, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

the north by Eglinton Ave., on the west by Duplex Ave., and on the south by Berwick St. While the construction of this carhouse, like the reconstruction of the tracks on north Yonge St., is contingent on the consummation of the clean-up agreement, the commission has obtained a building permit. The property has a frontage on Yonge St. of about 900 ft. It is the intention to resell the frontage on Yonge St., with the exception of 250 ft. near the corner of Yonge and Berwick Sts., and that on Eglinton Ave., with the exception of 250 ft., near the corner of Eglinton Ave. and Duplex Ave. The land to be resold will have a depth of 90 ft., and will, presumably, be used for stores. The carhouse, 306 x 190 ft., will be located in the middle of the property, and will be divided into 3 bays. Entrance to the yard surrounding the house will be by 2 tracks from Yonge St., near the Berwick St. corner, and from

Eglinton Ave., near the Duplex Ave. corner, and curves will be installed at main line points, so that cars operating in either direction on Yonge St. or Eglinton Ave., will be able to enter the yards with no reverse movement. A substantial office building will be built near the Yonge St. and Berwick St. corner, around which will run a loop. The layout is designed to afford the greatest facility in car movement. At the time of writing, July 18, no contract had been awarded.

Bridge on Main St. over G.T.R. track.—Consequent on the Commission laying tracks on Main St. and across the bridge which carries Main St. over the G.T.R. tracks, the G.T.R. claimed that the Commission or the city should bear a portion of the cost of the bridge. The matter came before the Board of Railway Commissioners at Ottawa on July 5, when I. S. Fairly, K.C., appeared for the Transportation Commission, G. R. Geary, K.C., for the city, and W. C. Chisholm, K.C., for the G.T.R. Mr. Fairly contended that the original plan of the bridge, drawn up in 1919, and approved by the Board, provided for street railway tracks crossing it, and that with this plan before it the Board had at that time decided that the G.T.R. should bear the full cost of construction. This having been done, he said, only the Board's approval was required on the mere technicality of allowing the Transportation Commission to make use of the tracks laid in accordance with the original plan. The Board reserved judgment as to apportionment of cost, but granted the Commission permission to proceed with the operation of cars over the bridge.

Installation of Grand Union.—The Commission is installing a grand union intersection at the corner of Bloor and Bathurst Sts., which will be one of the largest of this nature in Canada. It is stated that there is a grand union in Calgary with longer ends, but that only 108-lb. steel is used, while in the one being installed in Toronto, 140-lb. steel is being used. A grand union was installed recently by the Commission at the intersection of Adelaide and Bay Sts., but the job was not of the same magnitude as that now under way.

Trackless Trolley Operation.—The Commission is meeting with great success in the operation of its trackless trolley buses, described in detail in previous issues of Canadian Railway and Marine World. They are operating on Merton St. and Mt. Pleasant Road, in the northeast part of the city. Of the 4 buses, 2 operate throughout the day, with an additional one during the rush hours, and the fourth is held in reserve. Some of the difficulty was experienced at first on account of the buses being equipped with 1-pole current collection, but since this has been replaced with the 2-pole system, no delays have been experienced through the trolley coming off the wire. About 1,700 passengers a day are handled, and the service is proving very popular with the residents of the district served.

Frank Rulley was fined \$5 and costs by the Ottawa Police Magistrate, recently, for assaulting J. W. Shaver, an Ottawa Electric Ry. conductor.

Hull Electric Company's One-Man Cars.

The Hull Electric Co. has added two one-man safety cars to its equipment. The general dimensions are as follows:—

Length of body	21 ft.
Length of front vestibule, about	5 ft.
Length of rear vestibule, about	5 ft.
Projection of bumper	6 ft.
Width of car body over all	8 ft. 11 in.
Length over bumper	32 ft.
Seating capacity	41 persons
Standing capacity, approximately	26 persons

The car bodies are of semi-convective type, wood construction, built specially for one-man operation, and single end control. The sides are straight, and sheeted vertically with narrow tongued and grooved poplar sheathing. There are 8 double sash windows on each side of the body. The top sash is made stationary and bottom sash made to raise to open. The roof is of arch type with three ventilators on each side, and adjustable grids on the interior. The underframe is of composite construction, having wood side sills reinforced with 18 x 3/4 in. steel plates, which are rivetted to steel cross plates 6 x 1/2 in. to form

cross rail to the same upright fastened to the corner post, forming protection to passengers on longitudinal seats. The body seats are all wood slats with pressed steel pedestals with bronze grab handles. The seats comprise 12 cross and 2 longitudinal at the front end and are hinged to accommodate sweeping. There are curtains on all side windows, on metal rollers and pinch handle fixtures. Sanitary hand straps are provided at longitudinal seats, 3 on each side. The heater equipment is Cutler Hammer, 10 per car in two circuits, controlled by a 2-knife switch. The lighting system is arranged with 15 lights, keyless lamp sockets, 10 in the body and 2 in rear vestibule, and 2 for door lights, which are protected by a metal shade, which keeps the glare off the motorman. There is one headlight of pressed steel. Storm sashes are installed on all side windows and vestibule, with window guard rods which are installed between the post and do not require to be taken off when storm sashes are installed. A

One-man Car, Hull Electric Railway.

a complete steel frame. The cross wood sills are of oak. The flooring is 3/4 in. thick, tongued and grooved hard yellow pine, covered with hardwood floor matting laid lengthwise in the aisle. The interior trimming is red cherry, with no bulkheads at either end. The trimmings are solid bronze and the waist panelling agasote.

The front vestibule is 5 1/2 ft. over bumpers and step, the opening being 30 in. wide. The door opening has folding door and step operated by air engine. The rear vestibule is circular, with an emergency exit door lift up step, controlled by air engine in case of emergency, which can then be opened by hand. There is a circular seat running around the rear vestibule, which accommodates 9 passengers; the seats are of the wood slat type. The buzzer equipment includes push buttons, the current being procured from the trolley. The front vestibule is equipped with iron pipe railing, having a short stanchion to support the fare box, with a horizontal railing at an angle to upright the stanchion at the bulkhead, which is used as a grab handle; also another upright stanchion at the bulkhead on the right coming out and forming a grab handle and a small

buffer casting is installed on front and rear buffers, which acts as a protection to headlight and trolley catcher when cars are being placed in barns at night. A trolley catcher is installed in the rear vestibule. The air brake equipment is the Westinghouse safety car equipment for single end cars, having all safety features embodied, including the bungallow d.h. 16 compressor. The rear door, which acts as an emergency, is operated by an air engine, ensuring closing of door after emergency application. Air brakes are also provided. Air track sanders are installed on all four wheels with the Ohio air sander trap worked from motorman's valve. The draw bars are the Hull Electric Co.'s standard radiating coupler, installed at each end. The painting is pullmatic green, numbered and lettered in gold. The cars are mounted on 21-E trucks with Westinghouse 101-B motors.

The cars were built by the Ottawa Car Manufacturing Company.

A motor bus service is reported to have been put into operation from London to Parkhill, Ont., and it is stated that if traffic offers it will be extended to Grand Bend, on Lake Huron.

Quebec Railway, Light, Heat & Power Co. and the City.

In connection with a notarial protest served on the Quebec Ry., Light, Heat & Power Co., by Quebec City recently, we are advised that the company, in addition to having a franchise for the operation of its street railway, has an agreement with the city in connection with supplying gas. The main difference appears to have arisen over the price of gas, and the other matters, including alleged failure to keep agreements regarding street railway affairs, have apparently been brought into the controversy by the city in order to try and secure a more complete settlement. The protest called for the establishment of a 5-minute service in Belvedere Ward, by July 17; and for the making of replies on other matters by July 20. The company's directors were called to meet July 20, and the city council's finance committee, which has charge of the matter, was called the same evening.

We are officially advised that under the contract the company was authorized to charge \$1.75 net per 1,000 cu. ft. for gas, with a minimum of 75c a month per customer. This rate was to be in effect from Nov., 1920, to Nov., 1921, and thereafter unless changed by agreement, after three months notice. On Nov. 12, 1921, the city gave notice of the cancellation of the contract as from Feb. 11, 1922, and asked for a reduction in price. The company offered to put in force a sliding scale of rates of from \$1.65 per 1,000 ft. for the first 10,000 ft. consumed a month, \$1.55 per 1,000 for the next 10,000 ft. a month, and \$1.45 per 1,000 for the excess of 20,000 ft. a month, with a minimum charge of 75c a month. This the city refused to agree to and passed a resolution, March 24, requesting the establishment of a rate of \$1.45 net per 1,000 ft., on the understanding that the company would undertake extensions for gas supply whenever required. The company notified the city that it could not agree to this, and asked for a conference. The council did not agree to a conference, but appealed to the Quebec Public Service Commission on June 27. The Commission adjourned the hearing for three months to enable data to be compiled, or an arrangement to be made. The Commission's decision seemingly not meeting with the city council's approval, a study has apparently been made of all previous contracts between the company and the city, and the council is endeavoring to insist upon increased car services in certain sections, and on street railway extensions which it is claimed have not been gone on with in accordance with the several contracts. These are questions on which the company is in a position to satisfactorily defend its action, should no arrangement be made in the meantime.

The Canadian Highway Transit Co., operating a motor bus line in Woodstock, Ont., and vicinity, is reported to have been fined by the police magistrate for having refused to carry a Woodstock, Thames Valley and Ingersoll Ry. employee to a destination three miles outside the city, in contravention of the bylaw governing the operation of taxicabs. The case has been appealed and in the meantime cases against two of the company's other drivers for breaches of the same law were adjourned to Sept. 15.

Trackless Trolley Buses, Hydro Electric Power Commission of Ontario.

The Hydro Electric Power Commission of Ontario has placed in service four trackless trolley buses on its Hydro Radial Railway, Essex Division, formerly Sandwich, Windsor & Amherstburg Ry. The chief dimensions are as follows:—

Length overall	26 ft. 9 in.
Length of body	21 ft. 6 in.
Wheel base	16 ft. 6 in.
Width over side sheets at window sills	7 ft. 5½ in.
Width overall	7 ft. 6 in.
Width inside	6 ft. 1½ in.
Gauge, rear wheels	5 ft. 4 in.
Gauge, front wheels	5 ft. 10 in.
Height of floor at entrance	2 ft. 6 in.
Height from road to first step	1 ft. 5 in.
Height from step to floor	1 ft. 1 in.
Height from floor to ceiling at center	6 ft. 5 in.
Height from roadway to top of roof	9 ft. 3 in.
Post spacing	2 ft. 4½ in.
Seat spacing	2 ft. 4½ in.
Angle	1 ft. 6 in.

The following description was prepared when the buses were ordered and was therefore written in the future tense.

The frame will be built up of 6 x 3 x ¼ in. heat treated alloy steel channels,

raise 13 in. In the rear there will be 3 windows, and the front of the body will be provided with a rain vision shield, 70 in. wide, with stationary green glass visor. At the right front corner will be a double folding door, with glazed glass in the upper panel and 3/16 in. wide glass in the lower panel, the door will be hung on ball bearing shaft and the leaves jointed with ball bearing butt hinges, and the closing edge will be provided with rubber tubing bumper. This door will be opened and closed by a manual operating device, located convenient to the driver. An emergency door will be provided at the left rear corner of the bus.

Electric motive equipment will consist of two 25 h.p. 600 volt motors, connected in tandem, through full universal joints between motors, and between motor and rear axle. The motors will be supported on frame channels, with cast steel brackets. The control equipment will consist of a foot pedal operated

and 1 tail light, connected with accumulator in series with the main lighting circuit and so arranged that in case of failure of the trolley circuit the auxiliary lights will be automatically cut in.

The steering gear will be of the screw and nut type, with 22 in. wheel. There will be service brakes acting on the front and rear wheels, and an emergency brake, acting on the rear wheels only, of the internal expanding type. The wheels, of 36 in. diam., will be of the Sewell cushion type, and the tires, of the cushion type, will be single, 6 x 36 in. in front, and double, 5 x 36 in. in rear. The front springs, of semi elliptic type, will be 3 x 44 in. and the rear springs, also semi elliptic, will be 4 x 64 in. The rear axle, of 3½ tons capacity, will have double brake drums, and the gear ratio will be 8.66 to 1. Drawbar pockets will be provided on each end of bus to permit coupling with standard safety cars by the use of an offset bar. Heating will be by Cutler-Hammer heaters. The

Floor plan Trackless Trolley Bus, Hydro Electric Power Commission of Ontario.

with cross sills of drawn steel shapes, fitted between and riveted through the web of the channels and tied with flat plates extending from side sill to side sill. The cross sills will be of 3/16 in. material. The side sills will be of 3 x 2 x ¼ angles. The frame will be held in square with large gussets riveted through the bottom flanges of the channel and cross sills. The body will be built as an integral part of the frame, the side posts will be riveted to the side sills, side sheets, belt rail and letter panel, and the window sills will be tightly fitted between posts and welded. The side sheets will be riveted to the side sills, side posts and belt rails. The side sheets will be of no. 16 aluminum, the belt rail of 1½ x ¼ in. steel, and window sill and letter panel of no. 18 sheet steel. The floor will be double, laid transversely, and securely nailed and screwed to side and center furring. The bottom layer of flooring will be of 7/16 in. tongue and groove material, and the top layer will be maple.

There will be 7 windows on each side of the body; the upper sash will be stationary and the lower sash arranged to

master controller, connected to motor controlled sequence switch, which will automatically control the operation of the magnetic line breaker and rheostat switches. The master controller will be so arranged as to give two running speeds through action of the foot pedal, making it unnecessary for the operator to notch up the controller. The equipment in detail will consist of two 25 h.p. motors; 1 set of 6 magnetically operated switches, mounted on panel; 1 foot operated master controller; 1 reverser; 1 double pole, magnetically operated line switch, with overload relay; 1 set of grid resistors, 30 5 in. alloy grids, 2 frames; 2 O-B trolley bases with swivel harps, 6 in. wheels and 18 in. poles; 1 double pole control snap switch, with fuses; 8 knuckle joint connectors; 1 set of rods for controller and reverser.

The lighting equipment will consist of 2 circuits of 5 lights each. On one circuit will be 2 headlights, 1 tail light, 1 step light and 1 body light. The other circuit will carry 5 body lights. In addition to the main lighting circuit there will be an O-B auxiliary lighting circuit, consisting of 2 side lights, 2 body lights

heating units will be wired in 4 circuits of 4 each and connected to thermostat. A Faraday high voltage car signal buzzer will be located at the front, and push buttons will be placed in the moulding near the center of the window space.

The interior of the bus will be finished in mahogany, and the side lining will be in mahogany veneer. The seating arrangement is shown by the accompanying plan, the total seating capacity being 29. The longitudinal seats will be over the rear wheel housing. All seats will have ventilated spring cushions, and will be upholstered and covered with cowhide, while the seat backs will be of the padded type. The operator's seat will be of the bucket type. There will be a stanchion located near the front of the car to support the fare box, and another will be located between the longitudinal seats at the rear. An aluminum hand-rail will be placed at the step well, and a brass grab handle will be placed at the side of the entrance door, at a convenient height for passengers entering. Window and door fittings will be of bronze, polished and lacquered. Four ventilators with registers will be placed

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—Work is reported to be practically completed on the reconstruction of the bridge over the Vedder River, Fraser Valley line.

The company has proposed to Point Grey municipality, a Vancouver suburb, to relocate a part of its Dunbar St. line, provided the council will regrade Alma Road to permit street car operation. This would do away with a detour by Crown St. Following this, and with the completion of the Broadway West extension, the company offers to run both Dunbar St. and Sasamat cars through to the city, giving a 20-minute service alternating. (July 3p. 375.)

Grand Valley Ry.—Lake Erie and Northern Ry. —A press report states that a contract has been let to Webster & Torg, Galt, Ont., for the erection of a joint station on Main St., there, for these two lines. We were officially advised in April, that the building would be 100 x 34 ft., brick and stone being the principal materials. The foundations and walls are designed to carry a 2 story structure, but only one will be erected at present. It is expected to have the building completed in the autumn. (July, 3p. 375.)

Guelph Radial Ry.—Guelph, Ont., City Council approved of the expenditure of \$150,000, to complete the rebuilding of the railway. It will not be necessary to issue new debentures, as the Council originally issued \$300,000 of debentures, one half of which were to be held as collateral. F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario, laid before the council recently a statement showing the expenditures already made on reconstruction, out of the first \$150,000, amounting altogether to \$138,025.24, and distributed as follows:—Reconstruction of yards and other streets, \$79,972.52; reconstruction of line to Agricultural College, \$54,68; interchange track with C.P.R., \$1,905.11; passing tracks Ontario and Gordon Sts., \$5,856.65; Surrey and Neeve street curves, \$988.74; concrete floor and car barn repairs, \$565.76; York road diamond, \$536.74; carpet mill siding, \$978.42; engineering, \$5,112.34; roadway tools, \$4,659.92; track for overhead work, \$890.53; payments on 8 one-man cars to date, \$37,674.28; office furniture, \$292; general incidentals, \$537.24. The total expenditure proposed for this year was \$71,158 exclusive of Suffolk street work. In order to rehabilitate the line fully a further expenditure of \$150,000 would be required, of which \$85,000 would be for new rails, steel ties and other ties. The \$150,000 was to be expended in putting the line in good operating condition, and to provide 10 one-man cars. These cars it was originally estimated would cost \$9,000 each, but they are actually costing \$11,000 each. (Feb. 3p. 79.)

Hamilton Street Ry.—The Dominion Power and Transmission Co. is reported to have relaid the tracks on King St. West, between James and Bay Sts.

Hull Electric Co.—We are officially advised that the company is laying 360 ft. of new rails, and paving on Youville St. and paving a portion of its track on Bridge St.

Kitchener and Waterloo St. Ry.—A press report states that plans are under consideration for building a second track from Union St. to William St., Waterloo, Ont., and for the erection

of new car barns on Preston Road, Kitchener. The city council is reported to have approved of the submission of a bylaw to the voters to provide \$70,000 for the work. (June, 3p. 315.)

Montreal Tramways Co.—Plans for laying a track on Church Ave., Verdun, to connect Wellington St. with the present terminus of the Cote St. Paul section of the Notre Dame St. line, were approved recently by the Montreal Tramways Commission, and work is reported to have been started July 12. The line is a double track one about 4000 feet long. (July, 3p. 375.)

Niagara, St. Catharines and Toronto Ry.—The question of extensions and improvements of the company's lines in Niagara Falls, Ont., is reported to be under consideration, and it is expected that some plans will be presented to the city council at an early date, when application for a renewal of the franchise will be made. (March, 1921, 3p. 159.)

Ontario Hydro Electric Ry.—Essex Division—The Essex County Council is reported to have granted permission for the construction of a spur from the main line to a dock at Petit Cote, Windsor, Ont. (July, 3p. 375.)

Oshawa Ry. Co. has been authorized to build a passing track on Simcoe St., 100 ft. south of John St. to Metcalfe St., Oshawa, Ont. (May, 3p. 258.)

Ottawa Electric Ry.—The Hull, Que. City council is reported to have refused to agree to the company's application to build a loop at its terminus in Hull, on the ground that an exclusive franchise was granted to the Hull Electric Co. in 1894, for the operation of an electric railway. The company made the application so that it might replace the present small cars, used on its line into Hull, with larger ones. (July, 3p. 375.)

Quebec Ry. Light and Power Co.—The Quebec exhibition commissioners having requested the company to improve the car service to the exhibition grounds, among other ways, by a more direct entrance into the grounds, the company made a suggestion which was considered by the city council, July 5. The company's plans provide building a loop at Parent St., and an extension of trackage at the intersection of St. Joseph and Crown Sts., which would give passengers to the exhibition a direct route without transferring. If the city council approves, the work will probably be put in hand at once.

In connection with differences between the company and the city council as to the price of gas and other matters, the council decided July 7, to serve a notarial protest on the company, which was done July 11. The protest stated that the council is of opinion that the agreement between it and the company made in 1919 has been broken by the latter, as the company has not fulfilled its obligations regarding the service in Belvedere Ward, the extension on Charlesbourg Road, and the adoption of a route going by Lavigner bridge. The protest gave the company to July 20 to reply, and it was intimated that if this was not satisfactory, the council would consider repealing the bylaw under which the present straight 5c fare on the street cars was fixed. (Nov. 1921, 3p. 601.)

Three Rivers Traction Co.—A press report states that the company proposes to build an extension on Normand Boul-

vard, and Bellefeuille and St. Philippe Streets, at an estimated cost of \$75,000.

Wellington-Waterloo Ry.—The Ontario Legislature has authorized the company to begin its construction of an extension of its line from the terminus in Bridgeport to Guelph, Ont., within three years, and to complete it within five years. Franchises for this extension are being negotiated with the municipalities interested, and it is hoped to have them arranged so that construction can be started during 1923.

We are officially advised that the Wellington-Waterloo Ry., built in 1902 as the Berlin and Bridgeport Electric St. Ry., extends now from Ahrens St. Kitchener, to half a mile beyond Bridgeport, 2.75 miles, and operates one mile over Kitchener city tracks, making a total distance of 3.75 miles operated. It has bought the right to use extending one mile beyond Bridgeport. The distance from present end of track to Bloomingdale is 1.5 miles. From Bloomingdale eastward to beyond New Germany, about 5 miles, a roadbed was graded, several years ago by the People's Ry. Co., This company had a survey and profile into Guelph which showed an easily practicable line from Bloomingdale to Guelph with no gradient exceeding 1.2%. The distance from the end of the graded line to Guelph is approximately 6.5 miles, making a total of 8 miles between Kitchener and Guelph, of entire new construction and 5 miles of ballasting and tracklaying on graded line. The total distance from Kitchener to a connection with Guelph city track would be about 15 miles. By far the most difficult part of the grading, eastward of Bridgeport, would be on the rest of the line all the way to Guelph would be very easy grading. A bridge across the Grand River would be required at Bloomingdale and a favorable location is afforded for it. This bridge is designed of 3 reinforced concrete girder spans of 100 ft. with three approach spans of 35 ft. It is estimated that a population of 45,000, outside of the City of Guelph, would more or less use the line which would also draw from stations on the Grand River Ry. between Kitchener and Preston, also from north and west of Waterloo and west of Kitchener. There are said to be opportunities for developing considerable freight traffic on the extension, particularly from the large gravel deposits just beyond Bridgeport, and at Bloomingdale.

Windsor Electric Ry.—Work on the Academy Road extension, described in our last issue, is reported to be about completed. It is proposed to maintain the same routing on the line as at present, except that the cars will run on to the new terminus at Lindsay St., instead of to the former terminus at Ash St.

Considerable rehabilitation work on the city lines is reported to be in progress. Portions of the track on Osborne St. have been improved by putting in new stone set liners, and portions of the track on North Main St. are being renewed. The diamond and through lines special work at the intersection of Main St. and Higgins Ave., is to be relaid, and work is nearly completed on relaying the intersections at Main and Dufferin Sts., and Main and Euclid Sts., as soon as this is completed. The track on North Main St., will, it is said, be relaid from Higgins Ave. to Redwood Ave.

Double Deck Gasoline Motor Bus, Toronto Transportation Commission.

As stated in Canadian Railway and Marine World for April, pg. 208, the Toronto Transportation Commission has made another addition to its fleet of motor buses, viz., a double deck gasoline driven bus built by Eastern Canada Motor Co., Hull, Que. It has the following general dimensions:—

Length over all	25 ft. 10 in.
Width over all	7 ft. 6 in.
Height over all	10 ft. 8 in.
Height, ground to floor of top deck	9 ft. 1 in.
Length, inside interior compartment	13 ft. 2½ in.
Width inside interior compartment	6 ft. 11½ in.
Height, inside interior compartment	5 ft. 9½ in.
Ground to rear platform	1 ft. 7 in.
Platform to floor of interior compartment	11 in.
Ground to front step	1 ft. 1½ in.
Wheel base	15 ft. 7½ in.

The frame is built up of special heat treated steel members and the spring gear includes 44 x 3 in. semi elliptic springs at the front, and 54 x 4 in. semi elliptic springs at the back. The steel

The interior compartment is finished in mahogany, and the interior seating arrangement includes 2 longitudinal seats at the rear and 4 transverse seats on each side of the aisle, the interior seating capacity being 21. These seats are finished in rattan. The stairs to the upper deck ascend from the rear platform, a door opens into the interior, and there is also a door at the front of the interior compartment. Four grided ventilators are set in the ceiling, which is lined with enamelled paper-board and the interior of the bus below the windows is lined with green plyboard. The arrangement of the wheel arch in the interior compartment, in relation to the seating arrangement, is such that no inconvenience is caused passengers. All windows are of the drop sash type, and are equipped with blinds. An electric signal system is installed, the push but-

in operation, viz.: four, built by Fifth Avenue Coach Co., New York, operating on Humberstone Ave. in the western portion of the city; the bus described herein, operating in the same district; one built by the Associated Equipment Co. in England, also on the same run; a gasoline-electric bus built by Tilling-Stevens Co. in England, operating on Merton St. and Mount Pleasant Road in the northern part of the city, and one built by the Leyland Co. in England, also operating in the northern part of the city. The bus service is proving itself satisfactory in every way.

Electric Railway Employes' Wages, Working Conditions, Etc.

Calgary Municipal Ry.—The city commissioners recently adopted a plan for an equal division of day and night work between the senior and junior men on Calgary Municipal Ry. The matter was discussed by the men and subsequently by the commissioners, who finally decided that the present division of one month's day work to three month's night work for junior men should be continued to Dec. 31, 1923, after which there would be an equal division of the night and day shifts between all men who have served with the street railway department for more than four years. The junior men have intimated their acceptance of the plan, but asked that the council give further consideration to the suggestion that the equal division be put in operation, Jan. 1, 1923, instead of Jan. 1, 1924. It is reported that the senior men, while not agreeing with the plan, will not oppose it. The proposal is expected to be ratified by the city council.

Ontario Hydro Electric Ry.—Essex Division—Following the notification of the management that a reduction of 5c an hour would be made in the wages of motormen and conductors on the expiry of the agreement on June 30, the men stated that they would walk out in protest. The Windsor Trades and Labor Council passed a resolution protesting against the proposed reduction, and sent it on to the city council with a request for its endorsement. The management then decided not to enforce the reduction and asked the men to make an agreement for another year on the former terms of: 45c an hour for new men, rising to 55c an hour. Operators of one-man cars and trackless trolleys will be paid 2c an hour extra, instead of 10c an hour, for which it is reported, they asked.

Manitoba Public Utilities Commission.—The situation in regard to the Manitoba Public Utilities Commission is said to be that on May 31, the Commissioner, P. A. Macdonald, ceased to function, the Legislature having refused to vote funds to pay salaries after that date. Neither the Public Utilities Act, nor the Sale of Shares Act have been repealed, and no transfer of the duties of the Commissioner, who administered both of these acts, could be made without special legislation, which was not introduced at the last session. The order-in-council appointing P. A. Macdonald as Commissioner, and the other members of the staff has not been recalled. The Commissioner's office has been moved to 166 Portage Avenue East, Winnipeg.

Double Deck Gasoline Motor Bus, Toronto Transportation Commission.

body is double lined. The wheels are of the Morand cast steel cushion type, having an internal lining of rubber ½ in. thick between the circular sections. The rear tires are of solid rubber, with single 10 in. tread, and the front tires, also solid, are of 5 in. tread. The wheel diameter is 36 in.

The bus is driven by a Buda 4 cylinder 40 h.p. type Y-T-U engine, with cylinders 4½ in. diam. by 6 in. stroke. The engine is water cooled, the radiator being of the vertical tube design and equipped with a set of vertical protecting bars in front, circulation being ensured by a gear driven water pump. The gear box is of the 4-speed selective type. Spicer universal joints are employed in the connection from engine to rear axle, and a Clark double reduction rear axle is employed. The magneto is of the Eisemann type, gear driven. A 45 gall. gasoline tank is used, and the engine is equipped with a Zenith carburettor. Brakes include a service one operating on the carban shaft, and an emergency one operating on the rear wheels through external contracting bands. The alemitic grease system is employed.

tons in the interior being placed between the windows, and on the upper deck they are on the railing posts. The interior of the bus is heated by the exhaust from the engine, and the bus is lighted by a Westinghouse 6 volt system, there being 7 lights in the ceiling in the interior, and a step light, in addition to the head-lights and tail light.

On the upper deck the slatted seats are arranged transversely on each side of a central aisle, the seating capacity of this part being 30, thus making the total seating capacity of the vehicle 51. The lower band surrounding the upper deck is of wood, surmounted by wire mesh and a wooden top railing. The spiral stairs leading to the upper deck are built up of wood steps and metal casing, with corrugated metal strips on the steps, and the stair hand railing is of brass. The seats on the top are bolted to the floor, and the bus may be converted into a single decker quickly, by removing the seat bolts and the railings. The rear platform, below the stairs, is equipped with a swivel seat for the conductor.

The Commission now has eight buses

Electric Railway Notes.

The Toronto Street Ry. Men's Union, Division 113, is reported to have about 3,500 members, the largest number in its history.

The Levis County Ry., Levis, Que., is going to add to its equipment 8 one-man safety cars, 3 sweepers, 1 rotary plough and 1 snow leveler, to replace losses by fire some time ago.

The Kitchener Light Commissioners are considering the purchase of two additional new cars similar to those recently put in operation on the Kitchener and Waterloo St. Ry.

London, Ont., City Council is reported to be collecting data as to the operation of one-man cars, as a result of an intimation that the London St. Ry. desires to place five in operation.

The New Brunswick Power Co. is reported to have placed cards 18 x 10 in. in the advertising rack of each of its cars in St. John, N. B., giving the name of the operator of the car.

The British Columbia Electric Ry. Co. is raising the dam at its Stone Lake power plant, and making preparations for the installation of a fifth unit. The cost is estimated at \$1,000,000.

The London, Ont., Assessment Commissioners reported recently to the city council that the London St. Ry. was assessed as follows: — Land \$18,655; buildings \$195,635; business \$14,375; total, \$208,665.

The Quebec Ry. Light and Power Co. is reported to be about to make a considerable expenditure on the grounds surrounding Kent House, adjacent to Montmorency Falls, to increase its attractiveness as a tourist resort.

The Board of Railway Commissioners passed orders June 6 and 9 authorizing the Hydro-Electric Power Commission of Ontario to operate Guelph Radial Ry. one-man cars over the G.T.R. and C.P.R. tracks on Woolwich St. and York Road, Guelph, Ont.

The British Columbia Electric Ry. has shipped 10 street cars from Victoria to Vancouver, their places being taken by 10 new safety cars, built recently. Two of the old 10 cars have been assigned to New Westminster, having been fitted with safety equipment.

A Montreal Tramways Co.'s messenger, Lorenzo Berthiaume, was attacked by a couple of holdup men recently, while locking up the office at 110 De La Roche St., and was robbed of \$1,684 in cash and a quantity of tickets which he had in a bag for carrying to the head office.

The British Columbia Electric Ry. put daylight saving time in effect on its lines in Vancouver, New Westminster, and surrounding municipalities at midnight—June 30. The City of Vancouver adopted the daylight saving time to begin on June 30, and the surrounding municipalities followed suit.

Fire broke out in underground ducts leading out of the B. C. Electric Ry.'s Point Grey substation on July 3, throwing the railway and light and power lines in Point Grey and part of Vancouver out of business for some time. Jumpers were placed on the trolley wires immediately, and temporary cables strung through the windows of the substation, until permanent repairs could be made. The damage was estimated at about \$50,000.

Members of the Amalgamated Association of Street and Electric Railway Employees in St. John, N.B., held a reunion in the Trades and Labor Hall, there, June 30, to celebrate the first anniversary of their lock-out by the New Brunswick Power Co. About 80 members were present, and it was reported that only a few men had left the Association to re-enter the company's service. The other members were reported to be engaged in other lines of work.

The London St. Ry. has been re-measured by engineers for the London, Ont., City Council, and found to have a length of 27.9 miles. The line has hitherto been assessed as having a length of 24.33 miles. An investigation, will, it is reported, be made to determine where the responsibility for the error, if any, rests, and steps may be taken to recover from the company the difference between the

Wm. C. Hawkins,
Managing Director and Secretary, Dominion
Power & Transmission Co., and Honorary Vice
President, Canadian Electric Railway Association.

amount paid in taxation on the shorter mileage, and what should have been made on a larger mileage.

The British Columbia Electric Ry. Co. promoted courtesy education among its employees during June. W. G. Murrin, Assistant General Manager, Vancouver, in his general circular, says that by making courtesy a daily habit it is easy to win friends. A. T. Goward, Local Manager, Victoria, intimates that while the company has always endeavored to see that every courtesy is extended to the public by its employees, the idea was that June was to be a period of intensive training which it is to be hoped will be productive of lasting and beneficial results.

The question of the operation of one-man cars is reported to be causing some difference between the Port Arthur Public Utilities Commission and the city council of Fort William public utilities committee. It is stated that the Fort William City Council has threat-

ened to turn its cars at the boundary between the two cities, unless Port Arthur will operate one-man cars immediately. The operation of these cars in Port Arthur is being held back because of a difference with regard to a crossing of the Canadian National Rys., about which the city alleges it had an agreement with the old Port Arthur, Duluth and Western Ry., a record of which, it is reported, is not available.

London, Ont., City Council, on July 3, authorized the Mayor to appoint a transportation commission to enquire into the transit situation as a whole in the city, and to report to the council. The commission is to gather all data necessary to deal with the street railway situation there, so that a bylaw may be introduced and get ready for the voters to vote on, to take over the London St. Ry. at the beginning of 1924, to extend the franchise, whichever may be found to be the best solution. The Mayor has appointed Sir Adam Beck, Chairman Hydro Electric Power Commission of Ontario, and of London Railway Commission, P. Pocock, Vice Chairman, London Railway Commission; Aldermen Childs and Drake.

The Cape Breton Electric Co., a press report states, owing to decreased traffic, put in operation on July 1, a reduced traffic schedule in Sydney, N.S. On the Avenue line a half hour schedule is being operated from early morning until noon, and from 10.30 p.m. until midnight, in place of the former 15 minute schedule which is being maintained from noon until 10.30 p.m., and on the Pier line a 20 minute schedule is being operated in place of the former 15 minute schedule. C. C. Curtis, Manager, is reported to have stated that for the five months ended May 31, the operating expenses of the company's railways exceeded the earnings by \$33,000, and that for the first 25 days in June the earnings showed a decrease of 23½%, compared with the same period of 1921.

Mainly About Electric Railway People.

William Clark Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co., Hamilton, Ont., who was elected Hon. Vice President, Canadian Electric Railway Association, at its recent annual meeting at Quebec, Que., and whose portrait appears on this page, was born at Orange, N.J., Sept. 5, 1866. From Jan. 1, 1890, to July 1, 1893, he was Manager, Plymouth Electric Light Co., Plymouth, Mass.; July 1, 1893, to Feb. 1, 1896, Manager, Concord Land & Water Power Co., Concord, N.H.; Feb. 1, 1896, to Jan. 1, 1898, Manager, Columbia Water Power Co., Columbia, S.C.; Jan. 1, 1898 to July 1, 1901, Engineer, local companies committee, General Electric Co., Schenectady, N.Y., and since July 1, 1901, he has been General Manager and afterwards Managing Director and Secretary, Dominion Power & Transmission Co., Hamilton, Ont.

Geo. Kidd, General Manager, British Columbia Electric Ry., when in Europe recently went to Copenhagen to see J. Buntzen, formerly General Manager, B.C.E.R., who is living there.

Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Ry., and his family, are spending the summer in Muskoka.

Electric Railway Passenger Fares.

British Columbia Electric Ry.—The bylaw passed by the City of Vancouver, providing for the extension of the 6c fare charged by the company after June 30, provides that the fare is to remain effective only until the B.C. Government provides for a board of arbitration, or court of appeal, with jurisdiction upon the matters in dispute and for one month after such board is authorized to adjudicate thereon. In the alternative, the bylaw provides for the 6c fare remaining until such time as the parties shall have entered into a permanent agreement amending or varying the franchise, which shall be mutually satisfactory and acceptable to both parties. Whichever of these dates, the entering into a permanent agreement or the expiration of one month from the authorization of a board of arbitration, is the earliest, is to be the termination of the temporary agreement extending the present fare. Further, if the legislature should fail to establish a board of arbitration or court of appeal by Dec. 15, 1922, the temporary agreement is to lapse. The agreement stipulates also that if no permanent agreement is reached and the matter goes to the board of arbitration, the onus of proof shall be upon the company to demonstrate that it is entitled to a fare in excess of 5c.

The board of arbitration, if called upon to adjudicate, must deliver an award within 90 days after its appointment otherwise the temporary agreement becomes null and void. In consideration of this temporary agreement, the company undertook to construct a double track car line on Broadway West from Trafalgar St. to Alma Road, and have it completed by Sept. 1, 1922. It is also condition of the temporary agreement that the company shall not reduce its wages or change its men's working conditions during the agreement.

Calgary Municipal Ry.—Calgary, Alta. City Commissioner, after considering a recent report from R. A. Brown, Superintendent Calgary Municipal Ry. passed a resolution against granting any reduction of fares at present. The report compares the fares charged on the railway, with those charged elsewhere, and gives estimates showing how reductions of fares would affect the revenues. The present fares are as follows: Cash 10c; blue tickets 16 for \$1; red tickets 18 for \$1; school children's tickets 32 for \$1.

Kitchener and Waterloo St. Ry.—Plans for the improvement of this electric railway, if carried out, may, it is reported necessitate an increase of fares. V. S. McIntyre, Superintendent, is reported to have said that if this should be the case, rates would still be lower than on other electric railways.

London St. Ry. Co.—In connection with the putting in operation of a 5c fare for adults and a 3c fare for children between 5 and 12 years on June 14, a recent press report stated that a delegation to be headed by H. A. Stevenson, M.L.A., who led the opposition to the bill in the Ontario Legislature, last session, proposed to go to Ottawa to ask the Dominion Government to disallow the act. J. M. Donahue, a London lawyer, claims that the old bylaw providing for selling 7 tickets for 25c, and 6 for 25c, are still in operation, on the ground that the act passed last session does not specially refer to the sale of tickets. The company's solicitors, state

that there is absolutely no doubt that the company has the right to collect the fares it is now doing.

Toronto Transportation Commission. In announcing the reduction in children's fares, recently mentioned in *Canadian Railway and Marine World* for May, the new rate for tickets for children not over 51 in. high being 10 tickets for 25c, instead of 7 tickets as formerly, the Commission said:—"The consideration of the Commission, and we believe the same thing is true of car users in general, has been for those citizens who, blessed with large families, found they were unable to take advantage of the street car service to the fullest extent. We feel, therefore, that it will meet with the entire approval of the citizens at large that we should take the first possible opportunity of making this concession in the quarter in which it is most needed. In fixing the date as from the morning of July 1, children will have the advantage of the cheap fares for the public holiday on that day, as well as during the hot summer months when the schools are closed. In taking this step the Commission realizes that this low rate for children is out of proportion to the adult rate. It is a recognized principle in street railway operation that the children's fare should bear an approximate ratio to the adult fare of 1 to 2, whereas the new fare will be nearer a ratio of 1 to 3."

Ottawa Electric Railway Franchise Negotiations.—The Ottawa City Council's special committee, consisting of the mayor, the board of control, and five aldermen, which was appointed in January to discuss the renewal of the company's franchise, following the municipal voters' emphatic declaration for a renewal of the franchise, rather than a service at cost arrangement, or municipal ownership, has been meeting from time to time, and is reported to have made some progress, but as far as can be ascertained there have been no direct negotiations between the city and the company. Mr. Feustel, of Fort Wayne, Ind., who was engaged by the city council to advise it, has a staff at work in Ottawa. L. A. Herdt, D.Sc., E.E., Macdonald Professor, Electrical Engineering, McGill University, and Vice Chairman, Montreal Tramways Commission, has been retained by the company.

Hull Electric Co.'s Future.—A press report credits a Hull Que., alderman with stating that negotiations may shortly be begun by the city council with a view of taking over the company's electric railway in Hull in 1923. The company has a franchise for 35 years, which does not expire until 1929, but there is a section in the agreement under which the city may, at any time after the expiration of 25 years, enter into negotiations for the purchase of the railway at a price to be determined upon by arbitration. We are advised that while statements of this kind have been made from time to time, the matter has not been formally put before the company. The line has 16.54 miles of first track mileage, and its operating record for 1920 was as follows: Gross earnings from operation, \$335,217; miscellaneous earnings, \$29,505; operating expenses, \$220,281; taxes, funded debt, to \$83,590; net income, \$55,442; car mileage, 876,935; fare passengers carried, 4,333,051; freight carried, 8,141 tons.

Ottawa Electric Railway Assessments.

The Ontario Railway and Municipal Board's recent judgment on the Ottawa City Council's appeal against the County Court Judge of Carleton's decision reversing the Ottawa city court of revision's decision as to the assessment of the Ottawa Electric Ry. Co.'s machinery, was signed by the Chairman, D. M. McIntyre. In 1921 the city's assessment department assessed the company for 1922 for \$392,530 for electric motors, water power, steam plant and other machinery, against which the company appealed to the court of revision, which upheld the assessment. An appeal was then taken to the county judge, who directed that the items making the above mentioned total be struck out, and the city council appealed against this decision.

In his judgment Mr. McIntyre quotes from the agreement and from the Assessment Acts applicable to the case and then says that it is perfectly clear that, under the terms of the Assessment Act of 1914, which applied to the case, machinery erected or placed upon, in, over, under or affixed to land is real property and therefore assessable by force of the general enactment that all real property in Ontario shall be liable to taxation. Not only is the machinery in question real property, but it is fixed machinery, used for the production of motive power and is, of course, properly assessable under the exception in the latter part of subsec. 17. The remaining question is to what extent this conclusion is affected by the agreement. Certain of the company's property is exempted from taxation, but it is expressly stated that this exemption shall not apply to the real estate. The machinery in question does not fall under the terms "franchise, tracks and rolling stock" or in respect of things embraced in the words of such part of and other personal property used in and about the working of the railway." The company's contention as to the meaning of these words is too elastic. Certain of the company's real property is exempted under the agreement, but the clear meaning of such words should not be expanded so as to include real property so dissimilar in character from tracks by force of a word of vague import as such works, as the machinery in question. The judgment concludes by directing the assessment of the machinery in question to be restored to the rolls as entered by the assessment department.

In connection with this judgment, it is of interest to note that the Ottawa City Council, in applying to the Ontario Legislature for an act for certain purposes, is asking for authority to assess and levy upon all property of the Ottawa Electric Ry. Co. subject to assessment by the corporation under the provisions of the Assessment Act, such proportion of the taxes and rates for all municipal and school purposes, as would be payable by the company in 1923, if the company were not entitled to a partial exemption from taxation up to Aug. 13, 1923, under a certain agreement dated June 28, 1893, as the total number of days after Aug. 13 in 1923 shall bear to the total number of days in 1923 prior to such date."

The motor bus service which was operated for some time between Kitchener and Bridgeport, Ont., has been withdrawn, it did not pay.

Levis County Railway and the Municipalities

The Quebec Public Service Commission's judgment on the City of Levis' petition against the Levis County Ry. Co., and the other municipalities through which it runs, delivered recently, is a lengthy document. The first part deals with the company's history and with the company's jurisdiction in regard to matters complained of, and decides that under the amendment to the Revised Statutes of Quebec, article 740, passed last session (see Canadian Railway and Marine World, June, pg. 315), St. Romuald Parish, which had objected to the Commission's jurisdiction, could not be excepted, as the matter complained of, its common to the four, indivisible and the four are necessarily parties thereto. The commission's order, to be effective and useful, should be binding on the four municipalities as well as on the company. St. Romuald Parish is therefore legally mise-en-cause, and this order binds it as well as the other parties.

In reviewing the merits of the case the judgment says that the figures and conclusions are merely approximate, and should be reinvestigated within 12 months after a normal system has been re-established. The Commission was called upon to value what remains of the company's property, what will be required to ensure an enterprise which will give a proper service, and at the same time to guarantee to those who supply, or have supplied the funds, a legitimate return upon the part of the investment which is of use for the purposes of the enterprise. "There can be no question of guaranteeing the interest upon all the money which has been sunk in the venture, but only upon the part which still remains as an asset, and the total therefore must be first determined in order to arrive at the fixed charges upon the concern." The value of the system as to the serviceable capital which should draw interest has been estimated by two experienced engineers, L. A. Herdt, for the company, and W. R. Russell, for Levis. The Commission, after reviewing the reports of these engineers, expressed the opinion that the theory that the visible assets should be estimated at their cost of renewal is a fair one, as otherwise the invested capital could never be fully remunerated, because of the fact that from the moment material is employed, and even before construction has been terminated and the system put in operation, it had already undergone a certain depreciation; further, the system under valuation should originally have been constructed of new material and kept in such a good state of maintenance that its cost of operation would be equivalent to that of a new system. In the present case second hand material, such as rails, was used in the original construction and reconstruction, and the company never carried any reserve fund for depreciation. The cost of renewal should not be based upon war or immediate post war prices, but rather on current prices of material under normal conditions, the valuation being made for a fairly long period, about 15 years in this case, the term of the franchise. The Commission valued the system by endeavoring to estimate the cost of labor and contract material as in the case of a new enterprise, the balance being valued at its actual or depreciated worth. Mr. Russell practically followed this method, but the Commission decided he had not made a sufficient allowance for

general expenses, and adopted Mr. Herdt's percentages in that respect. Following out this method the Commission found the total value of the company's visible assets to be \$575,096.80, of which \$107,538.73 represents general outlay. This general outlay represents 23% of the total, and closely approaches the 23.7% established in the valuation of the Montreal Tramways Co.'s system. The Commission adopted Mr. Herdt's estimates for reconstruction, but reduced them from \$227,733 to \$219,068.20, considering that an item of \$6,050 had been included twice. The estimate for depreciation of total capital of 2% was considered reasonable, and the Commission found that a return of 6% on the present capital and 7% on the new capital should be made. The total capital value of the capital upon which fixed charges should be provided was therefore \$794,165 and the total amount of the fixed charges on the percentages above mentioned would be \$65,723.89.

The probable revenue to be anticipated from the rates actually in force would be \$151,621, the Commission using as a basis Mr. Herdt's estimate of \$147,389. The cost of operation, as estimated by Mr. Herdt was \$121,941, from which the Commission deducted \$3,947, which would be saved by a recent reduction of wages of platform men, thus fixing the operating cost at \$117,994. This would leave a surplus of \$33,527 to meet the fixed charges of \$65,723.89. The only way to meet the fixed charges was by increasing the revenues or by the municipalities contributing toward operating expenses. The Commission decided that it was not feasible to charge more than 10c a passenger and per zone, and therefore directed the suppression of tickets, except for school children, and these to be sold 25 for \$1.25. This, it was estimated, would provide an additional revenue of approximately \$20,000. The Commission were of opinion that the company should be relieved of the maintenance of the part of the street between its rails and as far outside them as the end of the ties, as well as of the cost of repairs caused by municipal paving work. These two items would affect an estimated saving to the company of \$6,112 a year, thus reducing the deficit to \$6,084.89. There was no fundamental reason why the company should pay the cost of snow removal rather than the municipality. The Commission directed that the joint responsibility of the municipalities for snow removal should not exceed \$16,000, and fixed the proportions by which it should be borne. The relief to the company by this arrangement would turn the estimated deficit of \$6,084.89 into an estimated surplus of \$215.35.

These results were problematical, and might not be achieved, therefore the Commission granted the company's request to modify its schedules and zone limits. In the event of the company doing this, 15 days notice of the proposed changes should be given to the municipalities, any one of which might appeal to the Commission. The judgment concluded: "It is needless to say that this order would be ineffective were the company obliged to meet competition from auto buses or other system of public conveyance."

A summary of the order giving effect to the judgment was given in Canadian

Railway and Marine World for July, pg. 375.

We are officially advised that the City of Levis and the Town of St. Romuald decided to appeal against the Quebec Public Service Commission's judgment, but that on July 11, the City of Levis withdrew its notice of appeal, thus leaving St. Romuald alone to take any further action. This appeal if continued, will not be heard until October, and will not affect the judgment, except in so far as that one municipality is concerned in the event of its obtaining a decision. In that event the situation, so far as St. Romuald is concerned will be that the old conditions will be restored, and the company will probably not operate its cars therein during the winter.

The company is taking steps to secure capital to replace the fire loss, based on the terms of the judgment. Car barns, with repair shops attached, will be erected, and the following new cars, etc. will be bought: 8 Birney safety cars; 3 sweepers; 1 rotary plough and 1 snow leverer. The cost of the construction and equipment is estimated at from \$220,000 to \$250,000.

New Brunswick Power Co.'s Weekly Pass System.

The New Brunswick Power Co. put into effect at the end of 1920 a weekly pass system on its electric railway in St. John. The pass is sold for \$1, and is good for as many rides from Monday morning until Sunday night as the buyer desires to take. The sales for the first week were 609 and in three weeks had increased to 1,532, in the seventh week to 1,625, and in the eighth week to 1,950, since when they have varied between 1,900 and 2,042, which was the largest number issued to the end of May. The total number of passes issued during the 27 weeks was 47,873, an average of 1,769. A census of the travel on passes in the early period gave an average of five trips on week days and two on Sundays, and a recent census has not changed this basis. For May the pass travel was 49% of the total passengers carried. On the basis of 32 trips per pass per week the fare realized is practically 3¼c. a trip, which is much too low, but the pass system was put in to effect when the company had to face strenuous competition from its employees who had struck and were operating buses and jitneys. The management considers the principal advantage of the pass system is that passengers can be handled much more quickly, as the issuing of transfers and making change are avoided, and one-man operation is therefore made easier. The regular fares are 10c. cash, 3 tickets for 25c., or 14 for \$1.

Woodstock, Ont., City Council has been considering the amending of its bylaw relating to motor bus traffic, with a view to increasing the license fee, and to compel owners to put up a bond of \$10,000 as security for damages for injuries which may be sustained by passengers. The principal bus route is between Woodstock and Ingersoll, competing with the Woodstock, Thames Valley and Ingersoll Electric Ry., the receipts of which are reported to have been seriously affected by the competition.

Marine Department

Canadian Ship and Boat Building Industries' Statistics.

The Dominion Bureau of Statistics, Centres of Industry Branch, which is in charge of J. C. Macpherson, has issued an advance report on the ship and boat building industry for the calendar year 1920, based on reports from 81 shipbuilding and 107 boat building plants, located as follows:—

	Shipbuilding	Boatbuilding
Alberta	2	2
British Columbia & Yukon	16	23
Manitoba	2	—
New Brunswick	3	—
Nova Scotia	39	17
Ontario	11	50
Prince Edward Island	1	—
Quebec	9	13
Totals	81	107

The number, tonnage and value of the ships built or under construction and the value of repairs made to ships and boats during the year, are shown in the following table for each section of the industry. The large decrease in the shipbuilding industry in 1920, amounting to \$31,675,073 was due to the curtailing of the shipbuilding programme on the cessation of hostilities.

	Shipbuilding	Boatbuilding
War ships	4	4
Steel ships, 5 gross tons or over—		
Steam	28	21,359,046
Motor	1	15,000
Sail, with auxiliary	1	7,900
Sail, without auxiliary	5	150,949
Wooden ships, 5 gross tons or over—		
Steam	23	1,583,690
Motor	3	27,571
Sail, with auxiliary	1	35,000
Sail, without auxiliary	1	1,686,875
Unrigged	2	89,000
Small boats, less than 5 gross tons—		
Steam	—	554
Motor	11	6,894
Sail and row	125	14,840
Canoes	4	44,027
Scows, pontoons, canal boats, etc.	42	15,997,326
Ships being built, but not launched	—	6,500
Repairs to ships and boats during year, including water work	—	6,832,228
All other specified products	—	1,525,166
Totals	\$54,814,640	\$1,967,640

The gross and net tonnage of ships completed and of those in course of construction are given by classes in the following table:—

	No.	Gross tonnage	Net tonnage
War ships	4	27,166	16,616
Steel ships, 5 gross tons or over	35	68,204	43,830
Wooden ships, 5 gross tons or over	86	21,947	16,954
Ships under construction	44	95,500	61,546
Totals	169	212,817	138,448

The amount of capital invested in the shipbuilding industry in the whole Dominion was as follows:—Land, buildings and fixtures \$21,508,995; machinery and tools, \$9,547,430; materials on hand, stocks in process, etc., \$21,821,516; cash, trading and operating accounts, etc., 10,080,348; total, \$62,868,289. The capital invested in the boat building industry was as follows:—Land, buildings and fixtures \$448,669; machinery and tools, \$209,783; materials on hand, stocks in process, etc., \$443,472; cash, trading and operating accounts, etc., \$265,093; total, \$1,367,617.

The number of persons employed in shipbuilding plants was 15,078 males and 120 females, the salaries and wages paid being \$21,588,127. The number of persons employed in boatbuilding plants was 762 males and 18 females, the salaries and wages paid being \$922,383.

Canadian shipbuilding plants used Canadian fuel valued at \$361,835 and foreign fuel valued at \$396,707. Boatbuilding plants used Canadian fuel valued

	Iron castings, bars, etc.	Ton
Steel castings, bars and billets	3,859	588,380

Ocean and River Service Estimates Voted.

The following amounts were voted at the Dominion Parliament's recent session:—

Further Supplementary Estimates, for year ending March 31, 1922:—	
Temporary relief of distressed seamen and to cover expenses of shipping firms	\$11,000
Further amount required	—
Main Estimates, year ending March 31, 1923:—	
Maintenance and repairs to Dominion steamships and wreckers	\$1,600,000
Examination of masters and mates	20,000
Investigation into wrecks	12,300
Navigation schools	5,000
Temporary relief of distressed seamen, pay legal expenses and cost of shipping books and forms	5,000
Registration of shipping	6,000
Removal of obstructions in navigable waters	5,000
Inspection of live stock shipments—Quebec and British Columbia	3,000
Subsidies for wrecking plants—Quebec and British Columbia	35,000
Unforeseen expense	5,000
Life saving service, including rewards for saving life	90,000

Further Supplementary Estimates, year ending March 31, 1923:—

To provide boat to replace the C.G.S. Lamerton, lost in Lake Superior	\$100,000
For compassionate allowance to relatives of officers, crew and light-keepers on board of the C.G.S. Lamerton when she foundered in Lake Superior on or about April 10, 1922, and were drowned	30,500
To pay compassionate allowance to seaman Arthur Barton of the C.G.S. Stanley	500
To pay Capt. Frank Murphy for loss of schooner and personal effects as result of collision with the Departmental Steamer Anamore in Aug., 1917	2,201

T. P. Thompson, Inspector of Boilers and Machinery, Marine Department, Kingston, Ont., is reported to have resigned on account of ill health.

Mail Subsidies and Steamship Subventions Estimates.

The following estimates were voted at the Dominion Parliament's recent session for steamship services between the points mentioned:—

Further Supplementary Estimates, year ended March 31, 1922:
Canada, China and Japan, further amount required, Governor General's warrant, Sept. 21, 1921, \$88,229.16.

Main Estimates, year ending March 31, 1921:

ATLANTIC OCEAN.
Canada and Newfoundland..... \$35,000
Canada and the West Indies or South America..... 240,666
Canada and South Africa..... 146,000

PACIFIC OCEAN.
Canada and Australia or New Zealand, or both, to the Pacific Ocean..... 1130,000
Prince Rupert, B.C., and Queen Charlotte Islands..... 21,000
Victoria and San Francisco..... 3,000
Victoria, Vancouver, way ports and Skagway..... 25,000
Victoria and West Coast Vancouver Island..... 15,000
Vancouver and northern ports of British Columbia..... 24,800
Vancouver and ports on Howe Sound..... 5,000

LOCAL SERVICES.
Baddeck and Iona..... \$9,000
Glasgow..... 2,000
Charlottetown, Victoria and Holliday's wharf..... 3,500
Grand Manan and the mainland..... 15,000
Halifax, Canoe and Gushybo, calling at intermediate ports..... 7,000
Halifax, LaHave and LaHave River ports..... 6,000
Halifax and Newfoundland, via Cape Breton..... 5,000
Halifax and Spry Bay and ports in Cape Breton..... 6,000
Mainland and Shipping Islands and mainland..... 3,300
Mulgrave and Canoe..... 13,500
Mulgrave and Gushybo, calling at intermediate ports..... 7,500
Newcastle, Neguac and Escomincac, calling at intermediate points on Miramichi River and Bay..... 6,000
Peele Island and the mainland..... 11,000
Mulgrave, Arichat and Petit de Grat..... 10,000
Pictou, New Glasgow, Miramichi Harbor and Georgetown..... 6,000
Pictou, Mulgrave and Cheticamp..... 7,500
County ports, schooner service..... 1,500
Port Mulgrave, St. Peter's, Irish Cove and other ports on Bras d'Or Lakes..... 6,500
Pictou, Souris and Magdalen Islands..... 24,000
Quebec or Montreal and Paspébeac, and ports on south shore of Gulf of St. Lawrence..... 85,000
Halifax, South Cape Breton and Bras d'Or Lake ports..... 30,000
Halifax and West Coast of Cape Breton, calling at way ports..... 6,000
St. Catharines, Bay and Tadoussac winter steam service..... 2,000
St. John and St. Andrews, N.B., calling at intermediate points..... 4,000
St. John and Bridgetown..... 1,600
St. John and Digby..... 16,000
St. John, Digby, Annapolis and Grandville, along west coast of Annapolis Basin..... 2,000
St. John and ports on Bay of Fundy and Minas Basin..... 8,000
St. John, Westport and Yarmouth and other way ports..... 10,000
St. Stephen, Deer Island and Campbell's Sydney and Bay St. Lawrence, calling at ports..... 2,000
Sydney and Whycocomog..... 7,000
Sydney and Bras d'Or Lake ports, ports on east and west coasts of Cape Breton
Supervision of subsidized steamship services..... 4,000

Supplementary Estimates, year ending March 31, 1922:
Mulgrave and Gushybo, calling at intermediate ports, further amount required Pictou, Mulgrave and Cheticamp, further amount required
St. John and Wedgeport, N.S., calling at intermediate points, further amount required
Campbell's D'Ors Island and mainland, further service required
Charlottetown, Victoria and Holliday's Wharf, further amount required
Halifax, Canoe and Gushybo, further amount required
St. John and ports on Bay of Fundy and Minas Basin, further amount re-

Port Mulgrave, St. Peter's, Irish Cove and Marble Mountain and other ports on Bras d'Or Lakes, further amount required..... 1,600
St. John, Deer River and other way ports..... 2,000

Drydocks Estimates Voted.

The estimates and supplementary estimates for the year ending March 31, 1923, voted at the Dominion Parliament's recent session, contain the following:—
Public Works, chargeable to capital.—Esquimaux, B.C., drydock, under construction, \$1,000,000.
Public Works, chargeable to income.—Esquimaux, B.C., graving dock, travelling crane, main estimate, \$35,000; supplementary estimate, \$3,000.
Public Works, authorized by statute, chargeable to income:—
Collingwood drydock No. 1..... \$15,000 00
Collingwood drydock No. 2..... 9,208 96
Montreal floating dock..... 105,000 00
Port Arthur drydock..... 37,741 60
Prince Rupert floating dock..... 75,970 85

Public Works, chargeable to collection of revenue:—
Champlain graving dock, main estimates, \$47,400; supplementary estimates, \$8,600.
Lachine graving dock, main estimates, \$34,000; supplementary estimates, \$3,200.
Esquimaux graving dock, \$22,000.

Transfer of Naval Service Department to Other Departments.

The National Defence Act, passed at the Dominion Parliament's recent session, provides for the establishment of a Department of National Defence, to be presided over by the Minister of National Defence, who shall be charged with all matters relating to defence including militia, military, naval, air and police service. There is to be a Deputy Minister of National Defence, who, it is said, will be the present Deputy Minister of Militia and Defence.

The Governor in council, may at the Minister's recommendation, appoint an officer, who shall, in relation to the Naval Service, perform all the duties vested in the Deputy Minister of the Naval Service, under the Naval Service Act, and who shall have the rank and salary of a deputy head of a department, and shall be a member of the Defence Council.

The Governor in Council may, on the Minister's recommendation, appoint a Comptroller, who, under the Deputy Minister, shall be charged with all financial matters relating to the department. It is said that the present Deputy Minister of the Naval Service, G. J. Desbarats, C.M.G., will be appointed.

All the powers, duties and functions vested in any minister or deputy minister, by the Naval Service Act, 1910, are vested in the Minister and Deputy Minister of National Defence.

The following branches of the Naval Service Department were transferred to the Marine and Fisheries Department on July 1, Fisheries Protection Service, Hydrographic Survey, Patrol of Northern Waters, Radio Telegraph Service, Tidal Survey.

Dominion Canal Estimates Voted.

The following amounts were voted at the Dominion Parliament's recent session for the Railways and Canals Department:—

Further Supplementary Estimates, year ended March 31, 1922, chargeable to capital:—
Welland Canal, Port Colborne, elevator to pay balance of J. A. Jamieson's claim..... \$7,000
Welland Ship Canal, construction, additional amount required, Governor General's warrant, Feb. 23, 1922..... 435,000
Main Estimates, year ending March 31, 1923, chargeable to capital:—
Welland Ship Canal, construction..... \$8,000,000
Trent Canal, construction and betterments..... 240,000
St. Anne's lock, toward cost of highway bridge across canal at Isle Perrot..... 50,000
Rideau Canal, construction of storehouse at Ottawa..... 4,000
St. Lawrence Ship Canal, surveys and investigations..... 60,000

Main Estimates, year ending March 31, 1923, chargeable to income:—
Champlain Canal improvements..... \$22,000
Carillon-Grenville Canal improvements..... 35,000
St. Anne's Lock improvements..... 5,200
Lachine Canal improvements..... 2,650
Soozville Canal improvements..... 214,000
Trent Canal improvements..... 150,000
Welland Canal improvements..... 160,000
Rideau Canal improvements..... 25,000
Sault Ste. Marie Canal, new steel gate..... 56,000
After
Surveys and inspections of canals, including salaries and expenses of experts employed temporarily..... 30,000
Supplementary Estimates, year ending March 31, 1923, chargeable to income:—
Champlain Canal improvements, additional amount required..... \$35,000
Trent Canal improvements, additional amount required..... 1,500

Working Conditions on British Ships.

—A deputation from the Trades Union Congress, the Sailor's and Firemen's Union, and the Amalgamated Marine Workers' Union, waited on the President of the British Board of Trade, July 7, and complained of working conditions on board British ships. They claimed that firemen work 56 hours a week, and stewards 90 to 96 hrs., compared with a 43 hour week adopted by some other countries.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during June, 1922:

Articles	Canadian	U.S. Canal	Total
Lumber	5	40,811	40,820
Flour	471,270	452,610	923,880
Wheat	1,359,819	11,078,225	12,438,044
Grain, other than wheat	4,230,209	8,702,276	12,932,485
Coke	1,829	7,650	9,479

Freight—Eastbound	187,806	7,409,620	7,597,326
Westbound	33,737	455,054	488,791
Total Freight	221,543	7,864,674	8,086,117

The Steel Bulk Freight Steamship Mathewston.

The steel bulk freight steamship Mathewston, which is under construction by

Lakes service, and will be employed chiefly in the grain trade. The contract

of the single deck type with 31 hatches, spaced 12 ft. centers, each equipped with

Port Arthur Shipbuilding Co. at Port Arthur, Ont., for the Mathews Steamship Co., Toronto, is intended for the Great

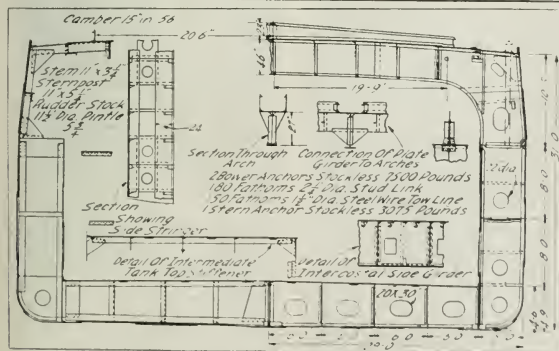

was placed at the end of Dec. 1921, and the keel was laid May 10, delivery being required by Sept. 15. She will be

sliding covers. A special feature will be the separation of the side hoppers from the water bottom, secured by con-

tinuing the hopper side plates down the tank top to bottom shell plates where watertight connection is made. Water ballast for the side tanks will be handled through separate pipe lines leading direct to the manifold, and by this method

hold will be divided into 6 compartments, each with a capacity of from 60,000 to 70,000 bush. Passenger accomodation will include 2 large state rooms with bath, and stairway leading to observation room on the forecastle deck. Accommodation

The steering gear will be of the direct screw type, located aft, with shaft control, from the wheel house, as well as a hand and steam emergency gear on top of the deckhouse aft. The main whistles will be operated by hand pulls,

of construction, the ballast tanks will be divided into 4 compartments athwartships, and the same number fore and aft, not including the peaks and engine room space, which will eliminate so far as possible any dangerous list. The cargo

for the master and chief engineer, with offices adjoining their compartments, and the crews' quarters will all be arranged on deck, each set of rooms being laid out en suite with sleeping quarters, bath and lavatory.

with electric and hydraulic arrangements. Her dimensions will be: Length 550 ft., breadth 58 ft., depth 31 ft. The propelling machinery will consist of vertical triple expansion engines, with cylinders 25½, 41 and 67 in. diam., by 42 in. stroke, arranged with high pressure cylinder in the center, and supplied with steam by 3 Scotch boilers, each 13½ ft. diam. by 11 ft. 2 in. long, equipped with interchangeable furnaces, at a working pressure of 185 lbs. She will be built to the highest class of the American Bureau of Classification for Great Lakes service.

Esquimalt Drydock.—We are officially advised that P. Lyall and Sons Construction Co. Ltd., has resumed work on the drydock at Esquimalt, B.C., for which it has a contract from the Dominion Government. The work was suspended when the Esquimalt Drydock from the Dominion Government was pending a decision as to whether it would be proceeded with to completion, or not. The Government's decision to proceed with the work was made May 13, and mentioned in our last issue. The estimates passed by the Dominion Parliament at its recent session included \$1,000,000 on this account.

Application to Suspend the Coasting Laws.

Following representations made by certain interested shippers etc., the Minister of Trade and Commerce took up the question of grain rates from the head of the Great Lakes, and addressed communications recently to the leading Canadian lake ship owners, calling attention to a slightly lower wheat rate from Fort William to Buffalo, than to Port Colborne, and Georgian Bay Ports, the rates quoted by him being: 2c to Buffalo, as against 2½c and 3c, respectively, and he made a request for an assurance that the discrimination would be removed if the coasting laws were to be maintained. Through the Dominion Marine Association, several interviews and correspondence with the Minister have taken place, and he has been placed in possession of the facts, as of July 8, when the wheat rate from Fort William to Buffalo was 2½c, to Georgian Bay ports 2½c, and to Port Colborne 3c, the rates from Fort William to the seaboard being, all water to Montreal, \$9.75; through Georgian Bay ports \$11.10 and through Buffalo \$11.35. From this it will be seen that the transportation through the Canadian channels to the seaboard, is the cheaper. Since the opening of navigation, the Port Colborne route has been severely congested, and the Government elevator there, blocked, largely due to a blockade at Montreal, where elevators are used to a great extent for storage. Lake ships should have been able to return promptly to Port Colborne from Montreal and relieve the pressure, but the average dispatch was about 90 hours, whereas 12 hours should ordinarily suffice. It is stated that the port of Montreal is not being worked to its maximum efficiency, that no sufficient plan has been devised for prompt unloading and clearing, and that lake shippers, while enjoying a fair rate of freight, have been losing money owing to the use of the elevator capacity by shippers for storage. This has become so serious that lake shippers have under consideration the insertion of a demurrage clause in their contracts, in order to save further loss. In the face of this condition the admission of U.S. tonnage to the Canadian coasting trade for the avowed purpose of breaking down the freight rate to the minimum created on the Buffalo route, would simply further congest Montreal, place the Canadian lake carriers in greater difficulty and preclude the possibility of their paying operating expenses when under the burden and loss of greater delays.

The Minister's attention was called to the reason for the rate to Buffalo, recently created. U.S. tonnage, which ordinarily enjoys the profitable carriage of coal and ore, found no movement in these commodities this season sufficient to satisfy requirements, and as usually occurs in the spring and autumn, when coal and ore are not moving, these ships enter the Canadian grain trade, and in order to keep busy, are willing to carry grain at 2c even if they do not make their operating expenses. The moment coal and ore again become available in quantities, the 2c rate will disappear.

The charge has been made that the Canadian miller is being discriminated against, and that the U.S. farmer is securing an advantage over the Canadian farmer by the retention of grain by-products in the milling business. On investigation, however, it appears that of some 30,000,000 bush. of Canadian grain

shipped via Buffalo, 27,000,000 were bonded through for export, to the seaboard, and that of the remaining 3,000,000 bush., 1,000,000 were subsequently sold for export. Pressure is being continued on the Government for the admission of U.S. tonnage, and some rather rash statements have been made by the parties concerned in the way of guarantee of dispatch and return cargoes. It is not considered likely that such representations will carry much weight with the Government under existing conditions, without the most convincing proof, and facts have been submitted which render such proof impossible.

The Canada Shipping Act, R.S.C., chap. 113, sec. 955, provides that "No goods or passengers shall be carried by water from one port of Canada to another, except in British ships," and sec. 958 reads: "The Governor in council may from time to time declare that the foregoing provisions of this part shall not apply to ships or vessels of any foreign country in which British ships are admitted to the coasting trade of such country, and to carry goods and passengers from one port or place to another." While there was reciprocity in the coasting trade between Canada and the U.S. during the war, it is not considered likely that the privileges of the U.S. coasting trade will be thrown open to Canadian ships at present, but Canadian ship owners are on record as being quite willing to have a suspension of the coasting laws, whenever such suspension is reciprocal. Without such reciprocal action the only method by which the coasting regulations could be suspended, would be by Parliament, the clause quoted above providing for their suspension by the Governor in council, being effective only in case of a reciprocal arrangement with a foreign country, which, as stated, is not, in this instance, considered likely. On the recent prorogation of Parliament, the Premier announced that it would not be called again until January, 1923, and as the matter can only be dealt with by Parliament, it is not possible for any step in the direction of suspension, to be taken, even if such were desirable. Canadian ship owners would have less cause for complaint at present if they were enjoying their full share of the use of facilities for transhipment and unloading already provided in Canada. The views generally expressed on this subject, in the daily press, to a very great extent, are to be mislead, as the general public fails to understand the great loss entailed every day that a valuable steaming ship remains tied to a dock awaiting the loading or unloading of cargo.

In connection with the proposal to suspend the Canadian coasting laws, the following letter, addressed to the Minister of Trade and Commerce, by Capt. J. B. Foote, of the Toronto Insurance and Vessel Agency, is of interest.

"If I may express an opinion, it would in my judgment be very poor policy to suspend the coasting laws, to permit U.S. ships to coast in Canada. The reasons which I advance are that at the present moment your Government, or its operating department, have 6 steel ships tied up, and out of commission at Great Lakes ports, and several others on the coast. If, as alleged, there is discrimination on the part of some Canadian ship owners, why not operate these idle ships, rather than let down the barrier to U.S. tonnage.

Again, such action, or the threat of such action, as the suspension of the law, tends to destroy any incentive there might be on the part of prospective owners to invest in new tonnage, and all of our Canadian shipyards are badly in need of orders; which, if forthcoming, would assist, directly and indirectly, to a considerable degree, in the return of prosperity to this country. Further, if the port of Montreal can be kept reasonably free of congestion, by a good export demand for grain (and the law of supply and demand governs this), it may be assumed that the movement out of that port will only be limited by its capacity to handle all water shipments; both Canadian and U.S. I am not at the moment financially interested in either ships or shipbuilding plants; so that my viewpoint is reasonably free from bias or self-interest."

The World's Shipbuilding.

Lloyd's report on shipbuilding throughout the world, for the quarter ended March 31, shows that there was a total of 955 ships having a gross tonnage of 3,679,622, under construction; not including any which are being built in Germany, for which country no figures were available. Of this gross tonnage, 437 ships of 2,235,998 gross tons were building in the United Kingdom; 31 ships of 136,266 gross tons in the United States, and 487 ships of 1,307,358 gross tons in other countries, exclusive of Germany. The tonnage is classified as follows:—United Kingdom, steam 397, gross tonnage 2,099,507; motor, 28 gross tonnage 133,997; sailing, 11, gross tonnage 2,500; United States, steam 22, gross tonnage 111,976; motor, 6, gross tonnage 19,945; sailing, 3, gross tonnage 4,345; other countries, steam 348, gross tonnage 1,144,224; motor, 79, gross tonnage, 139,587; sailing, 50, gross tonnage, 21,547.

Included in the tonnage under construction in other countries, are the figures for British Dominions, as follows:—Australia, steam 7, gross tonnage 18,350; Canada, steam 10, gross tonnage 12,264; sailing 6, gross tonnage 6,225; Hong Kong, steam 7, gross tonnage 22,110; others, steam 4, gross tonnage 4,278; motor 1, gross tonnage 100; sailing 1, gross tonnage 175; total of 38 ships with a gross tonnage of 63,502.

The tonnage under construction in the United Kingdom is about 404,000 tons less than what was on hand at the end of 1921, and about 1,563,000 tons less than the tonnage under construction there a year ago. The figures given above do not include any ships of less than 100 tons.

The Ice Breaking Steamship J. D. Hazen, which was built for service in the St. Lawrence River, but was sold to the Russian Imperial Government during the war, for operation in the White Sea, and which has been at Cherbourg, France, for some time, has finally been rebought by the Dominion Government, and we were officially advised, July 20, that she was expected to sail for Canada within a few days, in charge of Capt. John Hearn, of Quebec. Que. A special cable to the Toronto Mail & Empire, July 21, stated that the steamship had been seized at Cherbourg, France, by the local authorities, on the complaint of the crew, who contend that their wages have not been paid.

Canadian Government Merchant Marine Operation, Etc.

Officers of Ships.—The following changes of chief engineers have taken place since those advised in our last issue: Canadian Coaster, C. Christian; Canadian Forester, J. J. Francis; Canadian Logger, A. Cunningham; Canadian Navigator, F. C. Brown.

The s.s. Canadian Commander, outward bound from Chatham, N.B., with lumber and general cargo, ran ashore at Flat Point, Little Miquelon, July 3. The wrecking s.s. Lord Strathcona and the wrecking schooner G.T.D. were dispatched immediately to her assistance, and she was reported to be ashore in a bad spot, and it was anticipated that some difficulty would be experienced in refloating her. The engine room, stoke hold and after hold were reported to be full of water, and it was at first stated that she was considered a total loss. Later advice, however, stated that she was in no particular danger. The bulk of her cargo was lightered with the assistance of the steam tug La Canadienne of Halifax, the trawler Sadie Mac, of Sydney, N.S., and the Red Cross Line s.s. Sable I, and she was refloated, July 16, and taken into St. Pierre.

Canadian Trooper Ltd., as owner of the s.s. Canadian Trooper, is suing the Norwegian s.s. Otta for salvage services, when the latter ship was in distress through the breaking of her rudder stock about 500 miles from St. John's, Nfld., whither she was bound, in Oct. 1921. The claim represents the Canadian Trooper as valued at \$599,200, and at the time she had a cargo aboard, valued at \$5,533. A wireless call to all ships, from the Otta was answered by the Trooper, and she eventually got the Otta in tow and took her to St. John's. The cost of piloting has been fixed at \$9,576, and expenses incurred at St. John's, \$2,783.54. The Otta is valued at \$181,600, and her cargo at the time of salvage, at \$141,142. For the defence, it is claimed that there was no such risk as alleged by the Trooper, nor such a state of circumstances with regard to the value of the ship or otherwise, as to give rise to such claim, and the owners left themselves with the Court as to whether the Trooper was entitled to any salvage award, and submitted that, in any event, the claim was grossly excessive. At the time of writing (July 16), judgment had not been given.

Montreal Sailings.

Liverpool Service.—Canadian Conqueror, Aug. 19; Canadian Pioneer, Sept. 2. London Service.—Canadian Ranger, Aug. 10; Canadian Constructor, Aug. 24. Glasgow Service.—Canadian Squatter, Aug. 4; Canadian Runner, Aug. 18; Canadian Navigator, Sept. 1.

Cardiff and Swansea Service.—Canadian Carrier, Aug. 16.

Australia and New Zealand Service.—Canadian Spinner, Aug. 26.

Barbados, Trinidad and Demerara Service.—Canadian Beaver, Aug. 2; Canadian Harvester, Aug. 16; Canadian Coaster, Aug. 30.

Hamilton, Bermuda, Nassau, Kingston and Belize Service.—Canadian Fisher, Aug. 3; Canadian Forester, Aug. 24; Canadian Fisher, Sept. 14.

Newfoundland Service.—Canadian Sapper, Aug. 13 and 29.

Vancouver Sailings.

Australia and New Zealand Service.—Canadian Traveller, Aug. 5; Canadian

Scottish, Sept. 5; Canadian Highlander, Oct. 5.

Oriental Service.—Canadian Winner, Aug. 10; Canadian Inventor, Sept. 15.

India Service.—Canadian Transporter, Aug. 20.

Parliamentary Vote.—The estimates for the year ending March 31, 1923, passed at the Dominion Parliament's recent session contained the following item:—Loan to Canadian Government Merchant Marine Ltd., repayable on demand with interest at rate to be fixed by the Governor-in-council, upon such terms and conditions as the Governor-in-council may determine, and to be applied in the payment of—(a) Deficits in operation of the company and of the ships under the company's control during year ended Dec. 31, 1921; (b) working capital and deficits in connection with such operation during the 15 months ended March 31, 1923; (c) capital expenditure in connection with the ships under the company's control \$4,360,720.

Prince Rupert Drydock and Engineering Co., Prince Rupert, B.C. An appropriation of \$130,000 was included in the supplementary estimates passed by the House of Commons, at its recent session, to settle some indirect claims in connection with the building of the steamships Canadian Britisher and Canadian Scottish. Some opposition developed to the item being included, as it was felt that the Government was in no way responsible for the claims, it having met all demands covered by the contract with the builders, now in bankruptcy. The Minister of Marine, however, stated that he was satisfied that the claims for which the appropriation was asked, were justified.

Lighthouse and Coast Service Estimates Voted.

The following amounts were voted at the Dominion Parliament's recent session:—

Further Supplementary Estimates, year ended March 31, 1922:—
Breaking ice in Thunder Bay, Lake Superior and other points deemed advisable for the good of navigation, further amount required..... \$126,000

Main Estimates, year ending March 31, 1923:—
Agencies, rents and contingencies..... \$210,000
Salaries and allowances to lightkeepers..... 300,000
Maintenance and repairs to lighthouses..... 850,000
Construction of lights and aids to navigation, including regulation of traffic in Detroit river and such other places as may be necessary..... 400,000

Main Supplementary Estimates, year ending March 31, 1922:—
Administration of pilotage..... 80,000
Maintenance and repairs to wharves, breakers, ice thunder bay, Lake Superior and other points deemed advisable for good of navigation..... 40,000
Allowance to Harbor Master, Amherstburg, for supervision of lights and buoys on St. Clair River, Detroit River and Lake Erie, and other services in connection with lighthouse service for seasons of navigation 1921 and 1922..... 8,700

Supplementary Estimates, year ending March 31, 1923:—
Marine Signal Service, further amount required..... \$9,000
Administration of pilotage, further amount required to provide for Sydney pilotage district..... 44,000
Compassionate allowance to John Davidson, formerly lightkeeper at Cape Mudge, B.C..... 500

Canadian Wheat via Panama Canal.—During January, February and March, the shipments of Canadian wheat from Vancouver to European ports via the Panama Canal, totalled 40,758 tons.

The Receiving and Shipping of Grain at Montreal.

The Grain Elevator Commission, which was appointed by the Dominion Government recently, to study the proper balancing of the elevator facilities east of Port William and Port Arthur, at the different lake and ocean ports, consisting of M. P. Fennell, General Manager and Secretary, Montreal Harbor Commission, chairman; R. A. C. Henry, Special Engineer, Railways and Canals Department; and C. J. Smith, Manager, Montreal Warehousing Co., visited Prescott and Kingston, Ont., recently to obtain information in regard to elevator facilities there, and looked into the question of approach channels, depths of water, anchorages, etc., and also looked over several other ports between Prescott and Kingston.

The Grain Clearance Board, consisting of M. P. Fennell, chairman; T. R. Enderby, Operating Manager, Canada Steamship Lines Ltd.; E. N. Todd, General Foreign Freight Agent, C.P.R., and C. J. Smith, Manager, Montreal Warehousing Co., has arranged a system of transportation of grain into and out of Montreal, which it is claimed, will eliminate all congestion, and enable ships to be loaded with a minimum of inconvenience. As a part of this system, the Board looks after the movement of grain from Georgian Bay and Port Colborne elevators to Montreal.

The activities of the Grain Elevator Commission and the Grain Clearance Board gave rise to the following Kingston, Ont. press dispatch, "The members of the Montreal Harbor Commission who were in Kingston for a short time on their way westward, have undertaken to handle all grain passing by water through Canada, and have taken over the Government elevators at Port Colborne." We are officially advised that the Montreal Harbor Commissioners have no intention whatever of taking over the Port Colborne elevator, and the explanation given above, will explain how the report arose.

Naval Service Estimates Voted.

The following amounts were voted at the Dominion Parliament's recent session:—

Main Estimates, year ending March 31, 1923:—
Maintenance of Royal Canadian Navy..... \$1,500,000
Hydrographic Survey and maintenance and repairs of Hydrographic steamships..... 350,000
Fisheries Protection Service and the repairs and maintenance of protection steamships..... 345,500
Radiotelegraph Service and building and maintenance of wireless stations for the general administration of radiotelegraphy..... 440,400
Tidal and Current Surveys..... 30,000
Patrol of northern waters..... 15,000
Customs dues..... 500
Pay of temporary officers and clerks at headquarters, Halifax and Esquimaux dockyards..... 20,000

Marine Public Works Contract.—The Dominion Public Works Department has awarded a contract for dredging at Squamish, B.C., June 29, to Vancouver Dredging and Salvage Co., Vancouver, at \$6 a cub. yd. for class A, and 28¢ a cub. yd. for class B, materials to be measured in situ.

The Mount Royal Steamship Co., Ltd. Montreal, is being sued by the Guaranty Trust Co., New York, for \$798,100 unpaid notes. The President of the company is Jas. McNaught, 10 Broadway, New York.

Dominion Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties.—
Collision with Bridge by s.s. Canadian Squatter.

Held at Chatham, N.S., June 14, into the collision of the Canadian Government Merchant Marine s.s. Canadian Squatter with the Morrissy bridge across the Miramichi River, between Newcastle and Nelson, June 4, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. R. A. MacLean and C. Mitchell, as nautical assessors. The evidence showed that a very defective and dangerous system is used with respect to the approach to the bridge. Though recognized by pilots as unsatisfactory, nothing has been done beyond complaint to the pilot commissioners, where apparently it ended. It is evident that though signals were given timely, pilots had to await the goodwill and readiness of the bridge man to obtain an opening, and hence a dangerous custom was established in bringing ships very close to the bridge before it was opened, and, as things the pilot expresses it, it was the only thing they could do to get it opened. No system of signals has been established, nor has the bridge employ any specific instructions, when, in the event of unforeseen happenings, the bridge could not be operated timely. The court did not expect an employ to be consistently on the bridge from sunrise to sunset, but it maintained in view of the fact that he is to supervise traffic to and from the bridge, with regard to the speed of vehicles, that his absence from his post from noon to 6 p.m., about the time he received the signal, was unjustified, and not in accordance with the rules governing these bridges. With respect to the pilot, who has had many years of service without his conduct being questioned, he was followed a dangerous custom of approaching a bridge with valuable property to a point where ships have to meet eddies, and, while uncertain as to whether something unusual or unsuspected would happen to cause delay in opening the bridge. This custom is of the pilots' own creation and the court assumed that whatever complaints were made, they were of a very weak and indifferent kind, as no attention was evidently given to them. The court did not think that the speed of the ship was too great to meet the conditions existing. Two signals were given in ample time to permit the bridge-man to be at his station. The master saw that everything was done in accordance with the custom as related to him by the pilot, and from his point of view the ship appeared too close to the bridge, and it being clotted, the anchor was let go with appropriate orders to the engine room. Unfortunately, the wrong anchor was let go, which necessitated a speed ahead order to straighten the ship's head. The error was considered excusable. The master's duty in such a case was to insist, when at a safe distance, that the bridge be open before proceeding, but the pilot's assertion that it was necessary to almost touch the bridge before any attempt would be made to open it, was considered as extenuating. The court therefore found that the bridge tender, L. Coughlin, was neglectful in his duties, and was the chief factor in the accident. The pilot, G. Sutton, was found at fault for following a dangerous custom, and his license was suspended for three

months. The master, Capt. F. W. Boulton, was exonerated, but cautioned to use his own judgment in future. The court recommended that a signal be hoisted on a flag pole at the operating tower, and hauled down when the bridge is about to open, and that the instructions to the bridge operator be more clearly established as to duties and responsibilities, and that regulations should be framed by the harbor master for the governance of pilots, so as to avoid possibility of a recurrence of similar accidents.

The nautical assessors both dissented from the court's decision. Capt. R. A. MacLean laying the blame for the accident on the New Brunswick Government, on the ground that invariably ships have been compelled to approach the draw-bridge very closely before the draw would swing, owing to the traffic on the bridge, and he believed that both the master and pilot of the Canadian Squatter had no doubt that the approach would swing as usual, but as it did not, he considered they took the very best steps to avert a catastrophe in view of the fact that the bridge was thronged with people at the time. He recommended that both master and pilot be exonerated. Capt. C. Mitchell attributed the accident entirely to the bridge keeper, on account of his failure to be at his post during the hours of navigation, when the bridge might be required to be open at any time. He appeared to have been left to form his own rules and regulations at his hours of attendance. He had no signal of any description which would by day warn any approaching ship when he was not at his post, or that the bridge could not be opened through any other cause. He recommended that the master and pilot should be exonerated as they followed the usual custom, which has been practised since the bridge was built in 1914.

Grounding of Car Ferry Scotia No. 1.

Held at Mulgrave, N.S., June 17, into the grounding of the Dominion Government car ferry Scotia No. 1, near Borden, P.E.I., May 7, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. N. E. Morris and A. Gamon, as nautical assessors. The evidence showed that the ship had two compasses, both absolutely unreliable, on account of carrying numbers of steel cars, 15 being carried on the trip when the grounding occurred. No log was set, as it could not be used effectively owing to the currents. During the trip there was a thick fog and slow speed was ordered and maintained until the grounding. Casts of the lead were taken three times and at the last cast, three fathoms was found. Hearing both bell and whistle from the shore, the master, Capt. J. M. McKinnon, ordered helm hard aport and full speed astern, but the ship grounded. The court found that the master adopted every precaution which prudence and good seamanship demanded. His last order was proper, as he heard the bell and whistle on his starboard bow, and the speed of 1½ knots an hour was under the circumstances, justified. He was therefore exonerated from blame, the grounding being attributed to the currents, which were northerly in the vicinity, the velocity being underestimated. The course could not be determined, owing to slow speed, and the unreliability of the compass rendering any accurate knowledge of the effect of the current impossible.

Mina Brea-Long Sault-Manon L. Collision.

Held at Montreal, June 24, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. LaPierre and A. Lefebvre, as nautical assessors, into the collision between the Imperial Oil s.s. Mina Brea, and the steam tug Long Sault, owned by Lachance Ltd., Quebec, Que., and the barge Manon L., in tow, in the River St. Lawrence, near Three Rivers, May 28. The court found that J. B. Angers, pilot of the s.s. Mina Brea, was in default for inattention and bad lookout, involving wrong movements of the helm and ship, contrary to good seamanship and rules of the road, and ordered him to pay \$200 in two instalments by July 15, and Aug. 15, respectively. W. A. Poole, second officer of the s.s. Mina Brea was severely reprimanded for indifferent lookout, and failing to call the master as instructed at the first appearance of danger. Capt. A. Geddes, master of the s.s. Mina Brea, was cautioned as to his responsibilities as master, and the owner's attention was called to that fact. As regards the tug and tow, the court considered that while much could be said about their doing, it was of opinion that in view of the situation created by the Mina Brea, they must be given the benefit of the doubt. The master of the barge was considered responsible for the damage to the barge by hard astarbording his helm when fast to the tow line, and as the law does not compel a master to have a certificated master, the court severely reprimanded him. The court stated that it was aware, from experience, that through lack of knowledge or strongheadedness, on the part of masters of ships, barges and small boats, generally, deep draft ships have been placed in positions of jeopardy, causing great anxiety and uneasiness to pilots and officers of large ships, and for this reason, was lenient with respect to the action of the s.s. Mina Brea.

Keywest-Glenmavis Collision.

Held at Montreal, June 26, into the collision between Keystone Transport's s.s. Keywest, and the Great Lakes Transportation Co's s.s. Glenmavis, May 9, in the Welland Canal, near Rami's Bend, both ships being damaged. The evidence showed that the master of the Glenmavis was on deck and saw the Keywest's lights. He exchanged the usual one blast signal when about 100 ft. distant, they being head on, the Keywest being more to the middle of the canal. The Keywest struck the Glenmavis a glancing blow, and he ordered full speed ahead with starboard helm, and then full speed astern, the Glenmavis striking the abutments on the right hand side of the canal, damaging her starboard bow, this being due to the Keywest not giving the Glenmavis sufficient room. The master of the Keywest stated that his ship was at slow speed, and that, being light, he had kept close to the canal bank, and he claimed that the Glenmavis had encroached into the port side of the midship line of the canal. The master was steering and the wheelsman was on the bridge looking out. The court found that the Glenmavis was alone to blame for the damage caused. The Keywest was held to be under the influence of a port helm in accordance with the rules, and the starboard order of full speed astern on the Glenmavis, indicated a sudden

movement without refection, and consequently, the damage done was due to her own manoeuvres, and also indicated that she was going faster than state and as she was the downbound ship, she had to exercise more care. The court did not feel that the case warranted the suspension of the master's certificate, as the first impact could have been brought about by the suction of either ship, which must take place when ships pass at such close range at a speed, which, although in accordance with canal regulations, must be considered hazardous, especially in places where the usual spaces are narrowed by abutments. The full speed astern order was wrong, but was done in the excitement of the moment, and showed lack of judgment, for which the court reprimanded and cautioned the master of the Glenmavis, Capt. Angus Mackay.

A Seamen's Wages Suit.

Before the Quebec Superior Court, recently, five employees, two engineers and three stokers of the s.s. Rock Ferry, owned by George Hall Coal Co., sued for two months wages, claimed to be due, and the company claimed for loss owing to the delay of the ship, caused by the insubordination and consequent discharge of the men. The trouble occurred in 1920, when on a voyage out of Montreal. The master had a dispute with the second engineer, whom he discharged, stating that he would be allowed to leave the ship on her return to Montreal. The man insisted on an instant discharge, and demanded to be put ashore at Three Rivers, but as no call was to be made there, the master stated that he could leave with the pilot. He still insisted on being discharged at Three Rivers, and the remaining men backed him up, claiming that they were acting according to their union agreement, and stated that if the ship was not put in at Three Rivers, they would allow the fires to go out and halt its further voyage. The master therefore immediately put in at Sorel, communicated with the shipping master at Montreal, and discharged all the men, waiting for a new crew. A mistake was, however, made in not paying the men their wages then due, they being entitled to that, and no more, the master claiming that the wages due were forfeited against the cost of the delay to the ship. Judgment was given for the men for the amounts actually due to the date of their discharge, and in favor of the company for the actual balance being in the company's favor, but the judgment declared that the claims were compensated, costs in each case going with the judgment.

Quebec Top Wharfage Rates Reduced.—A Dominion order in council has been passed confirming the Quebec Harbor Commissioner's bylaw 94, replacing the original bylaw 94, providing a tariff of top wharfage rates on goods landed and shipped at the port, and providing for a slight reduction in the tariff for certain commodities, to bring the Quebec harbor rates into harmony with the Montreal ones, which were reduced recently. The decreases are on the following commodities, per ton, coal, bituminous, from 7c to 7c; coke, 10c to 9c; flour, 12c to 11c; and grain, 7c to 6c.

The Hudson's Bay Co. s.s. Baychino, 3,500 tons, will, it is stated, be run between Vancouver and Petropavlosk, Siberia, during the summer.

General Shipbuilding Matters Throughout Canada.

Steamship for Marine Department.—The Dominion Parliament, at its recent session, voted \$100,000 to provide a steamship to replace the C.G.S. Lampton, which was lost in Lake Superior early in the year.

North Vancouver, B.C. Ferry Steamboat.—North Vancouver City Council has again had under consideration, tenders for the construction of a new ferry for the city's service. Tenders have been received from Wallace Shipbuilding and Drydock Co., North Vancouver, for \$249,000 and Napier and Millar, Ltd., Glasgow, Scotland, for \$200,925. It was decided to prepare bylaws covering each tender, and to submit them to the municipal voters at an early date.

Port Arthur Shipbuilding Co., Port Arthur, Ont., will probably launch the s.s. Mathewston, for Mathews Steamship Co., Toronto, about Aug. 12, and make delivery by the middle of September.

Prince Rupert Drydock and Shipyard, Prince Rupert, B.C. did the following work during June—Canadian Government Merchant Marine s.s. Canadian Skirmisher, 8,370 tons, docked, cleaned, painted and generally overhauled and repairs made to 3 frames in shell plating. 15 fishing ships were docked, cleaned and painted; 4 barges were docked, cleaned, painted and repaired, and 2 tugs and 2 yachts were given general overhaul.

Sorel Shipyard.—The estimates for the year ending March, 31, 1923, voted at the Dominion Parliament's recent session, provide \$90,000 for the Government Shipyard at Sorel, Que., comprising offices, shops and laborers.

Victoria Machinery Depot Co., Victoria, B.C., did the following repair work during June—C.P.R. s.s. Princess Royal, docked, painted and hull and engine repairs; Canadian Government s.s. Armenities, docked, painted, and repaired; Dominion Public Works Department dump scow 306, docked, painted and repairs to door, and dredge Ajax, repairs; s.s. Silver Spray, docked, painted and stern bearing repairs; steam tug Point Ellice, boiler repairs; steam tug Nora, docked, painted and repairs to rudder; steam tug Spray, boiler room repairs; s.s. Grainer, docked, painted and bottom repairs; s.s. Orion, engine room repairs; yacht Scaramouche, docked and rudder repairs, and two scows, docked, painted and general repairs.

Yarrows Ltd., Victoria, B.C., did the following repair work during June—Canadian Government Merchant Marine s.s. Canadian Inventor, 5,497 tons, repairs to ballast pumps; Canadian Government s.s. Restorer, 3,180 tons, welding operation; Coastwise Steamship and Barge Co. s.s. Amur, 907 tons docking, cleaning and painting, extensive underwater repairs and engine room and boiler repairs; s.s. Griffon, 1,463 tons, docking, cleaning and painting, and drawing tailshaft; C.P.R. s.s. Princess Adelaide, 3,061 tons, repairs to feed heater; Bowring and Co. s.s. El Lobo, 4,800 tons, minor engine room repairs; Pacific Construction Co., steam tug Burrard Chief, new propeller; dredge John Lee, docking, cleaning and painting; Union Steamship Co. s.s. British Columbia, s.s. Ananous, 1,369 tons, new propeller blades. Several scows were docked, cleaned and painted.

Canadian Notices to Mariners.

The Marine Department has issued the following:

22. May 22.—61, British Columbia, Vancouver Island, west coast, Clayoquot Sound, Hankin Rock, buoy to be discontinued. 62, British Columbia, Juan de Fuca Strait, Carmanah light station, new lighthouse under construction, temporary light to be exhibited.

23. May 29.—63, Ontario, Lake Ontario, Bay of Quinte, Belleville, dredging. 64, United States, St. Clair River, Port Huron ship channel to be closed temporarily. 65, United States, Lake Superior and St. Marys River, radio compass stations established.

24. May 30.—66, British Columbia, Vancouver Island, Clayoquot Sound, Browning Passage, off Usates Point, day beacon established. 67, British Columbia, Johnstone Strait, approach to Port Harvey, additional particulars of shoal reported in the approach.

25. May 31.—68, Nova Scotia, entrance to Beaver Harbor, character of buoys to be changed. 69, Nova Scotia, Cape Breton Island, Sydney Harbor, pilotage.

26. June 1.—70, British Columbia, Vancouver harbor entrance, color of buoys to be changed, buoys to be established. 71, British Columbia, Queen Charlotte Islands, Blunden harbor, corrected particulars of uncharted rock. 72, British Columbia, Seaforth channel, Gunboat Passage, uncharted rock. 73, British Columbia, Laredo channel, depth on shoal.

27. May 5.—74, British Columbia, Strait of Georgia, Fraser River, alteration in lighting system.

28. June 6.—75, Nova Scotia, Bay of Fundy, Harbourville, new lighthouse established. 76, New Brunswick, North Coast, Miramichi Bay, Horseshoe Bar, buoy to be changed in position. Character of buoy to be changed. 77, Quebec, Gulf of St. Lawrence, off Heath Point, radiotelegraph installed on lightsight. 78, Quebec, St. Lawrence River, between Quebec and Montreal, St. Maurice River, buoys established.

29. June 12.—79, Nova Scotia, Bay of Fundy, Minas Basin, Avon River, wreck removed. 80, Nova Scotia, Bay of Fundy, Eatonville, light discontinued. 81, Prince Edward Island, north coast, Malpeque Bay, Denley Basin, change in position of front range light. 82, Quebec, Gulf of St. Lawrence and lower St. Lawrence River, lights to be exhibited for survey purposes, caution to navigators.

30. June 13.—83, Ontario, Georgian Bay, Castor Island, light established. 84, Ontario, Georgian Bay, Opechee Island, light established. 85, United States, St. Lawrence River, Colborne or Little Round Island, wreck, lights established. 86, United States, Lake St. Clair, wreck buoy established. 87, United States, Lake St. Clair, 20 ft. channel, changes in buoyage.

31. June 14.—88, Ontario, Lake Huron, Tobermory, radiotelegraph station closed temporarily. 89, Ontario-Michigan, Detroit River, Livingstone Channel, light to be established, gus buoy to be discontinued. 90, Michigan, Detroit River, Livingstone Channel, light established, buoy discontinued. 91, United States, Lake Huron, southern end, wreck no longer a menace to navigation, gus buoy to be withdrawn.

Atlantic and Pacific Oceans.

The British s.s. Norburn, outbound from Matane, Que., with deals for Liverpool, collided with an iceberg in Belle Isle Strait, July 3, considerably damaging her bows. She proceeded at slow speed to St. John's, Nfld., where temporary repairs were made.

The Anchor-Donaldson Line's s.s. Cassandra was withdrawn from her service between Montreal and Glasgow, during July, and her sailings on July 14 from Glasgow, and July 28 from Montreal, were cancelled. A number of minor repairs are being made in readiness for her sailing from Glasgow, Aug. 17.

The Cairn Line s.s. Cairndhu, outbound from Montreal, collided with and sank the Sincennes-McNaughton Line steam tug Spray, of Montreal, July 6, causing the loss of six of the tug's crew. The Sincennes-McNaughton Line immediately libelled the s.s. Cairndhu, for \$60,000 for the loss of the tug, and the ship was released on bonds being furnished by Robert Reford Co., the agents.

The Donaldson Line s.s. Orthea, inbound to Montreal, collided with the British s.s. Airedale, outbound from Quebec, in the St. Lawrence River, a little west of Father Point, July 3, during a heavy fog. The wrecking tugs Bellechasse and Gopher were immediately dispatched from Quebec to her assistance, and she was beached near White Island, July 5, to save her from sinking. She is stated to be considerably damaged, and the s.s. Airedale is said to have her bow shattered from the water line to the hawse pipes. The s.s. Orthea was refloated, July 18, and taken to Quebec.

Maritime Provinces and Newfoundland.

An order in council has been passed approving regulations for the guidance of pilots passed by the G. B. d'Or Lakes Pilotage District Commissioners, covering the ports, harbors and bays of the Bras d'Or Lakes, and in the Great and Little Bras d'Or.

Senator Dandurand stated in the Senate recently in answer to a question, that engineers are to be sent to Cape Tormentine, N.B., to inspect the wharfage, and the surroundings, and see what dredging is necessary, in order to restore shipping facilities there, and that dredging will be proceeded with during this summer.

Steamship companies operating at Halifax, N.S., gave notice, recently, of the cessation of the existing wage agreement, with the Longshoremen's Association, and also of their intention to decrease wages from 55c an hour for day work, and 65c for night work. After some negotiations between the parties concerned, an agreement was arrived at, by which the existing rates of wages are to continue in effect until Nov. 30, after they may be subject to revision.

Province of Quebec.

The Public Works Department received tenders, July 21, for repairs to the roadway on the north embankment of the Soulanges Canal.

During June, 986 ship passages were made through the Lachine Canal, compared with 822 in May. The shipments of wheat totalled 9,989,933 bush. com-

pared with 4,997,331 in May, but there was a considerable falling off in shipments of corn, barley, etc.

Work was started, July 11, on the dredging of the St. Charles River, this being the first portion of the harbor development scheme, undertaken by the Quebec Harbor Commissioners, under the bill passed last session of the Dominion Parliament authorizing the advancing of \$1,500,000 to the commissioners, for harbor development.

Ontario and the Great Lakes.

The s.s. Rosemount owned formerly by Canada Steamship Lines, and now by Aube Steamship Co., Montreal, has had her name changed to Aube.

The Public Works Department received tenders to July 20 for dredging at the eastern gap, Toronto harbor. A total of 57,000 cub. yds. is to be excavated.

The Hamilton City Board of Control has passed the harbor commissioner's plans for development works in the harbor. Among the work to be undertaken is the cutting of a canal at Stipes Inlet.

The Northern Navigation Co.'s s.s. Noronic, grounded on a sand bar in the Upper St. Marys River, July 13, and was released by Canada Steamship Lines' s.s. Empress, early the following morning without damage.

The Railways and Canals, and Public Works Departments, have been requested to sweep and deepen the St. Marys River Channel, to 21 ft. in consequence of the triple grounding of the s.s. Valcartier early in July.

The s.s. Turret Cape grounded in the Welland Canal July 9, due, it is stated, to high wind. She was released later in the day, traffic having been held up for several hours, owing to the grounding being sideways, the ship blocking the whole channel.

The Mathews Steamship Co.'s s.s. Huronton was reported ashore at St. Denis, near Coteau, July 17, when downbound with grain. The Donnelly Salvage and Wrecking Co.'s steam tug Mary P. Hall and a lighter were immediately dispatched from Kingston, to refloat her.

Dominion Public Works Department dredge 109 arrived at Goderich early in July, to undertake extensive dredging operations in the harbor. A part of the island is to be removed and a large part of the harbor is to be deepened, preparatory to a considerable increase in the elevator storage capacity.

Canada Steamship Lines' s.s. Valcartier, while passing through the channel in the St. Marys River, July 3, grounded three times, but without apparent damage. She was carrying a cargo of 5,884 tons, some 400 tons short of full load, and was drawing 19 ft. 2 in. It is stated that the heavy and shifty winds caused a rise and fall of the water at intervals.

The U.S. Lake Survey reports the stages of the Great Lakes in feet above mean sea level, for June as follows: Superior, 602.20; Michigan and Huron, 580.54; St. Clair 575.46; Erie 572.91; Ontario 246.75. Compared with the average June stages for the last 10 years Superior was 0.24 ft. below; Michigan and Huron 0.40 ft. below; Erie 0.09 ft. below; Ontario 0.19 ft. below.

The steam tug John R. Moore, registered as owned by Pearl M. Moore, Port

Stanley, was offered for sale by tender on July 25, by the Collector of Customs and Excise, Toronto. She was built at Port Stanley in 1911, and is screw driven by engine of 6 h.p. Her dimensions are: length 68 ft., breadth 16.6 ft., depth 9 ft.; tonnage, 63 gross, 43 net. She was recently concerned in a case involving a breach of the Ontario Temperance Act.

An act passed at the Dominion Parliament's recent session constitutes Trenton Harbor comprising all the navigable waters of the River Trent from its mouth to the head of natural navigation at the first dam south of the G.T.R. bridge, and all the Bay of Quinte waters inside or north of straight lines drawn from Myers Point to the west point of Baker Island, thence southwestward to the point at which an extension of Rear St., Trenton, southerly, meets the Bay of Quinte shore. The mayor of Trenton, for the time being, and two persons appointed by the Governor in council, shall be commissioners.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The Purchasing Commission of Canada, received tenders to July 25, for the purchase of the Public Works Department's steam tug J. H. Montgomery, lying at Selkirk, Man. She was built there in 1913, and is screw driven by engine of 10 h.p. Her dimensions are: length 64.6 ft., breadth 16.2 ft., depth 7.4 ft., tonnage 76 gross, 52 net.

The Hudson's Bay Co.'s steamboat Athabasca River was launched at McMurray, Alta., June 3, and christened by Mrs. John Sutherland, wife of the company's chief engineer there. The Athabasca River sailed from McMurray, June 15, on her maiden trip to Fitzgerald, and will be operated regularly on the Athabasca-Mackenzie route during the navigation season.

British Columbia and Pacific Coast.

The Coastwise Steamship and Barge Co. Ltd., Vancouver, has been granted supplementary letters patent, increasing its capital stock from \$250,000 to \$500,000.

The Presbyterian Church in British Columbia has had launched at Vancouver additional mission steamboat for service to the Queen Charlotte Islands. She is 40 ft. long with 9½ ft. beam, has accommodation for five passengers, and will probably be named Sky Pilot.

The Hudson's Bay Co.'s auxiliary powered ship Lady Kindersley, sailed from Vancouver, during June, for Herschel Island, Baillie Island, Coronation Gulf and other Arctic posts, on her second Arctic trip, and is expected to return during September. She carried a large shipment of canoes and motorboats for the Eskimos.

The Air Board of Canada has established an air harbor at Esquimalt, and mariners are cautioned that seaplanes will use for alighting and taking off, an area of half mile square from the southerly point of Patterson Point, on the west side of the harbor, to a point about 180 yds. east of Dyke Point, thence to the southwest point of Ashe Head, thence to about 60 yds. from high water mark at Rose Bank and north to the point of commencement. The hangar is about 100 ft. north of Inskip Island.

G. M. Massey U.S. representative, Manchester Ship Canal Co., Manchester, Eng., visited Vancouver early in July to endeavor to establish a direct service between Vancouver and Manchester. At present, traffic goes to Liverpool, and is transhipped to Manchester, either by water or rail, at additional cost. He pointed out the advantages of direct shipment, and stated that ships of 12,000 tons can navigate the ship canal to Manchester, with safety, and that the port is well equipped with unloading facilities and storage capacity.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince John, is being used for a series of cruises to the Queen Charlotte Islands. The first sailing was from Vancouver, July 1, the second, July 15, and they are arranged fortnightly there. Queen Charlotte Islands as a general after. The object is to establish the tourist route, in conjunction with Canadian National Rys. Calls are made at 14 points, and then the ship proceeds to Prince Rupert, where tourists have the option of taking one of the company's steamships back to Vancouver or Victoria, or of returning over the same route by the Prince John.

The Anderson Co. of Canada has sold the three steamships, Ramon Marimon, formerly Minneapolis; Eduardo Sala, formerly St. Paul; and Brandon, all at one time running in the lake freight trade out of Ogdensburg, N.Y., to D. Sullivan & Co., Chicago, Ill. It is said that they are to be returned to the lake trade. The first named ship was built in Chicago in 1897, and has the following dimensions: Length, 238 ft.; breadth, 42 ft. 2 in.; depth, 22 ft. 2 in.; tonnage, 2,029 gross, 1,222 net, equipped with triple expansion engine, 17, 29 and 47 in. by 36 in. stroke, 132 n.h.p. The second ship was built in 1897 and is a duplicate of the first. The third ship was built at Detroit, Mich., in 1910, and measures as follows: Length, 244 ft.; breadth, 43 ft. 2 in.; depth, 27 ft. 2 in.; tonnage, 2,432 gross, 1,431 net. She is equipped with quadruple expansion engines 17½, 25½, 37 and 54 in. by 36 in. stroke, 175 n.h.p.

The capital stock of G. S. Mayes Tug Co., Ltd., Tug Mouton Ltd., and Tug Samson Ltd., all of Halifax, N.S., has been reduced from \$40,000 to \$20,000, in each case.

Mainly About Marine People.

David Drummond, whose appointment as Agent, C.P.R., and Canadian Pacific Steamships Ltd., Southampton, Eng., was announced in a recent issue, was born at Sheddies, Renfrewshire, Scotland, Oct. 12, 1884, and entered transportation service in 1899, since when he has been, to 1909, in various departments, Allan Line, Glasgow, Scotland; 1909 to 1916, secretary to Chairman, and London Secretary of the company, Allan Line, London, Eng. During the war he acted as Embarkation Staff Officer at United Kingdom ports for the Canadian Expeditionary Forces. In 1919 he was appointed to the General Manager's Department, Canadian Pacific Ocean Services, Ltd., London, Eng.; 1920 to 1921 General Freight Agent, same company, Liverpool, Eng.; 1921 to 1922 Freight Claim Agent, C.P.R., and Canadian Pacific Steamships Ltd., Liverpool, Eng.

E. Hawken, Assistant Deputy Minister of Marine, and Frank Macdonnell, Chairman of Board of Steamship Inspection, Ottawa, who went to Europe in March, in connection with the proposed purchase of the ice breaking steamship, J. D. Hazen by the Marine Department, had not returned to Ottawa up to July 8, and we were then advised that the date for their return was indefinite.

H. E. Kane, Port Agent, Canadian Government Merchant Marine, St. John, N.B., has resigned and has joined the firm of Nagle & Wigmore, there, who have been appointed local agents for the various lines controlled by the International Mercantile Marine Co., New York.

Sir William Nelson, founder of the Nelson Line, operating steamships out of London and Liverpool, Eng., to foreign ports throughout the world, died at London, Eng., July 7.

William Newman, for several years, Works Manager, Polson Iron Works, and latterly, master wrecker for John E. Russell, harbor contractor, etc., Toronto, died at St. Catharines, Ont., June 29, from injuries sustained when he fell into the hold of the s.s. Joyland, which was undergoing repair in the Port Dalhousie drydock. He was born at Kingston, Ont. in 1873, and had lived in Toronto, for

about 20 years. During the war, he acted as a naval architect for the Emergency Fleet Corporation, U.S. Shipping Board, and was an inspector of building operations at different points in the U.S.

H. C. Schofield, local manager at St. John, N.B., for Robert Reford Co., steamship agents and managers, returned there July 13, from England. He is reported to have stated that shipping conditions in Great Britain are not satisfactory, and that owing to a shortage of cargoes, numbers of ships are tied up.

H. B. Smith, President, Collingwood Shipbuilding Co., and Halifax Shipyards Ltd., has been re-elected a director of the British Empire Steel Corporation. Dr. W. L. McDougald, President, Montreal Harbor Commission, and J. F. M. Stewart, of Toronto, have been added to the board.

W. J. Stewart, Chief Hydrographer, Naval Service Department, was voted \$1,000 at the Dominion Parliament's recent session, as allowance in relation to questions under consideration by the International Joint Commission during the year 1922-23.

P. D. Sutherland, General Passenger Agent, Ocean Traffic, C.P.R., Hong Kong, China, arrived at Vancouver, July 3, on the s.s. Empress of Russia, for a short visit to Montreal, and expects to return to Hong Kong on the first Vancouver-Orient trip of the s.s. Empress of Australia.

Welland Ship Canal Construction Contract.—As stated in Canadian Railway and Marine World for July, the contract for combined sections 3 and 4, Welland Ship Canal, has been awarded to P. Lyall and Sons Construction Co., Montreal. The work, which will be in charge of H. M. Scott, who has been transferred from the Esquimalt dry dock construction, for which the same company is the contractor, was commenced June 29. The contractors' headquarters for the Welland work are at Thorold, Ont. The contractor will probably let sub-contracts for rock and earth excavation, and possibly for concrete work, if it can be done at satisfactory prices.

Locomotive and Train Employees' Hours of Service.

The Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen made a joint application to the Board of Railway Commissioners on May 3, 1919, as follows: "The locomotive enginemen have been for many years endeavoring to secure adequate regulations respecting the hours of service of railway employees. Provision has been made in the Railway Act, whereby the Board may make regulations limiting or regulating the hours of duty of any employees, or classes of employees. Believing that regulation of the hours of service of railway employees is in the interest of safety to the travelling public, and of the employees in connection with the operation of trains, on behalf of those we represent we hereby make application for an order of the Board prescribing such regulations as may be deemed necessary in connection therewith." The application was made under the provisions of the Railway Act, 1919, sec. 287, sub-sec. 1, paragraph J, which provides that: "The Board may make orders and regulations limiting or regulating the hours of duty of any employees, or class, or classes, of employees, with a view to the safety of the public and of employees."

On Sept. 27, 1919, the brotherhoods' officers requested the board to let the application stand, owing to the matter requiring further consideration by them. The application was subsequently renewed Jan. 29, 1921, and notices were sent out by the Board for a hearing, in Ottawa on June 21.

In addition to the two brotherhoods above mentioned, the Railway Association of Canada, the individual locomotive railways, and the two train service brotherhoods were represented. The railways and the conductors' and trainmen's brotherhoods opposed the application. The Railway Association was represented by C. P. Riddell, General Secretary; the C. P. R. by E. F. Plintoff, Assistant General Solicitor; the Michigan Central R.R. by W. B. Kingsmill, Solicitor, and D. W. Donahue, Division Superintendent, St. Thomas, Ont.; the G.T.R. by W. C. Chisholm, K.C., General Solicitor, and C. G. Bowker, General Superintendent, Ontario Lines; the Canadian National Rys. by A. Fraser, General Solicitor, and D. Crombie, Transportation Assistant to Vice President, Operation and Maintenance; the Toronto, Hamilton & Buffalo Ry. by H. T. Macdonald, Superintendent; the New York Central R.R. by H. Scott, Superintendent, Ontario Division; the Algoma Central & Algoma Eastern Rys. by W. H. Farrell, General Manager, Algoma Eastern Ry. The Brotherhood of Locomotive Firemen and Enginemen was represented by W. L. Best, Chairman, Canadian Legislative Board; the Brotherhood of Locomotive Engineers by Byron Baker, Legislative Representative, Ash Kennedy and W. G. Dewar; the Brotherhood of Railroad Trainmen by W. J. Babe, Canadian Vice President; the Order of Railway Conductors by S. N. Berry, H. K. Barker and R. A. MacDonnell; the G.T.R. members of the Brotherhood of Railroad Trainmen by J. Maloney,

System Chairman of Grievance Committee.

Byron Baker, in supporting the application, said that the requests were made primarily in the interests of safety, both of railway employees and the travelling public. He outlined the conditions prevailing in railway service, and maintained that it is for a man in locomotive or train service to be in good condition to carry out his work properly. He said that trains are often delayed for many hours, mentioning the worst cause of delay as being inexperienced firemen, and that if it were known what hazards long hours in train service create, it would not be necessary for him to appear and beg for an order to enforce reasonable hours.

W. L. Best said that the legislation desired would have the effect of protecting the employees against themselves. Employees would often go out when they had no business to do so, either to get home quicker, or to make more mileage, when their agreements gave them the right to book rest at the terminal. This brought up the question of what arrangements are in force between the railways and their employees in connection with rest, and Mr. Best stated that on the Grand Trunk Pacific, locomotive men and firemen are not required to leave the home terminal until they have had at least 8 hours rest if requested, such rest to be entered when booking in. At other terminals they are allowed 6 hours rest if requested, and are allowed to hold their locomotive, while if a man is called before his rest is up, he has the privilege of booking further rest. W. C. Chisholm stated that G.T.R. employees who have been on service for 12 hours or more may have 8 hours rest before they may be again called for service, and, provided advance notice is given the dispatcher, locomotive men on the road may have 8 hours rest after being in continuous service for 16 hours. It was also stated that the Canadian National Rys. and C. P.R. schedules provide that locomotive men may have the rest they desire either on the road, after 12 hours service, or at either terminal. Mr. Best claimed, however, that the schedule rules regarding rest do not bring about the desired result, and it soon became evident that the only reason they do not do so is because the employees in many instances do not take advantage of the rights the rules give them.

Chief Commissioner Carvell said that he was not sure that if a man was in good physical condition and wanted to go out, he should be prevented from doing so, whereupon Mr. Best referred to rule G, which states that railway men must not use intoxicating liquor on duty, or frequent places where it is sold. He urged that this rule was made for the benefit of employees and all concerned, although there were lots of employees who considered they had a right to drink if they felt like it. In the same way, he urged, the proposed hours of service rule might be found to be in the interest of all concerned. No definite limitation on hours of service was mentioned in the

application. The U.S. law provides for a 16-hour limitation, and Mr. Best stated that while many of his lodges thought 14 hours would be a reasonable maximum, he was of the opinion that the 16-hour law should be put in at first, for the sake of uniformity with the U.S. practice. He said a brotherhood convention had resolved to petition the U.S. Congress for a reduction in the number of hours from 16 to 12 as a maximum, but that no action had been taken. While Mr. Best was giving testimony, it was stated that it would be practically impossible to have the locomotive men's hours of service regulated, without the same regulations applying to the trainmen. He agreed to this, and said that the proposed regulations were, in addition to protecting his men against excessive hours and against themselves, protect them against other employees whose movements would affect them.

The conductors' and trainmen's representatives opposed the application. On behalf of the conductors, S. N. Berry said that it was felt that it would be quite inconsistent to rob a man of his individuality and make a machine of him rather than a human being. He pointed out that the conductors' contracts with the various railways provide for rest rules, and, as in the case of the locomotive men, they are the judges of their own condition. He said: "If a man cannot judge his own physical condition, I am sorry for him, and I do not think he would make a desirable railway employee, especially in the important positions we are representing here today." In connection with the application of the 16-hour law in the U.S., he said that it costs his organization a great deal of money, operates to reduce the men's earnings, denies them the comfort of their homes, and does not give them any real relief. He said the idea of a train crew getting within a few miles of home with their train, and then being tied up under the law, did not appeal to him, and Canadian employees did not want such a law. W. J. Babe, for the trainmen, stated that the schedule agreements covering hours of service and opportunity for rest are eminently satisfactory, and that every trainmen's lodge had gone on record as opposed to the hours of service regulation asked for. H. K. Barker, General Chairman, Canadian National Rys., Western lines conductors, said that his men could book rest after 12 hours on way freight and 14 hours on through freight; he said he felt sure that if a 16-hour law was passed the railways would try to remove the privileges now enjoyed by the men, and for that reason the men did not want to see the proposed regulation introduced.

C. P. Riddell, General Secretary, Railway Association of Canada, pointed out that the regulations would have to apply to complete train crews and not alone to locomotive men; he outlined how operating costs would be increased if the men were not permitted to take trains through, by sidetracks in the neighborhood of terminals becoming congested, and by the expense of sending out addi-

tional crews to bring in the trains that were tied up. He claimed that as the present schedules give the men opportunity for all the rest they need, and that the majority of the men concerned oppose the regulation proposed, it would be undesirable from the employees' viewpoint as well as from that of the railways.

E. P. Plintoff, Assistant General Solicitor, C.P.R., argued against the application along the same lines, and added that

the idea of tying up trains between terminals was undesirable, for the reason that the men could not get proper rest on the road anyway. He emphasized the additional unnecessary cost in railway operation which would be caused.

C. G. Bowker, General Superintendent, Ontario Lines, C.P.R., presented technical evidence to show that the proposed rules would be prejudicial to the interests of both the men and the railways. This was corroborated by D. W. Dona-

hue, Division Superintendent, Michigan Central Rd., St. Thomas, Ont., and D. Crombie, Transportation Assistant to Vice President, Operation and Maintenance, Canadian National Rys, who claimed that such a rule would add very materially to the cost of transporting grain when the annual peak loads were being handled to the head of the Great Lakes.

After W. L. Best had been examined on the application, the hearing was concluded and judgment reserved.

Interstate Commerce Commission Orders Installation of Automatic Train Control.

Canadian Railway and Marine World for February, pg. 69, contained details of Interstate Commerce Commission's tentative order, requiring 49 specified U. S. railways to show cause why they should not equip one division of each of their respective lines with some form of automatic train control by July 1, 1924. Subsequent hearings held by the Commission, at which the majority of the roads advanced reasons as to why the installations should not be made were dealt with in Canadian Railway and Marine World for May, pg. 242. The chief reasons advanced by the roads were as follows: 1. There has not been any automatic train stop or train control device developed to an extent which would justify the installation contemplated. 2. The railways have not had any opportunity to make adequate service tests of devices which differ fundamentally in their principles of operation from those now installed, and in operation under service conditions. 3. Independently of the tentative order, every reasonable effort is being made by the railways to co-operate with the Commission for the purpose of testing and developing devices which will best meet operating requirements. 4. The order requires a much greater number of, and more extensive, installations than are warranted, in view of the present state of the art. 5. The costs of installation and maintenance of automatic train stop or train control devices are high, and not within the carrier's financial ability at present. In this connection it was argued that the enforced installation of automatic train control would prevent many of the roads specified from going ahead with installations of automatic block signals which were contemplated, and it was argued that signal installations are more important than train control, as the former, in addition to providing for safety of operation, are large factors in increasing line capacity.

Notwithstanding the objections so strenuously put forth by the railways at the hearings, the Commission ordered, on June 13, that the tentative order of Jan. 10 be made absolute, and that the 49 railways specified should proceed forthwith to equip the designated division on each with automatic train control, the installations to be completed by Jan. 1, 1925, six months later than specified in the tentative order. The roads and divisions named in the order are identical with those in the tentative order, with the exception that the Cincinnati, New Orleans & Texas Pacific Rd. has been directed to equip between Cincinnati and Chattanooga, instead of between Cincinnati and Knoxville, and the St. Louis-San Francisco has been directed to equip between Springfield, Mo., and Tulsa, Okla., instead of between Springfield and St. Louis. The Michigan Central Rd. is ordered to equip between Chicago and

Detroit, and the Pere Marquette Rd. between Grand Rapids and Detroit. The railways are ordered to begin without delay to select the devices to be used, and to file monthly reports with the Commission, beginning on or before Jan. 1, 1923, showing in detail the progress made.

A report accompanying the order, the Commission said: "The cost per mile of road and per mile of track cannot be stated generally. The cost for locomotive apparatus and for roadside or track apparatus will therefore be given, together with the cost of the installations which have been under observation. From the various figures submitted by respondents and by proprietors and manufacturers, it appears that the cost of locomotive apparatus for an intermittent control device of the ramp type ranges from \$400 to \$1,000; for an intermittent control device of the induction type, from \$375 to \$2,100; and for a continuous control device, induction type, from \$1,000 to \$3,000. Assuming one indication point per block, the cost of track equipment of the ramp type is from \$200 to \$550 per block; of the induction type, intermittent control, from \$400 to \$2,500; and of the induction type, continuous control, from \$300 to \$1,000. On the Chicago & Eastern Illinois installation the average maintenance cost per locomotive per month over a three months period was \$13.02; per ramp per month, over the same period, \$2.74, and per mile of track per month, \$2.27. On the Chesapeake & Ohio installation the average per locomotive per month over a six months period was \$12.23; per ramp per month, over same period, \$5.68, and per mile of track per month, \$18.12. On the Chicago, Rock Island & Pacific installation, the average per locomotive per month, over a nine months period, was \$11.33; per ramp per month, \$12.43, and per mile of track per month, \$9.44."

The Commission's report also said: "From Jan. 1, 1906, to Dec. 31, 1921, there were 26,077 head-on and rear-end collisions on U.S. railways. These resulted in death to 4,326 persons and injury to 60,682. The damages to railway property alone amounted to \$40,969,663. The annual average of these collisions were 1,643, the average number killed 270, and the average number injured 3,792. The average damage to railway property amounted to \$2,560,603 a year. Losses due to damage to lading are not included in these figures. If to the large property losses there be added the death losses, and the damages paid for persons injured, the total amount will be very great."

Under the Commission's order the permissive feature common to some train control systems already developed, and which is provided for in the American Railway Association's joint committee's recommendations, will not be allowed.

This feature provides for a locomotive man being able to forestall an automatic brake application, and proceed when he knows that it will be all right for him to proceed, even though the automatic stop is against him. The Commission has ruled that such a feature would make the automatic control system subject to the locomotive man's judgment, and observing that this factor of human judgment is the one which automatic train control is designed to eliminate, has ruled that any system adopted must not include the permissive feature.

The definitions, functions, requirements and specifications of a train control system were set out by the Commission in an appendix to its order. They were based upon facts developed by the Commission in its investigations, upon the requisites laid down by the Block Signal and Train Control Board in its report in 1910, the requisites of the Railway Signal Association reported in 1914, the requisites adopted by the American Railway Association in 1914, the recommendations made by the U.S. Railroad Administration Train Control Committee, in 1919, and those adopted by the American Railway Association's joint committee on automatic train control in March, 1921.

The Commission, in its order, has recognized the possibility of installing an automatic train control system uncomplicated by an automatic block signal system, by ordering that the installation of automatic train control devices shall not necessarily be limited to roads or portions of roads already equipped with automatic block signals.

The C.P.R.'s Quebec District Association officials held their regular monthly meeting in Quebec, recently. Following breakfast at the Chateau Frontenac, the business meeting was held, at which Col. J. S. Dennis, C.M.G., Chief Commissioner of Colonization & Development, spoke on matters connected with his department; S. Giddow, General Secretary, St. John's Ambulance Department, C.P.R., spoke on First Aid; and W. F. Haney, Claims Adjuster, spoke on the prevention of accidents. The members were then given luncheon on the C.P.R. s.s. Empress of France. Following this the Harbor Commissioners took them round the harbor, and to the Quebec bridge; the Quebec Ry. Light & Power Co. conveyed them to Ste. Anne's Beach; and to Montmorency Falls, dinner being served at the Kent House. On returning to Quebec they made a tour of the city in observation cars.

Locomotives on United States Railways, increased in the seven years ending with 1913, by 23½% and their total tractive power increased 50%. In the seven years ending with 1920 the number of locomotives increased only 2.3% and their tractive power only 23%.

Canadian National Railways' Locomotive Terminal, Longue Pointe, Montreal.

Complete new locomotive terminal facilities for the Canadian National Rys. at Longue Pointe, Montreal, were finished early this year. They were made necessary by increasing business and the inadequacy of the original terminals, which consisted chiefly of a 4-stall frame locomotive house and a frame coaling trestle, built in 1903. The old facilities were located south of the C.N.R. L'Assomption Subdivision line, about 1,000 ft. east of First Ave., near the easterly end of Ontario St., while the new facilities have been constructed in a new location, north of Boyce St., practically in line with the old layout. The accompanying location plan, fig. 1, shows the new terminal facilities to the northwest of the L'Assomption Subdivision line, the old layout being shown southeast of that line. The yard to the right of the old locomotive terminal is used as a general classification yard, and the track at the extreme right connects with the Harbor Commission's tracks and industrial spurs. The new terminal, as shown in the accompanying layout plan, fig. 2, consists of locomotive house, turntable, and outside track arrangement, machine shop, coaling plant, water tank, stores building, bunkhouse, ash handling facilities, and passenger car yard.

The locomotive house, of the part circle type, is of brick, on concrete foundations, and has 10 stalls. Each stall is 14 ft. wide at front, 21 ft. wide at rear, and 100 ft. deep. The house is completely equipped with tender truck, locomotive truck and driver wheel pits. The locomotive pits, 58 ft. long, are of concrete, and sloped for adequate drainage, and the house is equipped with cinder floor between pits. The roof is of 2-in. t. and g. sheathing, covered with felt, tar and gravel, and its slope is $\frac{3}{4}$ in. in 1 ft. The house is equipped with wood ventilators and wood smoke jacks, and is piped for steam, water and compressed air. The turntable is of the through type, 86 ft. long over all, carried on a concrete centre pier and circle wall. The table is operated by compressed air motor. The locomotive house is fitted with tin clad doors.

The machine shop, located in relation to the locomotive house, as shown in fig. 2, and connected thereto by tin clad fire doors, is of brick on concrete foundations, 21 in. thick. The shop is 53 x 127 ft. The roof, of 2-in. plank, tar and gravel covered, is supported by steel central columns set on concrete piers, and has a slope of $\frac{1}{4}$ in. in 1 ft. The shop is provided with a concrete floor, 6 in. thick, and the large window space affords adequate natural lighting. It is a one-bay structure and has a monitor, running longitudinally, fitted with large window area and ventilation facilities. Lavatory facilities are provided in the shop.

The boiler room portion of the machine shop is 52 ft. 9 in. x 37 ft., and is equipped with three boiler pits and concrete piers. Space for cold storage, and facilities for economical handling of coal, are provided. The boiler room is fitted with 2 locomotive type boilers, of about 60 h.p. each, fitted with automatic boiler feed, and the necessary pumps, compressors, etc., are also installed. The heating system for the terminal is of the sealed automatic type, supplied with steam from the boilers in the boiler room. In addition to heating the locomotive house and machine shop, the same system also heats the stores building and bunkhouse,

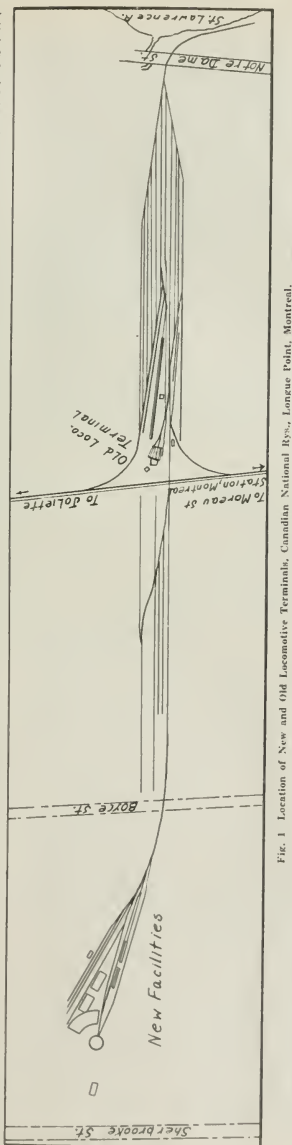

Fig. 1 Location of New and Old Locomotive Terminals, Canadian National Rys., Longue Pointe, Montreal.

and supplies steam to the lines used for heating passenger equipment occupying tracks in the car yard. Drainage in the machine shop and boiler room is provided by pipe laid in conduit. The machine shop is equipped with the usual complement of lathes, drills, shapers, etc., necessary for efficient handling of running repairs.

The stores building, 32 x 93 ft., is of brick veneer on concrete foundations, and equipped with roof covered with asbestos shingles. It has a basement, a portion of which is used for oil tanks, which are provided with pumps located on the main floor. The remainder of the basement is used for storage of material of the heavier class, and the main floor equipped with bins and shelving, is used for storage of locomotive supplies. The stores building also includes the locomotive foreman's office, and locomotive crew registering room, and lavatories.

The coaling plant, of 200 tons capacity, is of wood, on concrete foundations, and delivers coal to locomotives on two tracks. It includes an elevated trestle, up which the cars are run, and from which the coal is dumped to the hopper below and elevated by continuous chain buckets. The mechanism is operated by electric motor. The sandhouse is of frame and is equipped with a concrete firewall between the sand store room and the drying room. The sand is elevated to the cast pocket on the coal chute by compressed air pressure, and delivered to locomotives on either coaling track by the gravity system. The ash handling facilities are of the depressed track type. The locomotive tracks are supported on cast iron columns located 5 1/2 ft. c. to c., set on concrete piers, and the asphalt tracks are 8 ft. 8 in. below the level of the locomotive tracks.

In addition to the outside tracks for locomotive handling and storage, the terminal includes 3 car tracks, with capacity for storage of 38 passenger cars. Each track is equipped with air, water, and steam connections, the air and steam being supplied from the boiler room in the machine shop.

The water supply is obtained from the City of Montreal, the connection having necessitated laying a main from St. Catherine St. to Boyce St., on First Ave., and along Boyce St. to the railway property, where a meter chamber has been built and a meter installed. From this point to the different buildings, 6-in. cast iron pipe, with lead joints, has been laid. In addition to the extension of the water mains, the city built a sewer on Boyce St., to which the C.N.R. connected an 18-in. vitrified tile sewer, running from the turntable pit to Boyce St., with connections from the different buildings. Manholes have been located 150 ft. apart. The water tank, consisting of wooden tub and framework, supported on concrete foundations, is of 60,000 imp. gal. capacity, and the standpipe, of the Sheffield-Johnson no. 10 type, is supported on concrete foundations.

As shown by fig. 2, the terminal has two inbound and two outbound locomotive running tracks, in addition to the car yard tracks, elevated tracks to coaling plant and depressed tracks to asphalt. In addition to the construction of tracks in the terminal itself, it was necessary to rebuild the line between the C.N.R. main line and Boyce St., reducing the grade and relaying 80-lb. rail, which is also laid throughout the yard. The layout

contains approximately 11,000 ft. of trackage, of which 3,000 ft. are passenger car tracks. The grading for the tracks involved the handling of 7,000 cu. yd. of material, principally clay.

The terminal is used for handling of locomotives operating on the Quebec District, Montreal Division, L'Assomption Subdivision, which extends from the Moreau St. station, in the eastern end of Montreal, to Joliette, Que., 36.3 miles, and also for locomotives running past Joliette and operating on the St. Lawrence Subdivision, which extends from Joliette to Quebec, 140.2 miles. At present from 9 to 15 locomotives a day are handled at the terminal.

The construction of the new terminal was begun in Sept., 1920, and was completed in Jan., 1922. With the exception of the coaling plant, sandhouse and turntable, all of the work was done by the railway's own forces. The coaling plant was supplied by Williams & Wilson, Montreal, and the turntable by Canadian Bridge Co., Walkerville, Ont. The general layout of the terminal was designed by A. F. Stewart, then Chief Engineer, Eastern Lines, Canadian Northern Ry., Toronto, now Chief Engineer, Canadian Government Ry., Moncton, N.B. The buildings were designed by G. C. Briggs, then Architect, Eastern Lines, Canadian National Ry., Toronto, now

Rate on Blister Copper from Port Colborne to U.S. Points.

The International Nickel Co., refining nickel at Port Colborne, Ont., and Constable Hook, N.J., complained in Jan., 1921, to the U.S. Interstate Commerce Commission against the Grand Trunk Ry., and the Director-General of U.S. Railroads, as agent, that the 5th class rate of 35c. charged on 26 carloads of rate of blister copper from Port Colborne to Constable Hook and Chrome, N.J., was unreasonable, in that it exceeded the subsequently established rate of 23.5c. Reparation was sought. Three of the shipments moved over the G.T.R. to Suspension Bridge, N.Y., 22 miles, and thence over the Lehigh Valley Rd. to Constable Hook, 466 miles. Other shipments moved over the G.T.R. to Black Rock, N.Y., 20 miles, thence over the Delaware, Lackawanna & Western Rd. to Taylor, Pa., and thence over the Central R.R. of New Jersey to Constable Hook and Chrome, 452 and 458 miles respectively.

Complainant began operating its plant at Port Colborne early in the summer of 1918, and on July 30, 1918, asked defendants to establish a commodity rate on blister copper from Port Colborne to the destinations mentioned above, stating

tion of the Interstate Commerce Commission's jurisdiction, it was stated in the decision that "In view of the variance of opinion entertained with respect to our jurisdiction in the premises, it seems desirable that our ruling in this case which is fairly characteristic of those presenting the same issue of law, should be reviewed by the courts, in order that the extent of our jurisdiction may be judicially established for our guidance in similar cases as they may arise." Commissioner Esch dissented from the majority conclusion, and stated, "Whatever may have been the rule prior to the enactment of the Transportation Act, 1920, an amendment therein made to the Interstate Commerce Act specifically restricts our jurisdiction over foreign commerce to that part of the transportation taking place within the U.S. It is clear from the report of the majority that the unreasonableness of the through rates assailed inhered in the divisions received for that part of the transportation which took place within Canada, and that the charges received for that part of the transportation within the U.S. were not unreasonable. In my opinion we cannot undertake to render a decision affecting the charges for transportation beyond the borders of the U.S."

Canadian National Railways Pension Fund.

The following questions were asked in the House of Commons recently, by C. A. Gauvreau, Temiscouata, Que., and answered by the Minister of Railways:

Q.—Is it the intention of the Railways and Canals Department or "the Board of Commissioners of the Canadian National Ry." to reorganize the pension fund of its railways so as to increase the pensions to employees, and if so, when? A.—Investigation is being conducted, and it is hoped shortly to present for consideration a complete pension scheme for the Canadian National Ry.

Q.—Is it the Railways Department's intention to increase the pension paid to old employees of the Intercolonial Ry., and if so, when? A.—The current estimates of the Department include a vote of \$50,000, the same as in 1921, to provide for increasing the minimum compensation from \$20 a month to \$30, for employees who have been superannuated under the Intercolonial Ry. Provident Fund.

New Non-temper Brittle Steel.—H. H. Ashdown, of Sir W. G. Armstrong, Whitworth & Co., Manchester, in a paper presented recently before an English technical association, gave information concerning a new steel which he claimed to be superior to any of the modern alloy steels, in its mechanical, physical and general properties. He stated that it is impossible to make it temper brittle. He pointed out that while many nickel chrome steels possess excellent mechanical properties, they reveal inconsistency in impact tests, and that the new steel, known as "Vibrac," in addition to exhibiting better mechanical properties, particularly in regard to elastic limit, could, if subjected to any normal treatment after tempering, be either furnace-cooled or cooled in air, thus cutting out all risk of distortion, and yet give higher impact values than nickel chrome steels treated under the most favorable conditions.

FIG. 2. Layout Plan, Canadian National Ry. Terminals, Longue Pointe, Montreal.

Architect, Western Lines, C.N.R., Winnipeg. The construction work was done under the direction of H. T. Hazen, acting Chief Engineer, Canadian Northern Ry. lines east of Port Arthur; R. A. Baldwin, District Engineer of Construction, being in direct charge of grading and track work, and E. Hedley, Superintendent of Buildings, being in charge of building construction.

G.T.R. Dining Car Conductor Fined.—J. H. Lovell, conductor of a G.T.R. dining car, was fined \$400 and costs, by the London, Ont., Police Magistrate, recently, for having 28 bottles of whisky in the International Limited's dining car. He pleaded that he knew nothing of the presence of their liquor, but the magistrate held that as he was in charge of the car he must be held responsible. It is said the case will be appealed.

G.T.R. Recreation Club.—A recreation and athletic club for the company's office staff on the Island of Montreal was formed recently with the following officers: Honorary President, H. G. Kelly; Honorary Vice Presidents, W. D. Robb, J. E. Dalrymple, R. S. Logan, F. Scott, J. M. Rose, D. E. Galloway; President, E. R. Harwood; Vice Presidents, E. W. Burns, A. S. Mitchell, Mrs. W. J. Gaudin; Secretary, I. S. Edmunds; Treasurer, H. P. Walsh.

that shipments would begin to move late in August. A joint commodity rate of 23.5c. minimum 40,000 lbs., became effective March 10, 1919. At the hearing it was shown that the G.T.R. hauled to shipments a little more than 20 miles, or less than 5% of the total distance, but received as its division 35% of the total revenue. The commodity rate established, subsequently, was divided in the same manner. In view of the G.T.R.'s refusal to participate in the hearing, no evidence was presented in defence of the disproportionate division received by it. It was contended that the division received by the lines within the U.S., 22.7c. for a haul of about 460 miles, was not excessive or unreasonable.

The committee's decision, given recently, states that the charges assailed were unreasonable to the extent that they exceeded those that would have accrued at a rate of 23.5c. per 100 lb.; that complainant made the shipments as described and paid the charges thereon; that it had been damaged in the amount of the difference between the charges paid and those found reasonable, and that it is entitled to reparation from the Director General of Railroads, as agent, with interest.

On account of part of the haul being in Canada, which brought up the ques-

Birthdays of Transportation Men in September.

Many happy returns of the day to:—
Wm. Aird, ex-Master Mechanic, Locomotive Works, G.T.R., Montreal, now of Barrie, Ont., born in London, Eng., Sept. 3, 1843.

W. B. Bamford, District Freight Agent, C.P.R., Nelson, B.C., born at Belleville, Ont., Sept. 10, 1863.

O. E. Becker, Chief Dispatcher, Canadian National Rys., Saskatoon, Sask., born at Montreal, Sept. 20, 1873.

G. T. Bell, Passenger Traffic Manager, G.T.R., Montreal, born there, Sept. 7, 1861.

E. J. Blais, Foreman Tinsmith, Canadian National Rys., Transcona, Man., born Sept. 26, 1876.

V.T. Boughton, ex-Assistant Superintendent, Chapeau Division, Algoma District, C.P.R., Chapeau, Ont., now of New York, born at Troy, N.Y., Sept. 9, 1888.

E. R. Bremner, ex-Division Freight Agent, Ottawa Division, G.T.R., Ottawa, born at Toronto, Sept. 9, 1875.

W. B. Bullin, ex-Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, born there Sept. 16, 1858.

W. E. Burke, General Traffic Manager, Canada Steamship Lines, Montreal, born at Belleville, Ont., Sept. 23, 1881.

A. D. Cartwright, Secretary, Board of Railway Commissioners, Ottawa, born at Kingston, Ont., Sept. 30, 1864.

A. S. Dawson, Chief Engineer, Natural Resources Department, C.P.R., Calgary, Alta., born at Pictou, N.S., Sept. 6, 1871.

W. E. Duperon, General Passenger Agent, Canadian National-Grand Trunk Pacific Rys., Winnipeg, born at Stratford, Ont., Sept. 4, 1872.

R. S. Elworthy, General Agent, Passenger Department, Ocean Traffic, C.P.R., Chicago, Ill., born at London, Eng., Sept. 10, 1877.

H. G. Foreman, Assistant Treasurer, Canadian Northern Ry. System, Toronto, born there, Sept. 2, 1882.

C. B. Foster, Assistant Passenger Traffic Manager, Eastern Lines, C.P.R., Montreal, born at Kingston, N.B., Sept. 30, 1871.

G. J. Fox, Superintendent, Calgary Division, Alberta District, C.P.R., Calgary, Alta., born at Montreal, Sept. 24, 1883.

W. H. Gordon, Trammaster, C.P.R., Field, B.C., born at Montreal, Sept. 21, 1875.

R. S. Gossett, Auditor of Disbursements, Canadian Northern Ry., Toronto, born there, Sept. 28, 1879.

E. Goulet, Agent, C.P.R., New Westminster, B.C., born at Quebec, Que., Sept. 1865.

W. B. Howard, District Passenger Agent, C.P.R., Toronto, born at Chatham, N.B., Sept. 15, 1877.

W. E. Howard, dispatcher, C.P.R., Brownville Jct., Me., born at St. Andrews, N.B., Sept. 14, 1871.

Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., Montreal, born at Brockville, Ont., Sept. 15, 1858.

G. C. Jones, Assistant to President, G.T.R., Toronto, born at Clyde, N.Y., Sept. 24, 1869.

C. B. King, Manager, London St. Ry., London, Ont., born at Galena, Ind., Sept. 12, 1871.

S. King, London, Ont., formerly in car building service, born at Thetford, Norfolk, Eng., Sept. 12, 1853.

C. C. Labrie, Purchasing Agent, Canadian National Rys., Vancouver, B.C., born at Quebec, Que., Sept. 8, 1882.

R. E. Larmour, General Freight Agent, Eastern Lines, C.P.R., Montreal, born at Brantford, Ont., Sept. 26, 1868.

C. D. MacKintosh, Superintendent, Lethbridge Division, Alberta District, C.P.R., Lethbridge, Alta., born at Auckland, New Zealand, Sept. 24, 1882.

W. A. Mather, General Superintendent, Saskatchewan District, C.P.R., Moose Jaw, born at Oshawa, Ont., Sept. 1885.

J. A. Morice, Foreign Freight Agent, C.P.R., Toronto, born at Stratford, Ont., Sept. 17, 1878.

M. B. Murphy, Manager, Winnipeg Joint Terminals, Winnipeg, born at Napa, Cal., Sept. 11, 1866.

J. Paul, District Freight Agent, Canadian National Rys., Winnipeg, born in Ephraim, Ont., Sept. 13, 1858.

W. J. Pickrell, Master Mechanic, New Brunswick District, C.P.R., St. John, born at London, Ont., Sept. 15, 1880.

H. T. Rawlings, ex-Lake Forwarding Agent and Fuel Inspector, Canadian National Rys., now Vice President, Baier Coal Co., Cleveland, Ohio, born at London, Eng., Sept. 27, 1883.

C. S. Richardson, District Freight Agent, C.P.R., Buffalo, N.Y., born at New York, Sept. 26, 1870.

W. D. Robb, Vice President, Transportation and Maintenance, G.T.R., Montreal, born at Longueuil, Que., Sept. 21, 1857.

A. Scott, Division Engineer, Island Division, Canadian National Rys., Charlottetown, P.E.I., born at Kirkcaldy, Scotland, Sept. 6, 1884.

F. A. Shaw, General Agent, Freight Department, Canadian National-Grand Trunk Rys., Cleveland, Ohio, born at Smiths Falls, Ont., Sept. 20, 1872.

J. M. Silliman, ex-Engineer, Maintenance of Way, Susquehanna Division, Delaware & Hudson Rd., Oneonta, N.Y., now Fabre, Que., born at Easton, Pa., Sept. 8, 1885.

F. W. Sterling, ex-District Freight Agent, C.P.R., Edmonton, Alta., now of Quebec and Sterling, Vancouver, B.C., and Shanghai, China, born at Thornbury, Ont., Sept. 13, 1879.

Hon. L. C. Webster, President, Webster Steamship Co., and First Vice President, Dominion Marine Association, born at Quebec, Que., Sept. 30, 1871.

F. G. Wood, Ontario Freight Agent, Canadian Government Merchant Marine, Toronto, born there, Sept. 15, 1890.

H. A. Young, Northern Navigation Co., Sarnia, Ont., born at Brooklyn, N.Y., Sept. 1, 1864.

Speedy Travelling.

Simpson—"Well, talking about railway travelling, I was in a train the other day that travelled 60 miles within the hour."

Smart—"Yes, that's pretty quick travelling, but I did better than that yesterday. You know how far it is from Edinburgh to London? Well, I went into the station at Edinburgh and bought a third-class ticket, and, would you believe it, I came here to London in a second!"—Tit-Bits.

The Association of Railroad and Steamship Agents, of Boston, Mass., visited Quebec City recently. About 65 members of the association with ladies were present, and were taken in charge by J. S. Thom, President, Quebec Transportation Club. The party was taken to Montmorency Falls and St. Anne de Repentigny, and entertained at luncheon at the Chateau Frontenac. Part of the programme arranged had to be abandoned on account of rain.

Railway Companies' Liability as Common Carriers.

The Supreme Court of Canada gave judgment recently on the New York Central Rd. Co.'s appeal against the Quebec Court of Appeal's decision confirming the Quebec Superior Court judgment giving \$2,600 damages, with interest and costs, to Scotland Woollen Mills Co., Montreal, for goods lost in transit. The Scotland Woollen Mills Co., in Dec., 1917, bought from a firm in New York a lot of woollen goods valued at \$2,832.29, which were shipped in four cases from New York via the New York Central Rd. The railway accepted delivery Dec. 20, and issued a bill of lading. On examination in Montreal on arrival, the goods were found to be badly damaged, and three of the cases had apparently been opened and considerable of the goods removed. While in the customs premises several pieces of goods were removed by unknown persons from the fourth case. The railway company was sued for \$3,809.94, representing the cost of the goods short, and duty paid. The company pleaded that it delivered in Montreal the same goods in quantity and condition as were received in New York. The Superior Court found for the plaintiff, fixing the railway's liability at \$2,666.40, the value of the goods actually short. The Court of Appeal confirmed the judgment. Justices Martin and Rivard dissented from this finding, considering that the damage should be fixed at \$1,800, instead of the larger amount. The Supreme Court, by a majority, affirmed the judgment, holding that the burden of proof was on the railway company, and that as it had no exculpatory evidence, it must be held liable. Sir Louis Davis dissented as to the amount of damages only. The judgment of the Superior Court therefore stands.

The Quebec Court of Appeal gave judgment recently on the Grand Trunk Ry. Co.'s appeal against the Superior Court's judgment giving Mrs. Rose Greenwood \$100 compensation for damage to baggage. She was a passenger by the G.T.R. from Montreal to St. Armand, and thence by stage to Phillipsburg. During transit her trunk was burst open and some of its contents stolen. She sued to recover \$327.50, but the Superior Court ruled that the company's liability was limited to \$100 by the conditions of the contract; that the damage and loss occurred on the railway line, and gave judgment for \$100. In the Court of Appeal, Justice Teller, who delivered judgment, pointed out that in the light of the established jurisprudence on the point at issue, there was not a big principle of law at stake in the case. The whole question resolved itself into one of proof. Was the woman's trunk interfered with while in the company's possession? The Court was of opinion, from the facts disclosed, that it was; therefore the company was liable. The judgment of the Superior Court was confirmed with costs in both courts.

The American Locomotive Co. has delivered to the Union Pacific Rd. a mountain type locomotive which is held to be the lightest in proportion to maximum horsepower capacity of any locomotive of this type yet built. The total weight is 345,000 lb., of which 230,000 are on drivers.

Fire Prevention Regulations for Railway Companies.

The Board of Railway Commissioners passed general order 362, April 19, as follows:—Re general order 107, July 4, 1913, prescribing regulations to be adopted by railway companies for the prevention of fires. Upon reading the submissions filed by the Railway Association of Canada, on behalf of the railway companies interested; and upon the report and recommendation of the Board's Chief Operating Officer and Chief Fire Inspector, the Board orders as follows:—

1. That orders 3245, July 4, 1907; 3465, Aug. 14, 1907; 8903, Dec. 15, 1909; 15995, Feb. 16, 1912; 16570, May 22, 1912; and general order 107, July 4, 1913, are hereby rescinded.

2. Unless exempted by special order of the Board, every railway company subject to the legislative authority of the Parliament of Canada, the railway of which is under construction, or being operated by steam, shall cause all locomotives and other portable boilers, other than those using oil as fuel, used on the railway, to be fitted and kept fitted in good order with practical and efficient devices for arresting the escape of sparks or live coals, as hereinafter set forth:

(a) Every locomotive boiler equipped with an extension smokebox shall have installed therein, so as to extend completely over the aperture through which the smoke escapes, a double-crippled wire netting, the mesh of which shall not be larger than $2\frac{1}{2} \times 2\frac{1}{2}$ per inch of no. 10 Birmingham wire gauge; the openings of the said netting shall be sixteen $\frac{1}{16}$ ths of an inch square when new. The condemning limit of the said netting shall be eighteen $\frac{1}{16}$ ths of an inch. Experimental or improved devices which are not in full accord with this clause shall be tried only on receipt of permission from the Board's Chief Operating Officer.

(b) Every locomotive equipped with a diamond stack shall be fitted with a double-crippled wire netting, with a mesh not more than 3×3 per inch of no. 10 Birmingham wire gauge, placed in the front end of the diamond of the stack, so as to cover the same completely; the openings of the said mesh shall not exceed three-sixteenths and one $\frac{1}{16}$ th (that is, thirteen $\frac{1}{16}$ ths) of an inch when new. The condemning limit of the said netting shall be fifteen $\frac{1}{16}$ ths of an inch.

(c) All steam shovels, ditching machines, and pile drivers, having exhaust in stack and burning coal, shall be equipped with a wire netting in the front end, in accordance with the standard prescribed in sub-section (a), or with a bonnet screen or double-crippled wire netting mesh device on the top of the smoke stack, as may be prescribed in sub-section (a). All openings between the bonnet netting and stack must be fitted so as to leave no opening larger than the mesh of the netting. The condemning limit of the said netting shall be the same as sub-section (a).

3. Manhole, and door openings of superheater type next to the tube sheet, shall be securely closed and held in place by cotters or keys, so constructed that they cannot fall out. All dead plates and nettings shall be securely fastened to the smokebox shell by angle irons of sufficient width to hold the same in position. In no case must there be an opening in the dead plates where fitted around steam pipes or superheater doors, or any joints, in excess of $\frac{1}{8}$ of an inch in width. Cement or asbestos must not be used to fill openings in the fitting of fire-protective appliances.

4 (a). The openings of ashpans of locomotives with narrow fireboxes shall be covered with metal dampers. (b). Ashpan slides and doors of locomotives, when closed, shall be secured in that position by a heavy spring or by any other positive method. (c). Locomotive ashpans draft ports or openings shall be protected by solid deflecting plates, netting, or perforated plates, so placed as to protect the opening. Where netting is used, it shall be protected by deflecting plates.

(d). On locomotives where rods pass through the ashpans, the opening for operation shall be no larger than is actually necessary, and shall be protected wherever practicable by deflecting aprons or hoods, so placed as to prevent the escape of ashes and fire. Damper rods from the cab shall be disconnected between April 1 and Nov. 1 each year, or during the additional period, if any, as provided in sub-section (f). (e). Overflow pipes from injectors, or a separate pipe from boiler, or water pipes from injector delivery pipe, shall be fitted into the ashpans with the necessary valve and other fixtures to supply water to all hoppers of the ashpans at the same time.

(f). Sufficient water to dampen ashes and extinguish fire falling from the grates must be supplied from April 1 to Nov. 1 each year, or during such additional period as may be required in any particular territory by the Board's Chief Operating Officer.

5. That every railway company provide adequate inspection at terminal or divisional points where its locomotive engines, steam shovels, ditching machines, and pile drivers are housed and repaired, and at shops where necessary, and cause (a) An examination to be made, at least once a week, of—1. The netting. 2. Dead plates. 3. Ashpans. 4. Dampers. 5. Slides and doors. 6. Any other fire-protective appliances; (b) And a record to be kept of every inspection in a book to be furnished by the railway company for the purpose, showing: 1. The numbers of engines, steam shovels, ditching machines, and pile drivers inspected; 2. The day and hour of day of such inspection; 3. The condition of the said fire-protective appliances and arrangements; and 4. A record of repairs made in any of the above-mentioned fire-protective appliances. The said book to be open for inspection by any authorized officer of the Board. (c) In case any of the said fire-protective appliances are found to be defective, the said equipment shall be removed from service, and shall not (during the said prescribed period) be returned to service unless and until such defects are remedied. (d) Every railway company shall make an independent examination of the fire-protective appliances on all locomotives, steam shovels, ditching machines and pile drivers of such company, at least once each month, and the conditions of such fire-protective appliances shall be reported direct to the chief mechanical officer of the railway company, or other chief officer held responsible for the condition of the company's motive power.

6. That no employee of any such railway company—(a) do, or in any way cause, damage to the netting or other fire-protective appliances on any locomotive or other boiler in service. (b) Open the back dampers of any locomotive while running ahead, or the front dampers of any locomotive while running in reverse, when there is snow on the ground and it is necessary to take such action in order to have the engine steam properly.

7. That no such railway company permit fire, live coals or ashes to be deposited on its tracks or right of way, unless they are extinguished immediately thereafter, except in pits provided for the purpose.

8. That, unless otherwise ordered, no such railway company, between April 1

and Nov. 1, burn as fuel on its locomotives, steam shovels, ditching machines, and pile drivers, any coal not possessing good coking properties, the use of which with standard front-end fire-protective appliances prescribed by clause 2, results in the emission of sparks from the stack to an extent deemed by the board to be dangerous to the public interest, unless such equipment is provided with special fire-protective appliances approved by the board. Whether any particular coal possesses good coking properties shall be determined by certificate from the Mines Branch, Department of Mines, Ottawa.

9. That railway companies take all reasonable precautions to eliminate the danger of fires being set along railway lines by passengers and employees throwing burning smoking materials from trains. The measures to be taken shall include the posting of warning notices in cars or compartments of cars in which smoking is permitted, and the issuance at suitable intervals during the fire season of verbal warnings to passengers in such cars or compartments, including observation platforms and open observation cars. The territory within which they shall be effective shall be determined by the Chief Fire Inspector.

10. That every such railway company establish and maintain fireguards along the route of its railway as the Chief Fire Inspector may prescribe. The nature, extent, establishment and maintenance of such fireguards shall be determined as follows: (a) The Chief Fire Inspector shall each year prepare and submit to every such railway company a statement of the measures necessary for establishing and maintaining the fireguards of such railways in a condition safe from fire, so far as may be practicable. (b) Said measures may provide for the cutting and disposal by fire or otherwise of all or any growth of an inflammable character, and the burning or other disposal of debris and litter, on a strip of sufficient width on one or both sides of the track; the ploughing or digging of land in strips of sufficient width on one or both sides of the track; and such other work as may, under the existing local conditions and at reasonable expense, tend to reduce to a minimum the occurrence and spread of fire. (c) Said statements of the Chief Fire Inspector shall be so arranged as to deal with and prescribe measures for each separate portion of such railway upon and adjacent to which the fireguards are to be specifically treated. The intention shall be to adjust the protective measures to the local conditions, and to make the expense proportionate to the fire risk and possible damage. (d) Said statements of the Chief Fire Inspector shall prescribe dates on or within which the foregoing protective measures shall be commenced and completed, and the fireguards maintained in a clean and safe condition. (e) No such railway company shall permit its employees, agents, or contractors to enter upon land under cultivation to construct or maintain fireguards, without the consent of the owner or occupant of such land. (f) Wherever the owner or occupant of such land objects to the construction or maintenance of fireguards, on the ground that the said construction or maintenance would involve unreasonable damage to property, the company shall at once

refer the matter to the board, giving full particulars thereof, and shall in the meantime refrain from proceeding with the work. (g) No such railway company shall permit its agents, employees, or contractors to leave gates open or to cut or leave fences down whereby stock or crops may be injured or to do any other unnecessary damage to property in the construction or maintenance of fire-guards.

11. That in carrying out the provisions of the Railway Act, 1919, sec. 280, which enacts that "the company shall at all times maintain and keep its right of way free from dead or dry grass, weeds, and the like, and any unnecessary combustible matter" no such railway company, or its agents, or contractors, between April 1 and Nov. 1, burn or cause to be burned any ties, cuttings, debris, or litter upon or near its right of way, except under such supervision as will prevent such fires from spreading beyond the strip being cleared. The Chief Fire Inspector or other authorized officer of the board may require that no such burning be done along specified portions of the line of any such railway, except with the written permission or under the direction of the Chief Fire Inspector or other authorized officer of the board.

12. That the railway company provide and maintain a force of fire rangers fit and sufficient for efficient patrol and fire-fighting duty during the period from April 1 to Nov. 1 of each year; and the methods of such force shall be subject to the supervision and direction of the Chief Fire Inspector or other authorized officer of the board.

13. That the Chief Fire Inspector each year prepare and submit to each and every railway company a statement of the measures such railway companies shall take for the establishment and maintenance of said specially organized force. Said statements, among other matters, may provide for: (a) The number of men to be employed on the said force, their location and general duties, and the methods and frequency of the patrol; (b) The acquisition and location of necessary equipment for transporting the said force from place to place, and the acquisition and distributing of suitable fire-fighting tools; and (c) Any other measures which are considered by him to be essential for the immediate control of fire and may be adopted at reasonable expense.

14. That every such railway company instruct and require its sectionmen and other employees, agents, and contractors to take measures to report and extinguish fires on or near the right of way as follows: (a) Conductors, engineers, or trainmen who discover or receive notice of the existence and location of a fire burning upon or near the right of way, or of a fire which threatens land adjacent to the right of way, shall report the same by wire to the superintendent, and shall also report it to the agent or persons in charge at the next point at which there shall be communication by telegraph or telephone, and to the first section employee passed. Notice of such fire shall also be given immediately by a system of warning whistles, or by such other method as may be approved by the board. (b) It shall be the duty of the superintendent, or agent, or person so informed to notify immediately the nearest forest officer and the nearest section employees of the railway, of the existence and location of such fire. (c) When fire is discovered, presumably

started by the railway, such sectionmen or other employees of the railway as are available shall, either independently or at the request of any authorized forest officer, proceed to the fire immediately and take action to extinguish it: Provided such sectionmen or other employees are not at the time engaged in labors immediately necessary to the safety of trains. (d) In case the sectionmen or other employees available are not a sufficient force to extinguish the fire promptly, the railway company shall, either independently or at the request of any authorized forest officer, employ such other laborers as may be necessary to extinguish the fire, and as soon as a sufficient number of men, other than the sectionmen and regular employees, is obtained, the sectionmen and other regular employees shall be allowed to resume their regular duties. (e) The provisions of this section shall apply to all fires occurring within 300 ft. of the railway track, unless proof shall be furnished that such fires were not caused by the railway.

15. That every such railway company give particular instructions to its employees in relation to the foregoing regulations and cause such instructions to be posted at all stations, terminals, and section houses along its lines of railway. In case said instructions are not also carried in employees' time tables during said prescribed period, or in operating and maintenance of way rule books, they shall, previous to April 1 of each year, be reissued to all employees concerned, in the form of special instructions. The Chief Operating Officer or the Chief Fire Inspector, as the case may be, may waive the above requirements in whole or in part, as to lines or portions of lines where, in his judgment, the fire danger is not material.

16. That every such railway company allowing or permitting the violation of, or in any respect contravening or failing to obey any of the foregoing regulations, be subject, in addition to any other liability which the said company may have incurred, to a penalty of \$100 for every such offence.

17. That if any employee or other person included in the said regulations, fails or neglects to obey the same, or any of them, he shall, in addition to any other liability which he may have incurred, be subject to a penalty of \$25 for every such offence.

18. That the board may, upon the application of any railway company or other party interested, vary or rescind any order or direction of the Chief Fire Inspector, made pursuant to the provisions of this order.

H. A. Stimpson, Superintendent, Traffic Department, United Grain Growers, Ltd., Winnipeg, Man., writes: "I consider Canadian Railway and Marine World an excellent issue on Canadian railway matters."

They Must Have Been Hot.—Murphy, the foreman of the railway repair gang, went to the office to report a slight accident to one of his force. He got a blank and proceeded to nuke out his report. "I'm getting along all right, until he came to the space headed 'Remarks.' After staring at it a while he beckoned to the clerk, who asked: 'What's the matter, Pat?' 'Well, sor,' said Murphy, 'ye see it was Bill's big toe he hit wid th' hammer, and it wudn't luk well for me t' write down th' raymarks Bill made.' " Outlook.

Changes in Locomotive Booster Design.

Tests of locomotives equipped with boosters, on the Timiskaming & Northern Ontario Ry. in 1921, were described fully in Canadian Railway and Marine World for June, 1921, pg. 315, and July, 1921, pg. 356, and it was stated that in future applications of the booster, exhaust steam from the booster engine would exhaust through the locomotive nozzle and stack, instead of being carried back over the tender or being exhausted into the tank. We were subsequently informed by the Franklin Railway Supply Co. of Canada that no decision in this connection had been arrived at, and that the method of exhaust would be governed by existing conditions and customers' preferences, and this information was published in our August, 1921, issue, pg. 428.

We are now informed that, in future, standard booster applications will have exhaust steam from the booster engine exhausted through the locomotive stack, a specially designed exhaust nozzle to be used. We are also informed that the latest type C-1 booster embodies several changes in design, among these being higher gear ratio and better torque curve; better arrangement of idler; stronger construction for axle crown and caps; improved system of lubrication; larger bearing area. In addition, the new design of control and outside throttle is of much simpler construction and involves fewer parts. The admission of steam to booster, and operation of idler gear, are so co-related as to preclude the possibility of damaging boosters by faulty handling, while the outside throttle is cheaper to apply and maintain. It is claimed that this latest type represents a large improvement over previous designs.

Humber River Development Project in Newfoundland.

The project for the development of the water power on the Humber River, Nfld., together with the pulp and other resources of the land drained by the river, which was under consideration in 1921, has been revived. As originally outlined, the Reid Newfoundland Co. was to put into the company its lands and power concessions; the Armstrong-Whitworth interests of England were to provide for building the development plants, and it was anticipated that the Newfoundland Government would guarantee the bond issue. The Government, however, refused to do, and the project fell through. According to recent reports the Armstrong-Whitworth interests will buy out the Reid Newfoundland Co.'s interests in the area, and the proposed \$20,000,000 bond issue will be guaranteed by the British and Newfoundland Governments. The report states that the British authorities are favorable to the proposition, and that Sir Richard Squires, Premier of Newfoundland, is in England, to confer with them upon the matter.

Coming or Going.—Passenger—Please, guard, will you help me to get out of the train? Guard—Certainly, me'am. Passenger—You see it's this way. Being rather stout, I have to get out backwards and the porters always think I am getting in so they push me back into the carriage and say, "Urry up, ma'am!" I've passed four stations that way all ready.—London Opinion.

Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper publishes this important traffic order material. The Board are given in full on another page of this issue.

General order 365, June 24.—Ordering railway companies to file statements of their rates, and a method to be adopted for the filing of all future statements of free transportation issued.

General order 366, June 24.—Ordering railway companies to file tariffs giving effect to rate prescribed and authorized by judgment of the Board. June 24, 1922. Freight tolls, 1922.

General order 367, June 29.—Ordering that all international express commodity tariffs now in effect be amended to include a rule to the effect that rates named therein, unless specifically indicated as being competitive, will apply to and from intermediate points in Canada not enumerated in said tariffs; and that a similar rule be published in international commodity tariffs.

General Order 368, June 29, Rescinding general order 280, Dec. 23, 1919, and amending general order 248, Aug. 19, 1918, re flagging rules for impassable track. This order is given fully on another page.

32,463, June 2.—Authorizing Kettle Valley Ry. to rebuild bridge 18, Nicola Branch, B.C.

32,464, June 2.—Authorizing New Westminster Southern Ry. to cross the Base Road, one mile north of Cloverdale, B.C.

32,465, June 2.—Authorizing Kettle Valley Ry. to rebuild bridge 14.5 on the Nicola Branch, B.C.

32,466, June 2.—Authorizing G.T.R. to build spur for Grimby Fruit Growers, Ltd., and Growers Cold Storage & Ice Co., at Grimsby, Ont.

32,467, June 2.—Authorizing G.T.R. to build spur for National Co-operative Co., Hastings, Ont.

32,468, 32,469, June 5, 2.—Approving Bell Telephone Co. agreements with Stroud Telephone Co., Simcoe County, and with the telephone company of Ilderville Telephone Co., Ilderville and Mississauga Counties, Que.

32,470, June 5.—Extending to July 1, 1923, the time within which the C.P.R. may build freight shed at Kingston, Ont., as directed by order 28,542, July 14, 1921.

32,471, June 5.—Approving agreement between Bell Telephone Co. and Leeds & Grenville Independent Telephone Co., Leeds & Grenville Counties, Ont.

32,472, June 5.—Approving revision of location of Grand Trunk Pacific Ry. temporary line, from Highway 10, through the town of Schreiber, P. 5, Tp. 53, Range 18, West 53 Meridian, mile 60.71 to 64.46, Brule Subdivision, and authorizing crossing of highways.

32,473, June 5.—Authorizing C.P.R. to build spur for J. K. McLaughlin, Toronto.

32,474, June 5.—Approving Canadian National Ry. for maintaining fences, gates and cattle guards, between miles 40 and 53; 56 and 82; and 82.5 and 142.5, Kashabowie Subdivision, Rainy River Division, Ont.

32,475, June 2.—Relieving Canadian National Ry. from erecting fences, gates and cattle guards, between miles 143 to 181; 194 to 210; 211 to 222; 222 to 224.1; 224.3 to 226; 231 to 232 (yards); 285 to 266.7, Fort Frances Subdivision, Rainy River Division, Ont.

32,476, June 6.—Authorizing Hydro Electric Power Commission of Ontario to operate Guelph Central Ry. crossings over G.T.R. on Woolwich St., Guelph, Ont.

32,477, June 5.—Disallowing Algoma Central & Hudson Bay Ry. tariff, C.R.C. 35, showing a penalty of 26 cents per 100 lb. for switching rates on coal from New Ontario Coal Co.'s dock at C.P.R. at Sault Ste. Marie, Ont.

32,478, June 5.—Amending order 31,255, July 12, authorizing diversion and crossing of highway by C.P.R., by showing location as n.e. 1/4 Sec. 16, instead of s.e. 1/4 Sec. 16, as shown.

32,479, June 6.—Authorizing G.T.R. to build spur for Ontario Public Highways Department, on lot 17, Con. 9, Elsiech Subdivision, Township of Elsiech, Ont.

32,480, June 6.—Declaring that C.P.R. crossing of Marion St., St. Boniface, Man., is protected to Board's satisfaction.

32,481, June 7.—Authorizing Canadian Northern Ry. to build spur for Parrish & Heimbecker, at South Harbour, Port Arthur.

32,482, June 6.—Relieving G.T.R. from erecting fences, gates and cattle guards from miles 40 to 277.61; 280.3 to 330 (north side); 279.5 to 270 to 372.84; 384 to 393, and 393 to 400, District 22, Ottawa Division, Ont.

32,483, June 9.—Authorizing Quebec Central Ry. to connect with Canadian National Ry. at Lot 241, 2nd Range, Tenista, St. Jean Chrysostome Parish, Que.

32,484, June 9.—Amending order 32,459, June 19, relieving G.T.R. and C.P.R. from maintaining enclosures at crossing at Vanhook diamond.

32,485, June 9.—Declaring that C.P.R. crossing of St. James St., St. Johns, Que., is protected to Board's satisfaction, between 6.30 a.m. and 10.30 p.m.; slow order for remainder of 24 hours to remain in effect.

32,486, June 9.—Ordering Sherbrooke Ry. & Power Co. to connect switch on Depot St., Sherbrooke, Que., with interlocking plant, and arrange the locking so as to protect crossing of G.T.R. on Kingston St., Sherbrooke, Que.

32,487, June 13.—Approving agreement between Bell Telephone Co. and St. Marys, Medina & Kirkton Telephone Co., at Hinton, P.E.I., Middlesex Co., Ontario, Canada, Ont.

32,488, June 13.—Authorizing Pere Marquette Rd. to build spur for the S. Hadley Lumber Co., Chatham, N.B.

32,489, June 13.—Approving Canadian National Ry. plan showing minimum clearance at proposed bridge crossing of C.P.R. at York, Ont.

32,490, June 13.—Authorizing Alberta Public Works Department to make highway crossing over C.P.R. in Sec. 28, Tp. 9, Range 17, West 4th Meridian, Ont.

32,491, June 13.—Authorizing C.P.R. to build spur for Mona Petroleum Products, Ltd., Trenton, Ont.

32,492, June 6.—Relieving Canadian National Ry. from fencing right of way between miles 350.5 and 346.5, Sprague Subdivision, Rainy River Division, Ont.

32,493, June 9.—Authorizing G.T.R. to use overhead bridge carrying Brook St., Whitby, Ont., over tracks.

32,494, June 9.—Authorizing Canadian Northern Ry. to build spur for Millar Lumber Co., North Battleford, Sask.

32,495, June 9.—Authorizing G.T.R. to build spur for Brennan Paving Co., North Dumfries Tp., Ont.

32,496, June 9.—Authorizing C.P.R. to build spur for W. Makichuk, Winnipeg, Man.

32,497, June 9.—Relieving Canadian National Ry. from erecting fences, gates and cattle guards between miles 347.5 and 36.1, North Lake Subdivision, Rainy River Division, Ont.

32,498, June 9.—Relieving G.T.R. from erecting fences, gates and cattle guards between miles 218 and 262.25, District 31, Ottawa Division, Ont.

32,499, June 13.—Ordering G.T.R. to provide water for the 14th class station, milepost 10.98, St. Michel Archange Parish, Que.

32,500, June 17.—Ordering Canadian National Ry. to erect 14th class station at Tilney, Sask.

32,501, June 14.—Authorizing G.T.R. to rebuild bridge carrying public highway over its tracks at main crossing north of the town of Schreiber, P. 5, Tp. 53, Range 18, West 53 Meridian, mile 60.71 to 64.46, Brule Subdivision, Rainy River Division, Ont.

32,502, June 9.—Approving location of Canadian National Ry. standard third class station building at Millville, Ont.

32,503, June 9.—Authorizing Hydro Electric Power Commission of Ontario to operate Guelph Radial Ry. one-man cars across C.P.R. on York Rd., Hamilton, Ont.

32,504, June 7.—Declaring that G.T.R. crossing near Eganville, Ont., is protected to Board's satisfaction by a subway.

32,505, June 16.—Extending to June 4, 1923, the time within which C.P.R. may build spurs for New Aluminium Co., Toronto, Winnipeg Electric Ry., Ont.

32,506, June 15.—Extending to June 18, 1924, the time within which the Hydro Electric Power Commission of Ontario may maintain high tension transmission line across Great North Western Telegraph Co.'s wires and Canadian National Ry. at eastery limit of Port Arthur, Ont.

32,507, June 16.—Extending to Aug. 31, the time within which Canadian National Ry. may install bells and warning signals at crossing of Smith St. and Elsiech Ave., and Smith and Dewdney Sts., Regina, Sask.

32,508, June 15.—Approving revised local rates for interlocking & junction crossings on mile 53 to 69, to Lac des Quinze, Timiskaming County, Que.

32,509, June 16.—Extending to Sept. 30, the time within which Canadian National Ry. may install protection, directed by order 32,153, Feb. 21, at crossing of C.N.R. by Winnipeg Electric Ry. on Pembina Highway, Winnipeg.

32,511, June 19.—Rescinding order 32,448, May 31, suspending Canadian Railway Agency's tariff, providing advanced rates on fruits and vegetables, provided that the company publish and file a local rate on fruit and vegetables of 40¢ per 100 lb., in lieu of rate of 50¢ per 100 lb., now published in its tariff C.R.C. 1,344.

32,512, June 19.—Declaring that for the present the London & Port Stanley crossing, 11.6 miles from London, Ont., is protected to Board's satisfaction.

32,513, June 16.—Declaring that for the present Governor's Road crossing of C.P.R. at Jellicoe, Ont., is protected to Board's satisfaction.

32,514, June 15.—Relieving City of St. Thomas, from maintaining watchmen between 6 p.m. and 12 p.m. midnight.

32,515, June 16.—Extending to July 31, the time within which Grand Trunk Pacific Ry. may build ditch in Sec. 6, Tp. 13, Range 19, West 3rd Meridian, Sask., as required by order 31,924, Dec. 19, 1921.

32,516, June 19.—Extending to Aug. 31, the time within which C.P.R. may remove earth from top of hill southeast of crossing of Raglan Road, mile 61, Peterborough Subdivision, Ont.

32,517, June 19.—Declaring that when trains are approaching crossing of C.P.R. at Moore St., Carleton Place, Ont., the gateman first close gate on south side of track, then cross to north side and act as before.

32,518 to 32,520, June 19.—Declaring that for the present the C.P.R. crossings at Leaside, Ont., and 4 1/2 miles south of Innisfail, Alta., are protected to Board's satisfaction.

32,521, June 19.—Authorizing G.T.R. to build spur for British American Co., Yepra Tp., Ont.

32,522, June 20.—Approving revision of C.P.R. location of bridge 21, between miles 101.93, west of Catarqui River, Kingston, Ont., and authorizing crossing of certain highways.

32,523, June 19.—Authorizing G.T.R. to operate trains over siding to be built by Toronto Harbor Commission to serve new freight shed at foot of York St., Toronto.

32,524, June 19.—Approving location of Canadian Northern Ry. proposed 3rd class station at Ranfarcy, Alta.

32,525, June 20.—Extending to July 1st the time within which Canadian National Ry. may complete the crossing at and over the bridge at Leaside, near Subdivision, as required by order 31,941, Dec. 21, 1921.

32,526, June 19.—Authorizing G.T.R. to use bridge carrying public highway between Lot 19, Con. 8, and Lot 19, Con. 9, Esqueville Tp., Ont., across its tracks, near Georgetown, Ont.

32,527, June 19.—Authorizing G.T.R. to build bridge carrying public highway between Victoria & Eastern Ry. & Navigation Co. to make changes in signals at crossing of Powell St., Vancouver, B.C., as directed by order 31,983, Jan. 7, by July 31.

32,528, June 20.—Extending to Aug. 31, the time within which G.T.R. shall complete station at York St., Toronto, and prescribing penalty of \$25 a day for every day after Aug. 31, that it remains uncompleted.

32,529, June 21.—Ordering order 32,414, May 18, approving plan showing alterations to full interlocker at crossing of Canadian Northern Ry. and Guelph Radial Ry. at York Rd., Hamilton, Ont., ordering that a report as to success or otherwise of alterations be made to the Board within 90 days of date of order, and that if not made, instead of within 90 days from date of order 32,414.

32,530, June 19.—Ordering Vancouver, Victoria & Eastern Ry. & Navigation Co. to make changes in signals at crossing of Powell St., Vancouver, B.C., as directed by order 31,983, Jan. 7, by July 31.

32,531, June 19.—Rescinding order 29,832, May 6, 1922, authorizing G.T.R. to build spur over Crane, Ltd., Toronto.

32,532, June 24.—Authorizing City of Hamilton, Ont., to build a sewer under Toronto, Hamilton & Buffalo Ry., on King St. West.

32,533, 32,534, June 21.—Authorizing C.P.R. to rebuild bridge 21, between miles 101.93, west of Catarqui River, Kingston, Ont., and authorizing crossing of certain highways.

32,535, June 26.—Authorizing City of Victoria, B.C., to carry Johnston St. across Esquimalt & Nanaimo Ry. by a subway.

32,536, June 24.—Ordering City of Montreal to begin repair of Ontario St. subway, under C.P.R., by July 15, and to complete by Dec. 15, with a penalty of \$10 a day for every day after Dec. 15 that it remains uncompleted.

32,537, June 21.—Ordering Canadian National Ry. to erect 3rd class station at Vilna, Alta., and appoint station agent, by July 10, 1922.

32,538, June 21.—Extending to Aug. 31, the time within which Canadian National Ry. may install bell and warning signal at crossing of main road, near crossing of C.P.R. at Elsiech, P.E.I., and 4 1/2 miles south of Innisfail, Alta., are protected to Board's satisfaction.

32,539, June 24.—Approving clearances at extension of runway on C.P.R. for 30-ton travelling crane, near crossing of C.P.R. at Elsiech, P.E.I., and 4 1/2 miles south of Innisfail, Alta., are protected to Board's satisfaction.

32,540, June 26.—Authorizing C.P.R. to rebuild bridge 21, between miles 101.93, west of Catarqui River, Kingston, Ont., and authorizing crossing of certain highways.

32,541, June 24.—Authorizing Dominion Atlantic Ry. Co. to build a sewer under Toronto, Hamilton & Buffalo Ry., on King St. West.

32,542, June 27.—Declaring that for the present the crossing of C.P.R. at Elsiech, P.E.I., and 4 1/2 miles south of Innisfail, Alta., are protected to Board's satisfaction.

32,543, June 21.—Extending to July 31, the time within which G.T.R. may build overhead bridge at mile 11.68, Hamilton Division, St. Paul St., St. Catharines, Ont.

32,544, June 26.—Authorizing Saanich Municipality, B.C., to build highway over Canadian National Ry. at Esquimalt, near crossing of Victoria & Eastern Ry. & Navigation Co. to make changes in signals at crossing of Powell St., Vancouver, B.C., as directed by order 31,983, Jan. 7, by July 31.

32,545, June 27.—Authorizing C.P.R. to rebuild bridge 21, between miles 101.93, west of Catarqui River, Kingston, Ont., and authorizing crossing of certain highways.

32,546, June 28.—Approving location and details of G.T.R. station at Cardinal, Ont.

32,547, June 26.—Suspending Bell Telephone Co.'s tariff C.R.C. 5,383, effective July 1, showing rates for telephone calls in Windsor, Ont.

32,548, June 28.—Declaring that for the present, Michigan Central Rd. crossing, mile 1.68, near Brookfield, Ont., is protected to Board's satisfaction.

Railway Wages and Working Conditions in Canada and the United States.

In all the disputes taking place recently between Canadian railways and various groups of their employees, no serious trouble has resulted and in most cases the Industrial Disputes Investigation Act has been given an opportunity to function. In other cases either temporary or permanent agreement has been reached by direct negotiation. Following is a review of the developments to date in the several disputes arising chiefly out of the railways' proposals to reduce wages.

Maintenance of Way Employees.—Canadian Railway and Marine, World for August gave details of the reductions in maintenance employees' pay as proposed by the railways. On July 23, the negotiations between railway representatives and J. McAndrew, General Chairman of the United Brotherhood of Maintenance of Way Employees and Railroad Shop Laborers, Canadian Central Committee, and W. Aspinall, Secretary, were broken off, the employees declaring their intention to apply for a conciliation board. However, toward the end of July, negotiations were again undertaken, and an agreement was reached by which the employees agreed to accept the reduced rates pending further consideration when conditions so develop on U.S. railways as to enable a definite agreement to be concluded, and to withdraw their application for a conciliation board. It was agreed that the rates of pay finally agreed upon be as from July 16, the railways to make any adjustment necessary, and it was recognized that the interim agreement would protect the employees' interests until such time as a definite agreement can be entered into.

Railway Shopmen.—The wage reductions proposed to be applied by Canadian railways to shopmen were given fully in the Railway and Marine World for August, and as stated therein, the shopmen applied for a conciliation board under the Industrial Disputes Investigation Act. While the Railway Association of Canada took the stand that it could not appoint a representative on such a board, the railways individually expressed willingness to get together and appoint a representative, and finally appointed Isaac Pitblado, K.C., Winnipeg. The men appointed Jas. Simpson, Toronto, to represent them. Messrs. Pitblado and Simpson being unable to agree on a chairman, the Labor Department appointed Alex. Smith, K.C., Ottawa. A strike vote had been taken among the shopmen in the latter part of July, and on July 26, R. J. Tallon, President, American Federation of Labor's Railway Employees' Department, Division 4, telegraphed the Minister of Labor, that about 97% of the men had voted in favor of a strike, and asking him if the railways still intended to enforce the wage cut before the conciliation board had acted. The Deputy Minister replied on the following day, stating that the railways' intention in the matter was not clear. On Aug. 1, Mr. Tallon telegraphed Prime Minister King, and on Aug. 3 the latter telegraphed that the Department of Justice had given an opinion that the railways could not legally reduce the employees' wages pending action of the board of conciliation, and that they had been so notified. W. H. Curle, K.C., General Solicitor, C.P.R., and W. C. Chisholm, K.C., General Solicitor, G.T.R., went to Ottawa, Aug. 8, in connection with the matter.

The opinion given by W. Stuart Edwards, acting Deputy Minister of Justice,

was as follows: "Upon the hasty consideration which I have been able to give the matter, it would seem that the question depends almost altogether upon the provisions of the Industrial Disputes Investigation Act, sec. 57, which reads as follows: '(57). Employers and employees shall give at least 30 days notice of an intended change affecting conditions of employment with respect to wages or hours; and, in the event of such intended change resulting in a dispute, until the dispute has been finally dealt with by a board, and a copy of its report has been delivered through the registrar to both the parties affected, neither of these parties shall alter the conditions of employment with respect to wages or hours, or an account of the dispute do, or be concerned in doing, directly or indirectly, anything in the nature of a lockout or strike, or a suspension or discontinuance of employment or work, but the relation of the employer and employees shall continue uninterrupted by the dispute or anything arising out of the dispute; but if, in the opinion of the board, either party uses this or any other provision of this act for the purpose of unjustly maintaining a given condition of affairs through delay, and the board so reports to the Minister, such party shall be guilty of an offence and liable to the same penalties as are imposed for violation of the next preceding section.' Upon consideration of these provisions, I find it difficult to arrive at the conclusion that the intention of Parliament in enacting this legislation was to prevent the doing of that which the railways are proposing to do; that is to say, that the making of a reduction in the actual amount of money paid out to employees on pay day is making an alteration in the conditions of employment with respect to wages within the meaning of the statute, notwithstanding the fact that the intention of the railways is to account to the employees for the difference, if, and when, a report in favor of the employees has been made by the board. I do not overlook the fact that in case the railways continue payments at the old rate and the board reports in favor of a reduction, they may not succeed in recovering back all the overpayments so made, but I do not think this circumstance can be looked at as affecting the interpretation of the plain words of the statute." On Aug. 8 the Minister of Railways, wrote Presidents Hanna of the Canadian National Rys. and Kelley of the G.T.R., enclosing copies of the foregoing opinion, and stating that, on behalf of the Government, he had to express the view that the railways should act in exact accordance with the law applicable.

The conciliation board began its sessions in Montreal on Aug. 10, the railways being represented by Geo. Hodge, Assistant General Manager, Eastern Lines, C.P.R., A. J. Hills, Assistant to the General Manager, Canadian National Rys., and C. F. Needham, Assistant to General Superintendent, Motive Power and Car Department, G.T.R., and the shopmen by R. J. Tallon, President Division 4, Frank McKenna, Vice-President Division 4, and C. Dickie, Secretary, Jas. Bruce, Toronto, representing plumbers and steam fitters.

Mr. Tallon claimed that the railways had paid off men at the reduced rates of pay, and on Aug. 11 he brought before the board former employees of the three large roads, who testified that they had been paid off, on leaving the service a few days before, at reduced rates, and

that they had signed receipts for payment in full for services rendered. This started an argument as to the railways' right to enforce the reduced rates before a decision had been rendered by the board and the meeting was adjourned till Aug. 15.

On Aug. 10 Presidents Hanna of the Canadian National Rys., Beatty of the C.P.R., and Kelley of the G.T.R., replied to the communication sent them by the Minister of Railways saying that their own counsel had advised them that the Department of Justice's opinion was open to question, and pointing out that in a dispute between the Dominion Coal Co. and its employees, an exactly opposite opinion had been given by the court. It was explained that the railways' proposals effectively protected the employees in case the wage cuts were not upheld, and pointed out that U.S. employees had expressed a willingness to end their strike and return to work at the reduced wages. The presidents stated that the railways could not adopt a course of action which they believed to be not in accordance with the law, and not required by the merits of the case.

On Aug. 10, the acting Deputy Minister of Justice advised the Minister of Railways that the railways' legal representatives had taken the matter up with him, and called his attention to the Dominion Coal Co. case, and on giving the matter further consideration, he was of opinion that that case was of a different character to the dispute between the railways and their employees, and he was still of the opinion that the railways proposed action would be illegal.

On Aug. 12 Prime Minister King wrote Presidents Hanna, Beatty and Kelley asking them to restore the rates of pay in effect before July 16, pending the board's decision, and stating that if the railways failed to do this, the Government permitted to place their own interpretations on the act, there could be no guarantee of industrial peace, and that a contrary course on the part of either the railways or their employees would precipitate a most undesirable industrial situation. He added that he had been waited upon by a deputation of employees, and he had assured them that the Government would exert its full influence to see that the provisions of the law governing industrial disputes were lived up to.

On Aug. 15, after a brief session, the board adjourned until the railways replied to the Prime Minister's letter. On the same day the railway presidents telegraphed him that they were as anxious as he that there should be no industrial trouble in the country, and that although they were still convinced of the legality of the railways' proposed course, they would undertake, pending an anticipated early report of the board, to restore the former wages, provided the railways' case before the board should not be prejudicial, and provided the railways should not be precluded from taking the position in negotiating future agreements that the new scale should be retroactive to July 16 last.

On Aug. 16 the board resumed its sittings, and a detailed statement by the railways in support of their action in reducing the shopmen's wages before the board had made its award was presented. Evidence was also presented by both sides. On Aug. 17 the board's session was cancelled to give the railways' and the employees' representatives an opportunity to confer among themselves, but

the conference which took place did not result in an agreement. On Aug. 18 the board held a short session, at which no further evidence was taken, and which was concluded by the chairman announcing that the board would go into executive session and come to a decision. At the time of writing, (Aug. 25) no decision had been announced.

There is much difference of opinion as to the Dominion authorities' right to interfere in a question of wages as between employer and employee. Some months ago, in connection with arbitration proceedings between the Dominion Coal Co. and its employees, a judge stated that he considered clause 57 of the Industrial Disputes Investigation Act ultra vires of the Dominion authorities, and resting with provincial authority only. It is considered by many prominent legal men that the situation as between the railways and their shopmen is identical, and while the railway managements agreed to restore the former rates of pay, they still maintain their original view as to the legality of their action in withholding a part of their employees' wages pending arbitration.

Canadian National Rys. Clerks, etc. The decreased schedule of wages proposed by the C.N.R. management for its clerks, freight handlers, etc., the majority of whom are members of the Canadian Brotherhood of Railway Employees, was fully given in our August issue. At the end of July negotiations between the management and the employees had been broken off, and the management had declared its intention of placing the reduced rates in effect as from July 22. The Canadian Brotherhood of Railway Employees applied for a board and on July 31, this being granted, D. H. Bell, Ottawa was asked to represent the C.N.R., and H. S. Ross, K.C., Montreal, to represent the employees. Messrs. Kelley and Ross being unable to agree on a chairman, the Minister of Labor on Aug. 8 appointed F. T. Costello, barrister, of Alexandria, Ont. The board met on Aug. 16 in Ottawa, and proceedings were initiated by A. R. Mosher, President, C.B.R.E., stating that his side must decline to proceed until the railways' position in regard to restoring the previous wage level was made clear. No announcement as to this being forthcoming, the board adjourned. On Aug. 17 the board reconvened, there being present for the C.N.R., A. E. Crilly, Assistant to General Manager, Eastern Lines; G. E. Smart, Mechanical Assistant, Car Department, to the Vice-President, Maintenance and Operation; L. C. Thompson, General Storekeeper, Eastern Lines; A. C. Egan, General Auditor, and W. N. Rippey, Superintendent of Transportation, Maritime District. The C.B.R.E. was represented by A. R. Mosher, President, and M. M. MacLean, C. E. Cole, Montreal, H. Dykes, Winnipeg, and C. H. Minchin, Calgary, all C.B.R.E. officers. Proceedings were opened by an announcement by A. E. Crilly that the C.N.R. had agreed to suspend the wage cut pending the board's decision, that new payrolls covering back time from July 22 would be made out, and that this action would not prejudice the railways' dated back to July 22. Mr. Mosher claimed that, as the railways had proposed the cut, its representatives should justify it by argument. Mr. Crilly pointed out that it was the employees who applied for the board and not the C.N.R., and it was decided that the employees should present their case first. Mr. Mosher stated that the C.B.R.E. members are the lowest paid among the railway employees, and that a

reduction in their wages would render a decent standard of living impossible. On Aug. 23, when the board again met, Mr. Crilly argued that while the employees had received large increases in pay since 1917, there had been nothing like the decline which should accompany the drop in the cost of living. He said the increases had averaged \$51.50 monthly, and the decrease since the peak was reached averaged only \$18.36 monthly. An Ottawa press despatch of Aug. 29 stated that Mr. Mosher, in presenting evidence before the board, said that the greatest danger to the Government railways is not political interference, but the influence of owners of privately owned roads. He is reported to have said "The chief influence which is working to force down wages on the Government railways is, in our opinion, the C.P.R.'s influence, and to have added that "private owners are seeking to have the Government lines run according to policies which would least interfere with the profits of their privately owned property."

Following the submission of the C.N.R.'s evidence on Aug. 23, Chairman Costello enquired as to whether there would not be some chance of the two parties being able to arrive at a settlement, if being able to do so. Both Messrs. Crilly and Mosher expressed themselves as willing to try to effect a settlement, and the board adjourned till Aug. 24, when, if no settlement had been arrived at, debate on the evidence presented was to proceed.

C.P.R. Clerks, etc. A dispute having arisen between the C.P.R. and its clerical employees, the majority of whom are members of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, on account of the railway proposing a wage reduction approximating that ordered for clerical employees on U.S. railways by the U.S. Railroad Labor Board, the Minister of Labor on Aug. 21 appointed a conciliation board. The C.P.R.'s representative is J. T. Arvunder, formerly General Superintendent, Ontario District, C.P.R., and the employees' representative is J. G. O'Donoghue, Toronto. The chairman is Daniel Uguhart, Toronto. The board's first meeting was held at the C.P.R. general offices, Montreal, on Aug. 23.

C.P.R. Telegraphers. As stated in our August number, the dispute between the C.P.R. and its telegraphers regarding working conditions resumed, a conciliation board being formed, on which the railway was represented by U. E. Gillen, Toronto, the employees by David Campbell, Winnipeg, D'Arcy Scott of Ottawa, being appointed chairman by the Minister of Labor. The board held a few sessions in Montreal, but on Aug. 20 it was announced that negotiations had been resumed directly between the railway and its employees, and that a settlement had been arrived at independently of the board.

New York Central Rd. Canadian Employees. The Minister of Labor appointed a conciliation board to decide the dispute between the N.Y.C.R. and its employees on Canadian lines, the railway being represented by M. Goodrich, Ottawa, the men by J. Y. Foster, Montreal, and Senator Robertson being chairman. The employees concerned are shopmen. The board held a session on Aug. 14; but no advice has been received as to whether subsequent sittings have been held, or as to what has been accomplished.

G.T.R. Clerks, Freight Handlers, etc. The schedule of decreases proposed by

the G.T.R. for its clerks, freight handlers, etc., the majority of whom are members of the Canadian Brotherhood of Railway Employees, was given in full in Canadian Railway and Marine World for August, also the developments up to the point where negotiations between the railway and its employees were broken off. The C.B.R.E. officers then asked the Minister of Labor to grant a board under the Industrial Disputes Investigation Act to hear the dispute. The request was complied with and a board formed, of which E. McG. Quirk, Montreal, was appointed chairman, and on which the G.T.R. is represented by U. E. Gillen, Toronto, and the employees by H. S. Ross, K.C., Montreal. The board commenced its sessions at Ottawa, on Aug. 17, and continued on Aug. 18, when it adjourned till Aug. 22. On Aug. 18 A. R. Mosher, President, C.B.R.E., presented evidence to show that if the reductions proposed by the railway are permitted to take effect, 90% of the clerks in schedule positions, showing to be the highest paid members of the organization, will scarcely earn enough to per-
mit a man and his wife to bring up one child and maintain a standard of living approximating that of minimum health and decency. At the time of writing, (Aug. 24) the board's sessions had not been concluded, and we are advised that no decision has been reached as to restoring the original rates of pay pending a decision in the dispute.

G.T.R. United States Lines. The shopmen's strike in the U.S. continues to affect the G.T.R. Western Lines. On Aug. 15 the company was granted a temporary injunction in the U.S. Circuit court at Detroit, restraining strikers from acts of violence against the company's property. The question of a permanent injunction was to be argued Aug. 25. The temporary injunction was granted on application by H. E. Whittenberger, General Manager, who declared that he had appealed to both the Governor of Michigan and the state police for protection and had not received a reply from either. A lot of trouble had been experienced by the railway at its Port Huron, Mich., shops, where operations are being carried on with new employees.

Michigan Central Rd. Shopmen. The conciliation board, composed of J. M. McEvoy, K.C., London, chairman, H. T. Malcolmson, Superintendent, T.W.&B Ry., Hamilton, for the M.C.R., and W. D. Robbins, Toronto, for the men, appointed to hear the dispute between the M.C.R. and its shopmen, was to have begun its sessions at St. Thomas on Sunday, but did not start until Monday, when evidence was submitted on behalf of the railway by J. W. Fry, Chief of the M.C.R. Wage Bureau; E. R. Webb, Master Mechanic, St. Thomas, Ont., and W. H. Flynn, Superintendent of Motive Power, Detroit, and on the shopmen's behalf by J. Size, M.C.R. Shop Craftsmen's General Chairman; L. Belouin, Montreal, Canadian Vice-President, International Brotherhood of Railway Carmen, E. Inglis, London, Canadian Vice-President, International Brotherhood of Electrical Workers and others. Sessions were held on Aug. 1, 2 and 3, when the shopmen's representatives presented evidence to show the proposed wage cut to be unfair, and the new rates proposed by the company to be unfair. Mr. Size stated that the average railway mechanic required at least \$1958.24 yearly to provide for himself and family, and that earnings below that meant that he could not provide all the necessities of life. On Aug. 4 the presentation of the railway's evidence was begun, and in reply to Mr.

Size's statement as to minimum earnings, Mr. Fry stated that if each wage earner averaged the yearly estimate mentioned by Mr. Size, the total national income would have to be over \$600,000,000 greater than at present. Mr. Fry characterized Mr. Size's "minimum budget" as an economic impossibility. Generally speaking, the railway argument was to the effect that its Canadian employees are a component part of the entire shop crafts federation, and cannot be treated as a separate body when wage reductions or working conditions are at issue. The board adjourned on Aug. 4 owing to Mr. Robbins' illness, and did not resume till Aug. 14, when and on Aug. 15 the railway representatives completed the presentation of their testimony. The decreases ordered were not applied pending the hearing of the dispute by the board. A decision is expected in the near future.

Pere Marquette Ry. Clerical Employees. Following a reduction in the rates of pay for clerks, etc., employed on the P.M.R., Canadian Division, to bring their wages into line with those ordered effective July 1, by the U.S. Rd. Labor Board, the clerks applied for a conciliation board which was granted. The majority of the clerical employees concerned are members of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. They named as their representative, Chas. B. McClurg, barrister, of St. Thomas, Ont., on Aug. 6, and shortly after the P.M.R. named Alex. Leslie, Kingsville, Ont., as its representative. These two being unable to agree on a chairman, the Labor Department appointed W. T. K. Preston, of Port Hope. Sittings were begun in Windsor, Ont., on Aug. 21, when it was announced by F. Alfred, President, P.M.R. that the original wages would be restored till the hearing was completed.

Pere Marquette Ry. shopmen employed in Canada applied to the Labor Department for a conciliation board, which was granted. The P.M.R. were represented by Alex. Leslie, Kingsville, Ont., the shopmen by W. D. Robbins, Toronto, W. T. K. Preston, Port Hope, being chairman. The board met in Windsor on July 26, when it was decided to adjourn till Aug. 14, as Mr. Robbins was occupied on the Michigan Central Rd. shopmen's board. The P.M.'s shopmen's board met in St. Thomas on Aug. 14, and on the two following days, the hearing of evidence before the board was completed. The P.M.R. was represented by D. A. Klumph, of Detroit, Mich., Supervisor of Wages and Working Schedules, and C. Montgomery, Master Mechanic, St. Thomas. The employees were represented by H. Duker, President of P.M.R. shopmen's organization, and other shop crafts officers. No decision by the board has been made public up to Aug. 25.

Repairing U.S. equipment in Canada. On Aug 10 Wabash Ry. shop employees at St. Thomas protested to the Labor Department at Ottawa, through J. A. Killingsworth, a Department representative, against the alleged bringing of locomotives from U.S. lines for repair in Canadian shops, on account of the strike in the U.S. Canadian railways report that they are not repairing any U.S. equipment in their shops.

Inverness Railway & Coal Co. A conciliation board appointed to investigate a dispute between the Inverness Ry. and Coal Co. and certain of its employees, reported on Aug. 9 recommending that the rate of pay for section foremen should

be \$3.70 a day, and in which rates of pay for employees not engaged directly in railway work were also specified.

The United States Situation. At the time of writing, Aug. 25, the shopmen's strike in the U.S. seems as far from settlement as ever, despite the best efforts of President Harding and the leaders of the train service brotherhoods to bring the railway executives and the shopmen's leaders to an agreement. The President's initial effort to effect a settlement was made on July 31, when he suggested that the railway executives and the shopmen agree on the following terms: 1. Railway managers and workmen to agree to recognize the validity of all decisions by the U.S. Railroad Labor Board, and to faithfully carry out such decisions as contemplated by the law. 2. The carriers to withdraw all the lawsuits growing out of the strikes, and Railroad Labor Board decisions which have been involved in the strike to be taken, in the exercise of recognized rights, by either party, to the U.S. Road. 3. The carriers to agree to allow no strike to be returned to work with seniority and other rights unimpaired. Representatives of carriers and of employees to agree that there will be no discrimination by either party against employees who did or did not strike. The shopmen showed a willingness to accept the terms, but the railway executives refused to accept the third condition, and advised the President as follows, "It is submitted that the striking former employees cannot be given preference to employees at present in the service, without doing violence to every principle of right and justice involved in this matter, and without the grossest breach of faith on the part of the railways to the men at present in their service. The railway cannot consider any settlement of the present strike which does not provide protection, in their present employment, both to the loyal employees who remained in the service, and to the new employees entering it." The executives, however, agreed to respect all the Labor Board's rulings.

On Aug. 7 President Harding made another proposal, to both the executives and the shopmen, in part as follows: "Mindful of the pledge of both the executives and the striking workmen to recognize the validity of all Labor Board decisions, I am now calling on the striking workmen to return to work, and calling upon the carriers to assign them to work, and upon both to take the question of seniority to the Labor Board for hearing and decision." This proposition was considered by officials of the shopmen's organization, and those of the Brotherhood of Stationary Firemen and Oilers, and on strike, on Aug. 10, and by a meeting of all railway labor organization chiefs on Aug. 11. The plan was unacceptable to the labor leaders, who desired the Labor Board to assume jurisdiction over the seniority question, and give them a favorable decision, before calling off the strike.

The proposition was considered by the railway executives on Aug. 11 and the following resolution was adopted: "Resolved, that the carriers will not employ whose mileage totalled 151,824. 1. That all former employees who have not been guilty of proved violence shall be assigned to their former positions where vacancies exist. 2. Where their former positions have been filled, other employees of the same class will be found for them if they have committed no violence. 3. If, after these men have been assigned, questions of seniority arise with them which cannot be settled locally they will be referred to the Labor Board

for hearing. 4. No intimidation will be practised or permitted against any employees who remained in service, or new employees, or against those returning. The following resolution was adopted by roads whose mileage totalled 57,222. 1. All former employees who have not been guilty of violence shall be assigned to their former positions where vacancies exist. 2. If after these men have been assigned, questions of seniority arise, which cannot be settled locally, they shall be referred to the Labor Board. 3. In agreeing to submit questions of seniority, as above it is understood that neither the railways nor their employees shall be deprived of the right of review by the courts of such decisions, if they affect agreements in existence between any railway and its employees. The net result of the President's second proposal, therefore, was that nothing was accomplished.

On Aug. 18 the railway executives had a long conference with the train service brotherhood leaders, the latter stating that they were anxious to act as mediators in the dispute and to end it if possible. The proposals made by the train service brotherhood leaders at the conference were not made public, but it is said that they desired the railway executives to take back their striking shopmen with no mention made of seniority, the inference being that they expected the returning shopmen to get back their seniority in the natural course of events. A meeting of executives was held in New York on Aug. 23 to consider the train service brotherhood's leaders' proposals, which were rejected by a vote of 254 to 4, the executives re-affirming their stand on the seniority issue. The four votes were cast by S. D. Warfield, President, Seaboard, and three others. When the executives' decision was announced, the train service brotherhood leaders asked to be allowed to appear before the main meeting of the executives, and upon permission being given, L. E. Sheppard, President of the Brotherhood of Railway Conductors, submitted a new proposition, as follows: 1. That all men be reinstated in the same class as they held on June 30, at present rates of pay. Only those proved guilty of disorder and violence to be disregarded. 2. All cases of dispute to be referred to the U.S. Labor Board. 3. No intimidation or oppression to be practised against any employees who have remained or have taken service since the strike began, or those returning. 4. All lawsuits growing out of the strike to be cancelled by both parties." This proposition was also rejected by the executives.

A New York press dispatch of Aug. 24 stated that representatives of 20 railways, having about 30% of the class 1 road mileage, were in consultation with the train service brotherhood's leaders to see if a satisfactory settlement could be arrived at, but this report lacks confirmation at the time of writing. (Aug. 25.)

Not to be Deprived.—The train robber was holding up a Pullman car. "Out with your dough. I'll kill all men without money and kiss all women." An elderly man said: "You shall not touch these ladies!" An old maid in an apron then shouted: "You leave him alone, he's robbing this train."—Wump Wump.

Was it an Asbestos One?—A young man was walking up and down the aisle of a smoker, swearing, when a preacher approached him and said: "Young man, don't you know that you are going straight to hell?" "I don't," he cried. I've got a round trip ticket," replied the traveller.—Wump Wump.

Self Propelled Cars on Steam Railways.

Canadian National Rys. self-propelled cars have been re-numbered, as stated in Canadian Railway and Marine World for August, and in addition to the list there given, further cars were added during August. The equipment now includes no. 15,800, a gasoline-electric car, operating between Hansona and Winnipeg, Man.; 15,801, the storage battery car operating between Bathurst and Campbellton, N.B.; 15,803, a battery car secured in August from the Cambria & Indiana Rd.; 15,805, a steam car equipped with oil burning boiler, secured from the Unit Car Co., Boston; 15,810, a gasoline car operating between Souris and Elmina, Prince Edward Island; 15,811, a gasoline car operating between Cross Creek and Stanley, N.B.; 15,812 and 15,813, two gasoline cars, delivered recently by Ledoux, Jennings, Ltd., Montreal; 15,814, a gasoline car similar to that operating on the Greater Winnipeg Water District Ry.

Car 15,803, a storage battery car secured from the Cambria & Indiana Rd., is somewhat smaller than the storage battery car operating between Bathurst and Campbellton, having accommodation for 32 passengers. It has a small baggage compartment. This car was overhauled at the Niagara, St. Catharines & Toronto Ry. shops, at St. Catharines, Ont., on delivery from the U.S., some alteration in the battery arrangement being made. It will be tested in service in the near future. Another battery car, to be numbered 15,804, will, in all probability, be secured from the Cambria & Indiana Rd.

The steam car, 15,805, is equipped with a Stanley steam car engine, specially developed for it. Crude oil is used for fuel, and the car is equipped with a flash boiler using superheated steam at 750 lb. pressure. The car is 51 ft. long and has seating accommodation for 42 passengers. The boiler in at the front end, and the drive is through the leading truck axles.

The gasoline car, 15,812, built by Ledoux, Jennings, Ltd., and operating between Picton, Trenton, Jct. and Napanee, Ont., was described fully in Canadian Railway and Marine World for July and August. Car 15,813, delivered recently by the same builders, differs from 15,812, in that the leading truck is identical with the trailing truck, with the exception of the side rods, and also that it has a small baggage compartment at the front, equipped with folding seats. Car 15,812 had but a one-compartment interior, and a small leading truck.

The storage battery car 15,801, operating between Bathurst and Campbellton, is now hauling a trailer, this being necessitated by increasing traffic. The trailer is a 50-ft. passenger car. The battery car experiences no difficulty in making the same schedule time with the trailer, but, as is to be expected, current consumption is materially increased. It was intended to replace this car between Bathurst and Campbellton with car 15,814, the service gasoline car, but the intention now is to leave the battery car where it is. In this connection, we are advised that the management will shortly make a complete redistribution of all the self-propelled cars now owned.

The Canadian National Rys. have at the Canadian National Exhibition, Toronto, an interesting display of self-propelled cars, consisting of nos. 15,803, small battery car; 15,805, steam car; 15,813, gasoline car, and 15,814, gasoline car. These cars are attracting a great deal of attention at the exhibition, and

there is no doubt that the exhibit will have a large influence in emphasizing the possibilities of self-propelled cars for economical transportation, in their proper field. The assignment of cars to permanent runs, as referred to above, will be undertaken as soon as they are removed from the exhibition.

Canadian Pacific Ry.—The Board of Railway Commissioners passed order 32,755, Aug. 12, authorizing the C.P.R. to operate a passenger car, propelled by gasoline, on its Lasalle Loop Subdivision, the Board reserving the right to order any changes in any such car which may seem necessary for public safety, and convenience of the public or the company's employees. The C.P.R. is operating a gasoline car on its Lasalle Loop Subdivision, from Highgate to Cot St. Paul, Montreal Terminal Division, Quebec District, 5.85 miles, but we are officially advised that the C.P.R. has not bought or ordered any of this class of equipment, and that the car being operated is the Quebec Central Ry's property, and is being used by the C.P.R. temporarily. Details of the Lasalle Loop Subdivision, on which the car is being operated, are given elsewhere in this issue under the head of C.P.R. Construction, Betterments, etc.

The Grand Trunk Ry. has ordered a motor rail passenger car from National Steel Car Co., Hamilton, Ont. It is to be of the most modern type, and to be built in accordance with specifications furnished by the G.T.R.

Kitchener, Ont., press report of Aug. 4, stated that the Kitchener, Galt, Waterloo, and Doon Boards of Trade had decided to ask the Minister of Railways that a gasoline car be run on the G.T.R. between Kitchener and Galt. The G.T.R. took off one of the Kitchener-Galt trains recently, owing to the coal strike, and the loss of the train is said to be severely felt, especially by Doon residents who work in Galt and were dependent upon the train.

Greater Winnipeg Water District Ry.—Details of the gasoline motor car operated by this railway, between St. Boniface and Waugh, on Shoal Lake, Man., 91.9 miles, were given in preceding numbers. We are officially advised that this car was put into regular service on July 6, and is operating eastbound Thursday and Saturday, returning Friday and Monday. Two men are used. Up to date of our advice, July 23, it had been found necessary to operate a steam train eastbound every Tuesday and Wednesday. We are advised that the steam train will only be operated when carload and tray-freight traffic warrant it, and when the steam train is run the gasoline car does not run. If conditions warrant it, the mixed train will be run once every week regularly on stated days.

The Quebec Central Ry. management, after considering the operation of gasoline railway motor cars for branch line service, ordered two from Ledoux, Jennings, Ltd., Montreal, the specifications being similar to those built by the latter company for the Canadian National Rys., with the exception of the inclusion of a small baggage compartment. It was the Q.C.R.'s original intention to order cars with trailers, the combined cars to accommodate about 65 passengers, with baggage compartment, but later it was thought advisable, on account of engine power limitation, to drop the idea of a trailer, and try the single unit, seating 30 passengers, until such time as a more powerful engine is devised, capable of

hauling a trailer. One car has been completed and delivered. It is the railway's intention to operate these cars between Levis and Scotts Jct., performing two round trips daily, making connections there with main line passenger trains to and from Quebec via the Quebec bridge route. The operation of these gasoline cars will effect a considerable improvement in the service to the public and enable the railway to meet the bus competition which has been established along the government highway paralleling the railway in that section. If these motor cars prove successful, as is anticipated, the company extend the service between Valley Jct. and St. George, on the Chaudiere Division, and between Tring Jct. and Megantic, on the Megantic Division. The car that has been delivered is being tested and has proved very satisfactory. When the second car is received, the regular service will be established. Following are the chief dimensions:—

Wheel base	30	18 ft.
Length	30	3 1/2 ft.
Width	7	1 1/2 ft.
Length, baggage compartment	11	ft. 9 1/2 in.
Width, baggage compartment	7	ft. 1 in.
Total weight	10	tons
Seating capacity	30	
Engine	50 h.p.	Reo 8-cyl.

The Q.C.R. cars differ from Canadian National Rys' car 15,812 in having a baggage compartment, and from Canadian National Rys. car 15,813 in having the same type leading truck as Canadian National Rys. car 15,812, as illustrated in Canadian Railway and Marine World for August, pg. 418, while, as stated above, in Canadian National Rys. car 15,813, the leading truck is the same as the trailing truck, with the exception of the side rods. One of the cars ordered has been loaned to the C.P.R., and is being used temporarily on its Lasalle loop line, as stated in an earlier portion of this article.

Kingston Locomotive Works.—A Kingston, Ont., press dispatch says that the Canadian Locomotive Co. is not to be sold to the Baldwin Locomotive Co. or any other company, but will remain under its present control and management, and that a letter to this effect had been forwarded to all shareholders who had given options on their stock in the expectation that a sale of the control be effected. This letter states on behalf of F. G. Wallace, President of the company, in whose name the option had been obtained, that it has been found impossible to put the sale through. When the works will open up, again is problematical, but it is believed that there is reasonable hope that they will be opened this year, although on this point local officials have nothing to say.

Whitney Logging Railway For Sale.—We are advised that the Dennis Canadian Co. is offering for sale the rails and equipment of its logging railway, and the light rails and equipment of the tracks round its mill at Whitney, Ont. The rails consist of about 1,000 tons of 32 and 56-lb. relaying rails, approximately 100 tons of 16-lb. relaying rails, and 20 tons of 20-lb. relaying rails, and the equipment comprises: One 50-ton Lima geared standard gauge locomotive; 24 Russell log cars, 4 flat cars, 1 log loader and a large number of narrow gauge piling cars. The company's operations at Whitney are about completed, and the mill will be dismantled and disposed of this year. The rails, etc., are being offered for sale by J. J. Gartshore, Toronto.

Changes in Grand Trunk Railway Officials.

The Dominion Government passed the following order in council, Aug. 14: "The committee of the Privy Council have had before them a report, dated Aug. 11, 1922, from the Minister of Railways and Canals, submitting a letter of resignation from Howard G. Kelley, director and President of the Grand Trunk Ry. Co. of Canada, reading as follows:—

"Montreal, July 14, 1922. Hon. W. C. Kennedy, M.P., Minister of Railways and Canals, Ottawa.—Dear Mr. Minister: I am placing before you, herewith, my resignation as President and member of the board of directors of the G.T.R. Co. of Canada and also of the various subsidiary corporations comprising the G.T.R. System, to be placed in effect at your convenience. In doing so I wish to express my appreciation of the uniform courtesy which you have extended to me. I am, sincerely yours, Howard G. Kelley."

"The Minister recommends that Mr.

General Manager, and shall exercise the authority and perform the duties hitherto exercised and performed by the President."

Sir Joseph Flavell, Chairman of the

board of the company, the board of directors, at a meeting held today, appointed W. D. ROBB, ranking Vice President of the company, with the title of Vice President and General Manager. MR. ROBB will exercise the authority and perform the duties hitherto exercised and performed by the President."

Howard G. Kelley, who has resigned as a director of the G.T.R. Co. of Canada, and consequently also as President, was born at Philadelphia, Pa., Jan. 12, 1835, and entered railway service in 1861, since when he has been, to 1884, assistant engineer on location, construction and bridge construction, Western & Pacific Divisions, Northern Pacific Ry.; 1884 to 1887, engaged in mining; 1887 to Jan., 1890, Resident Engineer and Superintendent of Bridges and Buildings, St. Louis Southwestern Ry. System, including St. Louis Southwestern Ry. of Texas; Jan., 1890, to Mar., 1898, Chief Engineer, same

Frank Scott,
who has resigned as Vice President and Treasurer,
Grand Trunk Railway.

H. G. Kelley,
who has resigned as President, Grand Trunk
Railway.

Jas. A. Yates,
Treasurer, Grand Trunk Railway.

W. D. Robb,
Vice President and General Manager, Grand
Trunk Railway.

Kelley's resignation be accepted. The Minister further recommends that Graham A. Bell (Deputy Minister of Railways and Canals) "be appointed a director of the G.T.R. Co. of Canada. The committee concur in the foregoing recommendations and submit the same for approval."

Following a meeting of G.T.R. directors in Montreal, Aug. 17, the following official statement was issued: "The Chairman, Sir Joseph Flavell, laid before the meeting a copy of an order in council approved on Aug. 14, accepting the resignation of Mr. Howard G. Kelley as a director of the company, and appointing Graham A. Bell, Deputy Minister of Railways, in his place. Inasmuch as Mr. Kelley's resignation from the board of directors has, under the Railway Act, the effect of rendering vacant the position of President of the company, it was thereupon resolved that W. D. Robb shall be the ranking Vice President of the company, with the title of Vice President and

board, issued the following circular, Aug. 17: "The Government having accepted the resignation of HOWARD G. KELLEY as director, which, under the Railway Act, renders vacant the position of Presi-

road; Mar., 1898, to July, 1907, Chief Engineer, Minneapolis & St. Louis Rd.; July, 1900, to July, 1907, also Chief Engineer, Iowa Central Ry.; Mar., 1898, to Mar., 1899, also Consulting Engineer, St. Louis Southwestern Ry.; July, 1907, to Oct. 2, 1911, Chief Engineer, G.T.R., Montreal; Oct. 2, 1911, to Sept. 1, 1917, Vice President in charge of construction, transportation and maintenance, G.T.R., Montreal, and from Sept. 1, 1917, President, G.T.R. He was also President, G.T. Pacific Ry. Co., and a director and Chairman of the Board, Central Vermont Ry., as well as President of a number of subsidiary companies, a list of which was given in Canadian Railway and Marine World for May, page 239. In May, 1920, he was appointed chairman of the committee of management for the co-ordination of the G.T.R. with the Canadian National Ry. He is a C.E. of the Pennsylvania Polytechnic College, a member of the Institution of Civil Engineers of Great Britain, of the Engineering Institute of

Canada and of the American Society of Civil Engineers, and was President of the American Railway Engineering and Maintenance of Way Association for two terms. In connection with Mr. Kelley's resignation it is stated that his contract with the G.T.R. expired Aug. 31. He advises Canadian Railway and Marine World that he intends to take a holiday for a few months.

D. Robb, who has been appointed ranking Vice President and General Manager, G.T.R., was born at Longueuil, Que., Sept. 21, 1857, his father having come to Canada from Scotland, some time before, to engage in the early construction work on the G.T.R. He was educated at Sherbrooke Academy and St. Francis College, Richmond, Que., and entered G.T.R. service in 1871, since when he has been, to July, 1882, machinist apprentice, Montreal; July, 1882, to Jan. 1883, charge hand, Montreal; Jan. to Aug. 1883, Night Locomotive Foreman, Montreal; Aug. 1883 to Jan. 1897, Locomotive Foreman, Belleville, Ont.; Jan. 1897 to July 1901, Master Mechanic, Middle Division, London, Ont.; July 1901 to Sept. 1, 1917, Superintendent of Motive Power, Montreal; Sept. 1, 1917 to Oct., 1918, Vice President in charge of Motive Power Equipment and Machinery, Montreal; Oct. 1911 to Aug. 17, 1922, Vice President, Transportation, Construction and Maintenance, Montreal. Mr. Robb is the first person born in Canada to be appointed to chief executive office on the G.T.R., except Sir Joseph Flavelle whose occupancy of the chairmanship of the board of directors is only a temporary from which he is anxious to be relieved, one, and is the first one who has risen, with unbroken service, from an apprenticeship in the company's service.

Frank Scott, Vice President (Financial and General), G.T.R., has also resigned, after 44 years service with the company, during which he rose from a junior clerkship. His resignation was accepted by the directors on Aug. 25, when they expressed their appreciation of his services. He has been placed on the superannuation list. He entered G.T.R. service in 1879, in the Audit Department, and passed through all the stages in that department from junior clerk. He was appointed Treasurer in 1901 and in 1906 was also appointed Treasurer, Grand Trunk Pacific Ry., which latter position he relinquished on the appointment of a receiver. In 1914 he was appointed Vice President and Treasurer, G.T.R., and a number of its subsidiary companies.

James A. Yates who has been appointed Treasurer, G.T.R., Montreal, was born there, Nov. 30, 1876, and entered G.T.R. service in Feb. 1891, since when he has been, to Dec. 1906, clerk, Treasurer's office, Montreal; Jan. 1907 to Dec. 1911, chief clerk, Treasurer's office, Grand Trunk Pacific Ry., Montreal; Jan. 1912 to July 31, 1914, chief clerk, Treasurer's office, G.T.R., and G.T.P.R.; July 31, 1914 to Aug. 31, 1922, Assistant Treasurer, G.T.R., and Secretary, Montreal and Southern Counties Ry.

Jamaica Government Railways.—Lewis Thomas, Director of Railways, Kingston, Jamaica, W.I., received tenders to Aug. 10, building 16 miles of standard gauge railway to be known as the Kingston-Frankland branch. The work to be done covers approximately 400,000 cubic yards of excavation; the construction of a tunnel 180 ft. long; the erection of bridges, 7 with spans varying from 50 ft., deck span to 145 ft., a pin concreted truss, and viaduct 410 ft. long.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Abitibi Transportation & Navigation Co., Ltd.—Canadian Railway and Marine World for August stated that it was reported that the Abitibi Power & Paper Co. wanted to build a railway from Iroquois Falls via Hughes, to ultimately reach James Bay, or navigable waters flowing into it, and to do business there as common carriers. We have learned since that the company's original application to the Ontario Government was for the right to build a railway from Iroquois Falls to a point on the French River, running into James Bay, but, as stated in our last issue, it has only been authorized to build a logging railway on its limits from Iroquois Falls to Hughes, and that it has not been given a common carrier's rights.

We are advised that 85-lb. rails are to be laid on the main line, but the location and length of connecting spur lines have not been determined, but they will be of a temporary character, and that the rails will be taken up and used elsewhere on the company's limits as soon as each spur line has served its purpose. (Aug., pg. 409.)

Burrard Inlet Tunnel and Bridge Co.—Some information regarding this company's plans for the erection of a railway bridge across the Second Narrows of Burrard Inlet, Vancouver, was laid before representatives of the municipalities which hold the company's stock, recently. It was stated that of the \$115,000 which had been subscribed by the municipalities, \$113,500 had been expended in legal and organization expenses, securing engineering reports, preparation of plans, test borings for foundations, etc., prior to the war. The company's plans consist of the franchise and the plans. A Pittsburg, Pa., company is said to have made an offer to build a bridge and to accept the company's bonds and a provincial guarantee in payment. This the company is said to be prepared to accept, subject to the approval of the plans by the government and other authorities, and the passing of the necessary bylaws by the municipalities interested.

A press report states that the concern proposing to build the bridge is the McClintock, Marshall Construction Co., and that the plans submitted provide for a low level, single leaf leaf trunnion railway and highway bridge, of sufficient strength to carry 10-ton trucks, and of its roadways, and a train travelling at 20 miles an hour. The estimated cost of the structure is mentioned at \$1,241,000. The contracting interests of Vancouver and district waited upon the Mayor of Vancouver, a few days after the meeting referred to above, to protest against the giving of a contract to a United States company, without Canadian concern, being given an opportunity to compete. The Mayor is reported to have stated that it was understood that most of the fabrication of the structure would be done in Vancouver, in order to save cost of freight, and that it was expected that fully 50% of the construction cost of the structure would be for the benefit of local interests and labor.

Hon. D. Mackenzie, Dominion Solicitor General, is reported, in speaking at North Vancouver, July 22, to have said that it is the Dominion Government's intention to build, or to assist in building, this bridge, that its construction would not only benefit the local com-

munity, but the whole of Canada. Personally, he did not think the municipalities should contribute anything towards its construction, for when a public work is to become the Government's property, it should be paid for by Government.

The municipalities interested in the company are: Vancouver city, \$200,000 subscribed, \$30,000 paid up; North Vancouver city, \$150,000 subscribed, \$22,500 paid up; North Vancouver District, \$337,500 subscribed, \$50,625 paid up; West Vancouver, \$62,500 subscribed, \$9,575 paid up. There are five individual stockholders with \$2,000 each subscribed and \$500 each paid up. (Aug., pg. 409.)

Cowichan Bay Ry.—Application is reported to have been made to the British Columbia Government, for the provision of terminals at Cowichan Bay, Vancouver Island, for a short line of railway to run from Cowichan Lake, through Duncan. It is stated that at present the Esquimalt & Nanaimo Ry. is handling about 500,000 ft. of lumber a day from the Cowichan Lake timber area, and the new line is planned to secure a share of the traffic. The new line would be operated in connection with the Canadian National Rys. (Aug., pg. 405.)

Esquimalt & Nanaimo Ry.—Grant Hall, Vice President, C.P.R., made a trip over the line recently, and looked over the terminals at Victoria. It is reported that it is proposed to lay out some additional facilities and to erect a new station buildings as soon as the new Johnson St. bridge is completed. (Aug., pg. 407.)

Kettle Valley Ry.—We are officially advised that the reconstruction of bridges on the Nicola Branch, authorized by the Board of Railway Commissioners, consists of the following:—

Bridge 14.5, a Howe truss span on concrete abutments, 164 ft., between ballast walls, is to be replaced with 2 half-deck plate girder spans, 78 ft. in, center to center, on the existing abutments, and a new center pier. The pier has been built by Armstrong, Morrison & Co., Vancouver.

Bridge 18, a Howe truss span, on concrete abutments, 163 ft. 10 in., between ballast walls, built about 16 years ago, is being replaced by a 106% ft. pony truss span, and a half deck plate girder span, 53 ft. 6 in. in, pier to pier, to be erected on the existing abutments, and a new pier. The new pier has been completed by Armstrong, Morrison & Co.

The contract for the erection of the new spans had not been let when we were given the above information. (Aug., pg. 409.)

Lacombe & Northwestern Ry.—We are officially advised that a contract has been let to W. A. Dutton, Winnipeg, for clearing, grading and fencing, on a 12-mile extension of this line. The extension starts in the n.e. ¼ of Sec. 8, Tp. 43, Range 2, West 5th Meridian, and runs northwesterly to Sec. 4, Tp. 45, Range 3, West 5th Meridian. The work is expected to be completed during September. The bridging, tracklaying, and ballasting will be done by the railway's own forces. Track will be laid with 60-lb. rails, which are on hand. This railway is owned by the Alberta Government, and provision was made at the last session of the Legislature for the present construction. (Aug., pg. 410.)

Mainly About Railway People Throughout Canada.

R. B. Angus, the only surviving original director of the C.P.R. Co., is again reported to be seriously ill.

W. L. Aquin, contractor, who died at Dorval, Que., recently, was, for about 30 years, superintending construction on the G.T.R., and later built a portion of the Great Northern Ry. of Canada, now part of the Canadian National Ry., between Montfort Jct. and Huberdeau, Que.

Sir George McLaren Brown, Eastern General Manager, C.P.R., London, Eng., and Lady Brown, reported as expected to arrive in Canada shortly for a visit.

W. G. Brownlee, formerly General Transportation Manager, G.T.R., Montreal, from which position he resigned in Aug., 1912, died at his home at St. Petersburg, Fla., July 21. He was born at Lawrenceville, Ill., Sept. 9, 1838, and entered railway service in 1877, since when he was, to 1879, operator, Ohio Mississippi Ry.; 1879 to 1881, operator and dispatcher, Union Pacific Ry.; 1881 to 1884, dispatcher and Trainmaster, Denver & Rio Grande Rd.; 1884 to 1887, dispatcher, Union Pacific Rd., Laramie, Wyo.; 1887 to 1889, dispatcher, same road, St. Louis, Mo.; 1892 to Feb., 1900, Division Superintendent, same road, St. Louis, Mo.; Feb., 1900, to May, 1901, Assistant Superintendent, Eastern Division, G.T.R., Belleville, Ont.; May, 1901, to March, 1902, Superintendent, Eastern Division, same road, Montreal; March, 1902, to Dec., 1904, Superintendent, Western Division, same road, Detroit, Mich.; Jan., 1905, to April, 1907, Superintendent, Middle Division, same road, Toronto; April, 1907, to Aug. 16, 1912, General Transportation Manager, same road, Montreal. On his resignation, the position was abolished, and he spent a few months travelling in Europe, after which he lived at his summer home at Peaks Island, Casco Bay, near Portland, Me., for about two years, and later removed to St. Petersburg, Fla. He was buried at Lebanon, Ill., Aug. 1, the service being attended by a number of old associates and railway representatives.

George L. Bryson, whose appointment as Travelling Passenger Agent, Canadian National-Grand Trunk Ry., at Cincinnati, Ohio, was announced in our last issue, was born at Chicago, Ill., Sept. 30, 1888, and entered railway service May 7, 1912, since when he has been, to Jan. 20, 1913, ticket stock clerk, G.T.R., Chicago, Ill.; Jan. 20, 1913, to Feb. 16, 1914, assistant ticket agent, G.T.R., Chicago, Ill.; Feb. 16, 1914, to May 1, 1915, chief clerk to City Passenger and Ticket Agent, G.T.R., Detroit, Mich.; May 1, 1916, to May 1, 1918, Travelling Passenger Agent, G.T.R., Kansas City, Mo.; May 1 to July 1, 1918, Travelling Passenger Agent, G.T.R., Chicago, Ill.; July 1, 1918, to Feb. 20, 1919, in U.S. Naval service; Feb. 20 to Aug. 1, 1919, Passenger Agent, Canadian lines, G.T.R., Chicago, Ill.; Aug. 1, 1919, to June 1, 1922, Travelling Passenger Agent, Canadian National-Grand Trunk Ry., Chicago, Ill.

H. J. Cambie, formerly Special Assistant Engineer, C.P.R., and Chief Engineer, Esquimaux & Nanaimo Ry., Vancouver, B.C., was presented by the Vancouver Pioneers Association, Aug. 14, with a gold medal donated to the Association by the Hudson's Bay Co., for the member of the Association considered most worthy. Mr. Cambie, who was connected with early railway construction in that province, was 85 in Oct., 1921.

Allan Cameron, who has been appointed Oriental Manager, Canadian Pacific

Steamship Lines, Hong Kong, China, was born near Owen Sound, Ont., March 14, 1864, and entered railway service in 1879, since when he has been, to July 31, 1882, messenger and clerk, Great Western Ry. of Canada, Toronto; Aug. 7, 1882, to May 1, 1883, baggage master, Northern Ry. of Canada, Orillia, Ont.; June 1, 1883, to June 1, 1887, clerk, local freight office, C.P.R., Vancouver, B.C.; June 1, 1887, to Feb., 1890, clerk, General Freight and Passenger Department, C.P.R., Vancouver, B.C.; Feb. 1890, to July 1, 1893, Freight and Passenger Agent, C.P.R., Victoria, B.C.; July 1, 1893, to Sept. 30, 1896, Freight and Passenger Agent, C.P.R., Portland, Ore.; Oct. 1, 1896, to July 1, 1899, District Freight Agent, C.P.R., Vancouver, B.C.; July 1, 1899, to Dec., 1900, Assistant General Freight Agent,

Allan Cameron,
Oriental Manager, Canadian Pacific Steamships,
Hong Kong, China.

C.P.R., Vancouver, B.C.; Jan., 1901, to Aug., 1905, in charge of Asiatic business, Oregon Rd. & Navigation Co.'s steamships, as General Agent, Hong Kong, China; Aug., 1905, to Dec., 1908, General Traffic Agent, Great Britain and Europe, C.P.R., London, Eng.; Dec., 1908, to Mar., 1912, General Traffic Agent, C.P.R. New York; March, 1912, to Sept. 30, 1922, Superintendent, Land Branch, Natural Resources Department, C.P.R., Calgary, Alta.

William Chard, Clinns Agent, Reid Newfoundland Co., St. John's, Nfld., died suddenly on the s.s. Kyle, while bound from Port aux Basques for Canada on a holiday trip, July 31. He had previously been in apparent good health, death being due to heart failure. The body was taken back to St. John's, where the funeral took place.

F. W. Churchill, town ticket agent, C.P.R., Collingwood, Ont., died in the General and Marine Hospital there, Aug. 21, aged 69, after several weeks illness. He was born in London, Eng., his father being a shipowner, in whose office he started to work, then making a sailing ship trip to South American ports. He came to Canada in 1874, and was for some time secretary to his relative, F.

W. Cumberland, then Managing Director, Northern Ry. of Canada, at Toronto. Subsequently he entered the Bank of Commerce service, afterwards returning to England. After a short time, he came in back to Canada in 1888 and shortly afterwards going to Collingwood, where he entered into insurance business, which he continued until his last illness. He had also been town ticket agent, C.P.R., for over 25 years. He was a past President, Canadian Ticket Agents Association, was at one time deputy reeve of Collingwood, and of late years had been chairman of the public library's finance committee, and was for several years treasurer of Manito Masonic Lodge. The funeral at Collingwood was attended by W. Fulton, Assistant District Passenger Agent, C.P.R.; W. Dockerill, Travelling Passenger Agent, C.P.R., and J. Brignall, Travelling Passenger Agent, Robt. Reford Co., Toronto.

D. C. Coleman, Vice President, Western Lines, C.P.R., entertained a dinner at the Royal Alexander Hotel, Winnipeg, on Aug. 18, in honor of Hon. J. H. King, Dominion Minister of Public Works, and Mrs. King.

William Craig Chisholm, K.C., who has been appointed head of the Legal Department, G.T.R., Montreal, owing to the death of W. H. Hargreaves, K.C., Vice President and General Counsel, was born at Port Hope, Ont., Aug. 20, 1864, and educated at Port Hope high school, and Toronto University, graduating with the degree of B.A., in 1885. He was admitted to the Ontario bar in 1888, and appointed a K.C. in 1908. He was appointed Assistant City Solicitor for Toronto in 1891, and City Solicitor in June, 1905, and on resigning to go into private practice, Oct. 11, 1909, was presented with a cabinet of silver. He was appointed General Solicitor, G.T.R., in July, 1913.

C. B. Foster who has been appointed Passenger Traffic Manager, C.P.R., Montreal, was born at Kingston, N.B., Sept. 30, 1871, and entered C.P.R. service in Apr. 1891, since when he has been, to Oct., 1892, stenographer in Passenger Department, St. John, N.B.; Sept. 1893, to Sept. 1893, senior clerk, Passenger Department, St. John, N.B.; Sept. 1893, to July 1899, Travelling Passenger Agent, St. John, N.B.; July 1899 to Feb. 8, 1902, chief clerk, Passenger Department, St. John, N.B.; Feb. 8, 1902, to Nov. 22, 1904, District Passenger Agent, St. John, N.B.; Nov. 22, 1904, to Sept. 8, 1908, District Passenger Agent, Toronto; Sept. 8, 1908, to Oct. 31, 1910, Assistant General Passenger Agent, Vancouver, B.C.; Oct. 31, 1910, to June 17, 1913, General Passenger Agent, Western Lines, Revelstoke, B.C., and east, Winnipeg. June 17, 1913, to Aug. 31, 1922, Assistant Passenger Traffic Manager, Eastern Lines, C.P.R., Montreal.

William Cross, who died at Winnipeg, Aug. 16, was born at Birkenhead, Cheshire, Eng., in 1842, and entered Canadian railway service in 1863. He was, to 1882, journeyman and foreman in G.T.R. erecting shops, Montreal, and in 1883 to 1887, Master Mechanic, Eastern Division, C.P.R., Montreal; 1887 to April, 1900, Master Mechanic, Western Division, C.P.R., Winnipeg; April, 1900, to 1901, Consulting Mechanical Engineer, Western Division, C.P.R., Winnipeg; 1901 to 1904, Engineer of Tests, C.P.R., Montreal; 1904 to Dec. 31, 1907, when he was superannuated, Assistant to Second Vice President (Sir William Whyte), C.P.R., Winnipeg.

Hon. G. P. Graham, Minister of Militia and Defence, and formerly Minister of Railways in the Laurier Government, had to leave Ottawa, about the middle of August, for his home in Brockville, Ont., owing to illness.

D. B. Hanna, President, Canadian National Rys., has been elected President of the Scottish College Men's Club, organized in Toronto recently.

Mrs. James Hardwell, widow of the late Chief Traffic Officer, Board of Railway Commissioners, left Ottawa, early in August, to spend a few months in Europe.

Mrs. Hinton, wife of W. P. Hinton, formerly Vice President and General Manager, Grand Trunk Pacific Ry., Winnipeg, died there, Aug. 10, after a long illness. She was a sister of A. J. Parr, General Freight and Passenger Agent, Timiskaming & Northern Ontario Ry., North Bay, Ont.

H. B. Jackson, Manager, Hotel Vancouver, C.P.R., Vancouver, B.C., and formerly of the Empress Hotel, Victoria, who had been missing for two weeks, was found drowned in False Creek, Vancouver, towards the end of July. The funeral at Vancouver was attended by a number of the company's hotel officials.

D. Johnston, Travelling Passenger Agent, Canadian National Rys., Los Angeles, Cal., was a visitor during August, in Moncton, N.B., where he was formerly in the Intercolonial Ry. service.

Hon. W. C. Kennedy, Minister of Railways and Canals, was operated on at the Royal Victoria Hospital, Montreal, Aug. 25, for gall stones.

John Leslie, Comptroller, C.P.R., and Mrs. Leslie, returned to Montreal early in August, after a two months visit to Europe.

Mrs. A. D. MacTiger, wife of A. D. MacTiger, Vice President, Eastern Lines, C.P.R., Montreal, is visiting Great Britain, having gone over on the C.P.R. s.s. Empress of Scotland, which arrived at Southampton, Aug. 1.

Halmer J. Main, whose appointment as Superintendent, Trenton Division, Ontario District, C.P.R., Toronto, was announced in our last issue, was born at Kemptville, Ont., Aug. 16, 1885, and entered C.P.R. service, Aug. 1, 1902, since when he has been, to Sept. 1, 1911, operator and agent at various points; Chalk River Subdivision; Sept. 1, 1911, to Aug. 14, 1913, dispatcher, Ottawa and Smiths Falls, Ont.; Aug. 15, 1913, to Aug. 12, 1917, Chief Dispatcher, Smiths Falls, Ont.; Aug. 12, 1917, to Sept. 19, 1918, Assistant Superintendent, Smiths Falls, Ont.; Sept. 20, 1918, to May 31, 1920, Assistant Superintendent, Farnham, Que.; June 1, to Aug. 1, 1920, relieving Superintendent, at various points, Eastern Lines; Sept. 1, 1920, to May 31, 1921, Car Service Agent, Quebec District, Montreal; June 1 to Oct. 1, 1921, relieving Superintendent, Quebec District; Oct. 1, 1921, to July 4, 1922, Car Service Agent, Quebec District, Montreal.

H. S. Meacham, Import Freight Agent, Canadian National Rys., Montreal, was incorrectly referred to in Canadian Railway and Marine World for August, under Birthdays of Transportation Men in August, as "ex-Import Freight Agent, Canadian National Rys., Montreal, now of Calgary, Alta."

Lord Northcliffe, who died in England, Aug. 14, was the promoter, and probably principal owner, of the Anglo-Newfoundland Development Co., which has pulp and paper mills at Grand Falls, and a railway to Botwood, Nfld.

Glen E. Plumb, counsel for 16 of the larger United States railway companies,

and author of the Plumb plan of railway operation and ownership, died at Washington, D.C., Aug. 2.

C. Price Green, Commissioner, Industrial & Resources Department, Canadian National Rys., Toronto, is President of the Mimico, Ont., Horticultural Society.

R. A. Reid, a G.T.R. brakeman, has been congratulated by the company's officials, and reported to the Royal Canadian Humane Association, for saving the life of a little girl who had strayed on the track near Arnprior, Ont., recently. He was riding on the locomotive, and noticing that, in approaching the child, the train could not be stopped in time, he climbed on to the pilot, and, as owing to his position, he could not lift her, he pushed her under the pilot and away from the wheels. On the train being brought to a standstill, she was found quite uninjured.

Grant Hall,
Vice President, Canadian Pacific Railway,
playing golf at Banff, Alta.

Herbert J. Russell, Superintendent, Eastern Division, Reid Newfoundland Co., St. John's, Nfld., who has also been appointed Assistant to the General Manager (R. C. Morgan) as announced in our last issue, was born at Musgrave Harbor, Nfld., Dec. 24, 1891, and entered Reid Newfoundland Co.'s service, Sept. 12, 1906, since when he has been, to June 25, 1907, stenographer and clerk, Newfoundland Express Co.; June 25, 1907, to Jan. 17, 1913, chief clerk to Superintendent, secretary to General Superintendent, and acting Chief Dispatcher, Reid Newfoundland Ry.; Jan. 17, 1913, to Nov. 27, 1917, Assistant to Superintendent; and from Nov. 27, 1917, Superintendent, Eastern Division, all at St. John's.

H. H. Schaefer, formerly Division Freight Agent, Canadian Government Railways, Moncton, N.B., died suddenly, from heart trouble, at Cap Brule, near Point du Chene, N.B., July 26. He was born at Colone, Germany, Feb. 10, 1848, came to Canada with his parents in 1855, and settled in Nova Scotia, later moving to Prince Edward Island, where he entered the New York, Newfoundland &

London Telegraph Co.'s service, later the Anglo-American Telegraph Co., and in 1870 was appointed local manager at Sackville, N.B. He entered Intercolonial Ry. service in 1871, and was, to 1876, station agent, Sackville, N.B.; 1876 to 1878, station agent, Shediac, N.B.; 1878 to 1882, station agent, Point du Chene, N.B.; 1882 to 1897, Travelling Freight Agent; 1897 to 1898, in charge of weighing department; 1898 to June, 1905, chief clerk to General Freight Agent, St. John, N.B.; June, 1905, to Aug., 1913, Division Freight Agent, St. John, N.B.; June, 1913, until his resignation in March, 1914, Division Freight Agent, Canadian Government Rys., Moncton, N.B. In 1895 he was secretary to the freight rate commission appointed to take evidence in regard to alleged excessive freight charges in the north-west. He was buried at Shediac, N.B.

D'Arcy Scott, formerly a member of the Board of Railway Commissioners, and his family, spent August at Blue Sea Lake, Ont.

Roy V. Somerville, Advertising Manager for Funch, London, Eng., for the past 12 years, died there, towards the end of July, aged 62. He was born in Dundas, Ont., and was for some time Advertising Manager, C.P.R.

Hon. J. A. Stewart, M.P. for Lanark, Ont., ex-Minister of Railways and Canals, is in the Royal Victoria Hospital, Montreal, suffering from pernicious anaemia.

Frank W. Thompson, whose appointment as acting Chairman, Canadian Freight Association, Western Lines, Winnipeg, was announced in our last issue, was born at Toronto, June 14, 1873, and entered railway service in Oct., 1886, since when he has been, to 1889, apprentice, Freight Department, G.T.R., Toronto; 1890 to 1893, freight clerk, G.T.R., Toronto; 1894 to 1897, rate clerk, Division Freight Office, G.T.R., Montreal; 1897 to 1902, chief clerk, General Freight Department, Canadian Government Rys., Montreal; 1902 to 1903, rate clerk, Canadian Northern Ry., Winnipeg; May, 1903, to April, 1904, Freight Inspector, Canadian Freight Association, Winnipeg; May, 1904, to Dec., 1905, Freight Inspector, C.F.A., Port Arthur, Ont.; Jan. 1906, to April, 1907, Freight and Car Service Inspector, C.F.A., Edmonton, Alta.; May, 1909, to Nov., 1910, Freight Inspector, C. F.A., Fort William, Ont.; Dec., 1910, to Sept., 1912, Travelling Freight Inspector, C.F.A., Regina, Sask.; Oct., 1912, to Dec., 1917, Chief Freight Inspector, C.F.A., Winnipeg; Jan., 1918, to July, 1922, Assistant Secretary, C.F.A., Winnipeg.

C. E. Ussher, who has been appointed General Passenger Traffic Manager, C.P.R., Montreal, was born at Niagara Falls, Ont., Dec. 29, 1857, and entered railway service in 1874, since when he has been, to May 1876, clerk in Auditor's office, Great Western Ry.; May 1876 to June, 1880, clerk in General Passenger Department same road; June, 1880, to Apr., 1883, chief ticket clerk, Wabash, St. Louis and Pacific Ry.; Apr. to Nov. 1883, rate clerk, Chicago and Atlantic Rd.; Nov., 1883, to Nov., 1886, in private business at Hamilton, Ont.; Nov., 1886, to May, 1889, chief ticket clerk, C.P.R.; May, 1889, to Jan. 1, 1898, Assistant General Passenger Agent, C. P.R., Montreal; Jan. 1, 1898, to Dec., 1906, General Passenger Agent, C.P.R., Eastern Lines, Montreal; Dec., 1906, to Sept. 30, 1910, Assistant General Passenger Traffic Manager, C.P.R., Winnipeg; Sept. 30, 1910, to Aug. 31, 1922, Passenger Traffic Manager, C.P.R., Montreal.

Canadian Pacific Railway Construction, Betterments, Etc.

Last Minute Items, Too Late for Classification.

Chesley St. Bridge, St. John.—St. John, N.B., City Council was, a press report states, advised, Aug. 15, that the C.P.R. had applied to the Board of Railway Commissioners for authority to rebuild the bridge over Chesley St. The Public Works Commissioner was authorized to interview the company's officials with respect to the matter.

Tobique Subdivision Bridge.—We are advised that the reconstruction work authorized recently by the Board of Railway Commissioners on bridge 8.1, Tobique Subdivision, N.B., consists of the rebuilding in concrete of the present cedar crib abutments, which were built in 1908. The new work will be built to C.P.R. standard, with wing walls. The height of the abutments from bottom of footing to base of rail is 15 ft. The superstructure consists of a plate girder span, 35 ft. 10 in. long.

LaSalle Loop Railway.—The Board of Railway Commissioners passed an order, May 31, authorizing the C.P.R. to build a branch line from its main line, mile 42.82, Adirondack Subdivision, Quebec District, between the St. Lawrence bridge and the Lachine Canal, running southerly and easterly, about 4.5 miles. At the hearing of the application, prior to the issue of the order, it was shown that the LaSalle Town Council had granted the company 25 years exemption from taxation in respect of the line, upon condition that at least three passenger trains a day be operated by electricity or some other power than steam. The plan which was annexed to the application, showed that the line was to be in the nature of a loop line, centering on Highlands station, and would consist of a reconstructed freight line from Highlands station along the south bank of the Lachine Canal, to near Church Ave. bridge; and a new section, having a grade of 1.5% to the south of the line mentioned above, and following the main line to half way between the Lachine Canal and the Lachine bridge, where it would turn to the east, running parallel to, but rather more than half a mile from the St. Lawrence River, for about 1.3 miles, then turning northeast and running parallel to, by a quarter of a mile from the Montreal aqueduct for about a mile, then turning north, crossing the western part of Emard Ward and re-entering LaSalle, making a wide sweep towards the canal, joining the old freight line near the boundary line between LaSalle and Cote St. Paul.

Work on the construction of the line was reported to have been started July 4, and on July 31, the Board of Railway Commissioners authorized it to be opened for traffic. A service was put in operation Aug. 1, but the official opening took place Aug. 10. The line is at present operated by a gasoline motor car, built for the Quebec Central Ry., which is described on another page of this issue.

St. Agathe Subdivision Bridge.—The Board of Railway Commissioners has authorized the rebuilding of bridge 42.3, over the North River, St. Agathe Subdivision, Quebec District, on the line between Place Viger and Mont Laurier, Que.

Gordon Creek Bridge.—The Board of Railway Commissioners has authorized the rebuilding of bridge 37.1 over Gordon Creek, on the Timiskaming Subdivision, near Lumsdens Mills, Que.

Lake Timiskaming Spur Line.—A press report states that it is believed it is the

C.P.R.'s intention to build a spur line from the Kipawa-Quinze River Falls extension now under construction, to the Quebec shore of Lake Timiskaming, and a wharf from which a car ferry will be operated to the Ontario shore of the lake at Silver Center.

Dundas St. Bridge, Waterdown.—The Board of Railway Commissioners has authorized the Ontario Public Highways Department to rebuild the bridge carrying Dundas St. over the C.P.R. tracks at Waterdown, Ont.

Orangeville and Teeswater Subdivision Bridge.—A press report states that a contract has been let to the Goldie Construction Co., Toronto, for concrete substructures for bridges on the Orangeville & Teeswater Subdivisions, Bruce Division, Ontario District, to which reference was made in our last issue on page 407. The press report refers to work on three bridges, but our information gave details of only two.

Port Arthur Yards.—The land at Port Arthur, Ont., occupied formerly by Pigeon River Lumber Co., is being cleaned up by the C.P.R. with the object, a press report states, of building a yard there.

Port William Freight Shed Burned.—A press report states that freight shed 3, on the Kamistikwia River, Port William, Ont., together with a large quantity of freight, and about 30 box cars, were burned on Aug. 23, and that the loss was estimated at about \$100,000, largely covered by insurance.

Medicine Hat Locomotive House.—A press report states that the locomotive house to be erected at Medicine Hat, Alta., at an estimated cost of \$50,000, will be built by day labor under the charge of the company's engineers.

Shuswap Subdivision Bridge.—The Board of Railway Commissioners has authorized the rebuilding of bridges over the Eagle River, mile 19, Shuswap Subdivision, British Columbia District.

New Westminster Station.—A press report states that Grant Hall, Vice President, during his recent western trip, is reported to have told a deputation from New Westminster City Council and Board of Trade, that the company will adhere to its promise, made some years ago, to establish a union station, joint trackage and wharf facilities with the Canadian National Ry.

David Thompson Memorial.—The memorial post at Lake Windermere, B.C., which the C.P.R. has erected in memory of David Thompson, the explorer of a great part of British Columbia, was announced to be opened Aug. 30. The arrangements for the ceremony were made by J. M. Gibb, General Publicity Agent, C.P.R. The dedication ceremony to be performed by Lieut. Governor Brett of Alberta, in the presence of a large gathering of literary and other persons.

Rolling Stock Defined.—The Goblin, Toronto, gives the following definition: Hand-cars, snow-plows, go-carts, ca. In fact, anything is rolling stock whose wheels aren't square. The appearance of this stock is seldom changed by watering it, and its identity is easily recognized even in early childhood; therefore, it is seldom watered and safe to buy.

Capt. P. M. Frederick, who owned and operated the steamboat Nellie Cuthbert, on Quinte Bay, Ont., for many years, died at Belleville, Ont. Aug. 22, aged 79.

H.M.S. Raleigh. A Quebec press dispatch of Aug. 24 said that the salvage s.s. Lord Strathcona, which went to the aid of the Raleigh, aground in Belle Isle Strait, was on the way back to Quebec, and that it was considered the Raleigh would be a complete loss. A Halifax press dispatch of Aug. 26 said that H. M.S. Constance had arrived there from Belle Isle Strait, and was sailing again for Bermuda. She reported the cruisers Calcutta and Capetown as still standing by the Raleigh.

Cost of Legal Services in Railway Matters.—When the estimates were under consideration in the House of Commons, recently, an item of \$13,154.03 to provide for balance of legal expenses in connection with the Canadian Northern Ry. Guarantee Bill of 1914, and the G.T.R. mortgage trust deed, and lease of National Transcontinental Ry. Eastern Division, came up. The Minister of Finance explained that these expenses were incurred under the late Government and were approved of by the Department of Justice. Sir Henry Drayton, former Finance Minister, stated it was a very old claim and had not been recognized by the late Government. The former Premier explained that the legal firms employed in the several matters sent in their bills, which were taxed by the Department of Justice, and the amounts taxed were paid. The legal firms claimed they were not bound to accept the Department's taxing, and asked for the payment of the balance, but were informed that the Government would abide by the finding of its taxing officer. The item was then withdrawn.

Railway Amalgamation in Great Britain.—The amalgamation of the various railway companies into four groups is reported to be proceeding apace. The Great Western Ry. has completed its second plan of absorption, and confirmation meetings have been held; the Midland-London & Northwestern group is gradually being consolidated now that the big companies have got together; the southern group is straightening out the financial details for the amalgamation of the Southeastern-Chatham lines, the London, Brighton & South Coast Ry. and the London & Southwestern Ry., the biggest of the amalgamating lines. The first to fully complete its amalgamation is the Northeastern and eastern group, which comprises the Great Eastern, the Great Northern, the Great Central, the North British, and the Great North of Scotland Railways, with 26 subsidiary companies, having approximately 6,500 miles of main line, and a total capital of \$38,000,000.

Inter-Continental Forwarding Co., Ltd., has been incorporated under the Dominion Companies Act, with authorized capital of \$40,000 and office at Toronto, to carry on business as custom house broker, shipping agent and traffic manager, and to act as broker and agent generally for the buying and selling of merchandise and commodities, and for forwarding, stevedoring and warehousing. The incorporators are nominal, with the exception of A. H. Barry, Detroit, Mich., and H. Cohen, London, Ont., described as freight brokers.

Grain in Store at Elevators.

The Bad Order Car Situation.

Railway Earnings.

The Dominion Bureau of Statistics, Internal Trade Branch, reports that the grain in store at the various elevators for the week ended Aug. 11, decreased as follows: Wheat, 3,140,701 bush.; oats, 330,457; barley, 329,644; flax, 74,116; and rye, 59,645; a total net decrease of 3,394,563 bush.

In the western country elevators, the decreases were: Wheat, 485,257 bush.; oats, 139,736; barley, 89,340; and flax, 22,003. There was an increase in rye of 1,147 bush. The quantity in store at the three prairie provinces was as follows: Manitoba, 784,050 bush.; Saskatchewan, 2,578,401; Alberta, 3,178,396; a total of 6,590,845 bush. The receipts were 813,064 bush. and shipments, 1,550,670.

In the interior terminal elevators the decreases were: Wheat, 123,062 bush.; oats, 11,317; barley, 2,550; flax, 989, and rye, 4. No wheat was received at Vancouver and shipments out of Vancouver were: By ship, 49,714 bush., and by rail, 18,496.

In Winnipeg private terminal elevators the decreases were: Wheat, 22,135 bush.; oats, 2,519, and barley, 4,513.

In the public and private terminal elevators at Fort William and Port Arthur the decreases were: Wheat, 1,145,029 bush.; oats, 19,878; barley, 168,507; flax, 36,212, and rye, 54,913. Receipts were: 1,850,829 bush., shipments by ship, 8,969,607, and by rail, 305,762.

In the eastern public elevators the decreases were: Wheat, 1,606,406 bush.; barley, 116,754, and flax, 14,912. The increases were: Oats, 36,071 bush., and rye, 2,492,660. Receipts were: 2,492,655 bush., by ship, and 148,341 by rail. The shipments were: 3,341,210 bush. by ship, and 946,301 by rail.

The quantity of U.S. grain in store at eastern public elevators was 7,340,319 bush., compared with 6,483,887 for the same period, 1921. The bulk of the former quantity was: Corn, 3,264,968 bush., and rye, 2,824,477. U.S. lake port showings increased: Wheat, 245,283 bush., and barley, 67,165. There was a decrease in oats of 36,673 bush. U.S. Atlantic seaboard ports decreased: Wheat, 2,095 bush.; oats, 156,405; barley, 15,145, and rye, 13,435.

C.P.R. Going Out of Elevator Business.

—Grant Hall, Vice President, C.P.R., is reported to have said at New Westminster, B.C., on his recent trip of inspection, from which he returned to Montreal at the beginning of August, that the company is going out of the grain elevator business, although which it is not keen. The company still owns an elevator at Fort William, but will relinquish control of it in the near time. —Moose Jaw press dispatch of Aug. 24, credits D. C. Coleman, Vice President, Western Lines, C.P.R., with stating that the company has given a long lease of Elevator D at Fort William, Ont., to the Consolidated Elevator Co.'s interests.

Railway Accidents Throughout Canada.

The total number of railway accidents reported to the Board of Railway Commissioners during July was 215, resulting in 7 employees and 24 others being killed, and 62 passengers, 154 employees and 59 others being injured. Under "others," are included 12 persons killed and 49 injured, in 24 highway crossing accidents. In these accidents, the crossings were unprotected in 20 cases, in 2 cases they were protected by gates, and in 2, by bells. Automobiles were concerned in 20 of the accidents, wagons in 2, and pedestrians in 2.

The Railway Association of Canada reports the total number of freight cars on Canadian lines for the 15 days ended Aug. 1 as 201,028. The allowance for bad order cars on the A.R.A. basis, which assumes a total of 7% of the cars in bad order, was 14,072, and the actual number in bad order was 19,655, an excess of 5,583 on the 7% basis. The figures 19,655 represent 9.8% of the cars in bad order. There were 30,603 surplus cars in good order, making the total not in use 50,258, or a total of 36,186 idle cars on the basis of 7% of the cars being normally in bad order.

The American Railway Association's Car Service Division reports that the total number of freight cars on line on class 1 roads in the U.S. on July 15 was 2,258,267. Of these, 342,079 were in bad order, this figure representing 15.1%, compared with 14.3% on July 1. Out of 1,027,429 box cars, 159,814, or 15%, were in bad order; out of 57,731 refrigerator cars, there were 8,834, or 15.3%; out of 952,762 gondolas, there were 146,305, or 15.4%; out of 82,085 stock cars, there were 11,141, or 13.6%, and out of 96,579 flat cars, there were 12,821, or 13.2% in bad order.

United States Railways' Financial Results.

U.S. class 1 railways' earnings continue to improve. As stated in Canadian and Marine World for August, the net operating income for May was \$61,980,000, compared with \$50,271,865 in April, and in June the net operating income was \$76,594,000. This represented a return on the annual basis, of 4.78% on the roads' tentative valuations, and was approximately \$15,000,000 short of being enough to earn the 5% to which the Interstate Commerce Commission has decided the roads are entitled, in accordance with the Transportation Act. The net operating income for June 1921, was at the annual rate of but 3.18%.

To date, 1922 has been uniformly more satisfactory to U.S. railways from the financial viewpoint than 1921, as is evidenced by comparing the results for the first six months of each year. For the first six months of 1922, the net operating income was \$349,092,945, representative of a 10% annual return on the tentative valuation, of 4.43%. For the first six months of 1921, the net operating income was but \$145,485,019, representative of an annual return on valuation, of 1.85%. While gross operating revenues for the first six months of 1922 decreased 2.5% from those of the first six months of 1921, operating expenses were 12.1% less. The operating ratio for class 1 roads, as a whole, was 76.82 for June, 1922, compared with 82.51 for June, 1921, with 79.61 for the first six months of 1922 and with 88.31 for the first six months of 1921.

The improved financial results attending railway operation in the U.S. is reflected by the prices now commanded on the New York stock exchange by railway stocks and bonds, these being much higher than for some time past.

British Railway Shopmen's Wages.

A London cablegram says that it is proposed to reduce the war bonus by 16s. 6d. a week, and that about 120,000 men will be affected, two-thirds of them belonging to the National Union of Railwaymen, and most of the remainder to smaller unions.

Canadian National Railways.

Following are total operating revenues, total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry. System, Grand Trunk Pacific Ry., and Canadian Government Ry., the last including the Intercolonial Ry., Prince Edward Island Ry. and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government.

	Revenue	Expenses	Net	Deficits
	1921	1921	1922	1921
Jan.	\$23,000,915	\$10,610,160	\$2,230,477	\$2,230,477
Feb.	7,607,413	10,026,572	2,376,829	2,986,998
March	9,138,100	10,397,547	979,447	2,532,939
April	12,831,971	10,783,298	1,648,773	1,097,439
May	9,878,965	9,726,020	17,055	2,554,540
June	8,235,603	10,199,592	1,963,589	2,955,257

\$50,998,040 \$59,937,083 \$8,938,999 \$16,169,451
Deer. \$6,371,807 \$13,602,259 \$7,230,452

Approximate gross earnings for July, \$8,560,536, and for 8 weeks ended Aug. 21, \$56,348,200, against \$9,380,929 and \$7,152,036 for same periods 1921.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1922, compared with those for 1921. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are due to the fact that the latter is, at its request, furnished with figures by the C.P.R., including the Esquimaux & Nanaimo Ry., and the Montreal & Atlantic Ry., which are not included as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in expenses supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net	Decreases
	1921	1921	1922	1921
Jan.	\$11,397,975	\$10,439,205	\$654,888	\$158,904
Feb.	11,208,693	10,648,205	654,888	158,904
March	13,847,627	11,427,120	2,420,507	39,402
April	12,831,971	10,783,298	1,648,773	1,097,439
May	11,364,246	11,319,732	2,344,514	949,938
June	13,810,448	11,448,134	2,362,313	742,445

\$76,295,359 \$66,481,288 \$8,941,071 \$13,136,095
Deer. \$7,760,313 \$4,624,218 \$13,136,095

Approximate gross earnings for July, \$13,840,000, and for 8 weeks ended Aug. 21, \$116,156,000, against \$15,263,000 and \$10,912,000 for same periods 1921.

Grand Trunk Railway.

Following are total operating revenues, total operating expenses and net operating revenues or deficits for 1922:—

	Gross	Expenses	Net revenue	1921
	1921	1921	1922	1921
Jan.	\$5,354,317	\$4,984,953	\$369,364	\$701,166

Deer. \$1,812,748 \$4,414,468

*Deficit.
Approximate gross earnings for July, \$2,220,065; for July, \$9,820,641, against \$8,508,543 and \$8,472,261, for same periods 1921.

Canadian National Railways Train Exhibits.

In addition to the 4 self propelled cars which the C.N.R. is exhibiting at the Canadian National Exhibition in Toronto, reference to which is made under "Self propelled cars on steam railways" on another page of this issue, the C.N.R. is showing a complete transcontinental train, consisting of Pacific type locomotive, 5504; baggage car, 8631; colonist car, 2810; first class passenger car, 5010; tourist sleeping car, 2241; dining car, 1248; first class sleeping car, Fort Chaudiere; compartment observation car, Fort William; and mountain observation car, 15100.

The Brotherhood of Locomotive Firemen and engineers' Canadian legislative board opened its seventh meeting in Ottawa on Aug. 21. W. L. Best, Canadian Legislative Representative, who presided, stated that the Brotherhood's membership is in excess of 100,000, and that it is in splendid shape financially, funds on hand being in excess of \$9,500,000. The meetings, which were continued throughout the week, were attended by approximately 100 members, made up chiefly of Canadian general chairmen and other brotherhood officers.

Traffic Orders by Board of Railway Commissioners.

International Express Commodity Tariffs.

General order 367. June 29.—Re general order 177, Jan. 10, 1917, requiring publication of a rule to govern rates to intermediate points in Canada not named in international tariffs; Upon its appearing that a uniform practice in connection with both freight and express tariffs is desirable, the Board orders that all international express commodity tariffs now in effect be amended so as to include a rule to the effect that rates named therein, unless specifically indicated as being competitive, will apply to the intermediate points in Canada not enumerated in the said tariffs; and that a similar rule be published in international commodity tariffs as issued.

Express Rates on Ontario Fruit and Vegetables.

32,448. May 31.—Re application of Niagara Peninsula Growers, Ltd., for suspension of American Railway Express Co.'s tariff 150-A, C.R.C. 1,333, and Express Traffic Association for Canada Tariff C.R.C. no. E.T. 732, as applicable to fruits and vegetables moving from Ontario points. Upon reading the submissions filed on behalf of the applicants, the American Railway Express Co. and the Express Traffic Association for Canada, the Board orders that American Railway Express Co.'s tariffs C.R.C. 1,333, 1,341, and 1,344, also item 1 in Express Traffic Association tariff C.R.C. no. E.T. 732, be suspended, and the Board further orders that the rates as published in American Railway Express Co.'s tariff C.R.C. 1,193, be continued in effect until further order of the Board.

32,511. June 19.—Re application of Niagara Peninsula Growers, Ltd., for suspension of the American Railway Express Co.'s tariff covering advanced rates on fruits and vegetables, which tariffs were suspended by order 32,448, May 31. Upon its appearing that an agreement has now been reached between the growers and the American Railway Express Co. as to the rate on fruit from points in Ontario, the Board orders that order 32,448, be rescinded, provided the American Railway Express Co. publish and file a local rate on fruit and vegetables from Fenwick to Hamilton, Ont., of 40c per 100 lb. in lieu of the rate of 50c per 100 lb., now published in the company's tariff C.R.C. no. 1,344.

Coal Switching Rate at Sault Ste. Marie.

32,477. June 5.—Re application of Canadian Coal Company, Montreal, for an order suspending the Algoma Central & Hudson Bay Ry. tariff C.R.C. 585, effective March 15, 1922, showing increases in switching rate on coal from the New Ontario Coal Co.'s dock to the C.P.R. at Sault Ste. Marie, to 2c per 100 lb., and order 32,196, March 8, 1922, suspending the said tariff; Upon hearing the matter at Ottawa, April 18, in the presence of counsel for the applicant company and the railway company, and what was alleged, the Board orders that the said tariff be disallowed.

Reduction in Freight Rates.

32,629. July 20.—Re general order 366, June 30, 1922, in the matter of freight tolls, 1922: Standard mileage freight tariffs of the undermentioned railway companies having been filed on the basis prescribed by the Board's judgment of June 30, and general order 366, the Board orders that the following stan-

dard mileage freight tariffs be approved; the said tariffs, with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette: Canadian National Ry. C.R.C. no. W-252; Grand Trunk Pacific Ry. C.R.C. 526; Edmonton, Dunvegan & British Columbia Ry. C.R.C. 171; Central Canada Ry. C.R.C. 86.

32,635. July 24.—Re general order 366, June 30, 1922, made in the matter of freight tolls, 1922, dated June 30: Whereas standard mileage freight tariffs of the undermentioned railway companies have been filed on the basis prescribed by the said general order and the Board's judgment of June 30, 1922, the Board orders that the following standard mileage freight tariffs be approved: Great Northern Ry., C.R.C. 1,797 and 1,798.

32,650. July 24.—Re revised standard freight mileage tariffs, filed in accordance with the Board's judgment in Freight Tolls—1922, dated June 30: Whereas revised standard freight mileage tariffs have been filed by the undermentioned railways, on the basis prescribed by the Board's judgment and its general order 366, June 30, the Board orders that the following standard freight tariffs of maximum mileage tolls be approved: Canadian Pacific Ry., C.R.C. nos. W-2,642 and C.R.C. nos. W-2,645; Esquimaux & Nanaimo Ry., C.R.C. 503; Kettle Valley Ry., C.R.C. 298; the order 32,613, dated July 15, 1922, made herein, be rescinded.

Calcium Limestone Freight Rates.

32,637. July 24.—Re complaint of Beachville White Lime Co., Beachville, Ont., relative to freight rates on high calcium limestone from Beachville to Niagara Falls, Ont., on the G.T.R., as compared with rates on the same commodity from Walkerton to Hamilton: Upon hearing the complaint at Hamilton, June 8, 1922, the complainants and the G.T.R. being represented at the hearing, and upon reading the further submissions filed, the Board orders that the G.T.R. publish and file tariffs showing a rate of 90c a ton on high calcium limestone from Beachville to Niagara Falls, Ont., the said rate to become effective within 10 days from the date of this order.

Empties Returned by Express.

32,652. July 21.—Re application of Express Traffic Association of Canada for approval of Supplement B to Express Classification 3, restricting empties which may be returned at one-half outgoing rate to the following:—Egg cases, cream cans, ice cream tubs, meat, bread and cake hamper (not baskets), and standard poultry coops. Upon hearing the application at Ottawa, June 20th, 1922, the Express Traffic Association of Canada, the Toronto and Montreal Boards of Trade, the Canadian Manufacturers' Association, the Compressed Gas Association and the Canadian Carbonate Co. being represented and what was alleged; and upon reading the further submission filed—The Board orders that the application be refused.

Express Fish Shipments Delivery.

32,654. July 27.—Re application of W. R. Spooner, Montreal, for revision of Express Classification, to permit delivery of shipments of fish to several different persons, although based on one consignee: Upon hearing the application at Ottawa, June 20, 1922, the applicant appearing in person and the Express Traffic Association of Canada being rep-

resented and what was alleged, the board orders that the application be refused.

New York Central Railroad Freight Tariffs.

32,713. Aug. 8.—Re application of the New York Central Rd., under sec. 330 of the Railway Act, 1919, for approval of its standard Mileage Freight Tariffs, C.R.C.-N.Y.C. 2643 and C.R.C. N.Y.C. 2644, effective Sept. 6th, 1922, whereas it appears that the said tariffs have been filed in accordance with general order 350 of Nov. 24, 1921, and upon the Chief Traffic Officer's report and recommendation, the board orders that they be approved.

Greenock Wood Railway.—We are officially advised that the Greenock Wood Ry., owned by Cargills, Ltd., Cargill, Ont., is to be dismantled and the rails and equipment sold. It was built to haul logs from Greenock swamp to the company's mills at Cargill, about 7 miles, and is not connected with a steam railway. It was started in 1910, and was laid partially with wood rails, these being replaced subsequently with 30-lb. steel when the road was completed in 1911. It was operated by a gasoline marine engine geared to and mounted on a 6-wheel rig, and capable of hauling 6 loaded cars. The 18 cars, forming the rolling stock, are 4-wheeled ones, made by the company. The rails and equipment are being offered for sale through J. J. Gartsch, Toronto.

Montreal Board of Trade Trip.—In connection with the commemoration of the Montreal Board of Trade's 100 anniversary, a special trip has been arranged to leave Montreal, Sept. 1. In addition to about 100 members of the Board and their wives, the party will include representatives of the Imperial Parliament, the Associated Chambers of Commerce of Great Britain, and the Association of British Industries, and will travel by special C.P.R. train from Montreal to Port McNicoll, Ont., thence by C.P.R. steamship to Fort William, Ont., and by C.P.R. train to Vancouver. The party will then go by steamship to Prince Rupert, B.C., and return to Montreal over the Canadian National Ry., reaching there Sept. 30.
